More than that—and at the risk of exposing myself to the accusation of immodesty—I want to mention briefly that the erection of the Intergovernmental Committee for European Migration is similarly the result of my personal efforts.

This organization which we set up at Brussels, Belgium, in December 1951, has so far moved to happier lands almost half a million people who had no opportunities of making a livelihood and bringing up their children in the war-ravaged overcrowded countries of Europe. It is good to see that the committee which had 16 nations as its members at the start, has grown into an efficiently functioning organization with a membership of 26 independent nations. We keep the Committee outside of the United Nations in order to prevent any Soviet interference and we excluded from it any nation under Communist domination.

Australia, Canada, Argentina, and other South American countries have cooperated splendidly with the United States and with the immigrant-sending European countries in the furtherance of the Committee's aims. With the assistance of my colleagues who serve on congressional committees handling foreign affairs and appropriations, I intend to continue my work in behalf of that useful organization.

I now intend to insist, both in Washington and in Geneva, that the Intergovernmental Committee for European Migration undertake a determined and sustained effort designed to explore and open up new vast areas of South America and central and southern Africa for the benefit of European migrants who should be resettled in larger numbers on farmlands and not in congested industrial areas.

To bring the unskilled surplus European manpower and families to unsettled lands where they could engage in agriculture, would serve a double purpose. In addition

to providing the migrants with new opportunities, it will increase food production for the ever hungry and now increasingly hungrier world.

EXPLOSION OF HUMAN FERTILITY

Let me digress here for a moment and give you an idea of what is going on in the field of human fertility—a marvel that has a decisive import on our immigration problems.

According to statistical data placed at my disposal by experts from the Population Reference Bureau in Washington, D. C., the world is faced today with a true explosion of human fertility. Every morning there are 95,000 new mouths to feed. Every second 1 person dies, and 2 are born. The world's population is growing infinitely faster than the food supply produced by the globe's good earth.

Japan with a land area about equal to the State of Montana has 88 million inhabitants. In order to realize the overcrowding of Japan, one would have to imagine one-half of the population of the United States squeezed into Montana.

Communist China has 500 million people. That is one-fourth of the world's population. If the present birth rate continues in India, coupled with the decreasing death rate, that country will have 450 million people by 1970. The population of our neighbor to the south, Mexico, has increased by 30 percent in the last 20 years, and the population of Mexico is still growing so fast that at the current rate of growth Mexico's present population of 30 million will jump to 60 million in less than two decades.

And now a quick look at our own population picture. According to figures supplied by the Bureau of the Census, the population of the United States on April 1, 1956, was 167,440,000. This figure represents an increase of over 16 million, or 10.8 percent, since April 1, 1950, the date of the last national census. Since 1950 immigration has contributed 1,700,000 to our population increase. Over 4 million babies were born in the United States in 1955. In comparison, births in 1940 numbered 2,800,000 babies.

Statisticians and economists of the Population Reference Bureau maintain that the increase of our population is entirely out of proportion with the rate of accumulation of capital in our country. They say that we are not earning enough capital to expand our production facilities, our housing, our schools, and our highways, so as to accommodate the future generations of our own citizens.

One glance at the world's population picture and the picture reflecting the increase of our own population leads to one inescapable conclusion: Immigration into the United States has long ceased to be a solution to the problem of crowded humanity. The only solution is a bold concerted effort to increase food production on the still virgin continents of the southern hemisphere coupled with an enlightened attempt to limit the uncontrolled increase in the total number of inhabitants of the globe. To pile up more people on top of an expanding native mass of people seeking employment and a decent living in the countries with a population density similar to ours, is worse than folly. It is clearly an invitation to disaster.

THE PHONY REFUGEE LAW

Having told you how proud I am of the part I played in helping to resettle displaced persons and refugees, I want to refer to another legislative enactment with which I had much to do—mostly opposing it. What I have in mind is the much talked about, the deceptively labeled Refugee Relief Act of 1953. The refugee relief law under which no relief was granted to refugees.

I have on many occasions called that law—a "phony" and I still use the same word to describe it. It was a fraudulent gesture of brazen political hypocrisy. For all its purported humanitarian aims the law, rammed down the congressional throat by a new administration seeking popularity which it lacked, is a crudely concocted piece of old-fashioned pork-barreling on international and national level.

Under that law refugees were created as a matter of pure legislative fiction writing. Real refugees were overlooked. Large numbers of nonquota immigrant visas were arbitrarily allocated to certain countries. The allocations were made entirely out of proportion to any acceptable economic or demographic standards or equitable humanitarian considerations. I believe that the numerical visa allocations of the 1953 act are simply in direct proportion to the strength of the political minority lobbies on Capitol Hill and at the White House.

I opposed this inequitable 1953 law, but having been outvoted in the subcommittee over which I now preside and in the committee of which I am the ranking member, I have undertaken on the floor of the House a little salvage operation. I submitted a total of 11 amendments permitting United States citizens to bring to this country their close relatives because even they, the relatives, just as the genuine refugees, were overlooked by the sponsors and pushers of the phony Refugee Relief Act. All the sponsors and the pushers of the 1953 law were interested in was but one thing—getting in good standing with the strong big-city pressure groups.

However, the Refugee Relief Act of 1953 has served at least one good purpose. It provided a perfect demonstration of what happens when immigration visas are distributed—"passed around" would be a better way of saying it—by politicians instead of mathematicians. It provided the strongest argument against any departure from the present equitable, mathematical formula of distribution of the annual immigration quota in accordance with the national origins of those immigrants who fashioned the fundamental legal and social concepts upon which this Republic has been built and upon which it stands.

As you know, it is this fair, nondiscriminatory method of distributing our annual immigration quota that is under the sharpest attack by the leaders of special interests.

I will resist that attack. We all must resist it just as we would resist a foreign invasion. Yes, invasion—and I shall attempt to convince you that the word I use is not just a figure of speech.

FIGURES TELL THE TRUTH

The participants of the immigration numbers lottery say all over this country—and, indeed, have unfortunately advertised that brazen lie all over the world—that under the present immigration laws, access to this country has been curtailed, if not well nigh closed.

Let us look at the figures rather than listen to the chant of the auctioneers. In the fiscal year of 1955, we have admitted 858,736 aliens, of which 237,790 have come as immigrants to dwell among us for the rest of their lives and to bring into the world native-born American citizens. The corresponding number for the previous fiscal year, 1954, is 774,790 aliens admitted, of which 208,177 were immigrants coming to this country for permanent residence. Going back to the preceding years, the figures indicate a lesser number of aliens admitted to the United States, but looking at the figures for the current fiscal year and even disregarding those that come under special legislation, it is obvious that as the years pass, our annual intake grows larger and larger. It is quite possible that during the fiscal year 1957, possibly even in 1956, we will pass the one million mark of aliens admitted to this country temporarily or permanently.

You also hear from the immigration hucksters that we have closed our doors to foreigners who come to this country temporarily to transact business, to visit or to work here, or to study. Let us again take a look at the figures. In the fiscal year 1955, we admitted 26,288 foreign government officials, 68,696 foreign businessmen, 27,192 foreign students, well over 18,000 actors, artists, lecturers, writers, press, radio and television reporters, 16,077 foreign trainees who came to our colleges, hospitals, laboratories and similar institutions. If addition to these, an imposing total of 332,394 persons came here to visit. Each of the figures which I have just cited represents a 10 to 20 percent increase over the preceding year which in turn represented a similar increase over the fiscal year 1953.

You have also heard much about the "inadequacy" of our total immigration quota. The truth is that due to the extremely liberal treatment we accord under the existing law to natives of the independent countries of the Western Hemisphere and to all wives, husbands, and children of American citizens—regardless of race, color and place of birth—our annual immigration quota has become but a basic premise from which we operate. Nonquota immigration represents almost double the number of immigrants which we admit under the quota.

In the fiscal year 1955, we admitted 82,232 immigrants under the quota and 155,558 immigrants outside the quota. Of the latter only 29,002 came under the Refugee Relief Act.

The numerically unrestricted nonquota immigration is rising constantly. Here are the figures. In 1951 we admitted 49,170 as nonquota immigrants; in 1952—71,273, in 1953—86,259, in 1954—114,079, and in 1955—155,558 nonquota immigrants.

It is safe to predict that in the current fiscal year, we will pass the 200,000 mark of nonquota admissions.

What little bearing the alleged inadequacy of our immigration quota has on the actual number of those who come to this country, is best illustrated by one example. You have heard much about the immigration quotas for the people of Asia. What you probably have not heard is the fact that during the last fiscal year, well over 2,000 Chinese and 2,489 Japanese came to the United States as nonquota immigrants, although the quota for Chinese persons is 105 and Japan's quota is 185. Thus, nonquota immigration from these two countries exceeds the annual quota 10 to 22 times.

THE MEXICAN INFLUX

The most remarkable increase in the number of immigrants coming outside the quota is immigration from Mexico. This is reflected in the amazing increases of 128, 347, and 525 percent, for 1953, 1954, and 1955, respectively, over the annual average of the years between 1946 and 1952. In other words, we are admitting now annually six times as many nonquota immigrants from Mexico as we were admitting in any earlier fiscal year prior to the enactment of the present immigration law.

The great increase in Mexican immigration in the last 2 years is caused to a large extent, undoubtedly, by the closing of our southern border to illegal entrants, which had assumed the alarming total of over 1 million in the fiscal year 1954 alone. In the first instance, thousands of Mexicans who had married American citizens and had American citizen children were living as respected members of their communities despite their original illegal entries. Many of these returned voluntarily to Mexico in the face of the Immigration and Naturalization Service drive for the purpose of obtaining immigration visas, passing inspection, and

reentering this country in order to pursue the road toward American citizenship.

Others who had repeatedly entered the United States illegally in the past now faced the necessity of making a legal entry into this country, which includes the method of obtaining an immigration visa for permanent residence. The latter class is swelled by the present operation of the Mexican bracero program under which, except for a small percentage of individuals, the two Governments concerned have not established a mutual system whereby the recontracting and reemployment from year to year of a bracero can be assured. We know that a bracero wants to come to this country and earn American dollars. If both Governments can agree on a method to stabilize the Mexican labor force and if the bracero is assured that he will be able to come to this country for an unlimited number of times to work, I am certain that he will be content to stay in Mexico and remain a Mexican citizen.

The Immigration and Naturalization Service is now engaged in a unilateral operation seeking to achieve this desirable result. Under that system the bracero is inspected, reports concerning him are screened, and if he is found acceptable and satisfactory in all respects, including from the security standpoint, he receives a laminated identification card I–100. This is issued to him with the hope that he will again be selected by his Government the following year for agricultural work in the United States.

Recent reports have been received that in one locality a group of aliens on a farm endeavored to foment unrest among the braceros employed there. None of the suspected subversive aliens in this group was in possession of the laminated identification card. Similar instances have occurred in the past. It is obvious that the protection to the United States which the identification card provides against entries of such aliens, who have infiltrated the bracero program for ulterior or sinister purposes, is essential in the interest of national security.

The Department of State informed me just a few days ago that nonquota visas issued to Mexican nationals will increase this year by 693 percent above the 1946 to 1952 level. This means that we will admit seven times as many Mexican immigrants as we admitted in any single year before the present immigration law became effective.

In 1 single workday, our consuls in Mexico are issuing a peak of 324 visas. This simply means that if our consuls in Mexico work 8 hours a day—allowing a few minutes for a coffee break or a chat with the staff—they are issuing in Mexico 1 immigration visa every minute. However, they are also busy issuing visas to Mexican visitors, and in the last fiscal year they were doing that at the rate of 76,870 visas per year, plus approximately the same number of border-crossing cards, and plus 367,461 cards to Mexican agricultural workers coming to this country.

It would take too long and it would be too tedious to burden you with more figures, but as you may readily visualize, the increase in the number of entries from Mexico—lawful entries only, mind you—reflect a truly vertiginous rise. A graphic chart which the Department of State sent to my office the other day depicts immigration from Mexico in an almost vertically rising line.

What I have not seen as yet is a graphic chart which could reflect in a similarly rising line a like increase in our school facilities, available job opportunities, housing, and four-lane highways.

THE EISENHOWER PROPOSAL

Now, despite all the facts which I have just presented to you, we find President Eisenhower coming before the Congress and recommending, in a message dated February 8, 1956, that the volume of annual immigration intake be considerably increased, possibly trebled.

First, President Eisenhower proposed that we accept the census of 1950 as a new basis for the allocation of annual quotas. That proposal if enacted into law, would by itself mean that our present annual quota of 154,657 immigrants would be increased to 220,000 annually.

Second, in addition to recommending an increase in the total annual quota, President Eisenhower recommends that quota numbers not used by countries to which they are originally allocated, would be made available for use elsewhere. This proposal, if enacted into law, would mean that at all times, all of the annual quota will be actually used although right now, due to the fact that Great Britain, Ireland, Germany, Switzerland, Sweden, Belgium, and a few other countries do not provide a sufficient number of immigrants, there is seldom more than 60 percent of the total quota used in any single fiscal year.

Third, the President recommends that we wipe out the so-called mortgage imposed on about a dozen immigration quotas for the purpose of deducting from the annual arrivals a prorated number of displaced persons already admitted to this country. This would have a net effect of adding about 8,000 immigrants annually.

Fourth, the President does not recommend any change in the present very liberal provisions under which immigrants are admitted outside of the quota.

If we add these figures together, we see that the President's proposal will have the net effect of increasing our present annual immigration intake by well over 100 percent, and this estimate does not take into consideration the possibility of a further increase in the nonquota immigration from Mexico. If we consider this, too, it is obvious that what President Eisenhower is really advocating is a trebling of our annual immigration. Mr. Brownell, the Attorney General, admitted it in his testimony before a subcommittee of the Senate Committee on the Judiciary.

There is another consideration involved in President Eisenhower's proposals. If we heed his advice regarding the change of the census base and if we continue to follow the same course of action after the census of 1960 is taken and again after the census of 1970, I believe that it would be entirely safe to assume that by, say 1980, we will have much difficulty making ourselves understood in the English language in some parts of this country.

The distribution of immigrants in the United States represents a growing problem. According to a report prepared at the request of the great statesman who is now the Governor of the State of New York, 33 percent of all immigrants entering under the 1953 law remain in New York and according to other reports, as many as 75 percent of all aliens in this country reside in 9 States out of the 48. When the Immigration and Naturalization Service reviewed the postcards received in 1955, under the alien address reports program, they found that all but 20 percent of the resident aliens live in the following States in this order: New York, California, Texas, Illinois, Michigan, New Jersey, Massachusetts, Pennsylvania, Ohio.

Do not overlook, please, that the most recent figures released by the Department of Labor place—with the exception of California and Texas—all the areas affected with the highest figures of unemployed in exactly those States.

SOME FOOD FOR THOUGHT

Is it wise to permit at the present time the entry of well over half a million immigrants annually? I do not believe that it would be advisable to embark upon such a venture without having first a good look at both the domestic and the international ramifications of such a decision.

The United States is today the richest country in the world. Our standards of living are undoubtedly the highest in the world with the possible exception of but one country—and that one, Switzerland, is a country practicing the most restrictive immigration policy in the entire world.

With the population growth on the rampage all over the world and with the ensuing lowering of standards of living in the overcrowded countries of Europe and Asia, in the absence of any sustained effort on the part of most countries to have their food production increased and also their industrial capacity, the favorable conditions prevailing in our country have upon the hungry and unemployed masses the effect of a magnet placed near a heap of steel shavings.

Obviously, millions and millions of people are attracted by American prosperity and the opportunities which it offers. It is unfair to blame anyone for wanting to come to our shores, but is it wise to create in this country a problem of unassimilable surplus population on top of the problems created by our fast rising birth rate? Is it wise to bring in more people before we arrange our economy so as to take care of the present 3 million average additional citizens born in this country every year? I have no doubt that the United States has ceased to be what international migration experts call an area of resettlement.

Of course, we can afford to extend our hospitality to a sizable number of victims of totalitarian persecution. We can well live up to our tradition of opening the doors of the land of the free to people who love freedom and want to remain free. Many of those have already joined forces with us in our struggle for survival which we are waging against the cunning attack of a godless conspiracy. Many more want to come to our shores in their quest for asylum. We shall welcome them, although we would expect other free nations to do likewise, and we would expect that they stop insisting that we take once again an unproportionate share of political refugees.

It is also true that we can afford to permit immigrant families to be united and to bring their closest relatives. The present immigration law has been written with that thought ever present in the minds of its authors.

But—we must resist with courage and determination the attempt to convert this country into a disorganized, multilingual, overcrowded dumping ground for the unwanted rejects of the rulers of those countries who selfishly refuse, or neglect, to cope with the problem of their own fast growing population. We must tell those governments that after having spent approximately $50 billion of our taxpayers' hard-earned money to rehabilitate their lands, we would expect them to provide employment and food, to provide improved farmland and modernized industry for their own people instead of conveniently, yes, brutally, seeking to simply "get rid" of them and "send them to America."

Overcrowded and impoverished, torn apart internally by conflicting ideological concepts of uprooted immigrants swarming across our sea and land borders in excessive numbers, the United States could not maintain its present position in the world. The United States will be unable to stay strong, to remain the bulwark of liberty, the standard bearer of the free world and humanity's last reservoir of spiritual and material strength able to repel the onslaught of the atomic age Huns. We must resist the invasion in our own interest as well as in the interest of those who need our assistance.

This Nation cannot afford to play the immigration numbers game. The stakes are too high.

Effort To Admit Communist China to the United Nations

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 5, 1956

Mr. MARTIN of Pennsylvania. Mr. President, Col. Stanley K. Hornbeck has written very interestingly, in the National Bulletin of the Military Order of the World Wars, on the subject of Red China Does Not Qualify; and the United States Should Say "No."

This is an article which should be read by all Americans, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

One of the major aims of the Communist world today is to effect admission of Communist China to the United Nations. The move to achieve that aim is being given momentum both within the United Nations and outside of that organization.

Among those engaged in this campaign there are strange affiliations. Along with the Communists, many people who are opposed to communism raise their voices and exert themselves in support of the contention that, Communist China being a fact, the government which controls it should be accorded seats in the United Nations.

Many of these people look to the United Nations as an organization—in fact the organization—through which world peace and collective security are to be achieved. They seem not to realize that the aims and methods of Communist China are utterly inconsistent with the purposes, the character and the composition of the United Nations as set forth in its charter. China is an "original" (a founder) member of the United Nations. China's National Government has seats in the United Nations. Communist China does not qualify as a peace loving state or as a state inclined to "accept the obligations contained in the charter" and "able and willing to carry out these obligations." Communist China has in fact made war on the United Nations in Korea (and has been declared by the United Nations to be an aggressor). Admission of Communist China to the United Nations would cotravene both the spirit of the charter and the letter of several of the express provisions of that constitutional document. It would be detrimental to the good name, the interests and the capabilities of the United Nations. It would increase the prestige and capabilities of the Communist empire and would diminish those of the free world.

The people and the Government of the United States should oppose all this with all the vigor and by every means at our disposal.

Fundamental in the making and the activities of our Nation and State have been, first, belief in the reality of a body of natural, moral or divinely ordained law, and second, a practical application of principles evolved and expounded in the precepts of Christian doctrine. We believe in human freedom and in government by and under law. Thanks to many favorable factors, the United States has become a great power. Thanks—or no thanks—to developments in world affairs, there have devolved upon it great responsibilities. Because of its emphasis on the right of men and nations to be free, and because of its possession of material and moral strength, other free peoples and peoples seeking to be free look to it today for honest leadership in the cause of freedom. To give such leadership, we, our people and our Government must—first, last and always—be true to our American heritage of concepts and principles, and to the commitments which we ourselves have made.

American policymakers have declared over and over, and not alone during the present administration, that the United States will judge other countries and governments by their deeds rather than by their words. American public opinion endorses that declaration. As one judges, however, so is one judged. The world will judge the United States by its performance in relation to all of its commitments, formal and informal, multilateral, bilateral, and unilateral. One such commitment, unilateral, is that which was made when, in 1947, President Truman declared: "I believe it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or outside pressures." Another, bilateral, is that which was made in and by the mutual defense treaty concluded by the present administration a year ago with Free China (i. e., the Republic of China). And we have many other such, including our commitment as a member of the United Nations.

An assent by our Government to admission of Communist China to the United Nations would be a betrayal of our principles and a dishonoring of our commitments.

Our delegation in the United Nations has found and will find many other nations lined up against us on this issue. The United States cannot insist that other states subscribe to its principles or they that live, think, and act as it would wish. In many instances it has to tolerate conduct of which it thoroughly disapproves. It can, however, oppose, and it is under no compulsion to give assent to such. It should refuse to give even a tacit assent to violation by the United Nations of provisions of its own charter. It should not dodge the issue by preserving silence or by abstention from voting.

No matter by what process it might be effected, or with what guaranties, recognition by the United States of China's Central Peoples Government (i. e., the Government of Communist China) either in or out of the United Nations, while that Government persists in attitudes and practices utterly unlawful and utterly hostile to us and to the free world, would compromise the United States in the eyes of all people—even those who urge that we take that step and those who think they would profit from our taking it.

As matters now stand in world affairs, continuance of our recognition and support of China's National Government is in line with American commitments, with the overall purposes of American policy, and with our efforts on behalf of peace, security, freedom, and justice. It serves a broad moral purpose and particular political and strategic purposes. It signifies to all concerned that the United States is truly committed to the policy of supporting free peoples who are resisting attempted subjugation and that we can be counted on to honor our commitments.

In the quest for ways and means by which to promote the cause of peace, the question of keeping faith is of paramount importance. In the current quest for new agreements, with its emphasis on processes of give and take, what could be sounder than an understanding at all stages and by all concerned, that the United States, while prepared to negotiate and, if need be, to bargain, with a view to making new commitments, intends to stand by its existing commitments and will withhold from any trading that it may do both those commitments and the principles which underlie them?

The Retailers' Excise Tax

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 1, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to insert in the RECORD a brief concerning the retailers' excise tax which was prepared by the Kansas Pharmaceutical Association. I am certain all Members of Congress will find the brief of vital interest.

THE RETAILERS' EXCISE TAX

THE PROBLEM

The Internal Revenue Code of 1954 and of previous years provides, and has provided, for the collection, by retailers, of certain "luxury taxes" on items sold by the retailers. Formerly the tax was at the rate of 20 percent of the price at which the item was sold, and at current writing the tax is at the rate of 10 percent.

The retailers' excise tax is required by the following enactments (1954 IRC). All section numbers are reference to the Prentice Hall edition of the Internal Revenue Code of 1954, since the official IRC is not immediately available.

Jewelry and related items

SEC. 4001. Imposition of tax: There is hereby imposed upon the following articles sold at retail a tax equivalent to 10 percent of the price for which so sold:

All articles commonly or commercially known as jewelry, whether real or imitation.

Pearls, precious and semiprecious stones, and imitations thereof.

Articles made of, or ornamented, mounted or fitted with precious metals or imitations thereof.

Watches.

Clocks.

Cases and movements for watches and clocks.

Gold, gold-plated, silver, or sterling flatware or hollow ware and silver-plated hollow ware.

Opera glasses.
Lorgenettes.
Marine glasses.
Field glasses.
Binoculars.

SEC. 4002. Definition of sale includes auctions: For the purpose of section 4001, the term "articles sold at retail" includes an article sold at retail by an auctioneer or other agent in the course of his business on behalf of (1) a person who is not engaged in the business of selling like articles, or (2) the legal representative of the estate of a decedent who was not engaged in the business of selling like articles. In the case of articles so sold, the auctioneer or other agent shall be considered the "person who sells at retail."

SEC. 4003. Exemptions: (a) Specific articles.—The tax imposed by section 4001 shall not apply to any article used for religious purposes, to surgical instruments, to watches designed especially for use by the blind, to frames or mountings for spectacles or eyeglasses, to a fountain pen, mechanical pencil, or smokers' pipe if the only parts of the pen, the pencil, or the pipe which consist of precious metals are essential parts not used for ornamental purposes, or to buttons, insignia, cap devices, chin straps, and other devices prescribed for use in connection with the uniforms of the Armed Forces of the United States.

Furs

SEC. 4011. Imposition of tax: There is hereby imposed upon the following articles sold at retail a tax equivalent to 10 percent of the price for which so sold: Articles made of fur on the hide or pelt, and articles of which such fur is the component material of chief value, but only if such value is more than three times the value of the next most valuable component material.

Toilet preparations

SEC. 4021. Imposition of tax: There is hereby imposed upon the articles sold at retail a tax equivalent to 10 percent of the price for which so sold: Perfume, essences, extracts, toilet waters, cosmetics, petroleum jellies, hair oils, pomades, hair dressings, hair restoratives, hair dyes, aromatic cachous, toilet powders.

Any other similar substance, article, or preparation, by whatsoever name known or distinguished; any of the above which are used or applied or intended to be used or applied for toilet purposes.

SEC. 4022. Exemptions: (a) Items for babies: The tax imposed by section 4021 shall not apply to lotion, oil, powder, or other articles intended to be used or applied only in the care of babies.

(b) Barber shops and beauty parlors: For the purposes of section 4021, the sale of any article described in such section to any person operating a barber shop, beauty parlor, or similar establishment for use in the operation thereof, or for resale, shall not be considered as a sale at retail. The resale of such article at retail by such person shall be subject to the provisions of section 4021.

(c) Miniature samples: For the purposes of section 4021, the sale of miniature samples of any article described in such section for demonstration use only to a house-to-house salesman by the manufacturer or distributor, shall not be considered as a sale at retail. The resale of such sample at retail by such house-to-house salesman shall be subject to the provisions of section 4021.

Luggage, handbags, etc.

SEC. 4031. Imposition of tax: There is hereby imposed upon the following articles sold at retail (including in each case fittings or accessories therefor sold on or in connection with the sale thereof) a tax equivalent to 10 percent of the price for which so sold: Trunks, valises, traveling bags, suitcases, satchels overnight bags, hat boxes for use by travelers, beach bags, bathing suit bags, brief cases made of leather or imitation leather, salesmen's sample and display cases, purses, handbags, pocketbooks, wallets, billfolds, cards, pass and key cases, toilet cases, other cases, bags, and kits (without regard to size, shape, construction, or material from which made) for use in carrying toilet articles or articles of wearing apparel.

Special provisions applicable to retailers tax

SEC. 4051. Definition of price: In determining, for the purposes of this chapter, the price for which an article is sold, there shall be included any charge for coverings and containers of whatever nature, and any charge incident to placing the article in condition packed ready for shipment, but there shall be excluded the amount of tax imposed by this chapter, whether or not stated as a separate charge. A transportation, delivery, insurance, installation, or other charge (not required by the foregoing sentence to be included) shall be excluded from the price only if the amount thereof is established to the satisfaction of the Secretary or his delegate, in accordance with the regulations. There shall also be excluded, if stated as a separate charge, the amount of any retail sales tax imposed by any State or Territory or political subdivision of the foregoing, or the District of Columbia, whether the liability for such tax is imposed on the vendor or the vendee.

SEC. 4052. Lease considered sale: For the purposes of this chapter, the lease of an article shall be considered the sale of such article.

SEC. 4053. Computation of tax on installment sales, etc.: In the case of (1) a lease, (2) a contract for the sale of an article wherein it is provided that the price shall be paid by installments and title to the article sold does not pass until a future date notwithstanding partial payment by installments, (3) a conditional sale, or (4) a chattel mortgage arrangement wherein it is provided there shall be paid upon each payment with respect to the article tht portion of he total tax which is proportionate to the portion of the total amount to be paid represented by such payment.

The above quoted sections of the Internal Revenue Code therefore require shopkeepers, merchants and druggists to collect from retail purchases an additional percentage (10 percent at present), return the same and remit such tax to the various collectors of internal revenue at regular intervals. The law seems so inoffensive and simple; the application of the law, however, presents innumerable problems, both as to the operations of the retailers and as to the enforcement thereof by the local Internal Revenue Agents and Deputy Collectors.

ADMINISTRATION OF THE RETAILERS' EXCISE TAX

A. The merchant: The law states that the retailer shall collect 10 percent of the sale price and remit same to the Internal Revenue. This would, indeed, be simple if the entire stock of the merchant consisted of taxable items or if the store were a small, slow-moving, one-man operation. However, this is not the case.

In almost every instance the merchant, who is required to collect and remit the tax, handles hundreds of nontaxable items, and the taxable items constitute a very small part of his stock and inventory. This is particularly true in the case of the druggist and pharmacist; this is also true in the case of grocery stores, supermarkets, hardware stores, and general mercantile stores. For nearly all of these merchants the "luxury" taxed items constitute, to a great extent, a mere service to the community in which they are located and the actual profit from the sale of these items, over and above expenses of the store's operations, would in all likelihood, be relatively small. However, as to each of them, the public expects them to carry these items for their convenience and if they are not so carried the public frequently is vocally indignant.

The druggist and pharmacist, in serving his public, therefore feels that he must carry these items and, like the average American citizen, he tries the best he can to collect the tax as he understands it and honestly to remit and turn over to the Internal Revenue his collections.

In order to do his duty as a patriotic and loyal American citizen he attempts to instruct his clerks and employees, many of whom are high school and college students working part time in order to receive their educations, concerning the intricacies of the retailers' excise tax. He inquires of the local representatives of the Internal Revenue Service about the items upon which he must collect the tax. The information he receives is very inadequate since he is informed by the Internal Revenue Service that the local office has no list of such items. He is told that he must use his own judgment and, in effect, he is told to "do the best you can." With this meager information he attemps to explain to his employees that they must collect a 10 percent tax on "toilet preparations" and that they must collect a 10 percent tax on "any other similar substance, articles or preparation by whatsoever name known or distinguished" and upon any of the named items "which are used or applied or intended to be used or applied for toilet preparation." We are certain that such instructions make a lot of sense to an 18-year-old youngster working his or her way through junior college.

The same situation prevails when the druggist attempts to instruct his employees concerning the collection of the tax on luggage, and handbags, and billfolds, and other named items. We are certain that it is very clear to the employees as to exactly what they must do when the druggist instructs them that they must collect 10 percent tax on "other cases, bags, and kits (without regard to size, shape, construction, or material from which made) for use in carrying toilet articles or articles of wearing apparel."

If, however, the druggist also handles jewelry he must instruct his employees concerning the collection of the tax on jewelry and he must warn them not to collect the tax on a "fountain pen, mechanical pencil, or smoker's pipe if the only part of the pen, pencil, or the pipe which consist of precious metals are essential parts not used for ornamental purposes."

With these instructions, which are so clear to us and to the druggist and the pharmacist, the employees are prepared to do their loyal duty to their employer and to the Internal Revenue Service and, undoubtedly, they dutifully collect the tax. It is obvious, therefore, that there is no reason why this tax cannot be collected accurately since it is a clear and understandable tax and since the employees undoubtedly have nothing other to do than to meet their customers, ascertain their wants, watch out for pilfering, arrange their stocks and attempt to keep both their employer and the general public in a reasonably happy mood in addition to worrying and thinking about their individual problems, all of this being done under the normal pressures of modern business life.

In addition to the straight 10 percent which the employer and the employees must collect, the Internal Revenue, in an effort to be fair, has provided for different taxes on certain items such as hair-care kits or home-permanent kits. A tax is collected on the sale of these items, but it is not on the basis of 10 percent of the sales price. There has developed and is developing a lengthy list of items on which the tax is computed not at the rate of 10 percent but on some sort of a formula which has been arrived at by conferences between the manufacturer and the Internal Revenue Service in Washington. By way of comment the local Internal Revenue offices are unable to advise the druggist or pharmacist concerning these items and again the merchant must "do the best he can."

As the tax is collected on each item the problem of accounting arises. In some instances where the merchant has invested in a fairly inexpensive cash register costing only $400 or $500, he finds that no provision has been made to ring up his sales price, State sales tax, and Federal excise tax on the cash register. Upon inquiry he finds he can purchase such a machine for around $2,000. However, since he has no such a machine, he attempts to provide 2 boxes beside each cash register, 1 for the State sales tax and the other for the Federal excise tax. At the end of the day, around 11 p. m. or midnight, it is simple to arrive at the amount of tax due to both the State and the Federal Governments; that is, it is simple if he and his employees have remembered in each instance to put the actual sales price in the cash register, the excise tax in the excise-tax box, and the sales tax in the sales-tax box without getting confused while attempting to wait on and satisfy several impatient customers at the same time.

Assuming, however, he and his employees are perfect throughout the year, he still has the problem of proving that he has dutifully collected and remitted his tax to the revenue agent, who is ordered to check his records and to determine whether or not the merchant

has truly collected and remitted. And the merchant had better be ready to prove himself or stand ready to suffer severe penalties, including fraud charges and the penitentiary, not to mention civil assessments, penalties, and interest.

The small merchant possibly would be in a better position to prove his honesty if he employed certified public accountants to make monthly audits of his stock and to attempt to balance the stock purchases, the inventory on his shelves, and the sales made during the month with the amount of taxes that he has in his excise-tax box. This obviously would require a time-consuming inventory count and audit, and the accountant's services, in most instances, are worth, and they are paid, from $7.50 to $10 per hour. There is no way to estimate the amount of time which would be required in an average drugstore or pharmacy to arrive at an accurate accounting of the excise tax. The merchant, obviously, would pay more for accounting services than the tax he would be required to pay. He would, however, be in a better position to protect himself from fraud charges and civil liabilities and penalties.

The more fortunate drugstore operator who has invested approximately $2,000 in his cash register can at least show the revenue agent his tapes from his cash register and can show that tax was collected, and he can even show that he remitted to the internal revenue the total amount of tax which the tape indicates he owes. Even this merchant, however, cannot show that his employees have collected and rung up the tax due on each item sold through his store. To do this he, too, must show a balance of taxable stock purchased, taxable stock sold, and taxable stock still on his shelves. If he fails to do so, he, too, faces the possibility of criminal charges and civil penalties and tax liabilities, and it is entirely possible that his clerks and employees, in order to be right, have charged the purchasing public a 10-percent excise tax on every item in their particular department, irrespective of whether or not a tax was due on many of the items.

It should be obvious, from a practical standpoint, that this tax is awkward and expensive for the retailer who is required to collect it or face the penalties for his failure to do so. The retailer is almost entirely at the mercy of his employees since he, not they, is the responsible party and must suffer the consequences of their activities.

At the same time the druggist or pharmacist is well aware that many grocery stores, barber shops, beauty parlors, and sundry mercantile stores do not collect the tax; many of these are honestly unaware of the fact that they are required to do so by Federal law. The druggist and pharmacist, however, are aware of this law and always have been aware of it, and have attempted to cooperate with the provisions which apply to them to the best of their ability and knowledge, since all druggists and pharmacists have been advised of their responsibility by the various State and national pharmaceutical associations. The others, who are not druggists or pharmacists, in many instances do not belong to any such organizations which provide them with this type of information.

To this scrivener it is indeed amazing that the American pharmacist and druggist can keep his shop or store open from 6:30 or 7:30 a. m. until 11 p. m. or midnight, be on his feet all day long accurately making up his prescriptions, some of which mean the difference between life and death to his customers, oversee his employees, wait on his drug item customers, advise and consult with medical practitioners concerning dosages of drugs for patients, order his stocks, interview salespeople and wholesalers, keep up his payrolls, withhold his withholding tax and his F. I. C. A., accurately report and pay his unemployment insurance contributions, accurately report and pay his State sales tax, pay his mortgages, pay his State income tax, pay his Federal income tax, including his quarterly estimates, and remember at the same time to collect his luxury tax on this item and not to collect it on another, although both are similar in nature, and accurately report and pay in accordance with the provisions of the Internal Revenue Code, all while he is attempting to be a good local citizen and to pay all of his local taxes and at the same time attempt to lead what might appear to be a normal life for an American man or woman. Yes, it is amazing, but that is what he must do or suffer criminal charges and/or civil penalties and fines.

B. The Internal Revenue agent: For the Internal Revenue agent it would appear, on the first reading of the law, that it would be simple to ascertain the tax which the merchant should have collected and should have remitted to the Collector of Internal Revenue. However, in the performance of his duties the honest and sincere agent inevitably encounters situations which he cannot resolve either in favor of the Government or in favor of the merchant without considerable misgivings. If he arrives at the tax due from the expensive cash register tape, he still will not be satisfied in his own mind that a tax was collected on each and every sale. Undoubtedly without checking further he could well have a feeling or suspicion that all of the tax was not "rung up", if collected, or a feeling or suspicion that the tax was neither collected nor "rung up". The only way he can possibly arrive at a conclusion which would meet the demands of his own honesty and of his duty to the Government would be for him to make a complete audit of the period in question, usually that of 1 year.

If he decides to make the audit, or if he is instructed to do so, he presents himself to the druggest and requests the list of taxable items of merchandise which has been purchased from cosmetic houses, jewelry houses, and other wholesalers or jobbers. He is handed an enormous stack of tickets and invoices and the agent then retires to attempt to determine how many taxable items were purchased by the merchant during the year in question.

No sooner does the agent start going through the invoices than he finds that he does not know what items should be taxed or the amount of tax which should be collected on each and every item since the invoices only show the cost to the druggist and not the sales price. The agent does not have a list of the taxable items so, rather shamefacedly, he must ask the druggist which of the items are taxable. He then must attempt to determine the sales price which the druggist received on the sale of each and every item. Then the agent must attempt to arrive at how much taxable stock the druggist had on his shelves at the beginning of the period and how much taxable stock he had on his shelves at the end of the period. Then the agent must attempt to guess what the sales of the druggist were during the period in question, after deducting breakage, pilferage, and unsalable merchandise which was returned to the wholesaler or jobber together with other unsalable items that were merely thrown into the trash heap or given to the Salvation Army.

This scrivener has been informed that in one particular instance one revenue agent quit because of the impossibility of the job and another agent was discharged for his failure or inability to do the job which he felt should be done. Still another agent wound up a report and audit on one druggist, with apologies, since he was approaching his retirement age and dared not fail to make some sort of a report.

A typical example of an audit in the handwriting of an agent is photostated and attached hereto. This computation is a masterpiece of guesswork and gross inaccuracies but the merchant involved, nonetheless, was required to and did pay the additional tax and penalty indicated thereon. He was informed by a local collector that if he did not, his bank account, stock, and store would be seized. He was also informed that he could not afford to contest the assessment since it would cost him more in accounting fees and attorney's fees than the amount involved. Needless to say, he paid.

Another druggist who happened to have an opening inventory and a closing inventory and who happened to have the expensive type of cash register informed the agents, who called at his store, of those facts and they cleared him without any audit. In either instance the agent or agents could not be remotely certain as to whether the tax was underpaid or overpaid. They were, however, fairly certain that they would have had considerable difficulty with the druggist who had the opening inventory, the closing inventory and the cash-register tape. This druggist also employed accountants at considerable expense to "keep him in the clear." In the first example shown, which is represented by the agent's work sheet, the agent, in order to arrive at other years, merely multiplied the tax by 3 in order to cover a 3-year period. No audit of the other years was made and he merely guessed that the tax would have been the same if he had made an audit. This agent had to do something and the druggist paid with the theoretical gun in the ribs.

As an afterthought, the druggist recomputed some of the figures taken off the invoices by the agent. The druggist found that the agent, in his confusion and through his lack of knowledge, had charged the druggist with refunds or credits given the druggist by the wholesaler and had assessed the druggist with a tax computed thereon as though such refunds or credits had been purchases.

These instances are cited, not to embarrass any revenue agent or deputy collector and not to embarrass the Internal Revenue Service. It is generally considered that most of the representatives from the Service are honest and sincere and attempt to do a conscientious job to the best of their ability.

These instances are emphatically cited, however, to point out the awkwardness and unfairness of this method of collecting the luxury taxes. It appears rather unfair to impose this type of burden upon certain of our small merchants, the numbers of whom are few when considering all retail outlets. It is also unfair to our revenue agents and deputy collectors who have the duty imposed upon them to enforce the collection of these taxes. Both the druggist and the agent or deputy collector consider this type of taxation an impractical nuisance and both admit that the Government is not receiving the revenue to which it should be entitled. Both admit that the amount of taxes which the Government is collecting unnecessarily leaves behind it considerable ill temper, displeasure, and amazement over the fact that our American Government cannot devise a more workable system for the collection of the luxury taxes. Instinctively both the merchants involved and the deputy collector or agents realize that the hardship and confusion arising out of the collection and administration of the retail sales excise tax is disproportionate to the amount of tax collected. They conclude that the tax should be abolished or that a more efficient means of collection and administration should be devised.

CONCLUSION

This brief is not dedicated to the proposition that the luxury taxes should be abolished. We make no contention here that there is no need for the proceeds from the

collections of the luxury taxes, since such determination should be advanced and made only by those who have a more intimate knowledge of the needs of our Government. We do not represent that we have such knowledge and we must assume that there is a need for taxes on items which have been found by act of Congress to be luxuries. Neither do we propose to argue that this item is a luxury and that item is not, even though we feel that perhaps a tax on a salesman's sample and display case, which is a necessary part of the salesman's equipment with which he earns his living, is as fair as a tax on a beach bag. It also appears rather incongruous to find that Sen-Sen is taxable but Life Savers and gum are not. We only mention these examples to point out the fact that the present retail sales excise tax is full of inequities and confusion.

It is our purpose, however, to suggest and to respectfully urge a change in the administration and method of collection of this very awkward tax. The reasons which we cite to support our position have been covered above to some extent. Obviously, the above discussion does not attempt to cover all of the inequitable situations which have and will arise under the present law.

We propose and suggest that the excise tax on luxury items be removed from the retailers and that they be placed on the manufacturer at the manufacturer's level. This suggestion, of course, is not new since by far the greater amount of taxable items and taxes collected thereon are received from the proceeds of a tax upon the sale of articles and items by the manufacturer, producer or importer, at the manufacturer's level.

We find that a tax at the manufacturer's, producer's, and importer's level is collected on the following items: Automobiles; tires and tubes; gasoline; lubricating oil; household type refrigerators; household type quick freezers; combinations of household refrigerators and deep freeze units; air conditioning units; electric, gas, or oil water heaters; electric flatirons; electric air heaters (not including furnaces); electric immersion heaters; electric blankets, sheets, and spreads; electric, gas, or oil appliances of the type used for cooking, warming, or keeping warm food or beverages for consumption on the premises; electric mixers, whippers, and juicers; electric belt-driven fans; electric exhaust blowers; electric or gas clothes driers; electric door chimes; electric dehumidifiers; electric dishwashers; electric floor polishers and waxers; electric food choppers and grinders; electric hedge trimmers; electric ice cream freezers; electric mangles; electric pants pressers; electric garbage disposal units; power lawn mowers; badminton nets, rackets and racket frames (measuring 22 inches overall or more in length), racket string, shuttlecocks, and standards; billiard and pool tables (measuring 45 inches overall or more in length) and balls and cues for such tables; bowling balls and pins; clay pigeons and traps for throwing clay pigeons; cricket balls and bats; croquet balls and mallets; curling stones; deck tennis rings, nets and posts; fishing rods, creels, reels, and artificial lures, baits and flies; computing machines; coin counters; dictographs; dictating machines; dictating machine, record shaving machines; duplicating machines; embossing machines; envelope opening machines; erasing machines; folding machines; fanfold machines; fare registers and boxes; listing machines; line-a-time and similar machines; mailing machines; multigraph machines, typesetting machines and type justifying machines; numbering machines; golf bags (measuring 26 inches or more in length) balls and clubs (measuring 30 inches or more in length); lacrosse balls and sticks; polo balls and mallets; skis, ski poles, snowshoes, and snow toboggans and sleds (measuring mor than 60 inches overall in length); squash balls, rackets, and racket frames (measuring 22 inches overall or more in length), and racket string; table tennis tables, balls, net, and paddles; tennis balls, nets, rackets, and frames (measuring 22 inches overall or more in length) and racket string; radio receiving sets; automobile radio receiving sets; television receiving sets; automobile television receiving sets; phonographs; combinations of any of the foregoing; radio and television components; phonograph records; cameras; camera lens; unexposed photographic film in rolls (including motion picture film); electric motion or still picture projectors of the household type; pistols; revolvers; firearms (other than pistols and revolvers); shells, and cartridges; adding machines; addressing machines; autographic registers; bank proof machines; billing machines; cigarette, cigar, and pipe lighters; mechanical pencils, fountain pens and ball point pens; bookkeeping machines; calculating machines; card punch machines; cash registers; change making machines; check writing, signing, canceling, perforating, cutting, and dating machines and other check protector machine devices; portable paper fastening machines; payroll machines; pencil sharpeners; postal permit mailing machines; punch card machines; sorting machines; stencil cutting machines; shorthand writing machines; sealing machines; tabulating machines; ticket counting machines; ticket issuing machines; typewriters; transcribing machines; time recording devices; combinations of any of the foregoing.

And possibly last, but definitely not the least, there is a tax of 2 cents per thousand matches upon the sale by the manufacturer, producer, and importer of matches, except that in the case of fancy wooden matches the tax is 5½ cents per thousand matches.

It may be contended that there would be great difficulty in collecting luxury tax through the manufacturer of hair oils and hairdressings and toilet powders. It might be contended that there would be great difficulty in collecting luxury tax on watches and clocks. However, we cannot believe that there would be any more difficulty in collecting a tax on such luxury items than there is at the present time in collecting a tax on an electric blanket, at the manufacturer's level. It is obvious that the matter of policing the collection and reporting of taxes at the maufacturer's, producer's, or importer's level would place a much smaller burden on our Internal Revenue Service. At the present time our Kansas collector of internal revenue has in excess of 800 druggists and pharmacists establishments to police. We do not attempt to calculate the number of hardware stores, beauty parlors, barbershops, and sundries stores which should be policed and audited by our Kansas Internal Revenue Service. It is obvious that to do so conscientiously would be an impossible job requiring a tremendous number of internal revenue deputy collectors and agents.

On the other hand a tax at the level of the manufacturer, producer, or importer is now being fairly well policed by the Internal Revenue Service throughout the country. We do not feel that a substitution of the present retailer's excise tax for a tax at the manufacturer's level would increase the number of agents but it would, in all likelihood, decrease the present staffs or, at least, it would free these overworked men for more important duties.

We do not contend that our motives in urging a change of the tax from the retailer's level to the manufacturer's level is done solely for the benefit of the Internal Revenue Service, even though this would be a natural result. Quite the contrary.

We do contend that the retailer, the public, the revenue agents and collectors, and the United States Treasury all would benefit. To the druggist and pharmacist for whom we speak it would result in a reduction of the hours which he must spend in collecting the tax, accounting for the tax, in instructing his employees as to the intricacies of the code, and in the number of hours which he would spend with deputy collectors going over his accounts and in attempting to convince the collector of his honesty. It would eliminate one of the many nuisance duties that the pharmacist and druggist must perform both for the Federal Government and the State government. It would eliminate the hours of worry which he spends in wondering whether or not his employees have collected and accounted for the tax. It would eliminate the hours of worry and nervous tension he undergoes during an audit by a deputy collector or while awaiting a threatened audit.

As has been stated it most cetainly would reduce the number of hours and days that a deputy collector would spend if he could check and audit the source of supply instead of being required to check the prints of distribution. It most certainly would result in a greater amount of tax being paid to the United States Treasury, if the tax were collected from businesses and institutions large enough to bear the burden and cost of the extra accounting which would be required.

It might be argued that a 10-percent tax at the manufacturer's level would not produce sufficient revenue. If all the taxes due now were being collected under the present system, possibly this would be true. Assuming, however, that all of the taxes now are being collected under the present system, the same total net tax could be collected at the manufacturer's level, if, in most instances the tax were increased to a 5 percent at the manufacturer's level, making the tax 15 percent. For example, let us assume that a present item is sold by the manufacturer at $1 to the retailer, that the retailer sells the item at retail for a 50-percent markup or a total sales price of $1.50. Under the present law, to the sales price of $1.50, the retailer adds a 10-percent tax of 15 cents, making the total cost to the customer the sum of $1.65. Instead of this system, let us apply a 15-percent tax at the manufacturer's level. Fifteen percent of the $1 cost to the retailer would be 15 cents and the retailer would compute his profit of the 50-percent markup on the actual cost of the item, that is, $1, making a total of $1.50 which, with the 15-cent tax item added thereto, would result in a total cost to the customer of $1.65.

It might be argued by the opponents of our suggestion that it would be unworkable and that the public would suffer, but we offer in rebuttal to such argument, the evidence which is borne out by the present list of items which currently are taxed at the manufacturer's level. This list, as is obvious, is many, many times as long as the list of items taxable at the retail sales level. The method of taxation at the manufacturer's level has worked with a much greater efficiency than the method of taxation at the retail sales level and a greater percentage of the tax due has been received by our Treasury.

We, therefore, most sincerely urge that the retailers' excise taxes be repealed and that a manufacturers' tax be enacted without delay.

It would be a most welcome relief to thousands of harassed retailers throughout the country. It would result in increased sales by manufacturers since many items are not being handled by the retailers on account of the nuisance of the retailers' excise tax on those items.

Respectfully submitted.

KANSAS PHARMACEUTICAL ASSOCIATION.

Schedule of computation of retailers' excise tax, 1953

Total purchases, 1953×1		$104,353.41
Total taxable purchases (converted to 20 percent basis)		$3,086.42
Percentage of purchases of taxable items, 2.95766		
Opening inventory, all items		$23,412.40
Closing inventory, all items		26,359.72
Increase in inventory		2,947.32
Increase in inventory taxable items ($2,947.32×0.295766)		87.14
Purchases of taxable items		3,086.42
Less increase in inventory		87.14
Cost of sales taxable items		2,999.28
Less retail sales made at cost		299.00
Cost of taxable sales made at retail		2,700.28
Markup, 50 percent (based on 33⅓-percent discount) factor		1.50
Selling price of sales at retail price		4,050.28
Less pilferage and breakage, 20 percent		81.01
Net sales at retail price		3,969.27
Plus retail sales at cost		299.00
Total sales, taxable items		4,268.27
Tax due on sales to which tax is added, 75 percent ($4,268.27×0.75×0.20)		640.24
Tax due on sales made, tax included in price, 25 percent ($4,268.27×0.25×0.16⅔)		177.84
Total tax due, 1953		818.08
Tax previously assessed		387.35
Additional tax due for 1953		430.73
Cost of sales, 1953 ($104,353.41—$2,947.32)	$101,406.09	
Ratio of total tax due to cost of sales	818.08	
Computation of tax, other years:		
	Tax due	
1952:		
Cost of sales ($110,775.85×0.00806736)	$893.51	
Tax paid	352.57	
Additional tax due		540.94
	Tax due	
1953:		
Cost of sales ($102,406.37×0.00806736)	$826.15	
Tax paid	246.40	
Additional tax due		579.75
Total additional tax due, 3 years		1,551.42
Penalty (ad valorem penalty applies to the amount of deficiency or additional tax which is applicable to the periods for which returns were filed delinquent)		53.35
Total additional tax and penalty		1,604.77

Statement Re Encouraging the Construction of Passenger Ships

EXTENSION OF REMARKS
OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. BONNER. Mr. Speaker, when we last met on Thursday, May 31, I introduced a bill (H. R. 11554) to amend certain provisions of title XI of the Merchant Marine Act, 1936, as amended, to facilitate private financing of passenger vessels in the interest of national defense, and for other purposes.

The Merchant Marine Act of 1936, and all major maritime legislation subsequently enacted, has recognized the vital importance of passenger ships in the American merchant marine.

We have been repeatedly advised by our highest defense authorities that, because of its potential for troop transport, the national security demands an adequate modern passenger ship component in our active oceangoing merchant fleet. Such ships are expensive, complicated, and take a long time to create by either new construction or conversion. Yet, they are needed immediately in the event of emergency.

Only three new passenger ships have found their way into the privately owned merchant marine since World War II. Fortunately, today, with an upsurge of consciousness of the necessity for replacement of our merchant fleet, we are assured of the new construction of several modern passenger vessels as replacements in existing services. Even so, the introduction of these fine, more advanced and larger vessels will still leave us seriously deficient in the passenger carrying category.

I have just been advised, within the past 2 weeks, that from the standpoint of initial mobilization requirements, the Joint Chiefs of Staff estimate that there is, today, a deficiency of 15 large passenger vessels in the active merchant marine.

This situation prevails at a time when passenger travel by ship is increasing, but in the important passenger trade between the United States and the tourist mecca of northern Europe, American passenger ships in 1954 were carrying only about 18 percent of the waterborne traffic. Today the percentage is undoubtedly even less, in view of the new foreign ships which have entered the service.

There are only two American flag passenger ships in the North Atlantic service and one of them is becoming obsolete. Forty-one foreign passenger vessels are now taking the bulk of this business.

With higher incomes creating an expanding market for homes, durable goods, and many items once considered luxuries or nonessentials, have come new opportunities and new demands for travel. Within the past week I have read that 2 million Americans will visit Europe this year. And rehabilitation of European economies is making it possible for our friends across the Atlantic to visit the United States in increasing numbers. Yet this country, providing most of the travelers, has no transatlantic passenger ships to compete for the growing one-class tourist trade.

The Merchant Marine Act of 1936 provided for direct Government financing to aid in building up our merchant fleet on essential trade routes. Within the past several years this authority has been implemented by additional authority aimed at providing for private financing of merchant marine operations. It was the goal of the sponsors of this legislation that the Government be relieved of the necessity for requesting appropriations for the direct financing of necessary shipping projects and that the greatest possible participation therein be made available and distributed to private interests. This law, which is title XI of the Merchant Marine Act of 1936, provides for 90 percent Government guaranty of ship mortgages on 75 percent of the cost of a new vessel. However, all testimony on the legislation bore out the unlikelihood of securing the use of private investment funds in new ventures involving special-purpose vessels unless the Government would insure 100 percent, of the loan covered by the mortgage. Accordingly, as an incentive for needed new construction the law provides for full Government mortgage insurance on loans for the construction of special-purpose vessels. Whatever the reasons may be the term "special purpose" has been construed as not covering passenger vessels, despite their limited purpose and despite their special adaptability for immediate military use in time of emergency.

The bill I have introduced, H. R. 11554, would place passenger vessels in a position to receive the same Government guaranty of privately financed construction as other special-purpose vessels. Existing provision for 100 percent Government financing will still be available as an alternative to the attraction of private capital.

It is too soon to tell just how successful Government-insured private financing is in comparison with direct Government financing which has been responsible for the present strength of our merchant marine. One thing has become clear, however. That is that the extremely specialized nature of passenger ships, the long period of construction, and their great cost is clearly a deterrent to attracting the use of private funds without the maximum of Government guaranty.

There is at least one well-qualified operator ready, able, and willing to initiate a new type of passenger service on an essential trade route in the North Atlantic not now served by an American-flag operator, whose plans may be frustrated if the Government is unable to participate in the venture to the extent of insuring his mortgage over the long pull, and for reasons of policy is unwilling to provide direct Government mortgage aid.

There are indications of other passenger services which could be expanded or

initiated under private financing methods if the special problems of the passenger trades were recognized by according the same degree of Government insurance as is provided in the case of other special-purpose vessels.

Despite the present demands for transocean passenger accommodations, it is unreasonable to expect that private investment sources should make available its funds in great amount for long periods of time and also assume a heavy portion of unsecured risk on a national asset such as a modern version of the great steamship *United States*. The development of atomic energy and other advanced ideas in ship propulsion and design make understandable the reluctance of private interests, such as insurance companies, to enter upon extensive long-term commitments in an industry which has traditionally been one of feast and famine.

Yet the Government's stake and its need is both real and immediate as long as deficiencies in our mobilization base exist.

Unions Need Restrictions

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HIESTAND. Mr. Speaker, the San Francisco Examiner of May 24, 1956, contains a very pertinent article on political contributions by E. F. Tompkins. It hits the mark so well I am submitting it for the RECORD under unanimous consent previously granted:

POLITICAL CONTRIBUTIONS: UNIONS NEED RESTRICTIONS

David Dubinsky—one of the best respected and also one of the most political minded trades union leaders in the country—has made a vigorous defense of laborism in politics.

Dubinsky was speaking for his own organization, the International Ladies Garment Workers Union. That union is itself in the forefront of political activity. It is one of the proprietors of New York's socialistic Liberal Party. Its position in election campaigns is neither nonpartisan nor bipartisan. At its Atlantic City convention, Dubinsky indicated that this year the union—and its captive party—would again support Democrats.

Dubinsky asserted a reason for speaking out. He said he was answering critics of trade union politics who have been "complaining about labor's efforts."

The efforts lie mainly in donating union funds to the campaign chests of favored candidates. The obvious motive is to influence or dictate the performances of successful aspirants to public office. This is an antique custom, once practiced by corrupt corporations, and is one of the techniques for buying an election. The practice, if long tolerated, can only destroy the integrity of legislatures and debase the morale of elected public executives.

Dubinsky's union will continue the practice. Its convention approved a drive to induce, or compel?, the entire membership to make voluntary contributions through a political action coterie for use in the 1956 campaigns. At $1 a head, the ILGWU with 445,000 members, could raise nearly half a million dollars. Moreover, the ILGWU is a component of the AFL–CIO. If the Meany-Reuther organization collaborates fully, the potential is $15 million for 1 year.

The implied threat in this situation daunts many politicians. They assert that a labor vote accompanies every prospective labor dollar, a fallacy that was dramatically blasted by the late Senator Taft in 1950. For the actual truth is that labor union bosses dispense labor union campaign funds but not the ballots of labor union members.

Dubinsky defended his thesis sophistically. He said labor contributions to the 1956 campaign funds would be tiny alongside the huge amounts put up by wealthy corporation officers and stockholders. The facts are (1) the laws forbid corporations to make political contributions from their treasuries, although labor union bosses do this very thing; (2) corporations do not assess their stockholders for political purposes, as labor bosses asses their union members.

The inevitable consequence of Dubinskyism in politics will surely, and rightly, be the extension of the Corrupt Practices Acts by Congress and the State legislatures to cover unions and labor bosses, as well as corporations.

Legislators' Jobs Are No Snaps

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HARVEY. Mr. Speaker, in a State famous for journalistic enterprise, few columns of news comment and interpretation are more popular than "The Hoosier Day," authored by the veteran newsman, Frank A. White. Mr. White's article have won front page assignment as a regular feature in dozens of daily and weekly papers of Indiana. I am happy to insert in the RECORD one of his efforts which will be especially appreciated by most of us on Capitol Hill. It follows:

Many Hoosiers, including schoolchildren, are surprised on visiting Washington to find so few Senators or House Members in the Chambers at any given session.

The last time we visited Congress, fewer than 15 Senators and not more than one-fourth of the House Members were on the floor. About the only time the 96 Senators and 435 Congressmen are in the Chambers is when there is a rollcall vote.

Such a circumstance increases a popular conception that a Congressman has a snap job, excitement of living in Washington, with good pay at the same time. What are the facts?

The load of responsibility placed on a Member of Congress is tremendous. A Congressman's duties have been described as an iceberg, with most of it under the surface. Actual presence in House and Senate sessions are but one of the many things a Congressman has to do.

A Congressman receives a salary hardly comparable to an executive of our smaller industries. Training and ability would be equal. A Congressman must maintain a residence in Washington and a home in his district. He has to travel back and forth, stand expenses of campaigning and election. Much of the glitter of Washington vanishes in the sultry summer months when the place is overrun with millions of visitors.

COMMITTEE MEETINGS TAKE MUCH OF TIME

The Commerce-Clearing House, a national reporting service, pointed out that at the end of the first 15 months of the 83d Congress there had been introduced 8,679 bills in the House. Already the present session has seen 10,330 bills introduced in the House and 3,547 in the Senate. A flock of joint resolutions have been introduced and there have been 234 rollcall votes in the House and Senate this time. The President has approved 460 public bills.

Business before Congress grows in volume and complexity. All Members serve on committees.

Not infrequently, a single committee of House or Senate of Congress will have over 100 bills before it. Hearings must be conducted. A Congressman cannot just draw from his wisdom to vote the will of his people. An immense amount of research must be done for a Congressman to do a conscientious job in voting. Our Congressmen, regardless of their political affiliation, have a tough job and deserve our understanding and support.

To Promote Civilian Aviation

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an address delivered by Cadet 1st Lt. Joyce Kerley, of Birmingham, Mich., from my congressional district.

The language and construction of the address are especially well done. Miss Kerley deserves a great deal of credit for this demonstration of her ability and finesse in expressing her views on this most worthwhile subject; namely, To Promote Civilian Aviation. Miss Kerleys' address follows:

ADDRESS OF CADET 1ST LT. JOYCE KERLEY, OF BIRMINGHAM, MICH., BEFORE THE 1956 CIVIL AIR PATROL CONGRESSIONAL DINNER, HOTEL STATLER, WASHINGTON, D. C., MAY 24, 1956

"To promote civilian aviation" that's the purpose of the Civil Air Patrol. "To promote civilian aviation." It doesn't take very long to say, does it? Yet those few words cover a lot of territory.

First of all, aviation needs leaders. The cadet program operated on the premise that each and every person has certain qualities of leadership which can be developed. Good leaders aren't just born. They're made through proper training. The idea really works. When I first joined CAP, I was very shy and terrified of people. Last year I was awarded what to me is the highest leadership position a cadet can earn. I was made commanding officer of my squadron and CAP had accomplished a pretty big project in leadership.

Aviation needs people who can adjust to new situations, people who will feel at home with a growing field in a changing world. As a cadet, I have taken party in displays, State fairs, model airplane contests, newspapers, squadron missions, SARCAP's and a dozen other activities. Certainly this is diversification, but aviation needs more. It needs people who can get along with each other, not only those who share the same background and customs, but everybody working toward a better world.

To increase understanding among countries each year CAP sponsors an international exchange program. Our squadron has always been among those chosen to entertain the cadets from other countries who visit Michigan and it's surprising how little we really know about people in other countries and how much we learn from each exchange.

I saw a similar principle working at cadet summer encampments. There cadets of all races, religions, and social standings are throw together and told "You've got to drill together, study together, and live together for 2 weeks. Get busy. You have 1 hour to clean this barracks for a white glove inspection." In situations like this it doesn't matter whether the girl helping you clean dust from the rafters has a different color skin, or goes to a different church. I know she's a cadet and she's working for the same things I am; that's all that really matters. Wouldn't it be wonderful if all the prejudice and misunderstanding in the world could be ironed out and erased as easily as it is in the cadet program?

Last, but not least, aviation needs people who are interested in—aviation.

Before I'd been in CAP very long I decided if I was going to stay in the cadet program I'd better learn all about airplanes. All about airplanes. What an impossible dream. As I started my studies in a squadron engineering class it appeared that there was a lot more to airplanes than I'd anticipated. Each little bolt, every rivet is designed specially to do a special job. The whole thing is assembled, and lo and behold—it flies. (Sometimes it flies.) The fields of aviation are so entwined that I was soon delving into navigation, meteorology, ATC and a dozen other things, I'd never known existed. I even elected a course in physics at school. Before long I passed my proficiency test, which among other things, enables me to join the Air Force as an airman third-class and I'd even won a flight scholarship which paid for my first 10 hours of dual flight time, and introduced me to a whole new world in aviation.

The more I participated in CAP activities the more I realize that we are living in an air age.

At the very least being a Civil Air Patrol cadet has increased the knowledge and understanding I need to participate in this age. If I read in a newspaper that a jet airplane is installed with an afterburner, I know what they are talking about. If my brother writes home from camp that his DI made him march 20 miles in an afternoon, I know what it feels like; I've marched 20 miles. If I hear stories about strange people across the ocean, I know they're not really strange, but people like me.

CAP has given me much more than material things. It has given me confidence in myself, a better understanding of the world and the people who live in it. It has taught me the miracle of flight and provided me the thrill of meeting new people, seeing new places, and doing new things. In a sense it has made me a pilot, a traveler, a debater and a journalist. To sum it all up, CAP has made me a better person, and therefore, a better citizen.

The Late William T. Granahan

SPEECH
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. RODINO. Mr. Speaker, it is with a deep feeling of loss and a great sorrow that I join with my colleagues in saying a word as a last farewell in memory of our departed good friend, WILLIAM T. GRANAHAN.

"BILL," as he was affectionately known to many of us, will never walk this way again—yet once he walked among us a smiling and kindly man who radiated by his mere presence a warmth of affection and friendliness.

"BILL" was a good man—for he was dedicated to all the things that are good. And, he was a fine man because he did those things which are fine.

Though he was small of physical stature, BILL was possessed of a greatness because of his dedication to his fellowman. As a servant of the people he knew well the meaning of service and he gave of himself unselfishly and devotedly to his country's good. He shall always be remembered for these things and those whom he has left behind shall be grateful to his name.

I know that as a friend and colleague, I shall miss him and his kind face in these cherished Halls. His friends and those whom he served will also miss him. But, there is consolation in the thought that his good works will carry on.

To his family and to those dearly beloved to BILL, I extend my sincerest and deepest sympathy in this hour of their great loss.

Civil Servant From 18th Texas District Awarded for Outstanding Service

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. ROGERS of Texas. Mr. Speaker, today the Department of Agriculture is presenting awards for superior service to those employees of the Department who have made outstanding achievements in their roles as public servants. It is with a great measure of pride that I am able to announce that one of these awards is being given to Miss Nettie Sims, of Clarendon, Tex., in the 18th District of Texas, an employee in the county office of the Farmers Home Administration in Texas.

Miss Sims is being presented with the United States Department of Agriculture superior service award for "her unusual efficiency and dependability in conducting the duties of a county office clerk so that borrowers are given prompt, courteous service."

Mr. Speaker, in paying tribute to Miss Sims I would like to pay tribute to that great army of hardworking, conscientious, able Federal employees who carry on the work of Government and deal directly with the people. I have always been very firm in the belief that the people are entitled to every proper consideration and courtesy when doing business with any Government office and, for the most part, employees in the Federal service strive to give that kind of service. I am glad that the highest award for such service goes to one of these workers in the district I have the honor to represent in the Congress. I congratulate Miss Sims in being thus recognized, and I am sure her achievement will be a great inspiration to all Federal employees to strive ever to do a better job for the people whom it is their duty to serve.

Nicholas H. Dosker

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. ROBSION of Kentucky. Mr. Speaker, at the recent annual conference of housing and redevelopment officials held at Cleveland resolutions were passed honoring a public housing official of Louisville, Ky., Nicholas H. Dosker.

Because of the outstanding service rendered in the field of public housing by Mr. Dosker, I believe it is appropriate to include those resolutions in this RECORD, as follows:

Whereas persistence is one of man's most admirable traits when properly directed; and

Whereas too often the innermost thoughts we have about our friends are never expressed in words until the shock of their passing recalls them all at once; and

Whereas the members of NAHRO could never be more sincerely appreciative and genuinely grateful for the ceaseless efforts of a fellow member and friend in their behalf; and

Whereas that friend, Nicholas H. Dosker, administrator of the Louisville Municipal Housing Commission and chairman of NAHRO's retirement plan committee, has devoted about 15 years of untiring efforts and hard work to obtaining and assuring practical retirement benefits for the employees of local housing authorities; and

Whereas that untiring effort and hard work began with the laborious detailed collection of actuarial data that was a prerequisite for achievement of the goal he had set; and

Whereas local authorities, because of their peculiar governmental structure, were not able to place their employees under civil service or other local plans making provision for retirement; and therefore, needed to discover a group-type of plan that could offer realistic retirement benefits; and the search for which, Nicholas Dosker almost singlehandedly undertook by investigating plans of innumerable insurance companies throughout the United States; and

Whereas largely through Nicholas Dosker's efforts, a retirement plan for employees of local housing authorities was developed with the National Health and Welfare Association; and

Whereas Nicholas Dosker also was instrumental in the development of an official policy of the Federal Public Housing Authority regarding retirement benefits for local housing authority employees, which he thereafter promulgated among local authorities in getting many of them started on such plans; and

Whereas at the stage where the social-security law finally was amended to provide that local housing authority employees could qualify for social security, the wording of that amendment was such that local housing authority employees under a private retirement plan were disqualified from being covered under social security; and so

Nicholas Dosker promptly took the matter up in the Federal courts; and

Whereas although the court action, which was in process for several years, was not successful, the persistent and faithful devotion to the goal Nicholas Dosker had set for himself and his professional organization paid off last year when the social-security law was again amended, this time making it possible for local housing authority employees to be fully covered by both social security and private retirement plans: Now, therefore, be it

Resolved, That the membership of the National Association of Housing and Redevelopment Officials in convention assembled do hereby record their individual and collective thanks to Nicholas H. Dosker, fellow member and friend, for the security he has brought into their lives through his persistent and ultimately successful battle to make it possible for each local housing authority in the country to have a realistic and forward-looking retirement plan for its employees; and be it further

Resolved, That copies of this resolution be sent to Nicholas H. Dosker and to the board of commissioners of the Louisville Municipal Housing Commission.

Revitalization of the United States Air Force

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. E. L. Schimmel, vice president of Bell & Howell Co., Chicago, Ill., who offers challenging suggestions for the revitalization of the United States Air Force:

BELL & HOWELL CO.,
Chicago, May 17, 1956.

The Honorable MARGUERITE STITT CHURCH,
House Office Building,
Washington, D. C.

MY DEAR MRS. CHURCH: I take the liberty to draw your attention to an article published in the May issue of the Reader's Digest, which I am enclosing.

As a businessman, it strikes me how inadequate and antiquated is the policy of the United States Air Force in connection with its wages. If we in our company would train young executives or technicians for more responsible jobs but deny them any appreciable incentive, such as increase in pay, fringe benefits, bonus and promotion, both in title and responsibility, we simply would not be able to keep them.

In my opinion, the United States Air Force could do one of several things:

1. Review its nomenclature of ranks and add special ranks for technicians with adequate pay comparable to industry. The wages could be somewhat lower in view of the security offered by the United States Air Force.

2. Make promotion from one rank to the next dependent on merit—not seniority nor time lapse between one promotion and the other.

3. Reduce expenses by cutting out the waste of time and men now part of the schedules of the United States Air Force.

4. Hire a management expert for each of the airbases to streamline the administration and cut out waste.

I am by no means familiar with the problem, but I feel that the renewal of 80 percent of the technicians in the Air Force every 4 years by greenhorns who have to learn everything from scratch would certainly bankrupt any commercial organization and cannot fail to do the same thing to the United States Air Force.

Our defense in the air is vital to the United States and we should take it seriously.

Sincerely yours,

E. L. SCHIMMEL,
Vice President.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. POLK. Mr. Speaker, the foreign aid bill, H. R. 11356, authorizing an appropriation of $3,563,475,000 for foreign aid during the next fiscal year is unacceptable to me and I believe it should be recommitted to the Committee on Foreign Affairs for further study and further reduction in the total amount of authorizations. I am aware that the committee has recommended $1,109,000,000 less than was requested by President Eisenhower, and for this I wish to congratulate and commend them. Nevertheless, I believe the whole question of foreign aid should be further reexamined and reconsidered in the light of present-day world situations and conditions. Changing world conditions make it obvious that policies and practices that may have been justified in 1948 or 1950, or even later, are no longer sound arguments for foreign aid in 1957.

It is a well-known fact that today many of the so-called NATO countries are presently enjoying very substantial economic prosperity.

Most of these countries have declined to comply with their military commitments for the defense of Western Europe. Under these conditions why should we continue foreign military assistance to those countries who are no longer willing to spend money for their own protection? Greece, Turkey, and Iran have continued to show an interest in national defense and probably deserve the $170 million defense support allotted to them.

How an anyone defend the proposition to give Tito, of Yugoslavia, $30 million for defense support? Only last Saturday Tito is reported to have said in Moscow, "Never again will our two countries be divided." He was speaking of Russia and Yugoslavia; and all prudent and realistic appraisals of Tito should convince us that in time of trouble between the United States and Russia he would most certainly be found at the side of and in support of communism. How can our State Department and the administration be so naive as to believe the United States will ever receive any benefit from the military assistance scheduled for Yugoslavia next year? Should war arise between the United States and Russia, this military assistance most certainly would be used against us.

I am in favor of an appropriation to finance the export and sale for foreign currencies of surplus agricultural commodities or products. In view of the very generous authorizations for other purposes carried in this bill, I question the advisability of the povision that not less than $250 million shall be used for this purpose in 1957. For the present fiscal year the amount specified for this purpose was not less than $300 million. Why not make it $300 million for 1957?

I have noted the statement in the committee report No. 2213, beginning near the top of page 9, on the question of the status-of-forces treaty and agreements. The report states:

> The committee considered an amendment to this bill which would require the President to terminate any assistance being furnished under the Mutual Security Act to a nation which exercises criminal jurisdiction over United States service personnel stationed within its boundaries by reason of any treaty or international agreement. This proposal was not accepted by the committee.

I would be remiss in my duty as a Representative if I did not express my resentment against the fact that American boys are being tried in foreign courts and imprisoned in foreign jails. I am firmly convinced this should not be permitted. I believe the Committee on Foreign Affairs and the House of Representatives and the United States Senate should forthwith take suitable action to insure that the United States shall exercise exclusive criminal and civil jurisdiction over all American military personnel stationed in foreign countries. The President has full authority now to take such action. In view of the failure of the administration to act in this disgraceful situation, it is the duty of Congress to act, and to act now.

Increasing Significance of Antarctica

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 18, 1956

Mr. PATTERSON. Mr. Speaker, today world attention is focused on the continent of Antarctica where vast economic potentialities occur along with strategic military factors that are increasing in significance day by day.

According to competent authorities, the very first men to set foot on Antarctica were from the State of Connecticut. Dr. Edouard A. Stackpole, of Mystic, Conn., has made an important study of certain aspects of Antarctica. In this connection, I would like to here insert in the RECORD an article written by Miss E. A. Kendall that appeared in the Washington Evening Star in its edition of March 10, 1956:

COLD FACTS

It is most appropriate on the eve of the return of those valiant Americans who have

been in the Antarctic since November that a small but authentic book has appeared, telling of the first landing upon the Antarctic continent by human beings, these men being New England sealers (1820–21). It has never before been known exactly what men first landed on the shores of the huge southern continent, several countries having made such claim. So at last, through discovery of old logbooks, we have the story.

Dr. Edouard A. Stackpole, of Mystic, Conn., has set out in his study, The Huron and the Huntress, some well-documented statements as to first sightings and first landing. New England Captains Palmer, Burdick and Davis hold honors for having first seen the continent proper, and unless some authentic logs are turned up in contradiction, their place on this pedestal will be maintained.

And now, more than ever before, the importance of the Antarctic to our economic, military and psychological well-being is realized. There are questions from the grass roots—questions as to why the United States has never claimed the vast and rich Antarctic areas she has discovered and explored. Formal claims and occupation of our territories are the only logical actions.

E. A. KENDALL.

The Great Freedom Crusade

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. DODD. Mr. Speaker, once again I wish to speak about the great freedom crusade.

I want to ask my colleagues to urge their constituents to join in this movement which has as its objective the release of 13 innocent American citizens who are being held in prison by the Chinese Communists.

I wish each one of my colleagues would make a public statement urging the residents of his district to write a simple airmail letter to Mao Tse-tung in Peiping, China.

In this letter the writer should identify himself by name and by occupation and express his desire to have these Americans released and remind Mao Tse-tung that the Chinese Communist representative in Geneva promised to release these Americans many months ago.

Already thousands of such letters have been mailed to Peiping, China, and those who know the Chinese Communists best tell us that if millions of Americans write similar letters to Mao Tse-tung, there is a strong probability that he will react to this great moral influence.

Certainly it is not much to ask that American citizens take a few minutes and buy an airmail stamp for such a worthwhile purpose.

I have already asked the Members of Congress who have constituents in prison in China to cooperate in this worthwhile endeavor, and I have also asked Governor Ribicoff, of Connecticut, all the State officials of Connecticut, and the entire Connecticut delegation in Congress to urge people to participate in this great freedom crusade.

GOP Dent in Labor Vote Detected

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SPRINGER. Mr. Speaker, there has been, in recent years, a belief that labor has largely been in the Democrat camp.

It has always been my belief that labor, or any other economic group, largely follows the party in which it believes its best interests lie. The unusual prosperity which we have been going through outside the purely agricultural areas has brought its benefits to labor as well as other economic groups. It has not failed to have its effect on the average laboring man who expects to vote in 1956.

Two very penetrating analyses of the labor vote have been made by William H. Stringer, chief, Washington news bureau, the Christian Science Monitor, and another distinguished columnist, Roscoe Drummond.

Mr. Speaker, I append herewith an article from the Christian Science Monitor of a few days ago and another from the Washington Post of Saturday, June 2, 1956:

[From the Christian Science Monitor]

GOP DENT IN LABOR VOTE DETECTED

(By William H. Stringer)

WASHINGTON.—The hard work which a big, powerfully built, friendly gentleman in the Eisenhower Cabinet has put into his contacts with organized labor, is paying off.

The latest Gallup poll, surprisingly, shows that organized labor—as of today and as indicated by a sampling from coast to coast—actually prefers President Eisenhower over Adlai E. Stevenson.

This is sorry news for the Democrats, and it must be qualified by all sorts of provisos. Insofar as it does represent a steady shift in labor sentiment, the man who receives an important share of the credit is Secretary of Labor James P. Mitchell.

CONTINUING EFFORT

Secretary Mitchell is one Republican who has always believed that the Eisenhower administration could make a vigorous dent in the Democratic allegiance of organized labor. And in an indefatigable, painstaking manner, by promoting favorable legislation, by personal contact, and by speaking to labor conventions here, there, and everywhere he has made that dent.

Of course the other Republican who has helped along this unusual shift is President Eisenhower. Riding above the political storms, nonpartisan in his personal preferences, he has attracted labor strength right along.

In 1952 it is estimated that President Eisenhower received a substantial vote from union members, some 39 percent. Now, in a Gallup "trial heat" against Mr. Stevenson, Mr. Eisenhower received a majority of the votes—56 percent.

CAMPAIGN FUND

A polling of union leaders would of course show a very different sentiment. Only the other day David Dubinsky, president of the International Ladies Garment Workers Union estimated that the united labor movement (AFL–CIO) would raise a maximum of $3 million in voluntary political contributions for the 1956 presidential and congressional elections. And the presumption is that most of this money would go to support Democratic candidates.

But not all of the rank and file followed its leadership in 1952, and possibly a still larger percentage of the rank and file may not follow the leadership in 1956.

It should be noted that some members of the Eisenhower camp do not rate precisely as high with labor as do the President and Secretary Mitchell. The Amalgamated Clothing Workers of America, in their recent Washington convention, charged that Secretary of State John Foster Dulles was "unfit" to continue in his high office. Labor has had similarly uncomplimentary things to say about Secretary of Commerce Sinclair Weeks.

And as a man who does not shun contact with, and plain speaking to, labor, James P. Carey, president of the International Union of Electrical Workers, said recently of him:

"Whatever else the American labor movement may thing of the Republican administration it will and does acknowledge that the Secretary of Labor is both a fighter and an extremely courageous man."

SPUR FOR HARRIMAN

By espousing minimum wage legislation, equal pay bills, and safety proposals and by personally opposing State enacted right-to-work laws, Secretary Mitchell has worked to cultivate labor's friendship. Recently he criticized Congress for failing to act on labor legislation proposed by the administration.

A number of other labor leaders have praised Secretary Mitchell for his course of conduct. He is at least as effective with labor leaders as was the original Eisenhower appointee to the labor post, Martin P. Durkin who was himself a union official.

The Gallup poll sampling will be contested by Democratic spokesmen as insufficiently broad. Simultaneously it will set in motion vigorous efforts by labor leadership to return the straying membership to traditional allegiances.

And the fact that Mr. Eisenhower triumphed over Mr. Stevenson will not be lost on the supporters of less "moderate" Democratic presidential candidates, particularly Governor Averell Harriman of New York, who is an original New Dealer enjoying strong support in the labor movement. It will be argued that only Governor Harriman can hold organized labor and the Nation's minority groups for the Democrats in November.

But for the moment the Gallup results remain a testimony to President Eisenhower's remarkable popularity with just about every group in the country and to Secretry Mitchell's able and assiduous courting of organized labor.

Surveys show that in 1936 the GOP won only 20 percent of the labor vote and in 1948 only 26 percent. Which makes today's sampling, showing a 56 percent allegiance to Mr. Eisenhower, all the more impressive.

[From the Washington Post of June 2, 1956]

UNION LABOR AND IKE

(By Roscoe Drummond)

MITCHELL'S POPULARITY LINKED TO GALLUP POLL RESULT

Secretary of Labor James P. Mitchell is one Republican official who has never accepted the idea that the Eisenhower administration could not win the confidence and support of American labor.

From the earliest days of the New Deal through the 1952 election, union leadership has been overwhelmingly pro-Democratic. But this hasn't deterred Secretary Mitchell from taking continuously the case and the cause of the Eisenhower administration to

labor meetings—wherever 2 or 3, or 2,000 or 3,000 workers were gathered together. This drew from James B. Carey, president of the International Union of Electrical Workers, the admiring though perhaps slightly wry remarks: "He has—in an almost literal sense—been bearding the lion of organized labor in its own den. He has been addressing union conventions from one end of the country to another."

And then Carey added: "Whatever else the American labor movement may think of the present Republican administration, it will—and does—acknowledge that the United States Secretary of Labor is both a fighter and an extremely courageous man."

What does the American labor movement think of the Eisenhower administration? Nearly all the complimentary remarks which the labor leaders have been making about Secretary Mitchell have rested on the open or implied reservation: "Don't construe this to mean that we are pro-Eisenhower." But even if union leadership is not pro-Eisenhower, what about the rank and file of union labor?

The answer, according to the latest Gallup poll, is that for the first time in at least a quarter century, a clear majority of union members indicate that they intend to vote Republican this fall.

This wasn't a survey based on the vague question of whether on balance you like or dislike the way the President is doing his job. This was a direct, explicit question of how you're going to vote, and if your choice was between Eisenhower or Stevenson, whom would you support.

This poll shows that organized labor would vote 56 percent for Eisenhower and 44 percent for Stevenson. The Republican percentage of the majority party vote among union members in the last five presidential elections is as follows:

	Percent Republican
1936 election	20
1940 election	28
1944 election	28
1948 election	26
1952 election	39
Today's survey	56

This is a development which, I suspect, will surprise many labor leaders. Mitchell would be the first to say that it is not due primarily to his personal popularity with organized labor. But Mitchell's high credentials with the labor movement has given him a friendly and receptive labor audience in expounding the Department of Labor and other Eisenhower policies.

Along with James Carey and Walter Reuther, numerous other labor leaders, including David Dubinsky, president of the International Ladies Garment Workers Union; Emil Rieve, chairman of the board of the Textile Workers Union; and Jacob Potofsky, president of the Amalgamated Clothing Workers, have been hailing Mitchell as an outstanding friend of the workingman. Potofsky put labor's view of Mitchell in these words: "He is the most enlightened man in public service today. He is a sincere friend of labor. I should like to say that whoever is elected President in November, I hope that Mitchell will be continued as Secretary of Labor for another 4 years."

I am not arguing that labor ought or ought not be pro-Eisenhower. The political sentiment which Dr. Gallup now finds among union members may change as the election draws nearer. But it is fair to say that Secretary Mitchell couldn't prove himself to be a friend of labor, as the leaders all agree, unless President Eisenhower wanted him to be a friend of labor and created conditions which enabled him to be.

Let me cite one revealing fact. The total budget of the Department of Labor in 1950 was $223 million. The Department of Labor budget this year is $468 million. The purpose: To enable Secretary Mitchell to do his job better for labor.

Testimony of Cotton Industry Before Committee on Agriculture

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. BOGGS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following testimony of the cotton industry before the Committee on Agriculture:

Mr. GATHINGS. Mr. J. P. Henican, Jr., New Orleans Cotton Exchange.

Mr. HENICAN. May I ask Mr. Knell, who is representing the New York Cotton Exchange, to come to the witness stand with me? We will give testimony for both exchanges.

Mr. GATHINGS. Both of you want to make a statement?

Mr. HENICAN. We will talk together.

STATEMENT OF J. P. HENICAN, JR., NEW ORLEANS COTTON EXCHANGE, NEW ORLEANS, LA., ACCOMPANIED BY FRANK J. KNELL, NEW YORK COTTON EXCHANGE, NEW YORK, N. Y.

Mr. HENICAN. We of the cotton exchanges very definitely believe that this amendment will broaden the futures markets, and therefore make them more serviceable to the respective commodity industries.

Mr. Chairman, whereas I am president of the New Orleans Cotton Exchange, I am also a partner of Merrill, Lynch, Pierce, Fenner & Beane, so I am interested in all commodities, other than cotton, but, having been born in New Orleans, my No. 1 commodity is cotton. I think I know it best.

As said, I am interested in all commodities, as a partner of Merrill, Lynch, Pierce, Fenner & Beane, so what I believe of cotton I believe also of the other markets.

We think that this amendment is going to broaden the volume in the markets, and therefore make them more serviceable to the various commodities industries.

Mr. GATHINGS. The exchange will handle considerably more business, sir?

Mr. HENICAN. Yes; we think so, sir.

Mr. GATHINGS. What percentage increase in cotton will you anticipate?

Mr. HENICAN. That is very difficult to say, because I think it will depend entirely on the conditions in the market place at any particular time.

On that score, Mr. Chairman, there are 2 or 3 gentlemen here who represent cotton mills, and who would use the market under these conditions.

Mr. Emmett from Dan River Mills is here, Mr. Kirby from Dominion Textile Co., Canada, is here in the room, too, at the present time. Also, Mr. Robinson is here. He is the mill man representing the ACMI, American Cotton Manufacturers Institute.

Those people are vitally interested in the amendment, and make use of the markets on the basis suggested by the amendment. I think they are far more capable of intimately explaining to you how they will make use of these markets under the amendments.

I think it is very difficult to explain to you now how the volume will be increased, because it will depend on the conditions in the market place at any particular time.

Last October there was a 2-cent break in the cotton market. That break caused prices to go below the Government loan level. I think under those conditions we could say these people would have been in the futures market had they been allowed to do so. If this present amendment had been in effect, and if they had not been limited to a maximum of 30,000 bales of speculation.

I do not entirely agree with what Mr. Kauffman said about only a relatively small amount of organizations would be interested in this amendment because as the director of the commodity activities of Merrill Lynch, I receive frequent calls from people in the butter and egg business, for example, and in other commodities, that are investigating the possibility of pricing their commodities on an extended period.

They are not familiar with the present CEA Act and want to discuss it. When it is pointed out to them they are limited to certain positions in the market, they then do not go into the positions. I do not think that those kind of people consult with the CEA. Therefore, the CEA does not come in contact with those inquiries.

Mr. GATHINGS. We would like to hear from these individuals who are interested in this amendment. But we do not want to preclude either of you gentlemen from proceeding with your statement.

Mr. HENICAN. That is why we asked them to come, so you could hear them, as to the practical use of the proposed amendment.

Mr. GATHINGS. Do you want to ask any questions?

Mr. ABERNETHY. I would like to ask one question. How many cotton mills in the United States have a normal annual consumption of 30,000 bales or more?

Mr. HENICAN. Mr. ABERNETHY, frankly, I do not know the correct answer to that question. But as a rank guess, I would say in excess of 100 mills consumed or processed an excess of 30,000 bales annually.

Mr. ABERNETHY. Well, are there any?

Mr. HENICAN. Any?

Mr. ABERNETHY. Yes.

Mr. HENICAN. Well, certainly.

Mr. ABERNETHY. Have you any idea how many?

Mr. HENICAN. I think there might be in excess of 100.

Mr. ABERNETHY. There are a lot of them?

Mr. HENICAN. Yes.

Mr. ABERNETHY. I did not think there were so many.

Mr. HENICAN. But you ask these gentlemen when you have them on the stand.

Mr. ABERNETHY. Mr. Chairman, would it be all right to put that question to the audience and see if anyone back there could give a direct answer to it?

Can anyone in the audience give us a direct answer to that question?

Mr. HENICAN. Mr. Robinson, how many cotton mills consume in excess of 30,000 bales of cotton a year?

Mr. ROBINSON. I was going to say 100 mills. That is a guess. I do not know. But there are numerous cotton mills, large enough to use 30,000 or more, that is, of bales.

Mr. ABERNETHY. Might we identify who the witness was that answered that question?

Mr. GATHINGS. Would you state your full name?

Mr. ROBINSON. Ralph S. Robinson, member of the cotton committee of the American Cotton Manufacturers Institute.

Mr. GATHINGS. Thank you.

Mr. Robinson, you are an assistant to Mr. Jackson, are you?

Mr. ABERNETHY. That is the organization with which Mr. Robert Jackson is connected?

Mr. ROBINSON. Yes, sir; that is correct.

Mr. ABERNETHY. One of my constituents, incidentally.

Mr. GATHINGS. Mr. MCINTIRE.

Mr. MCINTIRE. Mr. Henican, I was impressed with Mr. Kauffman's statement of the fact that if this bill were passed, this broadening of the trading area, that it would have to be encompassed somewhat by some

regulation in order to keep it within bounds.

You mentioned that you are in charge of some of the commodity work of Merrill Lynch, Pierce, Fenner and Beane, and that concern I am sure is known widely for its part in trading activities, and is a member of these exchanges, I am sure.

Mr. HENICAN. That is right.

Mr. MCINTIRE. Now, in representing clients who wish to trade in commodities, to what extent does a broker for a member, as Merrill Lynch, assume some responsibility in making sure that the client whom they are representing in the trading activity stays within the boundaries of the regulations laid down by CEA.

Mr. HENICAN. Mr. MCINTIRE, we do that very, very actively. In other words, as a partner of Merrill Lynch, I do not want to lose my capital and, therefore, I want to keep these positions in bounds and well margined, depending upon the credit ability of the client, or the integrity of the client, his history in the industry and so on.

And we do not want to take undue risks. So, therefore, even if it is General Motors that wants to buy unlimited number of contracts, for example, we would limit our risks. We would try to spread our risk and supervise it to that extent, very definitely so.

That is why I like to use the word that the processor or manufacturer will be allowed to buy a reasonable percentage of his year's requirements, or anticipatory requirements, a reasonable percentage.

What is that reasonable percentage? I think it will vary, depending on each individual organization. And I like to put it on a personal basis for each account, very definitely so.

Mr. MCINTIRE. Do you think that it is a moral obligation then that rests very heavily on the broker that they not permit their client to, participate in any trading activities that is in violation of the trading principles that surround that commodity on the Board?

Mr. HENICAN. Very definitely so; very definitely.

Mr. MCINTIRE. I am not acquainted with any provision of the law which perhaps penalizes that broker, but do you not think he ought to have some responsibility under the law that if he permits a client to violate the trading practices of board that should subject him to perhaps being thrown out as a client that that brokerage concern ought to bear some of that responsibility, too?

Mr. HENICAN. Very definitely, Mr. MCINTIRE, because the way I personally feel about it is that if I allow my client to violate the law the controlling exchange is coming back to me for the violation and I subject myself to suspension, expulsion, fines, and so on.

Mr. MCINTIRE. Would you have any objection, as you see this responsibility on the part of a broker, of the law providing that the broker should be suspended if they permit their client to do any such thing as that?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. You would be in accord with that?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. Thank you.

Mr. HENICAN. Mr. MCINTIRE, I am not going to allow any customer to buy an unreasonable amount, I mean to take an unreasonable market position on my books and to clear those contracts for him beyond his normal year's requirements or ability to finance, very definitely so. Merrill does not want that risk. I personally do not want that risk.

Mr. MCINTIRE. I think that is a sound position. And thank you very kindly.

Mr. ABERNETHY. Do you feel that the language recommended by the Department improves the bill?

Mr. HENICAN. Yes; in substance. I have a disagreement on the question of liquidation. I recognize the fact that there are people who will purchase large amounts, possibly, to try to manipulate prices or influence prices to their own personal benefits. And, therefore, we have to provide safeguards to regulate or supervise those type of people. There is no doubt about that.

But, nevertheless, as a broker, I do not want to be too controlled as to liquidation, for example. You see, the proposed amendment says, "provided they liquidate in accordance with the provisions laid down by the CEA," the CEA Administrator.

For example, if there is a position in my books that is in financial difficulty, I do not want to have to go to Mr. Kauffman and have him say, "You can only liquidate under certain conditions." I want to get rid of that position as fast as I possibly can, to save my capital.

Mr. ABERNETHY. Let me put it this way: I can understand your position there.

Would you say that the language proposed by the Department is reasonable?

Mr. HENICAN. Generally reasonable; yes.

Mr. ABERNETHY. But you would prefer the language of the bill?

Mr. HENICAN. No; I would not.

Mr. ABERNETHY. You would not?

Mr. HENICAN. No. I think we can go a little further than the language in bill H. R. 9333. I think we can go a little further than that for protection.

Mr. ABERNETHY. You say a little further—do you mean as far as the recommended amendment goes or even further than that?

Mr. HENICAN. No, no; than the original bill, H. R. 9333. We go further than that—than H. R. 9333—to give the CEA supervision. I recognize that the CEA must have certain supervisory authority to take care of people who do not play the game fair. I do not want to be too restricted about the restriction, because as I say, of financial difficulties that they may come into play. I do not want Mr. Kauffman to tell me how I must liquidate.

Mr. GATHINGS. Do the regulations now provide liquidation that you would be willing to work out with?

Mr. HENICAN. There are no restrictions in the present act.

Mr. GATHINGS. In the language here contained in this recommendation here would broaden the authority in the Department by using these words "that such purchases made and liquidated in conformity with such regulations as the Secretary of Agriculture may prescribe."

That is broader authority than they have today.

Mr. HENICAN. That is correct. I do not know of any restrictions that tells us how we have to liquidate under the present act.

Mr. KNELL. There are none at all.

Mr. HENICAN. None today.

Mr. ABERNETHY. But this would reach all of the act now—that amendment would; would it not?

Mr. HENICAN. I do not know. I am not an attorney. And, therefore, I do not know whether this applies to the whole act or only section "C."

Mr. HAGEN. It just applies to "C."

Mr. GATHINGS. It is an amendment to "C."

Mr. HENICAN. I would like to point out one thing.

Mr. ABERNETHY. Before you do that, may I go back and ask one question and then I will be through. I want to put to you the same question I put to Mr. Kauffman.

Is there any benefit in your opinion, directly or indirectly, for the consuming public in this legislation?

Mr. HENICAN. Yes, sir.

Mr. ABERNETHY. What is it? I am not trying to trap you.

Mr. HENICAN. No; I know that. Don't you think it might be advisable for me to forego that answer, because there are 2 or 3 men here who have the responsibility of acquiring raw materials for their factories and therefore for the public.

Mr. ABERNETHY. I am perfectly agreeable to that.

Mr. HENICAN. Therefore, they are better able—they are experts in that line—they can tell you how they may be able to make sheets and pillow cases, et cetera, cheaper—

Mr. ABERNETHY. All right.

Mr. HENICAN. They are trying to acquire raw material every day. They live with it every day. And, therefore, I think they are more capable.

There is one thing I want to comment on. There has been a certain amount of fear, I think, indicated, that these large positions in the futures market might adversely affect the price from time to time. But it is factual that any of these people can acquire unlimited amounts of cotton in the form of actual cotton or actual grain without supervision, without any supervision whatever.

I think it would be better for them, better for the general market place, if they are allowed to acquire this with the supervision. Mr. Knell and I went through 2 or 3 rather bad experiences and Mr. ABERNETHY no doubt remembers what we refer to as the Jordan year when the price for cotton went down from 38 to 26.

At one time during that period we checked with all fo the brokers to determine whether or not the liquidation had been completed, and both of us slept that night because we were confident that the liquidation in the futures market had been completed, but the following morning when we arrived, there was about 300,000 bales of futures for sale that represented hedges against spot cotton that the banks had been financing that they wanted to protect.

We had not seen that 300,000 bales. We didn't see that position in the futures market. But it was there nevertheless. I think you made that point, sir, that it can be done now in spots. It cannot be done as conveniently or as easily as buying contracts but it can be done and these big positions can be accumulated in spots today without supervision and therefore unknown and unseen.

Mr. GATHINGS. Mr. Knell, would you make your statement?

Mr. FRANK J. KNELL. There is one point that I would like to make in regard to differences between the Commodity Administration bill now proposed, and that proposed by yourself, H. R. 9333. I seem to feel that this provision that such purchases are made and liquidated in conformity with regulations as the Secretary of Agriculture may prescribe may defeat the purpose that we are aiming at.

The question of accumulating any such line of long cotton or long commodities appears to have been approached on the idea that a mill or a spinner of any type is going into the market and is going to buy 50 or 100,000 bales at one swoop. That is not what we expect at all.

Some of the gentlemen who will testify will point out that their accumulations are arrived at piecemeal as the prices come to where they believe it reasonable to accept. And in liquidation it is much the same. When the price reaches a point where they feel that it is better for them to be in an even position in futures and take the spots, they are liquidated piecemeal.

It gives them a right to develop a position and if they need to hedge. It is very, very doubtful whether any such position is ever going to be liquidated in whole. And one of the big points that we are counting on in this, by allowing a spinner to take a position of this type, if he wants them to turn to spots, he can get a thousand bales from shipper "a" and a thousand from shipper "b" all around through the smaller trade, whereas, the assumption is made here that he is going to take 100,000 bales from one man.

Well, in that case he could only take it from a very large shipper and it would

react against the small man. We hope that this proposal will protect the small shipper. And we hope that there is some middle ground that we can get to that if there must be regulations, those regulations will be clear that the mills know before they attempt to go into a position, and will not prevent them in their liquidation, because the liquidation is just as vital to them as the accumulation of the position.

Further than that, in section 4 (A) 3, you have paragraphs A and B, both of which I believe are controlled and regulated at the present time by the Commodity Exchange Administration.

This proposal as proposed in the bill would be section C and it seems that that would be on the same restriction and same control that the Commodity Exchange have today under "A" and "B."

So I wonder why the need of this last sentence at all.

Mr. GATHINGS. Mr. Knell, you or Mr. Henican, presented me with a copy of a draft I would like the other members to see, that you are submitting to someone over in the Senate for introduction.

Mr. HENICAN. That is correct.

Mr. GATHINGS. Do you have a copy of that before you?

Mr. KNELL. Mr. Henican has.

Mr. HENICAN. Yes.

Mr. GATHINGS. This is the suggested bill that was to be introduced in the Senate?

Mr. HENICAN. That is right.

Mr. GATHINGS. Did you confer with the Department officials?

Mr. HENICAN. Yes; they have copies of that.

Mr. GATHINGS. They have seen this?

Mr. HENICAN. Yes, sir.

Mr. GATHINGS. That is this draft?

Mr. HENICAN. Yes.

Mr. GATHINGS. This is quite length here. I wish you would point out the differences between the recommendation of the Department and this particular recommended draft.

Mr. HENICAN. I think that the intent is identical except that that is no provision that the Department will set up rules and regulations of how positions have to be liquidated. That is all. That is the only difference I see.

But the intent is exactly the same. The wording is maybe a little different but the intent is the same.

Mr. ABERNETHY. A casual glance at this indicates that what you are doing here, you write some regulations into the act itself. Is that right?

Mr. HENICAN. That is pretty clear.

Mr. GATHINGS. Requiring these reports. I wonder what Mr. Kauffman had to say about this. We did not discuss this with you when you were in the witness chair a while ago. I wonder what your feelings would be as to the effect of this?

Mr. KAUFFMAN. I think there will have to be some regulations obviously with respect to the operation of it. I received a copy of this draft, I presume it is the same, the one that you have, and it just occurred to us that it would be better procedure to simply have the statute set forth the general principle and then have the Department promulgate regulations after conferring with the members of the trade concerned, rather than to try to spell out all of these details in the statute itself.

So for that reason we preferred the more general provision that is suggested in the Department's report of May 7.

Mr. ABERNETHY. Assuming you are not limited to the spelling out as it appears in this draft now before us, what is your opinion as to the contents of the draft but not limiting yourself to it?

Mr. KAUFFMAN. It looks all right to me; that is my curbstone opinion.

Mr. GATHINGS. Without the word "liquidation" being used?

Mr. KAUFFMAN. No; I was assuming that there would be regulations, that the Department would be required to promulgate regulations. I think there should be general regulations respecting the liquidation as well as the acquisition.

Mr. ABERNETHY. What you have said you say is a curbstone opinion, as you described it, you have approved of this language but you do not desire to be limited to it.

Mr. HENICAN. So far as it goes.

Mr. KAUFFMAN. That is correct.

Mr. HEIMBURGER. Mr. GATHINGS, I would just like to discuss this matter of liquidation with the gentlemen for a moment because I wonder if in arriving at their position, that liquidation does not need to be controlled, or probably, should not be controlled because they are not concentrating just a little bit on cotton, and forgetting some of the other or overlooking for the moment some of the other commodities that might be included and let us think specifically of oats where, I do not know, but I would just guess that in the oats business there are probably two or three manufacturers who use, let us say, a great proportion of the oats that goes into processed foods.

If we, by enacting this amendment, give these two or three persons or corporations the right to go into the futures market and make transactions, engage in them, which are far larger than those which can be assumed by any other trader in the market on a hedging position, do you not think that they ought to have some means of regulating the disposal of those blocks of contracts?

You assume, as I do, that in the normal course of business they will liquidate those things in an orderly manner as they conduct their business. But nevertheless, sometimes people do not always operate as we think they will or should, and if they have the perfect legal right for some reason or other to dump their entire holding overnight, it could be an upsetting factor, do you not think?

Mr. HENICAN. Mr. Heimburger, I think I admitted the fact that there is going to be people that don't play the game fair and they need to be regulated. We recognize that.

At the same time, I feel they are going to be in the minority, the great minority. They will be the exceptions. That the organizations that are going to make use of this amendment, are going to be the large national organizations that have a problem in acquiring their raw material and they consequently will conduct themselves in a very ethical manner.

It is beyond my imagination or belief that people I want to handle business for will do anything that is questionable by liquidation because if they go into a position and then, let us call it dump the position, they are going to defeat the purpose, the original purpose of why they went into the position.

Mr. HEIMBURGER. That is true, but it could conceivably be to their interest at the moment to defeat the original purpose, could it not?

Mr. HENICAN. Well, it is possible, yes. I don't think it is probable.

Mr. HEIMBURGER. No, neither do I. I agree with you that it is not probable and yet I am just questioning whether you believe it would be wise to remove all authority for the CEA to regulate liquidation. Perhaps it needs to be hedged and circumscribed. I just wonder if you believe it would be wise to give this unusual right to the trader without some corresponding power in the CEA to regulate the manner in which he exercises it.

Mr. HENICAN. I think I have admitted the necessity for supervision. I think possibly as Mr. Knell pointed out, maybe it did not strike you, but we are inclined to believe that the CEA has that power today in the act. It is in the act now. Now, as a broker, the CEA visits my office about on an average of once a year and if there are any unusual positions on my records they can go back to the principals to find out what it is all about. They are doing that now. And they have the right to make them liquidate if it is a violation.

So they possibly have that power right now in the present act.

Mr. HEIMBURGER. I certainly would not argue for a duplication of authority in this if there is adequate authority now in the act. Thank you, Mr. Chairman.

Mr. HAGEN. I want to ask a question that is probably quite aside from what you are talking about at the moment. But what elements in the cotton business, for example, normally engage in dealing in the futures starting with the man that grows the cotton.

Mr. HENICAN. The man that grows the cotton, the grower, the merchant, the shipper, the mill.

Mr. HAGEN. They all engage in futures operations?

Mr. HENICAN. Yes, sir; for various reasons. And I think you could say the same thing about any other commodity.

Mr. HAGEN. Including co-ops which market cotton for their members?

Mr. HENICAN. Yes, sir; the co-ops.

Mr. HAGEN. Are we going to hear from other elemnts in the cotton business on this bill?

Mr. GATHINGS. It has been widely announced last Friday and has had broad publicity as to the meeting of this committee and we do not want to deprive anyone from the privilege of testifying.

Mr. HENICAN. There is one other statement I would like to make. I think that this amendment is important also from a tax angle, because the courts have consistently ruled that where the positions are a legitimate hedge, a future transaction is a legitimate hedge, the results therefrom are considered as ordinary income and expense. But when it is considered as a speculative transaction it is then thrown into a category of a capital transaction, a long-term or short-term gain or loss. That is a problem for the accounting angle.

I do not think that point has been stressed enough. The famous case, of course, that Mr. Kauffman mentioned is the Corn Products case and there have been two conflicting court decisions in the Corn Product case.

One court said it was a hedge and the other court said it was not a hedge. I do not think that point can be stressed too forcibly, namely, the problem of taxes. I think these gentlemen whose function it is to acquire raw materials and price their raw materials for their principals will bring that point home as far as the taxes are concerned.

Mr. GATHINGS. I think so.

Are there any other questions?

Mr. ABERNETHY. I think Mr. Kauffman came to his feet back there just now to say something.

Mr. KAUFFMAN. If I may be permitted, I would like to make one observation with respect to my comments on the draft which I understand Mr. Henican left with you as a possible substitute draft. That is, that draft applies not only to processors and manufacturers but also to distributors. That is a very important difference which I overlooked.

Mr. HENICAN. No. May I correct you? That has been eliminated.

Mr. KAUFFMAN. In the draft I have before me that is in there. We never had any showing with respect to the need of distributors. I would not want to even give informal approval to legislation affecting the distributors as distinguished from processors and manufacturers.

Mr. GATHINGS. Thank you. Distributing should be deleted in (C), line 3.

Mr. HENICAN. That was eliminated.

May I also make this observation, Mr. GATHINGS. That is, I think that the exchanges and the two gentlemen from the CEA see eye to eye on this whole thing. I think we are in agreement on the spirit and intent of what should be done. We are only about just a short distance apart on the question of this supervision; that is all. It is only a degree.

Actually, I think we recognize the necessity for supervision but the degree of supervision is questionable.

Mr. KNELL. The degree of supervision of acquiring the position.

Mr. HENICAN. And liquidation.

Mr. KNELL. The question I raise is mostly as to liquidation.

Mr. HENICAN. I think you asked Mr. Kauffman why the Senate turned down a similar proposal to amend the act some years ago. This is the United States Circuit Court of Appeals for the Second District decision in the Corn Products case, that was handed down on April 13, 1956. Giving the legislative history of it it says this:

"An amendment introduced in the Senate by Senator Murphy to the bill which became the Commodity Exchange Act would have enlarged the definition of hedging so as to permit manufacturers and millers to buy futures in anticipation of futures manufacturing of milling requirements, even though they had no present offsetting sales. The amendment was opposed 'for the reason that it extends the power to hedge far beyond the definition contained in the original act.' "

Of course, that is what we want to do. We want to broaden the definition in the original act.

He also quotes Mr. Mehl who was the predecessor of Mr. Kauffman at the CEA. "Mr. Mehl, the Assistant Chief of the Grain Futures Administration, explained that the present definition 'of course, is not broad enough to cover the purchase of futures material against anticipated sales of a packaged good goods.' "

(Off the record.)

Mr. GATHINGS. It is 18 minutes to 12. How long would it take these representatives of the manufacturers?

Mr. ABERNETHY. Is their testimony more or less in line? They might be seated at the table at the same time.

Mr. GATHINGS. That might be well.

Mr. EMMERT. My name is A. B. Emmert. I am vice president of Dan River Mills at Danville, Va.

Mr. KIRBY. My name is Q. B. Kirby, from Dallas, Tex., president of the Howard Cotton Co. The Howard Cotton Co. is a wholly owned subsidiary of the Dominion Textile Co. of Montreal, Canada. The Dominion Textile Co. probably manufactures 50 percent, slightly more than 50 percent, of the cotton goods made in Canada.

Mr. ROBINSON. My name is Ralph S. Robinson, member of the cotton committee of the American Cotton Manufacturers Institute, Inc.

Mr. GATHINGS. Would you care to make the first statement?

* * * * *

Mr. GATHINGS. Are there any questions?

I just wondered now if we could not adjourn over until 10 in the morning and come back here then. Has anyone indicated to you, Mr. Kauffman, that they would like to be heard other than this? What about the oats people and wheat people?

Mr. KAUFFMAN. Mr. Chairman, inasmuch as the language of the bill would apply to all commodities, I should think that the grain exchanges would undoubtedly be interested in it.

Mr. GATHINGS. Yes, sir.

Mr. KAUFFMAN. I say grain because they are the Chicago board of trade, particularly, which is the largest grain-futures market.

Of course, Kansas City board of trade and Minneapolis grain exchange rank second and third in grain futures.

Mr. GATHINGS. I think we want to hear from the grain folks, by all means.

Mr. HENICAN. In that respect, sometime ago I prepared what I thought was an explanation of the proposed amendment that maybe the Congressmen of the committee could use. I would like to offer it for the record.

May I offer this for the record?

Mr. GATHINGS. Yes.

Mr. ABERNETHY. Supplemental to your testimony.

"EXPLANATION OF PROPOSED AMENDMENT

"At the present time the Commodity Exchange Act defines a 'hedge transaction' as:

" 'Sales of any commodity for future delivery on or subject to the rules of any board of trade to the extent that such sales are offset in quantity by the ownership or purchase of the same cash commodity or, conversely, purchases of any commodity for future delivery on or subject to the rules of any board of trade to the extent that such purchases are offset by sales of the same cash commodity.'

"The definition is the classical dictionary one. It is very narrow and in the opinion of well informed persons, who are students of the Commodity Futures Markets, should be broadened. It is the thought that, if the definition is broadened to make possible the use of 'anticipatory herges' by processors or manufacturers, the Commodity Futures Markets will become more liquid and thereby be of more service to thosse who make use of them for hedge purposes.

"An 'anticipatory hedge' may be defined as to the purchase of a commodity futures contract in lieu of the raw commodity by an organization 'in anticipation' of its processing or manufacturing requirements during a stated period in the future.

"Thus, for example, the cotton mill that processes raw cotton bales into sheets, pillowcases, etc., and has on the average of the past 5 years consumed 300,000 bales of raw cotton per year, would be granted the privilege of purchasing cotton futures contracts against a reasonable percentage of 300,000 bales to be consumed during the year 'in anticipation' of purchasing its raw material requirements. Under the present act, such purchases of futures contracts would be considered as a speculation, simply because the cotton mill does not have, at the time of purchase of the futures contract, firm fixed sales of processed goods in equivalent quantity to offset the purchases of futures contracts.

"More frequently than otherwise, the cotton mill is quite satisfied with the prevailing price of raw cotton and, if it were possible, would purchase its full season's requirements at a given time at given prices. It generally is not possible to acquire a full season's requirements, at any given time, of raw cotton. Either the farmer has not harvested his crop, or the merchants or shippers do not have the particular quantities in inventory.

"In contrast, however, the commodity futures markets are a daily continuous trading affair, in which large quantities of contracts are bought and sold. Under ordinary circumstances, the cotton mill would be able to purchase sufficient futures contracts to hedge its 'anticipated season's requirements' and later to convert those contracts into the actual raw bales of cotton.

"Such a transaction is not a speculation, but sound business. It is exactly the opposite of speculation because it will allow the cotton mill to anticipate its season's requirements at prices assuring a reasonable margin of profit between the raw and finished goods and at a time when it would not be possible to acquire the actual raw bales in the quantities desired.

"Under the present act, a cotton processor is allowed to maintain a maximum of 30,000 bales in any position in any cotton futures market without having an offsetting sales commitment. The maximum of 30,000 bales is a statutory limitation. As said, the act is not sufficiently broad in this respect, and further such positions are designated as 'speculative positions.'

"The differential between 'speculative positions' and 'anticipatory hedge positions' is most important from an accounting angle. The Internal Revenue Department has consistently contended that a processor who purchases commodity futures contracts without an offsetting sales commitment, is speculating and that therefore the results from such speculative positions are considered for taxes as capital gains or losses. In contrast, however, Internal Revenue has consistently held that the results from 'hedge transactions,' be considered as 'ordinary income and expense.'

"Recently the Second Circuit Court of Appeals has held that the corn futures contracts purchased by a corn processor, despite the fact that there were no firm offsetting sales commitments, were an 'anticipatory hedge' and part of its actual inventory. The relationship of the raw and futures corn markets were so intimately related, and because the function of the particular organization was exclusively that of processing raw corn, there could be no differentiation between the raw and futures contracts as inventory, said the court. Thus, a United States court has for the first time given recognition to an 'anticipatory hedge' as a legitimate futures market transaction, and has taken it out of the speculative category.

"The necessity to differentiate between a speculative and anticipatory transaction is essential.

"1. Because of taxes.

"2. Because certain organizations will not and do not enter into transactions in violation of the laws, although on frequent occasions in the past the purchase of commodity futures contracts under certain conditions would have proven sound business.

"What has been said above about the cotton mill processor applies to all other raw commodity processors; the flour mill; the processor of cereals from grains the refiner of vegetable oils making shortening, margarine, salad and cooking oils, etc.

"Such an amendment would also be of assistance to the processor-distributor type of organization.

"For example, a large distributor of food at either wholesale or retail who, over a stated period will distribute through retail or wholesale stores 1,000 carloads of eggs or butter, or 5 million pounds of coffee, and so forth. Under certain conditions the processor-distributor would find it profitable to acquire the full period requirements, when available, at a given price in either the raw state or through purchases of contracts in the commodity futures markets. Presently such is not allowed under the act because there are statutory limitations as to position, which are generally very small, and further such positions are now considered as speculative, with all the implications above.

"Some may contend that the accumulation of large positions in the commodity futures markets by processors or manufacturers will cause wide and unnecessary price gyrations. First, when the positions are acquired prices would be forced to high levels and, later, when the positions are liquidated prices would be forced to low levels.

"When such positions are acquired, the reason for their acquisition is because of certain circumstances prevailing as to the attractive level of prices, availability of quantities, etc. Should there be an utter disregard of sound business practices in the acquisition of these positions, the reason for them will have been eliminated. It is most

unreasonable to assume that a processor who desires to initiate such a position will conduct his activities in a manner that would unduly advance prices. Such an advance of prices would eliminate the sound reason for such a position.

"In contrast, a processor holding an anticipatory position, that is with the ownership of a large quantity of futures contracts, would not endeavor to liquidate them in a manner that would unduly depress prices. Rather, the liquidation would be based on the acquisition of the equivalent raw commodity. Because it is rarely possible to acquire, for example, 300,000 bales of spot cotton in 1 block and at 1 price, the position in futures contracts would not be liquidated by indiscriminately selling 300,000 bales of futures contracts. Rather, the 300,000 bales of raw cotton would be acquired in small blocks—500 to 1,000 bales at a time—and the long futures contracts liquidated in the equivalent quantities, which certainly would not have an appreciable effect on the prices for the futures contracts.

"Neither the acquisition of an anticipatory position nor its liquidation will be handled in a manner to cause undue gyrations of prices by established nationally known organizations which are the organizations most likely to take advantage of such operations.

"In addition, the amendment proposed provides that such organizations which would use the anticipatory hedge must justify the reason for the positions through detailed reports to the Commodity Exchange Authority, and under the present law the CEA has full power of investigation and supervising such positions.

"Finally and most important these anticipatory hedge positions will be of considerable benefit to producers and farmers, because they would tend to stabilize prices at a time when stabilization is urgently needed. It is most likely that processors or manufacturers would take anticipatory positions only when prices of the raw commodity are considered by them to be cheap in relation to the prevailing finished-goods prices or when the difference in prices between the raw material and the finished goods assures them a reasonable margin of profit. Thus this buying of commodity futures contracts by processors or manufacturers in anticipatory of their season's requirements would most likely develop at a time when prices were under pressure and declining, and at a time when such a demand is urgently needed. In contrast, it is not likely that the positions will be liquidated only as the equivalent raw material has been acquired or when prices are advancing, thus again offering the possibility of a stabilizing influence. The producer or farmer because of these positions will thus greatly benefit through these stabilizing influences."

Mr. GATHINGS. I wish that Mr. Henican would come forward and answer some questions.

Now, Mr. Henican, at the close of yesterday's session you submitted a brief, Explanation of Proposed Amendments.

Now, in that explanation you have given us the difference between speculative hedging and anticipatory hedging.

STATEMENT OF J. P. HENICAN, JR., NEW ORLEANS COTTON EXCHANGE, NEW ORLEANS, LA.

Mr. HENICAN. Yes.

Mr. GATHINGS. I wish that you would explain the difference between speculative hedging and anticipatory hedging.

Mr. HENICAN. It might take me 2 years to do that, Mr. Congressman. I do not think there is such a tranaction as speculative hedging. I think there is a speculative market position, but there is no such thing as speculative hedging, in my dictionary.

As to anticipatory hedging: the processor, or manufacturer, when he starts a year or a session is actually short of his raw material, even though he has not a written fixed-price sale. A national organization that has been in business for many years is going to process and manufacture a certain volume of raw material, so when he begins his season, or his fiscal year, he is actually short a certain percentage of raw material. This amendment is to allow him to acquire a percentage of his normal requirements—average requirements, by buying commodity futures contracts.

Mr. GATHINGS. I just wonder whether or not the actual goods would have to be in being.

Mr. HENICAN. I do not think so. In the matter that we quoted yesterday with regards to the Corn Products Co. Over a series of many years their economists had only a 5-percent error in forecasting their annual average requirements of raw material even though there were no sales made at the time the forecast was made; consequently I think it is possible in these large national organizations for either the vice president in charge of purchases, or the vice preseident in charge of sales, or the economist, or the board of directors to pretty well forecast how much finished goods they are going to process and manufacture and distribute during the year. So, on that basis they can then estimate how much raw material they are going to have to acquire.

Mr. GATHINGS. Can you not do that under the present law?

Mr. HENICAN. No, sir.

Mr. GATHINGS. You cannot anticipate?

Mr. HENICAN. No, sir. You must have a fixed commitment, a sales commitment in order to be long of futures contracts. As Mr. Kauffman and Mr. Bagnell explained yesterday, you must have a fixed commitment to buy beyond a certain number of cotton contracts, or require a certain number of contracts in the futures market; otherwise the position is considered a speculative position in the market, not a speculative hedge. I think a national organization that has been in business for a considerable period of time, that has had that experience in the past, knows the average they handle. As Mr. Kirby said yesterday, 200,000 bales of cotton a season. Unless we have a very deep depression in 1957, the Dominion Textile Co. is going to process around 200,000 bales of cotton. Therefore, when they start in 1957 they are theoretically short of approximately 200,000 bales of raw cotton. They want the opportunity when it presents itself, even though they do not have fixed sales on the opposite side, to take advantage of that opportunity, either in the futures market, or the spot market. They can do it in the spot market now, but they have not been able to do it in the futures market, which eliminated a certain amount of flexibility.

Mr. GATHINGS. Just try to explain to a layman how this thing works.

Mr. HENICAN. Let us go back to October 3, 1955, when we had a rather drastic decline in cotton prices. There is no use trying to decide why they declined, but they did. Cotton prices in the futures market were considerably below the Government loan at the lowest of the decline. Now, if one believed that the Government loan was going to continue, he had to assume that prices would eventually come back to the Government-loan level and that, therefore, they were at a discount under what the largest buyer in the world would pay for cotton—the United States Government.

Mr. GATHINGS. In dealing with these contracts you would have to figure whether it was going to be 90 percent of parity or 82½ percent, and so forth?

Mr. HENICAN. The percentage of parity loan had already been established and announced. The Department of Agriculture had already announced a 90-percent support program as of August 1, which support program was good for the balance of that season.

Mr. GATHINGS. That is right.

Mr. HENICAN. So the facts were known when prices declined on October 3, 1955.

As I say, the prices on the New York and New Orleans Cotton Exchanges at the lowest of the decline, that temporary decline, were about 2 cents to 4 cents under the 90-percent support loan as announced by the Department of Agriculture.

Mr. GATHINGS. For what month?

Mr. HENICAN. All months, practically all months.

Now, why did they go down? Your opinion is as good as mine. I think they were trying to anticipate a change in the program and a change in conditions.

Mr. GATHINGS. What effect did that have on the New Orleans Exchange in transactions handled?

Mr. HENICAN. Let us go back to your question. If the cotton mill that processes, say, 200,000 bales had sales with no raw materials, it could, under the present law, buy futures at that discount to cover its short position, and that would be a legitimate hedge. Assuming that it had no sales, it was prevented from taking advantage of that discount in price. There was no provision in the present law for an anticipatory hedge. If this amendment had been in effect, the cotton mill could have bought futures contracts at that discount under the Government loan in anticipation of the percentage of its requirements for the balance of the season. It could have taken advantage of that decline in price.

Mr. GATHINGS. What would that mean now to the producer of cotton and the stabilization of the price of cotton?

Mr. HENICAN. I think, Mr. GATHINGS, had this provision been operative, it is possible that we would not have had the decline to the extent we did at that time, because those buying orders for the account of anticipatory hedges would have been in the market place, and they might have prevented some of it, maybe not all of it, in my opinion. I personally contacted during those days—and there were 2 or 3 days of that decline—many mills, pointing out to them the cheapness, in my opinion, of the futures contracts as compared to the Government loan.

Mr. GATHINGS. As a matter of fact, you advised purchases?

Mr. HENICAN. I advised purchases, but the mills said they could not enter into the purchases because they did not have a legitimate hedge. They had nothing sold and therefore it would be a speculation on their part. However, if this amendment had been in effect, I think that a fair percentage of those whom I contacted would have purchased contracts that day and would have offset some of the selling that developed and therefore would have tended to stabilize the price to the benefit of the producer.

Mr. MCINTIRE. Mr. Henican, what happened to spots on those days?

Mr. HENICAN. Spots went down but not as much.

Mr. MCINTIRE. Did the millowners move in and buy spots?

Mr. HENICAN. I think that some did during that period, yes.

Do not forget, we are trading in futures contracts that endeavor to discount what is going to happen in the future, so therefore, futures are probably more sensitive to developments than the immediate spot price is.

There was a question asked of Mr. Kauffman about initiation and liquidation of these positions about which I would like to comment. We who are executives of exchanges want the positions to be initiated and also liquidated in as orderly and in as businesslike manner as possible, because we are very conscious of the fact that when there are unusual fluctuations we are subject to public criticism, congressional investigation, and so forth. We want these positions to be entered into and liquidated in as sound a manner as possible. We at the exchanges are going to see to it, or attempt to see to it, that that is done.

Mr. GATHINGS. Mr. Henican, what kind of requirements does the New Orleans Cotton Exchange set up for those traders who go on your board and do business? What do you have? How do you become a member? How are you going to operate in the New Orleans Exchange?

Mr. HENICAN. How do you become a member of the New Orleans Exchange?

Mr. GATHINGS. Yes.

Mr. HENICAN. We require an application for membership, a formal written application to become a member. The candidate appears before the membership committee and he must meet certain financial requirements.

Mr. GATHINGS. That is what I am getting at.

Mr. HENICAN. The application is screened by the membership committee through the usual banking circles, credit information bureaus, and so forth. The application must be endorsed and approved by two members in good standing who also appear before the membership committee to verify for the financial and moral integrity of the applicant.

Mr. GATHINGS. How often does your membership committee change in its composition?

Mr. HENICAN. I think most of the exchanges operate in the same way. We try to have overlapping members of the committee so that the policy and the customs and the habits are continued for 25 to 50 years.

Mr. GATHINGS. Do you get a Dun & Bradstreet report on these applicants?

Mr. HENICAN. We get a Dun & Bradstreet report, a banking report, and a recommendation from 2 or 3 outstanding people in the cotton industry from the local communities. For example, if there is an application from Dallas, we communicate with members of our exchange in the Dallas cotton market and ask their opinion of the candidate. We try to maintain very high ethics and standards.

Mr. GATHINGS. You know these people. You are going to know whom you are dealing with?

Mr. HENICAN. That is pretty much of an unwritten rule of our exchange, though it is not in the books. The two individuals who endorse the applicant or the application of the new member, it is presumed know the applicant. One of the questions that the chairman of the membership committee asks the endorser is, "How long have you known this candidate?"

Mr. GATHINGS. How many actual members do you have?

Mr. HENICAN. We have 331 members in the New Orleans Cotton Exchange.

Mr. GATHINGS. How many did you have 10 years ago?

Mr. HENICAN. About 400.

Mr. GATHINGS. Your requirements are more strict, or stringent?

Mr. HENICAN. No, sir; they are approximately the same. We are trying to maintain the same high standards. The membership has declined on the New York Cotton Exchange as well as on the New Orleans Cotton Exchange because we have not had a profitable volume of business due to the interference of the Government loan programs. We are in a squeeze.

Mr. GATHINGS. If you get this legislation passed, it is going to broaden out operations and you will get more business?

Mr. HENICAN. We hope that it might lead to some broadening in the market place; yes.

Mr. GATHINGS. What does a seat cost now?

Mr. HENICAN. In the New Orleans Cotton Exchange we have no seats. We are a corporation just like General Motors. When you join the New Orleans Cotton Exchange you must own a share of stock in the corporation.

Mr. GATHINGS. One share?

Mr. HENICAN. Yes.

Mr. GATHINGS. How much is it?

Mr. HENICAN. The present market value on that stock is about $800. That gives you an interest in all the assets of the corporation. The assets of the corporation presently consist of the building with no mortgage and cash in the bank.

Mr. GATHINGS. How often do you change your members on the board of directors?

Mr. HENICAN. Usually every 2 years. It has been customary to elect a president and a board of directors for 2 years, 1 year, and a continuation for the second year if they behave. There is usually an overlapping of directors.

Mr. GATHINGS. You have a sort of a closed fraternity, do you not?

Mr. HENICAN. No, sir.

Mr. GATHINGS. How many applications do you ordinarily receive in the course of a year?

Mr. HENICAN. I am not posted on that figure. I can tell you what the record has been since the 1st of December when I took office as president of the exchange. We have had 8 new members and we have had 4 resignations of members since the 1st of December 1955.

Mr. GATHINGS. Have you ever expelled a member because of his bad financial standing or for any other reason?

Mr. HENICAN. For bad financial standing and bad business practice, attempting to manipulate markets, manipulate prices—anything they may have done that is not a good business practice. Yes, we have.

Mr. GATHINGS. Under your charter just how is he expelled?

Mr. HENICAN. I think that it is pretty well spelled out. We have what we call a business conduct committee that supervises the conduct of members. If there is a charge made by a member that another member is not conducting himself with proper ethics, the business conduct committee considers it. The member charged has the right of appeal and then he has further recourse to the board of directors.

Mr. MCINTIRE. All trading on the floor must be performed by members of the exchange?

Mr. HENICAN. At public outcry?

Mr. MCINTIRE. They operate on their own behalf as traders, trading members, and as representing customers in the capacity of broker?

Mr. HENICAN. Yes. There are 2 or 3 categories of members. Those whom we call ring traders, who trade for their own account in and out; then there are those who arbitrate between the various markets; that is, if the prices are out of line in Liverpool, Bombay, or New York as compared to New Orleans. Then there are those who perform dual functions representing customers and trading for their own accounts, and finally like my own firm, Merrill Lynch, we only handle customers accounts. We act exclusively as brokers. We do not take any position for our own account.

Mr. MCINTIRE. Do the rules require that all margins and everything must be paid on the date of the transaction, or what lines of credit are extended to participating members?

Mr. HENICAN. Not only participating members. Under our rules, brokers are also allowed to extend a credit accommodation up to $10,000 based on $5 per bale against legitimate hedge transactions to cotton-trade accounts, members or nonmembers. In extending credit we are required to have a hedge certificate from the principal stating that any contracts that they enter in the market represent legitimate hedge transactions, but for Bill Brown, or Joe Smith, speculator, who may be an attorney or a doctor, he must deposit original margins within a reasonable time.

Mr. MCINTIRE. What is interpreted by the board as a reasonable time?

Mr. HENICAN. I'd say that a reasonable time is by the close of the market the next afternoon.

Mr. MCINTIRE. In other words, the following day?

Mr. HENICAN. The next afternoon, yes.

Mr. MCINTIRE. If that happens to be the last day of the week, it would be on the next opening day?

Mr. HENICAN. Monday. In addition to that, we have just recently passed rules stating that margin funds must be "readily available." We have a practice that developed whereby customers would mail a check from a very distant point and it would not reach us for 2 or 3 days. It would be on a local bank and when we sent it back for collection it would take another 2 or 3 days. Now we say that customers have to make funds readily available and within a reasonable time.

Mr. MCINTIRE. Your trading rules do not permit one to come in in the morning and trade all day and close out at night without putting up any money?

Mr. HENICAN. Not necessarily.

Mr. MCINTIRE. Not necessarily, but is that permitted to be done?

Mr. HENICAN. Yes. I think some brokers do it. Merrill Lynch does not do it in all instances. It depends upon the financial responsibility of the individual. In your case, Mr. Congressman, you do not have to put up margins right away and you can give it to me this afternoon. But in my case I put it up ahead of time. My financial condition is not as good as yours.

Mr. MCINTIRE. I think the record should show that I do not trade.

Mr. HENICAN. O. K., sir.

Mr. GATHINGS. Now, the exchange is well fitted and able to handle these credit transactions?

Mr. HENICAN. Credit is a question of each individual broker, not the exchange.

Mr. GATHINGS. Let me ask you this: What regulations of the department would cover credit transactions?

Mr. HENICAN. Of the Department of Agriculture?

Mr. GATHINGS. Yes.

Mr. HENICAN. I think they have no regulations covering credit. That is an exchange matter.

Mr. GATHINGS. Solely an exchange matter, and as far as I know, it never has been questioned.

Mr. HENICAN. I think so. Three or four years ago there was an attempt. Somebody introduced a bill to give the CEA control over margins and credit, but it was thrown out. I recall coming here and testifying against it.

Mr. MCINTIRE. On that point, you were dealing with two different things, you were dealing with margins and you were dealing with credit.

Mr. HENICAN. Yes.

Mr. MCINTIRE. And the bill that you referred to permitted the CEA to regulate margins as well as credit?

Mr. HENICAN. Right. Mr. Kauffman and Mr. Badnell can answer that.

Mr. KAUFFMAN. Mr. Chairman, the Commodity Exchange Act confers no authority with respect to margin requirements. The point at which the Commodity Exchange Act confers any jurisdiction with respect to margins is after they are deposited with the broker. The statute requires that the broker must treat and deal with customer's funds and equities as belonging to the customer, he may not commingle them with his own funds, and he must use the funds deposited by customers for the benefit of the customers and not for the purpose of extending credit to customer B. But as to the amount of margin that is deposited,

the statute is silent and confers no jurisdiction whatever.

Mr. GATHINGS. That is not being considered here at all, and I do not want to raise the issue. I just wanted to get Mr. Henican's view. I just wanted to determine in my own mind how the exchange operated.

Mr. HENICAN. I agree with the statement you made yesterday that Mr. Kauffman and Mr. Bagnell and the personnel at the CEA had done an outstanding job. They have been very cooperative with the exchanges. I personally would have been satisfied with the language they proposed in the amendment yesterday if I thought Mr. Kauffman and Mr. Bagnell would be there for life. I do not know who is going to follow them and how the man who follows is going to interpret the amendment. We want that slightly clearer explanation to satisfy some of the people who feel the same way about it. If I could be assured that these gentlemen would be the heads of the CEA as long as I am alive, I would be satisfied to take their wording of the amendment. Exchanges can operate with these two gentlemen and have operated with them, and as far as I am personally concerned, we want them there.

Mr. GATHINGS. Thank you. I read your explanation of the proposed amendment. I wonder if you would, in different language, give us an explanation in a few words.

Mr. HENICAN. I thought that I pretty well covered it before. It would be much easier if you would ask the questions.

Mr. GATHINGS. I wish that you would explain to the committee what benefits would accrue with respect to income taxes if anticipatory hedges are permitted as contained in this amendment.

Mr. HENICAN. Mr. GATHINGS, I think the courts have pretty consistently ruled that the monetary results from a legitimate hedge transaction represent ordinary income and expense, but they have also ruled that the results from a speculative position in the market represent a capital transaction. A processor, or manufacturer that has a speculative position in the market really has two accounting systems, one for capital gains or losses and one for ordinary income and expense. As Mr. Emmert, of Dan River Mills, said yesterday, by eliminating that speculative result, or the capital gain result, and recognizing it is as ordinary income or expense, it would either reduce the cost or increase the cost of his raw cotton. Naturally, he thinks it will reduce the cost of his raw cotton by so handling it that way. That is one of the reasons why on October 3, 1955, some of the people that I personally contacted did not want to buy contracts at that time, even though the price appeared very attractive, because they would say, "That is a speculation." The results would be a capital gain or loss as far as our accounting is concerned. It would not be ordinary income and expense as the courts have recognized the results from a legitimate hedge transaction.

Mr. GATHINGS. I wonder what the Bureau of Internal Revenue would think about this matter? What would be your view on that?

Mr. HENICAN. We have consulted with them on it. What do you think, FRANK?

Mr. GATHINGS. I asked whether the Internal Revenue Bureau has been consulted about this amendment, and what they think of it.

Mr. KNELL. Well, I think that it is a confusing tax matter that we are trying to avoid rather than an evasion. It is a clarification of handling taxes that we are seeking.

Mr. HENICAN. Mr. GATHINGS, I will make this observation: In all the tax decisions I have reviewed as to the commodity futures markets, the Judge has gone right back to the Commodity Exchange Act for his answer to the problem.

In other words, in this Corn Products case that we quoted yesterday, the judge quoted the definition of a hedge in the present act and then commented that the transaction involved was not a hedge—that it was an anticipatory hedge which is not recognized in the act.

If the act is amended to include this, I think the Internal Revenue Bureau will recognize it because, as I say, in all the tax cases that I have read that have to do with results from commodity market activities, the Judge has referred to the Commodity Exchange Act for his answer.

Mr. GATHINGS. Let us get back to the operations of the exchange. What are the benefits of an anticipatory future contract to a producer or to a shipper or to a cotton factor or to a manufacturer? I wonder if you would give us in a few words just what would be the benefits which would accrue.

Mr. HENICAN. Mr. GATHINGS, you have to eliminate the first three categories which you mention because this does not cover a producer, a shipper nor a factor. It only covers a processor and a manufacturer.

Mr. GATHINGS. All right.

Mr. HENICAN. It allows him to anticipate his normal or average season's requirements of raw materials. The other three categories are not involved at all.

Mr. GATHINGS. The testimony yesterday was to the effect that——

Mr. HENICAN. We think that because the processor and manufacturers are allowed to acquire these contracts in anticipation of the raw material which they need, that their activities will indirectly help the others by stabilizing prices, but the other three categories will not be able to use the markets under this amendment.

Mr. GATHINGS. I believe it was stated yesterday that all segments of the cotton industry are interested in going in there and buying these futures.

Mr. HENICAN. No, sir.

Mr. GATHINGS. Is not that right?

Mr. HENICAN. No, sir; only the processors and manufacturers.

Mr. GATHINGS. I will have to get that record and see just what they said.

Mr. HENICAN. Yes, sir; that is right.

Mr. MCINTIRE. I am not sure that I have this clearly in mind. Without this legislation the average mill buyer is faced with the fact that he can go into the futures market and purchase up to 30,000 bales of cotton and any purchases beyond that have got to be shown that they have fixed sales or else it is considered speculative?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. Now, if they want to go beyond that, they are perfectly at liberty to go to the spot market and buy as much spot cotton as they want?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. But a large consumer of cotton, if he considers going into the spot market to cover his needs to any substantial degree, finds himself faced with the problem of dealing with holders of cotton who may not want to deal in the quantities in which that manufacturer normally wishes to deal in on the spot market?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. If he were to press for that position in the spot market, he would likely be required to divide his total desire for purchases into a number of transactions with a number of individual holders of cotton in order to avoid what might be a premium if he were to place that order with one substantial holder who did not want to sell that much cotton?

Mr. HENICAN. Yes, sir.

Mr. MCINTIRE. This legislation would provide a vehicle of relief to him in that situation whereby he could move in on the futures market and accomplish that same objective and thereby naturally improve the volume of transactions on the futures board in which you are interested and would also provide for him a vehicle of avoiding the situation of paying premiums to cover himself on the spot market. Is that about what it would be?

Mr. HENICAN. Mr. MCINTIRE, you made a misstatement. You said you did not understand the amendment. I do not see how I could describe it more perfectly. Your explanation is absolutely perfect.

Mr. GATHINGS. Off the record.

(Discussion off the record.)

Mr. GATHINGS. I wonder if you would not follow through on a transaction which will furnish to us some additional information on this matter? I would like to have you take a hypothetical case and show us just how it is going to work out when initiated as well as when liquidations will take effect. I wish you would explain that.

Mr. HENICAN. Mr. GATHINGS, in answering your request, I am now thinking in terms of Mr. Kirby's statement of yesterday to the committee. I think he had made a very good explanation. So let's start. For example, the board of directors of a cotton mill decides that they are going to process through the next year 200,000 bales of cotton and they decide that the demand for goods is going to be such and the textile prices are going to be such that they can afford to pay 30 cents a pound for their raw material. Therefore they instruct Mr. Kirby that as soon as possible, or when market conditions will justify it, to buy 200,000 bales of cotton at 30 cents per pound or lower.

The mill buyer, Mr. Kirby, immediately gets busy and contacts all his sources of supply—the merchants, Mr. POAGE, of Dallas, Houston, or Muleshoe, Tex., or any market place else like that—and he buys some spot cotton, but he only buys a very small percentage of the 200,000 bales.

In the meantime the futures market is at or below the equivalent of 30 cents per pound. So in order to cover himself, he buys futures contracts up to whatever is allowed under the law, with the purpose of fixing the cost of his raw materials. In other words, the directors have said to him, "We think the goods markets are going to be such that we can buy raw cotton, process it, and make a profit on the basis of 30 cents a pound for our raw material." However, when buying futures contracts, that is done with the intent of eventually converting those futures contracts into spot cotton.

After the contracts are acquired Mr. Kirby is still contacting all the merchants, spot brokers, and f. o. b. people, as well as producers in the State of Texas, and is looking for the specific quality of cotton that he wants. Hence, as he acquires the quality of cotton required, he liquidates the equivalent in the futures market.

I do not think it is going to be possible for that processor or manufacturer to buy 100,000 bales of cotton in any one spot, not even from our mutual friends, Mr. POAGE, or Anderson-Clayton & Co., except at a premium. So he looks around and he buys it from several or many small merchants, shippers, farmers, and so on, in medium-sized lots.

As I say, as he acquires spot cotton he then liquidates his futures.

I cannot believe in this ghost that some talk about, that the futures position, once acquired, is going to be recklessly liquidated. I cannot believe that 100,000 bales of futures, for example, is going to be recklessly dumped on the market, because that would defeat the entire purpose of the transaction, in my opinion, and that it, therefore, is going to be liquidated in an orderly manner.

As these small blocks of spot cotton are acquired the comparable amounts of futures will be liquidated in an orderly manner.

Mr. GATHINGS. But only a small percentage of these contracts will be delivered upon; is that right?

Mr. HENICAN. Yes; because with regard to deliveries against futures contracts, 100 years ago trading in futures contracts evolved as the best method of doing business that was

to be consummated at a future time. The trading has been substantially the same through this 100 years. There have been refinements. It should be perfectly obvious that I as a buyer of contracts cannot by 1 grade and 1 staple or 1 quality of wheat or 1 quality of corn or the 1 quality of any other commodity, because nature may not have given us that quality during that growth year.

However, as trading in these contracts evolved, they allowed delivery of a range of grades and staples or a range of quality so there would not be a squeeze, and so that there would not be an undue manipulation of prices. Thus a range of qualities are deliverable. It should be perfectly obvious that if I have in mind a particular quality when buying a futures contract, it is possible that it will not be delivered because it is not convenient for the seller to deliver it. He may not have that particular quality; that particular quality might not have been produced that particular year. But, deliveries are allowed of a wide range of qualities on the basis of premiums and discounts. The best quality or the better qualities are deliverable at a premium and lower qualities at a discount.

Mr. POAGE. I dislike having to start this class back in the third grade, but I pretty nearly need to do it if I am going to keep up with you gentlemen.

I am just wondering if you will not take this fellow who is going to buy 100,000 bales of cotton and go through the entire procedure? Of course, he is buying a lot of cotton.

Mr. HENICAN. Well, he has consumed on the average of the past 10 years in excess of 200,000 bales.

Mr. POAGE. Not many of them do that.

Mr. HENICAN. We decided yesterday there was in excess of 100 mills which consumed in excess of 30,000 bales a year.

Mr. POAGE. Let us take the 100,000 bales of cotton which he is going to buy and follow through for me and tell me just what he does.

Assume that he goes out today and buys on the futures market, or that is what he would like to do, at least, as I understand it, and he buys it. Does he buy it for delivery all in the same month?

Mr. HENICAN. I do not think so. I do not think that would be a businesslike basis on which to do it. He is going to consume the 200,000 bales in probably equal monthly quantities over a 12-month period. So, he would scatter his purchases through, let us say, October, November, March, May, and July, probably in equal amounts.

Mr. POAGE. Let us assume that he has to have some cotton to go to work on immediately and that he has to buy spots of the quality which he wants. Of course, when he buys these futures, he just buys cotton, as I understand it.

Mr. HENICAN. He fixed the cost of his raw material. That is what it amounts to.

Mr. POAGE. I understand that. In other words, he buys that at 30 cents and that is probably on a fifteen-sixteenths Middling basis?

Mr. HENICAN. That is right.

Mr. POAGE. But if he wants an inch and an eighth, he pays the premium on that?

Mr. HENICAN. Pardon me a second. You are familiar with the fact that beginning with the new season, August 1, 1956, the base of the futures contract is Middling inch, which is a change from Middling fifteenth-sixteenths inch.

Mr. POAGE. Whatever the basis is, if he wants something better, he pays that premium for it; does he not?

Mr. HENICAN. Yes, sir.

Mr. POAGE. That is, if they deliver him something better. In other words, he does not have any choice over what he gets?

Mr. HENICAN. Yes, sir.

Mr. POAGE. He gets whatever they deliver.

Mr. HENICAN. Within a range as prescribed in the contract and under the rules of the exchanges.

Mr. POAGE. In a prescribed range, and within the differentials that are prescribed?

Mr. HENICAN. Yes, sir.

Mr. POAGE. But he has no choice as to what they deliver and they deliver whatever they want to.

Mr. HENICAN. That is right.

Mr. POAGE. That, of course, is one good reason why he would not want to take delivery on that contract, because it may not be something which he can use.

Mr. HENICAN. Yes, sir.

Mr. POAGE. Then, he might want short staple, or he might want seven-eighths, and get the benefit of the price on it.

Mr. HENICAN. He might want other factors, too, which do not show up in the contract, such as micronaire and other characteristics of the cotton, as well as textile characteristics, and so on.

Mr. POAGE. So he would go out and try to buy the cotton he wants, and he probably cannot buy it in any sizable blocks, as you pointed out.

Mr. HENICAN. Yes.

Mr. POAGE. In other words, he would find a thousand bales of cotton at Muleshoe, Tex., that he wants, and he would buy that cotton and let us assume he has to pay something more than 30 cents for that cotton next week. Let us further assume that he is buying 1-inch cotton, and he is buying Middling. He would have to pay about 34 cents for that; would he not?

Mr. HENICAN. What grades or staple did you say?

Mr. POAGE. I said 1-inch Middling.

Mr. HENICAN. It is about 155 points premium over Middling fifteenth-sixteenths inch—1.5 cents—or 31.5 cents would be the approximate cost.

Mr. POAGE. It would not be at 33 cents?

Mr. HENICAN. No, sir.

Mr. POAGE. In other words, he has to pay 31½ cents for that?

Mr. HENICAN. 31.5 cents.

Mr. POAGE. Yes.

Mr. HENICAN. That is, under the present differentials between Middling fifteenth-sixteenths inch and Middling inch.

Mr. POAGE. He has to pay 31.5 cents on that. Now, how does that hedge help him?

Mr. HENICAN. Well, obviously, it would not help him. So, therefore, he would not buy his futures at 30 cents. He would wait until they got to 29 cents, or to 28.5 cents.

Mr. POAGE. Well, he waits, but he does not have his hedge if he waits.

Mr. HENICAN. That is right. He would not enter into the position under those circumstances, and I think that is one of the controlling factors of the orderly manner in which these positions are going to be handled.

Mr. POAGE. Well, that is where you get me. You say he would not have to take a position. what do you mean?

Understand, I have never traded in these markets, and I do not know anything about it, except what I hear.

Mr. HENICAN. I think Mr. MCINTIRE can explain it better than I can. Jokes aside. What you describe is the reason I have not believed in this ghost in the closet. Let us go back to our original premise and that was to the effect that the board of directors told the mill buyer that they could use 200,000 bales of cotton profitably next year, provided those raw materials could be acquired at 30 cents. Then that mill buyer is going to use his very best efforts to buy that cotton at 30 cents a pound, and he is not going into the transaction until he can average about that price.

He is not recklessly going in and buy futures if the future price is above that level. Later the board of directors may change their minds and realize that cotton is not going to be available at 30 cents and say "go ahead and pay 32 cents for it," but the buyer is not going to recklessly buy a lot of futures contracts when the management has indicated that they are going to make a profit based on buying the raw material at 30 cents a pound.

Mr. POAGE. They are talking about 30 cents a pound cost to them for the grade of cotton they want?

Mr. HENICAN. That is right.

Mr. POAGE. He does not go out and buy futures, then, at 30 cents a pound?

Mr. HENICAN. No; he does not. He would not buy them at 29.5 or 28.5 under this proposal.

Mr. POAGE. All right. Now, let us assume that he is able to buy and, of course, if he was able to buy any, I guess he would buy the whole 200,000 bales, would he not, on the futures market?

Mr. HENICAN. He probably would. I would imagine, however, he would now be able to buy some cotton at prices desired under those circumstances. So, he would not have to buy the entire 200,000 bales, but assuming he could not buy spots, he would probably buy all his futures——

Mr. POAGE. What I am trying to do is to follow it on through, and see just what he does. He does not actually buy the 200,000 bales of cotton on the futures market. He probably only buys a part of that?

Mr. HENICAN. That is right.

Mr. POAGE. What would he buy, or what would we expect him to buy?

Mr. HENICAN. The amount he is going to be allowed to buy as covered by this last sentence in the proposed amendment: "In conformity with the regulations as the Secretary may prescribe." We do not know what that is as yet. We have discussed a "reasonable percentage" of his normal season's requirements with Mr. Bagnell and Mr. Kauffman and they, just thinking out loud, have indicated it might be 50 percent under certain conditions, and 40 percent under other conditions. I do not think that under any set of circumstances we would want a position of 100 percent coverage. Yet, on the other hand, a smaller operation—say for instance a mill that produces or processes only 20,000 bales or 15,000 bales—the situation would be different, and 100 percent coverage would not be unreasonable or unbusinesslike.

Mr. POAGE. He is not affected by this bill anyway, is he?

Mr. HENICAN. Yes; I think he is.

Mr. POAGE. I thought some one said he could buy 30,000 bales.

Mr. HENICAN. That is right, but that is a speculative position, and we want to take it out of a speculative position because of the tax result. Such a mill with, say, a small consumption logically would not unduly affect prices either up or down. I can see no reason why he cannot buy 100 percent of his season's requirements.

Mr. POAGE. I understand this 30,000-bale deal, but if he bought more than 30,000 bales it is not considered speculative; is it?

Mr. MCINTIRE. It is considered a speculative position.

Mr. POAGE. Please understand, gentlemen, that I just walked in and I do not know this background information. Therefore, someone has to tell me about it.

Mr. HENICAN. Mr. POAGE, according to the Commodity Exchange Act, a hedge is defined as a long future against a fixed sale or firm sale or a short future against ownership of a spot commodity. Those are what the CEA Act defines as bona fide hedges, and any contracts over that, not evenly balanced, are considered speculative positions either long or short.

Speculative positions are limited to 30,000 bales maximum.

Mr. POAGE. You cannot have more than 30,000 bales of speculative cotton; is that right?

Mr. HENICAN. That is correct. It is possible that a mill could have 100,000 bales long, and the equivalent of 100,000 bales sold in the form of processed goods, but beyond that, under the present act, he can also own only 30,000 bales, which is considered a speculative position.

Mr. POAGE. This would allow him to own more than 30,000 bales?

Mr. HENICAN. This would allow them to own a reasonable percentage of what they have normally processed over a series of years.

Mr. POAGE. When you say "a percentage," what percentage do you have in mind?

Mr. HENICIAN. That is what the CEA is going to tell us, or what they think is sound. The wording on the proposed amendment is, "It is a sound commercial practice."

Mr. POAGE. But except for that, if the man had 200,000 bales which he expected to use he could buy that now under the present law, and that is not a speculative position?

Mr. HENICAN. If he has something sold against it; yes, sir. If there are no fixed sales, the positions are limited to 30,000 bales, despite the fact the mill annually processes 200,000 bales.

Mr. POAGE. Then he can turn around and except for that proviso, if the Department imposed any limitation, he could go ahead and buy another 200,000 bales without having anything sold?

Mr. HENICAN. No, sir.

Mr. POAGE. He could not do that without having sold against the 200,000 bales?

Mr. HENICAN. No, sir. Do you mean under this proposal?

Mr. POAGE. That is right.

Mr. HENICAN. Well, I do not think so. I do not think the Department is going to allow full coverage.

Mr. POAGE. I understand, but I said except for that provision, and unless the Department acted, he could under this bill buy another 200,000 bales without it being called speculative; is that right?

Mr. HENICAN. Yes; if the maximum coverage is allowed, that would be correct.

Mr. GATHINGS. However, as the situation exists now, one cannot have but 30,000 bales?

Mr. HENICAN. That is right.

Mr. GATHINGS. That is, he cannot have but 30,000 bales at any one time?

Mr. HENICAN. Over and beyond the bona fide hedges; that is correct.

Mr. POAGE. You cannot have more than 30,000 bales without being in a speculative position?

Mr. HENICAN. That is right.

Mr. POAGE. You can have more than 30,000 bales; can you not?

Mr. HENICAN. No; only if you have some offsetting transactions, Mr. POAGE.

Mr. POAGE. You mean you cannot buy but 30,000 bales and remain outside of the speculative position?

Mr. HENICAN. That is right.

Mr. POAGE. Then, it is not like I stated, the matter a minute ago. I think I was wrong. I said that he could buy under this proposal 200,000 bales and he could buy 200,000 bales against his sales here if he had to, and then he could buy another 200,000 bales and still would not be in a speculative position. However, he would, in fact, be in a speculative position in the second 200,000 bales?

Mr. HENICAN. I do not think so.

Mr. POAGE. That is what I want to get straight. What difference does it make if he is not going to be in a speculative position because the 30,000 bales merely relates to the limit of speculative cotton he can hold; does it not?

Mr. HENICAN. May I ask you a couple of questions?

Mr. POAGE. Surely.

Mr. HENICAN. Do you thing that such an organization as the Dan River Mills is going to continue in business?

Mr. POAGE. I assume they will.

Mr. HENICAN. They have been in business for a long period of time; have they not?

Mr. POAGE. Yes.

Mr. HENICAN. On the average they have processed, say, for the last 25 years, 200,000 bales of cotton per year.

Mr. MCINTIRE. That is, 200,000 bales of cotton per year.

Mr. HENICAN. 200,000 bales of cotton per season. Is it not normal to expect that if we do not have a severe depression or adverse economic conditions that during 1957 they will process around 200,000 bales of cotton? That has been their experience for, say, 25 years, and they should do it again next year.

When they start the year, they are theoretically short 200,000 bales of raw cotton on a normal expectation, or the anticipation of the goods which they are going to process. So, by buying that additional 200,000 bales that you mentioned, I do not think it would constitute speculation. I think they are merely insuring their price against that which they anticipated producing based upon sound facts and sound records.

Mr. POAGE. What I have said—and I want to go back over it again because I am not sure now whether I was right or wrong, because I am more confused now than I was when I started—was in an effort to get this clear in my mind. Let us assume that the Dan River Mills has succeeded in selling the equivalent of 200,000 bales of cotton.

Mr. HENICAN. Yes, sir.

Mr. POAGE. That is they have contracts for their goods to that extent.

Mr. HENICAN. Yes, sir.

Mr. POAGE. They go ahead and buy 200,000 bales, as I understand it, on the futures market, and that is not speculative?

Mr. HENICAN. Totally exempt.

Mr. POAGE. That is right. I understand that, but as I understand it under this proposal if we leave out the proviso or if we assume that the department is not going to act on it, Dan River Mills can turn around and buy another 200,000 bales, which makes 400,000 bales, and that is not speculative either? Is that right?

Mr. HENICAN. In my opinion under the circumstances we are discussing, and if I understand them correctly, in my opinon, it is not speculation, because that second 200,000 bales is bought against what they anticipate processing during 1957 based on what they have done for the past 25 years, and they bought those contracts to insure the price level.

Mr. POAGE. I do not understand that, because they have already sold the 200,000 bales and they have contracts to sell another 200,000 bales because that is what they anticipate processing.

Mr. HENICAN. Yes, sir.

Mr. POAGE. Obviously, that is not speculative, and we understand that, but then, as I understand it, this second 200,000 bales which they could buy under the terms of this porposal would be declared not to be speculative under the terms of this bill.

I do not see how you can attribute to it the speculative feature when you already have contracts to sell. That would mean they would have to raise their position to 400,000 bales of goods or the equivalent of 400,000 bales of cloth.

Mr. HENICAN. Let me say this: I misunderstood your question. You were a little bit too much ahead of me. I am just a country boy, as you know. You were ahead of me. You put both transactions into one. I see it now. You put both the transactions into one year.

Mr. POAGE. Yes.

Mr. HENICAN. That would be prevented, in my opinion, because I am pretty certain, or I am as reasonably certain, that the CEA is going to set down proposals or rules whereby the organization making use of the amendment will have to show a necessity to use it, and there is no necessity for the second 200,000 bales in 1957, and therefore that would be prevented.

Is that a fair answer?

Mr. KAUFFMAN. I believe the answer is that that anticipated requirement would already have been filled by the purchase of 200,000 bales.

Mr. HENICAN. That is correct.

Mr. POAGE. It would seem that way to me.

Mr. HENICAN. That is correct. There would be no necessity for the second 200,000 bales and, therefore, they would not be allowed to purchase the second 200,000 bales in 1957, let us say, or in the same year.

Mr. POAGE. But that would depend upon the order which is issued by the Department; would it not?

I mean as far as this bill is concerned, they could buy the second 200,000 bales if there was not any order prohibiting it?

Mr. HENICAN. No, sir.

Mr. POAGE. They could not?

Mr. HENICAN. No, sir.

Mr. POAGE. I was just reading this proposed amendment——

Mr. HENICAN. Mr. Poage, may I refer you to the wording in section (c) there?

Mr. POAGE. You are looking at the printed bill, or this last one?

Mr. HENICAN. This last one. Under Section (c) in the third paragraph, the first word in the third line is "shall not exceed unfilled production for 1 year."

In the proposal that you made the anticipated requirements had already been filled for the year. Therefore, the second purchase would be out of order.

Mr. POAGE. I suppose that is right.

Mr. HENICAN. That is right; it would be out of order. In your case he sold on the average 200,000 bales, and he bought his 200,000 bales as futures, and he is finished for that year. He has no more unfilled requirements.

Mr. POAGE. All right.

Mr. MCINTIRE. Mr. Chairman, I have one further question: I think, perhaps, the record ought to show what effect the placing of an anticipatory hedge would have under the 30,000 bale limit. What is your understanding of this legislation, Mr. Henican, if, for instance, I was a small-mill operator? Could I purchase my anticipated needs and have it classified, or have it defined for tax purposes if I were operating under the 30,000 bale limitation, as is contained in the regulations now?

I take it from what you have said that there is no thought that there would be some different interpretation for tax purposes on an anticipatory hedge as contrasted with a speculative hedge.

All of our conversation yesterday and today has been very largely at least dealing with these transactions which are above the 30,000 bale limit. I think perhaps the record will indicate at this point that that was where an anticipatory hedge started, and that up to the 30,000 bales, if a mill manager was buying in excess of their firm sales that that for the record ought to show whether under 30,000 it would be defined as an anticipatory hedge, or whether you were speculative in the 30,000 bales and beyond that point you can come into the definition of an anticipatory hedge?

Mr. HENICAN. I do not know. That is a very interesting question, of course, and it is a question that, frankly, I do not have the answer for. I would like Mr. Bagnell to answer it.

Mr. BAGNELL. I believe, sir, that this proposal comes in section (c) under 4 (a). You have two other forms of hedges, one being the growers hedge. You have under (a) the amount of such commodity such person is raising.

Mr. McINTIRE. What page are you on?

Mr. BAGNELL. Page 5 of the act.

Mr. McINTIRE. I have the same thing.

Mr. BAGNELL. Half way down the page is paragraph (a). Then you have paragraph (b) which covers another form of hedge, and now you bring in here paragraph (c).

Mr. McINTIRE. All right. What is your thought as to the interpretation on that point?

Mr. BAGNELL. My thought is that that would take the same form and start figuring it exactly the same as these other forms of hedges from zero on up but not from 30,000 on up. In other words, a grower is allowed a hedge. There is no limitation on it. It is regarded as a hedge against his growing crop.

Mr. McINTIRE. Yes, sir; that is right.

Mr. BAGNELL. Then you have your second form, and now you take on this. I would assume that if a man in the category you mentioned, let us say he needed 15,000 bales.

Mr. McINTIRE. Yes.

Mr. BAGNELL. Heretofore he would not be in violation of the CEA if he were under the 30,000 bales. Now anything he did would be regarded as a bona fide hedge. At that time it might be regarded as a speculation.

Mr. McINTIRE. Well, then, to rephrase that in my own words, do I understand correctly there that under existing regulations that a purchase of less than 30,000 can be made and described as a hedge unless there are firm transactions against that?

Mr. HENICAN. No, sir.

Mr. McINTIRE. Well, I would not think so.

Mr. BAGNELL. No; that is just it.

Mr. McINTIRE. However, it is your thought that this legislation would permit that?

Mr. BAGNELL. It would permit that; yes, sir. It would describe a transaction such as you have just mentioned as a hedge. Heretofore it would be a speculation.

Mr. HENICAN. However, Mr. McINTIRE asked a further question and that was whether this amendment, as I understand it, Mr. McINTIRE, whether under this amendment this account would be allowed to buy 15,000 bales which they could put under hedge, and an additional 30,000 as a speculation.

Mr. McINTIRE. He is always free to buy the 30,000 as a speculation; is he not?

Mr. HENICAN. Yes, sir; I would imagine so. You can do it as an individual now, if you wish.

Mr. McINTIRE. What I was getting at for the record was how as it stands now this would take place. It is my thought, if I understand it correctly, that a hedge must be, in order to meet the definition of a hedge, such that you have firm sales of goods to cover the raw material?

Mr. HENICAN. That is correct.

Mr. McINTIRE. That is regardless of any quantity?

Mr. HENICAN. That is correct.

Mr. McINTIRE. And the 30,000, of course, is a speculative limit, but I was just wondering if this definition of anticipatory hedge would some into play below the 30,000 or whether it would be a speculation up to 30,000 and an anticipatory hedge above 30,000?

Mr. KAUFFMAN. May I answer that question, Mr. Chairman?

Mr. GATHINGS. Yes. sir.

Mr. KAUFFMAN. Our thinking on that is that if a manufacturer has an unfilled requirement of 45,000 bales for an operating season, he can now purchase 30,000 bales. So, under this provision he would be entitled to an additional 15,000. In other words, he would not be given 75,000. He would be given a total of 45,000 including the purchase of the present limit of 30,000, because there would be no occasion to provide for any larger quantity than that. That is our interpretation of it.

Mr. POAGE. He could buy the 45,000 without any element of speculation entering into it?

Mr. KAUFFMAN. No. Understand, he has no season fixed sales commitments but based on his records he anticipates that he can dispose of the equivalent of 45,000 bales of cotton. He has no season previous sales commitments.

So, he cannot place a hedge order in the market or acquire a hedging position that will qualify as such under the statutory definition of bona fide hedging. So, the most he can do is buy 30,000 bales of futures at present. Under this provision he would be permitted to buy an additional 15,000 so that he would have a total long position of 45,000 bales, which would be equivalent to his unfilled anticipated requirements.

Mr. McINTIRE. Let me ask a question at that point if I may, for the matter of the record.

Does he hold 30,000 speculatively and 15,000 on an anticipatory hedge, or does he hold 45,000 on an anticipatory hedge?

Mr. KAUFFMAN. Well, he undoubtedly holds 45,000 and he regards it as an anticipatory hedge and he probably would report it to us as such.

It would just be a matter of nomenclature.

Mr. McINTIRE. By the same token, he can hold 20,000 as an anticipatory hedge if he can show that is needed in his operation.

Mr. KAUFFMAN. Yes; if he has to avail himself of this provision.

The important fact is that we would not start counting with the first bale, but rather after 30,000. The 30,000 bales which he already had under the present law we would assume would be included in the 45,000 that he needs, and would not be added to the 45,000.

Mr. McINTIRE. With reference to this tax business, can he declare now if he is under 30,000 and does not have the contracts to show against it? He cannot declare that now as a legitimate hedge?

Mr. KAUFFMAN. Yes; but not as a bona fide hedge under the Commodity Exchange Act. However, in the Corn Products case, which was decided by the United States Supreme Court on November 7, 1955, the Corn Products Refining Co. against the Commissioner of Internal Revenue, that case involved that precise point. Both the United States Tax Court and the United States Court of Appeals for the Second Circuit found that the Corn Products Refining Co.'s futures transactions, which they engaged in these anticipatory hedges, they found those transactions to be an integral part of its business designed to protect its manufacturing operations against a price increase in its principal raw material, and to assure a ready supply for future manufacturing requirements. Although those transactions did not qualify under the Commodity Exchange Act as bona fide hedges, both the Tax Court and the Court of Appeals and the United States Supreme Court held that they were for the purpose of price protection, and they were an integral part of the petitioner's manufacturing operations and, therefore, for the purpose of the Revenue Act they were to be regarded as true hedges and were subject to the provisions relating to ordinary losses and not capital gains.

Mr. McINTIRE. That covers the point. Thank you.

Mr. GATHINGS. Off the record.

(Discussion off the record.)

Mr. Kauffman, I think it would be well to put the Supreme Court decision into the record at this point.

Mr. KAUFFMAN. In that connection, Mr. Chairman, there was a companion cause which I am sure would be of interest to the committee, and it bears even more directly on the purpose of the Gathings bill. That was the case in which the Corn Products Refining Co. was taking an exactly opposite position to what they took in the tax case. In the tax case they were contending that the positions were not hedging transactions, but in the CEA case against them they were contending that they were hedging transactions.

The Circuit Court of Appeals for the Second Circuit on April 13, 1956, handed down a decision sustaining the Department of Agriculture's position in the matter to the effect that those transactions do not qualify as bona fide hedges under the Commodity Exchange Act. I will also leave a copy of it here.

Mr. GATHINGS. If you would file copies of those decisions for the record, we would appreciate very much having them.

Mr. KAUFFMAN. I will furnish the reporter a copy of the Supreme Court decision in the other case also.

Mr. GATHINGS. Are there any further questions of Mr. Henican?

(No response.)

Mr. GATHINGS. Off the record.

(Discussion off the record.)

Is Mr. Robert C. Liebenow present in the room?

Mr. HENICAN. Mr. Chairman, he was here earlier this morning, but he told me he had an engagement at 11 o'clock which he would have to keep.

Therefore, he is not present.

Mr. GATHINGS. I understood he desired to make a statement.

Mr. HENICAN. He did, sir, but he told me that he would be glad to prepare for the committee a letter setting forth his views with reference to this proposal.

Mr. GATHINGS. We would like to have such a letter from him on file, and any statement which he would like to make for the record.

Mr. HENICAN. I am a member of the Chicago Board of Trade, and he personally gave me authority to act for him. I know that that institution is in favor of this amendment that we have proposed, and that we have agreed to here. I would just like to get that into the record at this point.

Mr. GATHINGS. Have you received any communications from any other commodity group with respect to this legislation since it was introduced?

Mr. HENICAN. Mr. GATHINGS, I have informally discussed this proposal with the executives of most of the Commodity Exchanges that are regulated by the Commodity Exchange Act, and in my opinion, they are all in favor of this bill. I have made it a point to discuss the matter with the president or the executives and vice presidents of substantially all of the institutions that are under the supervision of the act, and they are all in favor of it.

Mr. GATHINGS. Is there anything further, gentlemen?

Mr. McINTIRE. Mr. Chairman, I have one more question. This matter of liquidation is one that I do not get too clearly and distinctly in my mind, but I would draw this thought from your testimony, Mr. Henican.

This legislation being somewhat restrictive in its use in that it is directed toward the manufacturers and processors and to other elements who may be participating in the futures transactions that in itself is somewhat of a degree of insurance on the pressure of liquidations and the fact that the mill management, through its representative, is in on a futures transaction as price insurance protection; that their relative position between the price in those futures transactions and the spot market is sufficiently closely related so that the pressure of a quick liquidation is not likely to occur. Is that correct?

Mr. HENICAN. That is the way I feel about it; yes, sir. In my experience it is not possible to cover the exact quality required in any commodity in large amounts which would necessitate immediate liquidation of a large volume of futures that may be in the market.

It could be done in small blocks as the spots are acquired.

Mr. McINTIRE. You cited this case of mill management setting a price of 30 cents a pound for cotton, and instructing their pur-

chasing representative there to use that as a guide in relation to the actual cost of cotton which goes into their manufacturing process and that 30 cents a pound may or may not be a controlling factor on the purchase of futures.

Mr. HENICAN. That is right.

Mr. MCINTIRE. However, you think that there is a close enough relationship between the level of the price of futures and the spot market, so that it will not distort these positions enough to serve as an incentive to get out of the futures in bigger blocks than would be orderely?

Mr. HENICAN. Mr. MCINTIRE, those relationships get out of line once in a while, but I think on the average over a series of years they are pretty close together. We are talking about a business transaction and, in my opinion, it has to be conducted in a business-like way—otherwise, they would not be entered into or liquidated.

Mr. MCINTIRE. Mr. Chairman, we are spending a great deal of time in discussing cotton and using it as an illustration as to what this law would cover when we are actually covering other commodities.

Mr. GATHINGS. Yes.

Mr. MCINTIRE. This type of close relationship between the futures pricing and the spot market would not necessarily hold true in other commodities.

Mr. HENICAN. Mr. MCINTIRE, if you recall what I said yesterday, I am fairly familiar with most of the commodity markets but having been born in a cottonpatch I know that industry better. I think the relationship between the commodity markets and all commodities—that is, futures and spots—works substantially the same.

Mr. MCINTIRE. Well, could I ask your observation there as to whether you think the relationship in trading on such commodities as wheat, and cotton, and oats, and barley, are comparable to the relationships and the trading on onions, potatoes, and some of the other perishable comodities?

Mr. HENICAN. Mr. MCINTIRE, when talking about the functioning—I break down the commodity industries into two categories, major and minor. I put in the category of major commodities those commodities which we produce in America in large surplus such as cotton, wheat, corn, and a few others, and in the minor commodities I put the perishable commodities such as onions, potatoes, and so forth—the smaller commodities. There probably should be a third category called "import commodities" such as cocoa, coffee, hides, and so on. Quite naturally, the volume in those minor commodity markets are not the same, and from a commonsense angle there is a larger volume of trading in the major commodity markets where those commodities are produced in big surplus in this country. Therefore, in my opinion, the relationship and the functions of those latter markets is much better and much more efficient than in the smaller commodities.

I am quite familiar with the situation in onions and also in potatoes. Personally, I am not in favor of some of the things that are happening there.

Mr. MCINTIRE. You have a lot of company on that point, in my opinion.

Mr. HENICAN. O. K. I know of some of the things you have in mind. As I told you earlier, Merrill Lynch does not take a position in any of these markets. What we are interested in is a fair and equitable contract for buyers and sellers because we know that if they are one-sided in either respect we cannot do business. We are interested in a large volume of business in order to get our percentage of it.

Mr. MCINTIRE. I was getting to the fact that our responsibility under this legislation is much broader than cotton, but that is what we have spent our time on, and I was just wondering about the other commodities.

Mr. HENICAN. Let me ask you this question:

I wish you would clear up some of my ignorance because you originate from that territory. Is there such a thing as an onion processor or manufacturer?

Mr. MCINTIRE. I do not know. I do not come from an onion territory.

Mr. HENICAN. Would he qualify under this?

Mr. MCINTIRE. No; I do not think so.

Mr. HENICAN. I can see a possibility. There are potato processors and manufacturers.

Mr. MCINTIRE. Very definitely.

Mr. HENICAN. I have handled some long contracts for a potato-chip manufacturer where the potato price was such that he could fix his cost and fix his profits. I do not think there is such an organization as an onion manufacturer or processor. So, he would not qualify under this amendment; would he?

Mr. LAIRD. We do have these french-fry potato plants which are processors.

Mr. MCINTIRE. And, of course, there is likely to be more of it as time goes on. That is the direction in which marketing is moving in those commodities.

I am wondering, and I just wanted to get your thought, as to whether or not the discussion we have had here particularly on cotton has equal bearing and an equal relationship with the other commodities which are affected under this act?

Mr. HENICAN. I think so.

Mr. MCINTIRE. Do you think this bill should be amended to include only cotton?

Mr. HENICAN. No, sir; I am very strongly opposed to amending this to include cotton only. It should include all commodities because as you recall yesterday the gentleman from CEA mentioned the fact that the first time this came up was many years ago. It had to do with a Quaker Oats matter, and later the Corn Products matter, and it has only recently been involved with cotton.

There is another case in which I was personally involved which had to do with the Mexican Government in regard to wheat. I would be very much opposed to limiting this amendment to cotton only.

Mr. MCINTIRE. Thank you.

Mr. GATHINGS. Are there any further questions?

(No response.)

Mr. Kauffman and Mr. Henican, I just wonder if you gentlemen think that the record is complete or if you had any further suggestions?

Mr. KAUFFMAN. Mr. Chairman, I believe it is complete insofar as the Commodity Exchange Authority is concerned.

Mr. GATHINGS. Thank you.

If there are no further questions, the subcommittee will stand adjourned to meet again at the call of the Chair.

(Thereupon, at 12 o'clock, noon, the subcommittee adjourned.)

New Cabinet Member

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. FERNANDEZ. Mr. Speaker, it is with pleasure and high hopes that we from New Mexico wish godspeed and success to the new Secretary of the Interior, the Honorable Fred A. Seaton. As typical of the high regard in which former Senator Seaton is held by the press in New Mexico, I include herewith an editorial which appeared in the Albuquerque Journal, one of the leading daily papers in the State, on June 2, 1956, and which reads as follows:

NEW CABINET MEMBER

New Mexico has always been keenly interested in who holds the post of Secretary of the Department of the Interior because it has the guardianship of 400,000 American Indians as well as being classed as the custodian of the Nation's natural resources.

President Eisenhower has chosen Fred A. Seaton, of Nebraska, for his post as a successor to Douglas McKay who resigned to become the Republican candidate for Senator from Oregon.

Mr. Seaton, a former Member of the Senate, where he served a brief appointive term, has been a member of the inner White House staff. Although an old pro in politics, he is well known in Congress, and his nomination has been favorably received, even by such an ardent antiadministration conservationist as Senator MORSE, of Oregon.

The new Cabinet member will be the superior to New Mexico's Glenn Emmons, who was chosen by President Eisenhower early in his administration as Secretary of Indian Affairs. Mr. Emmons has done much to advance the educational and health status of the Indians in New Mexico and other States. Mr. Seaton's selection should assure continued cooperation with Mr. Emmons in this field.

Mr. Seaton also has an understanding of irrigation and water conservation, and especially of the public power issue on which Mr. McKay came under attack, whether justly or not. Nebraska more than 20 years ago dug into that issue, and State-managed and operated systems came to dominate that State.

The Seaton appointment does not signal a reversal of President Eisenhower's advocacy of a partnership policy with respect to Federal, State, and private power interests. Rather, it may mean that, knowing well the factors involved, he will be a balance wheel in carrying out the President's policy.

With his experience and background, Mr. Seaton ought to carry on the work of the Department of the Interior as well as any western man who Mr. Eisenhower could have selected.

Housing for Older Persons

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 16, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Herald News, Passaic, N. J., under date of May 29:

HOUSING FOR OLDER PERSONS

This year's omnibus housing bill the Senate has sent to the House contains two unusual provisions. If they become law they may revolutionize current methods of handling housing for older persons.

One provision would allow FHA to insure 100 percent of mortgages up to $10,000 for those 60 years and older. Payments could be spread over 40 years. These liberal terms would be available either to the older folks themselves or to a third party desiring to build homes to rent to them. If the third

party were a local government, an official agency, or a nonprofit organization, it could get the full 100-percent guarantee. A private builder could get up to 90-percent mortgage insurance. This would not be apartment project money, but for single homes.

This would accomplish what social workers have long urged, respectable homes for the aged at reasonable cost.

The other provision would authorize some 15,000 units of public housing to be built in each of the next 5 years especially for persons over 65. The bill also would change the law that says no less than two persons related by blood or marriage may occupy a public housing unit. It would permit single persons over 65 to constitute a family.

The FHA provision has support from both parties and stands a good chance of passing the House. The same can be said for the public housing plan, though the number of units to be built may be trimmed. Regardless, these provisions indicate congressional concern for the problems of the increasing number of older persons.

Statement of Tom Pickett, Executive Vice President, National Coal Association, to the Joint Congressional Committee on Atomic Energy, May 28, 1956, Presenting the Views of the Bituminous Coal Industry in Opposition to the Gore Bill S. 2725

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am inserting the statement by Tom Pickett, executive vice president, National Coal Association, to the Joint Congressional Committee on Atomic Energy, May 28, 1956, in opposition to S. 2725, commonly known as the Gore bill.

Mr. Pickett's statement follows:

Mr. Chairman, my name is Tom Pickett. I am executive vice president of the National Coal Association with offices in the Southern Building, 15th and H Streets NW., Washington, D. C. The National Coal Association is the trade organization of the bituminous coal mine owners and operators whose total production is two-thirds of all the commercial bituminous coal produced in the United States.

The bituminous coal industry is opposed to S. 2725 and similar proposals to adopt a crash program approach to the atomic generation of electricity, for the following reasons: (1) There is no current domestic need for the development of a new source of power. (2) The construction of a large number of nuclear powerplants with the Government paying all the costs would constitute a partial abandonment of the free-enterprise system and a long stride toward complete socialism. (3) The program called for by this bill would result in the construction of unnecessary plants, duplicating experimental plants, at high cost to the taxpayers, for the production of high-cost power. (4) Beneficial results can best be obtained by orderly research and development of nuclear power possibilities, with proper attention to the hazards affecting the public welfare, and with the least possible encroachment on the private-enterprise system.

The coal industry does not oppose the Government's present program for orderly research and development of experimental nuclear powerplants. The industry recognizes the need to continue Government sponsorship of the development of nuclear power through the experimental stages.

On February 15 of this year I presented to this committee the views of the bituminous coal industry with respect to the atomic energy program, and with respect to the report of the McKinney panel. In my statement at that time I quoted the resolution adopted on November 1, 1955, by the board of directors of the National Coal Association, setting forth the policy of the coal industry on atomic energy. I believe that policy statement is so important it warrants repetition here:

"Be it resolved by the directors of the National Coal Association, That the following facts and principles should be considered by the executive branch of the Federal Government, the Members of Congress, the Atomic Energy Commission and the American people, in determinating the role of the Federal Government in the development of atomic energy:

"I. In the progression of humanity, in furthering world trade, in advancing the cause of peace, and in maintaining the world leadership of the United States, there is a need to continue Government sponsorship of the development of nuclear energy. To this end, the National Coal Association recognizes the need for the Government to support the national laboratories and to carry out the basic as well as applied research in the field of atomic energy.

"II. Future development of economically feasible nuclear power is necessary to provide power for underdeveloped areas of the world, to assist nations which have power shortages, and to protect the future of the United States in the power field. The National Coal Association therefore recognizes the need for the Government to continue the power demonstration program to optimize the conditions under which atomic power is generated.

"III. The public interest requires that atomic energy be utilized principally in whatever ways or processes it will contribute efficiently to the energy requirements of the United States and the world. The conversion of solid fuels to gas and to liquid fuels through the utilization of atomic energy promises great benefits to the people of the United States. The national laboratory effort should be directed toward minimizing atomic energy fuel processing costs, increasing the safety of reactor systems against the public hazards, and developing high temperature materials of construction to the end that all sources of energy will receive their fair share of the total effort to achieve progress.

"IV. The United States is one of the few nations of the world blessed with sufficient reserves of fossil fuels to meet the Nation's power requirements at low cost for centuries to come. In the United States the most economic source of steam-generated electric power in the foreseeable future will be plants fueled by coal, oil or natural gas. Under the competitive stimulus of our free enterprise system, the ingenuity of the American people will bring about the most beneficial results that can be obtained from all energy sources, including coal, oil, natural gas and atomic energy.

"V. The public interest demands dissemination of actual cost information with respect to nuclear fuels to the greatest extent compatible with national security. To the extent that Government subsidies are necessary in the development stages of the nuclear program, the public should be informed as to the magnitude thereof. There can be no reliable forecast of the comparative costs of power generation until nuclear fuel costs, and the cost of the safe disposal of radioactive wastes, are established.

"VI. The Nation's best interests are not served by unwarranted optimism about the early availability of low-cost nuclear power."

S. 2725 would direct the Atomic Energy Commission to construct six nuclear-power facilities, and would declare it to be the intent of the Congress "that the full resources of the United States should be made available to advance the art of generation of electric energy from nuclear energy at the maximum possible rate." For the reasons hereinafter set forth, we believe this crash program is entirely unwarranted.

The proponents of an all-out program for nuclear power advance a variety of reasons therefor, including the following: (1) It is required if the United States is to maintain world leadership in the atomic-power race. (2) The United States has an urgent domestic need for this additional source of power. (3) The vast expenditure of money and effort will be justified by the quick achievement of cheap power or quicker achievement of it than would result from the present program. (4) Private enterprise is failing to carry its share of the burden in the development of nuclear power. A close scrutiny of the facts will show that none of these reasons is valid. First, the proponents contend that a greatly accelerated program is required if the United States is to maintain world leadership in the atomic-power race. They point with alarm to Russia's 5,000-kilowatt reactor, and to England's construction program under which that nation expects to furnish substantial amounts of power from atomic energy.

All the known facts indicate that the United States is now in the lead in the atomic power race and will maintain that lead under the present program. Appearing before this committee on February 29, 1956, Admiral Strauss said "I know of no country that has been selling any reactors in the world except ourselves * * * I think we are well in the lead, and we will maintain it aggressively." In his testimony before this committee last week, Admiral Strauss reiterated with emphasis the same thought, and he emphasized other valid reasons for the Commission's opposition to the program proposed by this bill.

The atomic power race will be decided by quality, not quantity. For instance, if the United States is able to develop and offer for sale reactors which will produce electric power at about 10 mills per kilowatt-hour, we will maintain our lead over a country which offers reactors producng 15-mill power. The total cost of the power produced will determine which reactors will be utilized, and this will not be affected by the number and variety of reactors in operation.

Little is publicly known about the Russian nuclear power program. However, at Geneva it was made clear that the Russian reactor produces power at a cost substantially higher than the cost of conventionally produced power in that country. Since conventionally produced power in the United States is much cheaper than it is in Russia, the margin between Russian nuclear power costs and United States conventional power costs is even greater.

The British speak in hopeful terms of 7-mill power from their nuclear plants, but it is quite obvious that this is an arbitrary and unrealistic figure which will be reached only by crediting the power operation with heavy payments for the weapons plutinium produced. From the information available to the general public, it appears that authorities on the subject are convinced the British reactors presently being planned and constructed will not compete on a cost basis with the atomic power reactors which are being

designed in the United States, much less with conventional power in this country.

World leadership in nuclear power will not be maintained by the construction of a large number of full-scale power installations merely to enlarge the use of atomic energy for power purposes. World leadership will be maintained by exploiting atomic power "at a rate consistent with sound technological, economic, and public policy considerations," to quote the language of the AEC.

The second argument advanced is that there is an urgent domestic need for an additional source of power. Time and again the press quotes various spokesmen, including Government officials, to the effect that the world reserves of coal are very limited, and the United States' reserves of coal are being exhausted. These statements convey an impression which is a complete distortion of the truth. There are many nations in the world which do have an acute shortage of coal reserves. In the United States, however, we have abundant coal reserves to furnish low-cost power for centuries to come, even if requirements for power production increase as rapidly as indicated.

The McKinney panel report included official United States Bureau of Mines statistics about the coal reserves of this Nation. According to the United States Bureau of Mines, the United States has nearly a trillion tons of economically recoverable bituminous coal. That is enough to last a thousand years, even if we are called upon to double the current rate of production. Further analysis of the figures supplied by the Bureau of Mines shows that approximately one-fourth of those reserves are recoverable at or near present costs (enough to last nearly 500 years at the current rate of production). Again, the Bureau of Mines figures show nearly 300 billion tons more of those reserves (enough to last an additional 500 years at the current rate of production) could be recovered at from 1¼ to 1½ times present costs. There is, therefore, an ample supply of bituminous coal to furnish the energy demands on our industry not only for the next quarter of a century but for the next millenium.

In the face of these official Government figures, it is intellectually dishonest to imply that our coal reserves are rapidly vanishing. Centuries from now our coal reserves may begin to reveal a tightening supply, but that hardly implies any urgency for the program proposed in this bill.

We not only have the coal—we have the ability to produce it. Unlike the coal industries of many foreign nations, the United States coal industry has achieved, and is continuing, an astounding rate of technological improvement. In 1940 only 35 percent of underground coal production was mechanically loaded, and national productivity averaged slightly over 5 tons per man per day. At the present time more than 82 percent is mechanically loaded and national productivity averages 9 tons per man per day. The Bureau of Mines states that "Significant developments are expected in all phases of the coal economy, including mining, transportation, improvement in present utilization, and in new or expanded uses."

Countries less fortunate than the United States, faced with a power shortage, may be compelled to proceed now with the construction of nuclear powerplants which are far from satisfactory and whose product is of such high cost as to make it an impractical and unecomonic operation if used in the United States. Such a course should not be followed here. England finds itself unable to meet its present power requirements with coal, and is therefore forced to seek another power source immediately. For this reason, the British are unable to pursue the most efficient method of developing economic nuclear power. On October 26, 1955, speaking at the National Industrial Conference Board's Fourth Annual Conference on Atomic Energy in Industry, the Right Honorable Lord Citrine, Chairman of the Central Electric Authority of Great Britain, said England is faced with a "very acute shortage of coal," which would grow to a shortage of 10 million or 11 million tons by 1965. Lord Citrine said there was no indication of future improvement of coal output in England. He then stated:

"Now with this as a backgrround, it follows that our approach to the problem of utilizing nuclear power or electrical generation must be somewhat different from those in countries like your own, where you have vast resources, not mercly of coal but of water and natural gas.

"I think it is important to remember that what might be uneconomic in the United States might prove in Great Britain not only to be economic but absolutely imperative for the industrial life of our country. Britain must push out with the development of nuclear power, and it is with that consideration always before us that we have to view this problem. * * *

"The real problem is that there may not be sufficient alternative fuel available and in these circumstances the economic argument moves into a different field. Then the problem can be stated in the following terms: Is it better to scale down our industrial output and living standard to the amount of fuel that is available? Or should we bear the extra costs of nuclear power and, by a corresponding tightening of our belts in other sectors of our economy, maintain our industrial activity and our economic strength?"

As previously shown, the United States has no corresponding fuel deficit. For that reason, we are not forced to undertake the inefficient and uneconomic road to the development of nuclear power—indeed, it would be very extravagant of our tax resources to do so.

A third argument advanced by the supporters of the principle of this bill is the expectation that widespread construction of reactors will result in quick achievement of cheap power, or quicker achievement of it than would result from the present program. Competitive nuclear power, like world leadership in the nuclear power race, depends upon quality, not quantity. Construction of a large number of reactors to produce power at costs far in excess of power from conventional fuels is not the most promising road to accomplish the scientific developments necessary before nuclear power can compete with conventional fuels. There is no assurance that nuclear power will ever be as cheap as today's power from conventional fuels. Eventually, with the proper scientific research, utilized in the most efficient manner, the cost of nuclear power might be reduced to a point where it may be of some benefit to the economy after conventional fuels become scarce or greatly increase in price. Whether the crash program approach or the orderly scientific research approach is adopted, there is no indication that the result will be a power cost any lower than today's power from conventional fuels. Furthermore, the cost of conventionaly-produced power is expected to drop with improved technology in mining, transportation and utilization.

One of the limiting factors to nuclear power progress is the extreme shortage of qualified personnel. Progress in the nuclear power art should be achieved far quicker by using the available personnel on research and experimental plants, than by using such personnel in the construction and operation of a number of plants which admittedly are going to be unable to contribute to the Nation's energy supplies on an economic basis. The potential of scientific personnel will particularly be wasted where they are used on projects which duplicate other projects. Passage of S. 2725 would result in uneconomic utilization of scientific personnel by providing for the construction of projects which will duplicate other plants. We submit that no project should be constructed with Government funds or subsidy to produce power at a loss unless it is a new type of facility which is different from any other facility. Government subsidy of one of each basic type of reactor may be justified on the grounds that the knowledge and experience thereby gained advances the nuclear power art. To subsidize a plant which duplicates substantially a plant of the same type is to waste personnel and money. This viewpoint was well stated by AEC Chairman Lewis L. Strauss on November 9, 1955, when he said:

"The information paid for in this manner must, of course, be new information which will supplement existing knowledge, otherwise it cannot be said to contribute to the advancement of the art. This means that the Government, generally speaking, will not invest in projects which appear to duplicate each other. Under this philosophy the Commission could not justify giving financial assistance to research and development work on 2 or 3 reactors which are of the same type and size, and which, therefore, could be expected to produce the same or very similar data."

In this connection, it is important to note that S. 2725 provides that "The reactor-construction program authorized by this act shall be in addition to the reactor-development program being carried out by private or public groups under licenses authorized by section 103 of the Atomic Energy Act of 1954."

The Atomic Energy Commission recently stated to this Committee that it presently has eight major types of reactors which are currently under consideration. Listed were nine pilot-sized reactors which are under construction by the Government for the purpose of developing civilian atomic power. Listed was one full-scale plant (the pressurized water reactor at Shippingport) under construction by the Government. Listed were 10 reactors which will be built with Government subsidy. In addition, there were three reactors listed which will be built without Government contribution to the capital cost. Already duplication of effort is becoming a probability, because the Shippingport reactor, the Yankee Atomic reactor, and the Consolidated Edison reactor will all be of the pressurized water type, even though there is some difference in size.

At the present time it cannot be determined how many of these reactors will eventually be licensed under section 103 of the Atomic Energy Act. However, it seems quite plain that S. 2725 expresses the intent that the 6 new plants called for would be built in addition to the present program and in duplication of plants which will be constructed under the present program.

Information available makes it quite obvious that at least one of each type of reactor considered worthwhile will be constructed under the present program, with or without Government contribution to the capital cost. It follows, therefore, that each and every 1 of the 6 additional plants which would be constructed under S. 2725 would be a duplication of some other plant and would be an inefficient and wasteful use of personnel and money.

A fourth reason assigned by proponents of this crash program is that private enterprise is failing to carry its share of the load in the nuclear-power program. It is quite obvious to us that this charge is incorrect. We have been cited no instance in which the Atomic Energy Commission has failed to receive private enterprise cooperation in any type or size of reactor considered worthwhile. Commission officials have previously testified, in effect, that every type of reactor is proceed-

ing as fast as orderly planning and development will permit.

Private enterprise is contributing a great deal to the nuclear-power development program through the construction of experimental plants. Private enterprise should not be expected to waste their own or the Government's money on the construction of plants which will merely increase the consumption of nuclear power but which will not contribute to the nuclear-power art, because they duplicate other plants and will not produce new knowledge. Neither should the Government itself do so.

A recent publication of the American Enterprise Association, entitled "The Role of Government in Developing Peaceful Uses of Atomic Energy," had this to say:

"If nuclear-produced power is to assume its proper place in the world economy, it must eventually do so on a basis of free and open competition with other power-producing fuels and not by subsidy, international or otherwise. * * *

"Shall we absorb atomic industry into the traditional framework of our society? Or shall we use the excuse of atomic-age problems to abandon the democratic processes? * * *

"If atomic energy is to become a part of our traditional economic and political structure, the next decade will require a continuation of the program begun in 1954–55, thus encouraging atomic energy to be assimilated by the competitive system.* * *

"Employing the highly efficient price system in the development of atomic energy is not something which can be accomplished immediately. * * * The sooner a maximum degree of freedom can be given to industry, including the freedom to lose money, the more likely we are to discover the most economical forms of reactors and the less likely we are to misuse our resources. It may also be the way we can contribute most to the economic advance of the world. In struggling to preserve civilization, freedom is our greatest asset; we ought to exploit it to the full."

The duplicate facilities called for by S. 2725, to produce high-cost electricity at the expense of the taxpayers, would increase the unknown, but potentially disastrous, public hazard. There is serious question whether Congress should subject the people of this Nation to such dangers even where the plants involved are true research plants which may eventually benefit the public. We very strongly feel that Congress should not impose these hazards upon the people merely for the construction of unnecessary plants, particularly when so little is known as yet about the full disaster potential.

I believe the following statement, which I made before this committee on February 15 of this year, warrants repetition here:

"On the basis of the known facts, we believe that in most sections of the United States the most economic source of steam-generated electric power in the foreseeable future will be plants fueled by fossil fuels. We believe that for the foreseeable future the maintenance of a dynamic and expanding economy will depend upon the availability of ever-increasing amounts of low-cost energy from coal. We have the coal reserves necessary to meet the Nation's needs. We have the know-how and the manpower to produce that coal. We confidently expect to meet the Nation's expanding energy demands within the framework of the free enterprise system, without subsidy, and we believe the Nation's dependence upon coal warrants close congressional scrutiny to the end that legislative inequities against the coal industry shall be eliminated. We do not fear inroads upon our market by nuclear power—we believe that for many years to come the atomic energy program will consume far more coal than is displaced by nuclear power."

Thank you for the opportunity to present the views of the coal industry.

Raiding Refuges

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. METCALF. Mr. Speaker, last year the Army tried to invade—and destroy—the Wichita Mountain National Wildlife Refuge in Oklahoma.

The Army wanted to take over the vital one-sixth of this refuge, the second most popular unit in the national refuge system, for its Fort Sill Artillery and Guided Missile School.

The invasion was repelled. And the Army is trying again.

In a timely editorial in the issue of June 3, the Washington Post and Times Herald had this to say of this new raid:

RAIDING REFUGES

National security has been advanced as a pretext for a good many absurdities but perhaps for none more pointless than the proposal by Representative VICTOR WICKERSHAM to transfer 10,700 acres from the Wichita Mountains National Wildlife Refuge to the Army. The Army wants the area as an addition to its Ft. Sill Guided Missile and Artillery Center for the testing of new types of rockets. The purpose is praiseworthy enough. But surely the Army can find a shooting range where it will do less damage to a vital national resource. Witnesses who appeared before a House Fisheries and Wildlife Conservation Subcommittee at hearings held last week suggested several inactivated areas under Army control which could be used for this kind of practice. There is no warrant whatever for a greedy grab at dedicated land for the mere sake of avoiding some measure of trouble and cost in reclaiming some other suitable site.

The Wichita Mountain Refuge, created by President Theodore Roosevelt, has the second highest visitation record of any wildlife refuge in the country. Nearly a million persons went to it in 1955—for fishing, camping, photography and nature study. It affords refuge to herds of elk, antelope, deer, longhorn cattle—and to more than 800 bison, symbol of the American frontier. It has contributed significantly to agricultural research through the restoration of erosion-resisting native grasslands. To destroy this oasis needlessly would be a wanton piece of vandalism. Conservation groups are unanimous in opposing the Wickersham bill. Their reasoned, disinterested and compelling objections ought to be respected.

Mr. Speaker, we feel this way out West, too. Following is an example of the correspondence I have received on this grab:

BILLINGS ROD AND GUN CLUB,
Billings, Mont., May 19, 1956.

Hon. LEE METCALF,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. METCALF: We believe wildlife refuges are one of the most important links in our public land system. We feel these are most essential to all our people for recreational uses that cannot be found elsewhere.

Refuges are needed for restoration and propagation of many of our most coveted and diminishing species of fish and wildlife resources. These refuges and the fish and wildlife they contain have a place in our American way of life, a heritage that should be preserved for all our people today and for the future generations. Also, we are losing something of the highest intrinsic value when even one acre of these lands is lost to the public, or when encroachment for exploitation for any purpose is imposed on these refuges. We feel the laws that set them aside should be strictly adhered to, and the purpose and program for which they were set aside should be fulfilled. The preservation of our country's natural resources, which we feel is most important of all, can be assured only if Government, in administering our public lands for their most beneficial uses, thinks of them as great vaults only to be opened for the most extreme-needed necessities.

To repulse tyrannical ambitions of the Armed Forces or others wishing to destroy or defeat the purpose of refuges or other public lands is the responsibility of our Congressmen, governmental departments and the spirited people of our Nation, who will use every means to deefat the ambitions of such foes, requests or opponents. The Armed Forces are important to this country, and their needs are gladly taken care of at public expense. Their purpose is to defend our country and defeat our enemies—not to destroy or defeat the public wishes in trying to preserve these areas of our country that are so urgently needed for our people. Instead, they should defend refuges and our public land systems for their many recreational uses that are so important today and for the increasing visits they will receive each successive year.

We are very much disturbed at the attitude some of our Congressmen and departments are taking when evaluationg public lands and refuges for multi-purpose use, or in trying to dispose of them any way possible through sales, leases or otherwise. I refer you to Secretary McKay's own words in a statement from the Billings Gazette of April 30, 1956, which is enclosed for your information.

It is our sincere belief that our Government, in the administration of our public lands, should take into consideration the important part these lands play in keeping the people strong, healthy, vigorous, alert and happy. Happy people are the most important asset any Government can have.

"Private lands—no trespassing" signs are becoming too numerous in many localities today. We vigorously oppose encroachment that would adversely affect these areas and acquisition of these lands to the Armed Forces or others who wish only to exploit these areas for selfish gains.

Sincerely yours,

AL JENKINS,
President, Billings Rod and Gun Club.

Mr. Speaker, when Douglas McKay was Secretary of the Interior, he refused to turn part of this refuge over to the big gun and rocket shooters for destruction. Presumably he did so after a discussion at the cabinet level—because the Department of Defense was justifying the request on the ground of national defense.

The same justification is being presented today. And once again, the Department of the Interior has voiced its opposition.

Congress should not override the administrative decision unless there is substantial new evidence justifying the Department of Defense request. No such evidence has yet been presented, therefore the Department of Interior should not be interferred with on one of the rare occasions when it is carrying out its lawful duty to protect the people's lands.

The Threat to the Textile Industry and to Cotton Growers in the United States

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. RILEY. Mr. Speaker, the Departments of Commerce, Agriculture, and State have all failed to recognize the threat to the great textile industry of the United States and to the cotton farmers of this country through the increase of imports of cotton textile goods made from cotton grown in other countries and fabricated by low wage labor. The textile industry is one of the largest industries in the United States. It employs a highly intelligent class of workers and pays good wages. It purchases approximately two-thirds of all the cotton grown in this country and pays for this cotton the parity price or better. Foreign spinners will not pay the parity price for our cotton when they can purchase cotton on the world market for much less. So when the Federal departments and commissions refuse to put some limitation on the importation of cotton textile goods while GATT and other international organizations insist on lowering the American tariff on such goods, a great American industry is in extreme danger of being liquidated and the American cotton farmer is on his way out.

In support of this observation I beg to insert below a letter written by Mr. H. C. McClellan, Assistant Secretary of Commerce for International Affairs, to Mr. Angus H. Macaulay, president of the South Carolina State Chamber of Commerce, together with the reply to Mr. McClellan by Mr. R. C. McCall, of Easley, S. C. Mr. McCall is an outstanding textile manufacturer who has made a very detailed and objective study of this grave situation.

The letters follow:

THE ASSISTANT SECRETARY OF COMMERCE,
Washington, March 7, 1956.

Mr. ANGUS H. MACAULAY,
President, South Carolina
State Chamber of Commerce,
Columbia, S. C.

DEAR MR. MACAULAY: The Secretary has asked that I reply to your letter of February 28, 1956 in which you call his attention to the resolution of your chamber favoring import quotas on cotton textiles.

The concern of the cotton textile industry over imports is a matter which this Department has been considering for some time. Speaking quite frankly, we are not at all convinced that such quotas would be as helpful as they would be harmful to the industry and to the general economy of the South. Our questions regarding imposition of import quotas are based upon the following considerations.

In 1955 the United States industry produced an estimated 11 billion square yards of cotton textiles and it is estimated that approximately 542 million square yards of cotton textiles were exported during this period. For the year, imports of cotton textiles are estimated to have been 133 million square yards, equivalent to approximately one-fourth of the quantity exported. Our concern is based on whether imports, amounting to approximately 1.2 percent of our total production, justify jeopardizing exports which are equivalent to nearly 5 percent of our cotton textile output.

There seems to be no question but what application of quotas to our textile imports would result in steps being taken by foreign countries which would result in less favorable treatment for United States textile exports. The foreign reaction to news stories that quotas are being advocated makes such a result seem inevitable.

A corollary part of the import quota problem is the effect such quotas would probably have on cotton exports. The first concern in this connection is with the cotton in cotton textile exports.

In 1955 the cotton equivalent of textile exports is estimated at 530,000 bales, while the cotton equivalent of textile imports is estimated at 130,000 bales. If we take a step which jeopardizes our export market for textiles, we put in equal jeopardy an exchange in which our net market gain is equivalent to about 400,000 bales of cotton. An even more direct effect on our cotton market would result from the impact import quotas would have on Japan.

In 1955 Japan imported an estimated 647,000 of the approximately 2.5 million bales of cotton the United States exported. Japan was by far our best foreign market for cotton, taking over 25 percent of our total exports. Preliminary data indicate total United States exports to Japan in 1955 of $643 million, as compared with our imports for consumption from Japan which we estimate at $425 million. Earnings from textile imports were about $60 million. With the disparity in her trade balance, imposition of textile import quotas by the United States would bear heavily upon Japan and purchases of United States cotton most certainly would be affected adversely.

It is for the foregoing reasons that we are skeptical of United States resort to import quotas on textiles. I want to assure you that the Department of Commerce feels a strong responsibility to the textile industry. We have been in almost constant contact with representatives of the industry and have raised with them the same objections to quotas we have outlined in this letter. We are hopeful of finding an equitable solution to the import problem which will not put our foreign trade in cotton textiles and in cotton so much in jeopardy.

Cordially,

H. C. MCCLELLAN,
Assistant Secretary of Commerce for International Affairs.

Mr. H. C. MCCLELLAN,
Assistant Secretary for International
Affairs, United States Department of
Commerce, Washington, D. C.

DEAR MR. MCCLELLAN: I am a member of the South Carolina State Chamber of Commerce and have recently seen your letter of March 7 to our president, Mr. Angus H. Macaulay, in which you give your reasons for opposing import quotas on cotton textiles. Frankly, I find your position in this matter very difficult to understand, particularly as I believe your letter to Mr. Macaulay overlooks some very salient facts. We have learned to expect such strained arguments from the Department of State, which is so obviously determined to transfer a portion of our industry to Japan. But it is indeed disturbing when a responsible official of the Department of Commerce takes the same line.

You state that in 1955 cotton textile imports were only one-fourth of cotton textile exports. However, you are referring to countable cotton cloth only. Statistics collected by the Bureau of the Census in the Department of Commerce show that in 1955 imports of cotton manufactures (dollar value), including countable cloth, apparel, towels, etc., were 51 percent as large as exports of cotton manufactures. Furthermore, it must be remembered that the import valuations are based on foreign wholesale prices while the export valuations are based on United States prices; this means that imports were actually far more than 51 percent of exports in 1955. But even if we do not take this into account, you have made an error of 100 percent in your statement because imports are actually one-half exports, not one-fourth. Incidentally, I would think it significant that imports from Japan of countable cotton cloth for consumption increased about 300 percent between January 1955 and January 1956—from 5.1 million square yards in the first month to 20 million in the latter.

You argue further that if the United States imposed an import quota on cotton textile imports this would reduce cotton textile exports. This is, really, a specious argument for the following reasons:

1. The whole idea of international trade is based on the assumption that countries export more of certain items than they import, in order to import more of certain other items than they export. Doubtless, there is no example in the whole gamut of United States foreign trade where exports of a particular item exactly balance the imports of that same item.

With respect to cotton textiles, the United States has been for many years an important exporter and, indeed, in view of the surplus of domestically produced raw cotton in the United States, the high level of clothing consumption of the American population, and the low level of clothing consumption in many areas of the world, this is to be expected in any logical world trade pattern.

2. Very similar is the situation relative to United States exports and imports of wheat flour. The United States produces a surplus of wheat, and its population's food consumption per head is very high relative to the rest of the world and exports of wheat flour far exceed imports thereof into the United States.

Indeed, since May 29, 1941, a strict import quota on wheat flour has been maintained by the United States Government precisely as it has maintained since that time a strict import quota on millable wheat. Both the wheat quota and the flour quota have been instituted under section 22 of the Agricultural Adjustment Act because wheat is a price-supported commodity and large imports of wheat or of wheat flour would imperil the success of the price-support program on wheat.

3. Under section 22 a strict import quota on American upland types of raw cotton has been maintained since 1939 in order to make possible the maintenance of a support-price program for raw cotton. Yet, no import quota has been imposed on cotton textiles under section 22 as has been imposed since 1941 on wheat flour, and imports of raw cotton in the form of cotton textiles are now of such proportions as to seriously undermine the raw cotton program. Present imports of cotton textiles now represent an amount of raw cotton several times larger than the raw-cotton import quota referred to above.

4. What is the relationship between the imports and exports of wheat flour? The global import quotas on wheat flour is 4

million pounds which is the equivalent of some 93,000 bushels of wheat. Over 90 percent of this quota is allocated to Canada and was filled in 1955 on May 29, the first day of the new flour quota year. Exports of wheat flour from the United States in the last crop year (July 1, 1954–June 30, 1955) were equivalent to 46,287,000 bushels of wheat. In other words, an import quota has been imposed on what flour for more than 14 years, yet imports of wheat flour are below 1 percent of wheat flour exports.

5. The import-export relationship with respect to cotton textiles has been stated above. Exports of cotton manufacturers are now but twice as large as imports while exports of wheat flour are 498 times as large as imports.

This fantastic discrepancy between the exports and imports of wheat flour concerns no one; it has not been suggested that because of this statistical fact the import quota on wheat flour should be abolished. And rightly so, for the fact that United States wheat flour exports greatly exceed imports has nothing whatever to do in law, in economic theory, or in logic with the need and desirability of an import quota on wheat flour.

And so also with respect to cotton textiles.

In arguing that imposing import quotas on cotton textiles would reduce cotton textile exports you say "that the foreign reaction to news stories that quotas are being advocated makes such a result seem inevitable."

To give the complete foreign reaction, it seems to me that you should have stated that the Japanese Government and the Japanese textile industry have both indicated to the United States Government and the United States textile industry that they recognize a serious problem exists and are ready to negotiate an equitable limitation upon their shipments to this market; that the United States textile industry is agreeable to this solution but that the United States Government refuses to effectuate it.

You also argue that import quotas on cotton textiles would jeopardize our export market for raw cotton and you cite certain statistics in support of this statement. However, you neglect to point out that in 1955, according to statistics collected by the Bureau of the Census in the Department of Commerce, United States imports of all textile fibers and the manufactures thereof from Japan exceeded exports from the United States to Japan of all textile fibers and the manufactures thereof. I am sorry that I must say to you in all frankness that this argument also seems specious:

1. Japan is the world's leading exporter of textiles and already has one-fourth of the total world cotton goods trade. Cotton will not grow in the Japanese climate. Therefore, Japan must import cotton. Quite clearly, Japan purchases her cotton where she can get it cheapest, all things considered. In 1955, while Japanese exports of cotton textiles to the United States were rising rapidly, Japanese purchases of United States cotton were declining sharply. Japan is importing increasing quantities of Mexican cotton despite the fact that Mexico places a virtual embargo on cotton textile imports from Japan.

2. The decline in United States raw cotton exports to Japan and elsewhere, which you apparently anticipate would follow upon adoption of import quotas on textiles, has already occurred, of course. And the explanation of the decline in raw cotton exports to Japan and elsewhere—a decline of 62 percent in the first half of the current crop year as compared with the first half of the last crop year is very simply and correctly explained by the Foreign Agricultural Service of the United States Department of Agriculture on page 398 of its March 26, 1956, issue of Foreign Crops and Markets as follows:

"The low level of United States cotton exports during the first half of the current market year may be attributed mainly to anticipation on the part of both buyers and sellers abroad during all of 1955, that prices of United States cotton for export would be reduced. Prices of foreign growths declined by around 25 percent while prices of United States cotton remained close to the loan level, roughly 5 to 8 cents a pound above those for similar quality foreign growths."

You are also aware, I feel certain, of the special programs, such as Public Law 480, through which the United States Government is financing most of the cotton now being exported from the United States to Japan. In short, the Japanese are buying declining amounts of United States raw cotton and increasing amounts of Mexican and other growths because of the price differential, and they would be buying still less United States cotton if it were not for special United States Government export programs. All of this has nothing whatever to do with the problem of controling cotton textile imports from Japan.

3. There is no Japanese dollar shortage; indeed, Japan is using United States dollars to buy cotton from Mexico. The facts are that, according to the Federal Reserve Board, Japanese dollar holdings increased from $794 million in September 1954, to $992 million in September 1955. I wonder if you also know that Japan's industrial production reached an all-time high in December 1955, almost twice the pre-World War II average and that her export trade is at an all-time high and is rapidly expanding? In fact, in 1955 Japan's international payments balance would have been favorable even if there had been no United States military or economic aid expenditures in Japan.

Very truly yours,

R. C. McCALL.

EASLEY, S. C.

THE ASSISTANT SECRETARY
OF COMMERCE,
Washington, April 30, 1956.

Mr. R. C. McCALL,
Easley, S. C.

DEAR MR. McCALL: In your letter of April 16, 1956, you cover a broader range of questions with respect to textile imports than we felt was intended by the letter to us from Mr. Angus Macaulay and in our answer to him.

We appreciate having your point of view on these broader issues.

Cordially,

H. C. McCLELLAN,
Assistant Secretary of Commerce for International Affairs.

Mineral Leases in Superior National Forest in Minnesota

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. METCALF. Mr. Speaker, on page A4177 of the May 24 CONGRESSIONAL RECORD, the gentleman from Arizona [Mr. UDALL] called our attention to Warren Unna's excellent summary of Republican Giveaways in the current issue of Harper's magazine.

Mr. Unna devoted one section to The Gifts Already Given.

In this section he included a mineral lease now being developed by agencies of the Department of the Interior with the International Nickel Company of Canada, Ltd.—Inco—for lands in the Superior National Forest in Minnesota.

Mr. Unna put it this way in his article:

(3) At least one parcel of the National Forest in Minnesota has gone into private hands through a secret long-term lease.

International Nickel Co., anxious to justify investing $56 million for nickel and copper mining in northern Minnesota's Superior National Forest, had asked the Democratic administration for a 99-year lease on 12,000 acres. It got nowhere. Once the Republicans came in, the company confronted the Forest Service with an Office of Defense Mobilization letter declaring the national welfare would be endangered if the mining were not permitted. International Nickel next visited the then Assistant Interior Secretary, Orme Lewis. In the presence of a former high-ranking Bureau of Land Management official, Lewis told the company officials:

"If you gentlemen draft the kind of lease you want, we'll be glad to look it over."

The 50-year option they gained is an irrevocable commitment by the Government. Yet Lewis E. Hoffman, top minerals official of the Bureau of Land Management says that as far as his records go International Nickel has only a 2-year prospecting permit, and that the memorandum of conversations with Assistant Secretary Lewis "is in the confidential file of the Secretary (McKay)."

Fifty-year leases in the national forest are unheard of, yet M. A. Hanna Co., formerly headed by Secretary of the Treasury George M. Humphrey, and Kennecott Copper, have similar agreements pending with Interior for Superior National Forest land.

I have just addressed several questions on this lease to the Secretary of the Interior in the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 5, 1956.

Hon. FRED A. SEATON,
Secretary of the Interior,
Washington, D. C.

DEAR MR. SECRETARY: It has come to my attention that agencies of the Department of the Interior are now developing a mineral lease with the International Nickel Company of Canada, Ltd. ("Inco"), for lands in the Superior National Forest in Minnesota.

From what I have been able to learn of this proposal, it involves grave questions of national defense, conservation, monopoly, a critical shortage of an indispensable metal and the attendant injury to small business.

I will appreciate your answers to the following questions:

1. When will the lease become effective?

2. What provisions are made in the proposed lease for the stimulation of production during a period of emergency such as we are experiencing now? I consider this a most important question in view of the allegations of the Senate Preparedness Subcommittee in Document No. 4, 82d Congress, with respect to Inco's monopoly position in nickel production and distribution.

3. Has your Department had access to a copy of the Office of Defense Mobilization letter to the Forest Service on the desirability of stimulating nickel production in the national interest?

4. Has your Department examined the assays of samples from the diamond drillings by Inco in the Superior National Forest? If so, what did they show? Were minerals in addition to nickel and copper found in commercial quantity? What were these minerals? What royalty provisions for

all minerals involved are contained in the contemplated lease?

5. In view of the current emergency, has ODM been consulted with respect to the terms of the proposed lease?

6. Is Inco to have an undivided interest in the lease? If not, what other companies will have an interest and how much?

7. In view of the Senate subcommittee's finding that Inco is "one of the most formidable monopolies the subcommittee has found," has the proposed lease been referred to the Antitrust Division of the Department of Justice for determination as to whether Inco's monopoly would be enhanced by this lease?

8. Is there a requirement in the proposed lease that the plant, which will process this ore from public lands, be located in the United States?

In addition, I would appreciate a copy of the proposed lease.

In view of the importance and widespread interest in this matter, I intend to place this letter in the CONGRESSIONAL RECORD. I shall do the same with your reply which I would like to have within 10 days.

Very truly yours,

LEE METCALF.

The introduction of Senate Document No. 4 of the 82d Congress read as follows:

The Senate Armed Services Preparedness Subcommittee has for some time been studying the effect of foreign strategic material monopolies on the preparedness program of the United States. One of the most severe shortages, both current and foreseeable, that the subcommittee has encountered has been in nickel. And one of the most formidable monopolies the subcommittee has found has been the International Nickel Co. of Canada, Ltd. ("Inco"), which produces over 85 percent of the free world's nickel.

The current shortage has resulted from the collision of a rapidly increasing civilian and military demand for nickel with the relatively fixed supply produced by Inco. The foreseeable shortage, however, is even more serious. Nickel has important alloying qualities which are indispensable in steelmaking and the production of certain types of aircraft engines. The large increases in the production of these industries, which have now become basic to our survival as a free nation, depend substantially on a similar increase in nickel production.

Yet Inco through the years has displayed, in the opinion of the subcommittee, a conservative approach to the expansion of its productive capacity. The glutted markets after World War I and the sharp decline in the demand for nickel during the depression appear to have been an important factor in shaping Inco's approach to expansion. Inco is now operating at full capacity and has professed to be unable substantially to increase its productive capacity because of vexing mining and metallurgical problems.

It is therefore essential to the preparedness program to stimulate the production of nickel from other sources. While this need has been recognized for some time by the responsible agencies of our Government, the subcommittee has observed a very leisurely approach toward accomplishing this program.

Mr. Speaker, I believe the many grave questions—including national defense, conservation, monopoly, a critical shortage of an indispensable metal and the attendant injury to small business—make it imperative that this proposed lease be carefully scrutinized.

Features To Be Renamed on the Colorado-Big Thompson Project

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. HILL. Mr. Speaker, on Tuesday, June 5, 1956, the Department of the Interior, Bureau of Reclamation, issued a news release which I insert in the RECORD for the benefit of the Congress.

The Colorado-Big Thompson project, which is mostly in my district—Second Congressional District of Colorado—is one of the outstanding Bureau of Reclamation projects and is a monument to the great work of this Department.

One of the originators of the idea of such a project was the late Charles Hansen, Greeley, Colo., newspaper publisher and prime organizer of this multipurpose transmountain water diversion project.

Because of Mr. Hansen's vision, understanding, great leadership, and continuous and sacrificing service in the promotion and developing of this project, the Bureau of Reclamation has made it possible to honor the name of Charles Hansen by calling two canals the Charles Hansen Feeder Canal and the Charles Hansen Canal.

The Charles Hansen Feeder Canal is 13 miles long and connects the Flatiron and Horsetooth Reservoirs. The Charles Hansen Canal is 5 miles in length and carries water from the Horsetooth Reservoir to the Cache la Poudre River. This is an honor justly deserved. The news release follows:

FEATURES TO BE RENAMED ON COLORADO-BIG THOMPSON PROJECT, COLORADO

Two major features of the Colorado-Big Thompson Federal reclamation project will be renamed to honor the late Charles Hansen, Greeley, Colo., newspaper publisher and prime organizer of the multipurpose transmountain water diversion project, Commissioner of Reclamation W. A. Dexheimer said today.

The Horsetooth feeder canal will be known as the Charles Hansen feeder canal, and the Poudre supply canal will be the Charles Hansen Canal. The feeder canal stretches for 13 miles between Flatiron and Horsetooth Reservoirs, and the supply canal carries irrigation and municipal water from Horsetooth Reservoir 5 miles to the Cache la Poudre River.

The change in names has been approved by the various public and private groups concerned and will be formally proclaimed August 11, 1956, when northeastern Colorado plans to celebrate completion of the irrigation aspects of the project, Commissioner Dexheimer said. A monument will be dedicated at Loveland, Colo., at that time to the laymen leaders who urged, organized, and supported the project 20 years ago. Mr. Hansen's widow is expected to participate in the celebration.

Mr. Hansen was president of the Northern Colorado Water Users' Association from its organization in 1933 until it became the Northern Colorado Water Conservancy District in 1937. He headed the latter until his death on May 24, 1953. The district contracted with the Bureau of Reclamation to repay irrigation construction costs and has taken over operation and maintenance of the works as units were finished.

Directors of the district recently endorsed the renaming of features in a resolution pointing out that Mr. Hansen rendered great leadership and continuous and sacrificing service to the community movement resulting in the construction of the Colorado-Big Thompson project.

"His leadership brought a needed and greatly beneficial perpetual supplemental supply of water into the Cache la Poude, Thompson, St. Vrain, and Boulder streams for farms, towns, and cities and of the whole South Platte Valley and has brought electric energy supply to other river valleys of the whole State of Colorado," the resolution said.

The Greeley Chamber of Commerce adopted a resolution to similar effect. The 40th General Assembly of the State of Colorado also called for memorializing the project pioneers, specifically including Mr. Hansen.

Approaching full operation during the last 3 years, the Colorado-Big Thompson project has been providing vital supplemental irrigation water during a current cycle of critical drought.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include an editorial from the Boston Herald of May 26, 1956, entitled "Time for a Plan." It discusses a proposal regarding foreign policy made by two professors of the Massachusetts Institute of Technology, which is timely.

The editorial follows:

TIME FOR A PLAN

Many Americans, including some highly placed in the administration, are convinced that our program of aid to underdeveloped countries is completely inadequate and should be expanded without delay. But Congress is balking at the size of the present program. The outlook for any immediate change is, therefore, dim.

The trouble is that the administration has no real plan of action. It is improvising, and improvisations don't inspire either confidence or interest.

This week the Comptroller General attacked the management of foreign aid funds and sharply criticized the Internation Cooperation Administration's planning. "A significant portion of the annual programs proposed to Congress for the past few years," he said, "has been beyond the capacity of the agency and the recipient countries to get underway during the fiscal year for which the funds were appropriated."

How can we hope to sell Congress on a broader aid program if the present one is out of control? How can we inspire taxpayers to accept further sacrifices if what they now spend produces uninspiring results?

If economic aid is to continue, as apparently both the President and Mr. Dulles think it must, then it should be wrapped up in a more convincing package. We must have not just more of the same, but something attention catching and exciting—a new Marshall Aid or a refurbished point 4. We must, in short, have a plan.

At this moment the administration has before it a hard-headed, yet inspiring aid plan worked out by Professors Max Millikan and W. W. Rostow, of MIT. The Tech men want the United States to take the lead in setting up a permanent international development agency which would feed capital to underdeveloped countries as fast as they could absorb it.

The agency would, however, set up rigid standards which the receiving country must meet before getting any money. The whole operation would be set up on a banking basis, not in the sense that every program must be economically self-liquidating, but in the sense that every undertaking must have a reasonable technical prospect of achieving the economic and social results desired.

There would be no political or military strings attached to the program, and the authors would be willing at least to consider the possibility of letting Communist countries participate as recipients and donors. The purpose of the program would be recognized as primarily one of creating stability in a part of the world which is now in dangerous ferment and not of buying friends either for us or for the Reds.

What would such a program cost? The professors say not more than $3.5 billion a year overall and not more than $2 billion a year of United States money. Eighty percent of all expenditures would be in recoverable loans.

We are not prepared to say that the MIT plan is the best possible one. Indeed all the details are not available yet for us to judge. But it is a plan. It is both realistic and comprehensive. It would appeal to the in-between peoples of Africa and Asia, who are now struggling to catch up with the modern world and who are not fussy where their help comes from, so long as it is compatible with their national pride. Properly explained, it might appeal to Americans, whose money would have to finance most of it.

Drift is the one thing we can't afford in the rapidly shifting world situation. We must reestablish a positive policy of some sort in this field soon. We must adopt some plan.

Since an aid bill is already before Congress, it is probably too late to withdraw it and substitute a new one this session. But a new long-range program could be worked out with congressional leaders, and the groundwork for an international organization could be laid this year.

Now is the time to make a start.

Fifty-three Thousand Eight Hundred and Ninety-two Illinois GI Loans Repaid in Full

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am inserting in the RECORD the following statement which, in my judgment, is a fine tribute to the veterans of Illinois and the Nation, which I am sure will be of interest to the Members of Congress who made it possible for the veterans of our country to own their own homes:

FIFTY-THREE THOUSAND EIGHT HUNDRED AND NINETY-TWO ILLINOIS GI LOANS REPAID IN FULL

The 53,892d Illinois veteran has repaid his GI loan in full, Robert D. Beer, VA's regional manager for Illinois, has announced.

As of April 26, 1956, 53,892 loans for homes, farms, and businesses totaling more than $280 million had been repaid in full, or nearly 2 out of every 7 GI loans guaranteed or insured by VA.

In the 11 years of the program VA in Illinois has underwritten 176,002 GI loans totaling $1,348,060,479. Most of the loans, or 167,769, were for homes. Of the remainder, 1,906 were farm loans and 6,327 were business loans.

Of the 53,892 GI loans repaid in full, 47,909 were home loans totaling $263,528,537; 1,249 were farm loans totaling $3,993,988; and 4,734 were business loans totaling $12,288,464.

In addition to the $280 million repaid in full, Mr. Beer estimates another $200 million has been paid off in installments by veterans whose loans are still outstanding.

The Veterans' Administration has paid claims to lenders on only 761 loans for homes, farms, and businesses.

The net loss to VA has been $366,867, or slightly more than 28 cents for every thousand dollars borrowed. Mr. Beer said the net loss is subject to further recovery, either from the veteran or from the liquidation of tangible security.

Of the 761 loans on which claims have been paid, 359, or slightly more than one-fifth of 1 percent of the total number guaranteed, were home loans.

Allowing for repaid-in-full loans, amortization payments and claims paid, Mr. Beer estimates that $884 million of the original $1,348,060,479 borrowed by World War II and Korean conflict period veterans still is outstanding.

Presidential Gag

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the following interesting editorial entitled "Presidential Gag" appearing in the Boston Post of May 24, 1956:

PRESIDENTIAL GAG

The transcript of the President's press conference concerning the differences of opinion and planning in the armed services, indicates that President Eisenhower has made all the decisions and issued orders as commander in chief, and that any general or admiral who publicly differs with him will get the ax.

What the President's decisions are and what weight he will give to the role of each of the armed services has not been clarified. This following colloquy in the press conference indicates that the Senators probing the Armed Forces are going to find the generals and admirals clammed up, on orders from the President.

"Mr. President, Senator CHAVEZ and Senator SYMINGTON have announced they will call some of the military 'brass.' Will those officers be permitted to tell their differences with their superiors?"

"I don't know what you're getting at," the President replied, "but I will tell you this: The day that discipline disappears from our forces, we will have no forces, and we would be foolish to put a nickel into them. Now, there comes a place in the military hierarchy where someone must make a decision, and that decision must stick. Now, the President, by Constitution, is the Commander in Chief, and what he decides to do in these things, in the form and the way you arm and organize and command your forces, must be carried out."

The President is right on every count, except one. He is obliged to tell his plans to the people, and explain why he considers these to be the right plans. He is not empowered to put the gag on all the professionals who differ, in this case a difference of opinion running counter to all the administration's handling of the problems of arms, organization and command.

The President said as plainly as he could that he had made the decisions, issued the orders, and that anyone who dares to question his judgment and command will incur the penalty of a breach of discipline.

Secretary Wilson had obediently taken the lumps for the generals and admirals who dared to raise their voices, and it is now quite clear that the President had issued orders what to do and say in the face of a searching Democratic inquiry into the armed services.

The President stated at the press conference that the Russians were giving their forces the same New Look treatment that was given the American defense establishment back in the days of the hapless "more defense for less money."

Some capable generals and admirals doubt that—but they will keep their doubts to themselves or get the ax. The President has challenged the power of the Congress to ascertain facts and seek justification for appropriations or for denying appropriations.

Our Attitude on the Trial of Young Rumanian Anti-Communist Patriots

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. MACHROWICZ. Mr. Speaker, on the night of February 14–15 of last year a group of young anti-Communists, in utter desperation at being unable to contribute in any organized anti-Communist action, decided to act by themselves. They seized the Red-occupied Rumanian Legation in Bern, Switzerland.

They had information that the new political setup in the Kremlin was in the process of sending fresh instructions to their various organizations and agents in the free world, one of these being the MVD chauffeur of the enslaved Rumanian Legation. They thought a raid in that Communist den would surely yield valuable clues in that direction. In fact it uncovered the espionage activities of the Red diplomats. An entire arsenal was found in the legation: a shortwave radio transmitter, automatic guns, all kinds of projectiles, time bombs, rockets, and a large quantity of ammunition.

During the time the young men held the legation the tension and excitement

were at their height in Bern. The morning after the coup about 2,000 Swiss were gathered in front of the building and 200 Swiss police surrounding it. As the young patriots refused to surrender at first, the Swiss authorities, under heavy pressure from the Communists, organized a veritable siege against these lone anti-Communists, surrounding the premises with barbed wire and bringing up an infantry battalion and an armored tank.

The young patriots had made a vow to obtain the release of five men from Communist jails, a cross section of the persecuted leaders of the Rumanian resistance behind the Iron Curtain, among whom was the heroic Bishop Suciu. In these five men, they were symbolically asking the liberation of their people from the curse of Soviet slavery. It was a cry of these patriots which stemmed from the same source as that of a Patrick Henry, as it voiced the eternal struggle for individual freedom and national independence.

Finally, after 42½ hours, this action, which had caused such an impact on public opinion, came to an end. The young men, before entering the police car, in full view of the crowd, nailed upon the wall of the legation the insignia of Free Rumania. And inside they left a note saying, "We shall return."

As an immediate result of the Bern affair, the authorities in Sweden, alerted by this incident, on closer investigation uncovered also an important spy ring centering around the Rumanian and Czechoslovak Communist Legations in Stockholm, thus bringing an added proof of the results of the action in Bern. In a recent report by Newsweek, on information furnished by the young patriots, the Swiss police sized two fat dummy accounts in an obscure farmers' bank in the mountains of Switzerland. The Communists were using the money to run far-reaching spy nets in West Europe. The accounts have been traced back to Bucharest.

On information given by the League of Free Rumanians, the Armstrong Circle Theater gave a television show, the Five Who Shook the Mighty, the story of the Bern incident. It will be repeated June 26 with the latest additions, after the trial of the young anti-Communists, which will take place in Bern, Switzerland, from June 11 to June 21.

It is an experience of deep meaning to talk to the disinherited and to find in them an unshaken faith in the ultimate victory of freedom and its values, while many of those more fortunate around them in the free world seem indifferent to it and tired of everything, even the truth. The flame of resistance burns in the oppressed. Here we have fresh proof that this spirit cannot be killed. The miracle is that this seed of liberty is germinating in the youth who have undergone for 10 years intensive Communist indoctrination.

Reports from Rumania tell of anti-Communist resistance groups in high schools. One lad of such a group is one of the boys who are going on trial June 11 in Switzerland. These youthful heroes, members of the League of Free Rumanians, now in prison awaiting their trial, considered life no longer worth living in face of the complete oblivion and abandonment of their country by the free world. They were willing to risk their lives and liberty in a blow against their country's oppressors, themselves directly, as being the only way they could be useful; that is, by focusing world attention on the tragedy of Eastern Europe. It was a dramatic demonstration of the revolutionary spirit of freedom fermenting under the boot of Soviet despotism. These young men, who recently fled their country, were messengers of widespread popular feelings and of the embedded hostility to communism of that Latin country.

Let us help these youthful patriots who risked their lives and willingly took calculated risks to prove that the Soviet Union carries on against the free world constant espionage and subversion.

Let us encourage other patriots to bring out with them vital documents by aiding the cause of these young men and we will encourage others to perform like acts of heroism in the name of freedom and liberty, thus producing vital intelligence that will inform the free world of premeditated acts of treachery.

These patriots have a message for the still free world. Trials throughout history have altered the course of history, and this trial can insure a great victory on the side of humanity, Christianity, and freedom.

This action of the young anti-Communists has aided freedom wherever freedom still exists. Their cause is the cause of freemen everywhere. The moral drama of these patriots, their youthfulness, the eldest among them being 31 years of age, aroused the sympathies of Europe.

The right to liberty is the cornerstone of our civilization, of its very existence and of its progress. The right to resist oppression is inherent in the foundation and development of liberty. Parts of the world and notably eastern Europe are now under the rule of absolute despotism, which has replaced the concept of equality of men and the law which is the protection of all, by the inequality of men and the persecution of all at the hands of a tyrannical Communist oligarchy.

Men everywhere behind the Iron Curtain are fighting against tremendous odds for liberty through recurring acts of resistance at the risk of imprisonment, forced labor, deportation, and death.

Our civilization needs be solidly with this struggle for liberty or lose its spiritual and political roots and driving force, disintegrate through materialistic discords and fail in its universal mission. This solidarity should express itself through a positive policy recognizing the right of the enslaved peoples to self-determination and human liberty by every moral and material assistance the free can muster for this purpose.

Let us not forget that our own great country has been founded on the passionate desire for liberty which animated our forefathers and for which they willingly died. So let us not fail to extend a helping hand and sympathetic understanding to these patriots in their fight for freedom, so similar to the fight of the fathers of our country. For our country would not be free today if they had not fought, with whatever means in their power, as do their prototypes today in the anti-Communist resistance movements, against the foreign invaders and oppressors of the people.

Foreign Aid—It's Time To Adopt a Down-to-Earth Policy of Technical Cooperation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter from a gentleman who has had considerable experience abroad, part of the time working with our Technical Cooperation Administration. His letter is interesting and comes at a time when we are about to consider an authorization for continued foreign-aid spending.

The letter follows:

VICKSBURG, MISS., *May 27, 1956.*

DEAR FRIEND: My letter of the 19th was very hurried and I did not bring out fully the most important point I had in mind. You will recall that in our discussion of the aid program I stressed the fact that our missions were operating at an entirely too high level and the importance of a down-to-earth policy with our people working constantly in a friendly and helpful contact with the people themselves.

We have sent missions out over the world to cure the ills of backward countries and they have failed due to the lack of concepts of the basic conditions and needs of the people we were trying to help. The policy pursued has to a great extent been that the lavish gift of money and material things would solve the problems. This policy is terribly wrong. After centuries of exploitation in every conceivable form by conquerors and their own rulers, the people we are endeavoring to help live in a state of apathy and hopelessness. They are fearful and suspicious, not only of strangers but of their own governments. They question our motives and there is a wall between them and us that can only be broken down by establishing ties of friendship and understanding. The great and crying need is for spiritual uplift rather than for material things. Human relations are the most important phase of the problem we face in obtaining the good will and friendship of the little people throughout the world.

In the event you have not read it, I am enclosing an article by Mr. P. Alstan Waring, who spent 3 years on an agricultural mission in India. This article substantiates much of what I have advocated and repored—not only is it timely and informative of the condition to be found in all of Asia and some other countries, but implies the importance of God's part in our aid programs. The need of sincere Christian peoples is very urgent.

The fact that our aid program needs to be a complete reorganization is obvious and

the services of such men as Mr. Waring would be invaluable in effecting this reorganization. I wish that every Member of Congress would take time to read and study this article. It contains many basic facts that should be considered by all who have to do with formulating and administrating the aid program. I have been very critical of the policies and ineffectual administration of our several aid programs. My criticism has not been aimed at the program itself, but at the colossal and unnecessary waste of both the money and the time of the personnel. To me it is a tragedy, when the little people need so much. No matter how much of our money and time we donate, it will be small when compared to the needs of a billion people.

While I have stated that the program could be cut 25 percent and it should be cut this amount or more, until it is reevaluated to insure the funds reaching the masses, I would favor increased and continued spending if it were spent wisely and efficiently.

Take India as an example. By this time, she has approximately 400 million people. A billion dollars would mean about $2.50 per person. This amount of material things would be absorbed and forgotten in a very few days. Billions could be spent here and but a relative few of the masses would ever know about it. Yet, regardless of how we may feel about the present Government and its policies, India is the most important country in the world in the fight against communism, for us. We must therefore continue in our efforts to help her but should redouble them to reach the little people.

I planned to be in Washington at this time but have several business deals in the making that compel me to stay here until they are closed. I may be able to make the trip next month. If I do I will see you.

With kindest personal regards.

Sincerely,

C. S. ROBERTS.

Annual Memorial Day Program, Altoona, Pa., May 30, 1956

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. VAN ZANDT. Mr. Speaker, as principal speaker at the annual Memorial Day program at Fairview Cemetery, Altoona, Pa., May 30, 1956, under the auspices of the Blair County War Veterans Council, I delivered the following address:

NINETEEN HUNDRED AND FIFTY-SIX MEMORIAL DAY ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, FAIRVIEW CEMETERY, ALTOONA, PA., 11 A. M., MAY 30, 1956

As a past commander in chief of the Veterans of Foreign Wars of the United States, it is an honor to join you, my fellow veterans, and my fellow citizens, in this Memorial Day ceremony.

Memorial Day places a serious obligation upon any speaker.

It is not an easy assignment to be our war heroes' spokesman.

Perhaps thoughlessly we have come to regard Memorial or Decoration Day mainly as a holiday, a day set apart for amusement and recreation.

But when we pause to give thought to its purpose and significance, we become conscious that it should receive a more fitting observance.

The men we honor today marched forth into the fire and hazard of battle to secure and safeguard the rights, privileges, and benefits which we today enjoy.

The holiday-minded public needs to be halted long enough to hear and heed the words uttered at Gettysburg: "That from these honored dead we take increased devotion to that cause to which they gave the last full measure of devotion."

Memorial Day is a day of memories and a day of rededication.

We Americans know that the man who dies in the service of our great Nation makes this sacrifice in order that the hopes and ambitions of our Founding Fathers might be realized, and that the Constitution upon which our form of government is based might stand today—strong and triumphant—and as the bulwark of our Nation.

We not only pay honor to those patriotic men and women who have given their lives for America, but we pay honor to all, living and dead, who unselfishly contributed their services in order that we, our families, our children, and posterity, might enjoy the blessings of liberty.

Let us not forget the thousands of disabled veterans—many still confined to hospitals—their dependents, and the widows and orphans of those deceased veterans whose lives were shattered in our Nation's behalf.

Let us pay tribute to the doctors and nurses in our veterans' hospitals whose work is often overlooked, but who are giving the best of their energies, their knowledge, and their skills in order to help and comfort our sick and disabled war veterans.

Those whom we honor were adequate to the challenges before them.

This is a day for the living to resolve that we will be adequate to meet the challenges which are before us in 1956.

Thereby can we best honor those who have gone before.

Our basic responsibility is to determine just how we can be adequate to meet the problems before us.

How can we with assurance go forward to preserve the priceless heritage which has been bequeathed to us?

Are we accustomed to accept the blessings of a free constitutional government as a matter of course?

Do we complacently use our freedom under the protecting arm of a great government as if we, by our own efforts, had gained it?

Do we forget that thousands of men gave their lives and other thousands of men and women suffered and sacrificed to establish and maintain our free institutions?

How often have we returned thanks and expressed appreciation or gratitude to those to whom we owe so much?

We Americans write and speak and think freely.

We may worship God as we please.

We are free from unlawful searches and seizures.

We enjoy freedom of elections through which we select those who are to administer and legislate for us, and we fix conditions and limitations to their authority.

We are secure in our legitimate property rights and in the making and carrying out of plans for our lives.

These great privileges, among others—far from being a matter of course—were never enjoyed by any nation until 169 years ago.

Are the fortunate and happy conditions in which we live entirely of our own making?

They are not.

Ought we not bow and bare our heads in grateful memory and reverent homage to those brave men who gave their lives that we might have these great privileges?

They are gifts from the dead—not entirely conquests by the living.

We properly set aside certain days to commemorate individual men whose deeds have justly placed their names high upon the rolls of the great.

Most of these men received honor and distinction during their lifetimes from their fellow citizens in recognition of their services and accomplishments.

Today we commemorate no single man, but the thousands whose names are not written on the scroll of fame, who gave their all without recognition or reward, and who served as devotedly as those whose names are sung and whose deeds are acclaimed.

Our debt to them is great.

Let us pause in the comfortable and secure round of our daily activities, at least a few hours in the year, to acknowledge it.

Let us not only acknowledge our debt, but let us try to pay it.

There is one way in which we can at least make some small payment on this great debt.

These men gave their lives for our Nation and the principles upon which it was founded.

We cannot preserve our way of life, our priceless heritage, unless we know precisely of what it consists.

Our Constitution, instituted 169 years ago, has stood the acid test of time.

It has been the symbol for all people who believe in opportunity, in freedom, and in tolerance.

What a breadth of vision our Founding Fathers showed when they wrote "We, the people."

Our long journey as a nation began with steps that were slow and laborious.

These first steps were taken by American patriots who wrote a document that history has proven to be a colossal monument to freedom and free enterprise.

We have been able to preserve not only the inherited words of the Constitution, but also the living laws contained therein.

We cannot forget that in our infancy we were a weak and struggling nation, exposed to external and internal perils of the gravest character.

Until 1803, we were hemmed in on the west; first by Spain, and then France.

Until 1815 our relations with the two greatest powers of Europe—Britain and France—were stormy.

We fought wars with both, were invaded by one, and saw our Capitol burned by a hostile British Army.

Sectional, party, and class divisions shook the fragible ship of state until its timbers seemed about to break.

Many believed that no popular government could prove durable.

Even the most hopeful found the experience of administering so huge a country full of difficulties.

Yet at an early date a hopeful sentiment began to develop.

As our Nation grew stronger, our self-confidence increased.

A pride in the United States as a world example grew up in the people.

Americans began to feel that their Republic was placed upon a stage for all mankind to observe and imitate.

In the Declaration of Independence we find an expression of this idea.

Jefferson had used the words "a decent respect for the opinions of mankind."

We began to develop that respect.

But it developed only when our individual citizens grew in their respect for each other, and in turn, their international neighbors.

We can honor America's dead by understanding our heritage, and further, by preserving unity among the living.

We known, as Lincoln knew, that "a house divided against itself cannot stand."

Our heritage cannot continue to stand if we pay heed to those who cause dissension among us, wittingly or unwittingly.

There are those on the home front who would divide us, class against class, race against race, religion against religion.

There are others who would divide us from friendly nations, and who are blind to the consequences of their acts.

As we rededicate our lives to those we memorialize today, let us resolve that unity will prevail.

If ever there was a time in the history of the world that American needed to understand herself and to understand her friends and to be understood by them, it is now.

Just so long as we are vigilant toward those who would mislead us into surrendering our national heritage, just so long will we continue to be a free powerful America.

The example of suffering and sacrifice by America's sons and daughters who would not surrender our national heritage should help us to rededicate ourselves to the preservation of peace for this Nation and all mankind.

If our honored dead could tell us what reward they would wish of us, they would, I believe, with one accord say: "Continue the fight in peace for the cause for which we gave our lives."

Surely this we must be willing to do.

Let us, therefore, both for ourselves and in memory of them, pledge ourselves to the preservation of our institutions in their essential purity and integrity.

Once we in this land could sit back and rest in comparative safety.

Two oceans—one to the east and another to the west—protected us from invasion.

We felt secure in our isolation from the world.

But that was before the atomic age, before the age of aerial warfare.

London, Paris, Berlin, Moscow, Manila, Hong Kong, Tokyo are all but a short distance by plane from our own land.

Once Pittsburgh, Ceveland, Detroit could laugh at the thought of a threat from a foreign invader.

But no longer.

If ever an invader come to our shores again, it will be by air, and inland cities, as well as coastal ones, will be easy targets.

When we dropped two atomic bombs over Japan and thus blasted her out of the war, we proved that isolationism is dead and gone forever.

The world is at our doorstep for better or for worse.

Those who gave their lives while in the uniform of our armed services cannot return to protect us against new dangers.

We cannot again know the security of two oceans.

However, the courage of our war dead has made possible a way of life which gives us the opportunity to develop the peaceful use of rapid flight.

We who discovered and developed atomic power recognized its vastly greater and better side—the good it could do for humanity.

It is good for the world that this secret was entrusted to a nation that recognized a moral obligation in this trust imposed on it.

Atomic energy will change the entire economic life of the world.

Certainly when this great power has been subdued to man's will as it must be, man should reach a sort of economic heaven.

Certainly work will not be so difficult nor so tedious.

There will be few hours of labor.

Man will have more time for recreation, for play, for study, for further research.

He will have more time to educate himself, to broaden himself, to travel, to enjoy life.

Perhaps the cycle will swing back and the tempo of life will taper off.

Perhaps we will learn to take it easy with atomic energy.

But these things are of the future.

What of the moment?

We need a true, righteous, and just peace to bring this old world back to an even keel.

We need a lasting peace from war.

Here at home we need peace from internal strife.

Could all our millions or war dead around the world speak, what would they say?

Their language would be legion, but their message would be one little word—"peace."

Our heroes died to establish and maintain institutions where justice among freemen was the great objective.

They made the supreme sacrifice for the perpetuity of a government, the object of which is the freedom and welfare of the citizen, not its own power and greatness.

With the increasing complexity of our civilization, the problem of preserving the freedom of the citizen is of increasing difficulty.

This does not absolve us from our obligations to the honored dead whom we commemorate.

We cannot, with clear conscience, fail them.

The blessings of sound government, which the sacrifices of other men have provided for us, we must in all good faith and justice pass on unimpaired to those who follow us.

It would be little less than cowardly for us to provide comfort and safety for ourselves at the cost of ruin and destruction to those who are to come after us.

As good citizens and true men, we cannot rob the future for our own benefit.

Rather let us try to pass on a government better for our having lived.

Our Nation may be destroyed as thoroughly in times of peace as by ruthless enemies in time of war.

It may be destroyed in time of peace by subversive doctrine, by abandonment of fundamental principles, by surrender of the rights and privileges of the citizens, by an economy which denies to men their political freedom, or by a vicious and wasteful fiscal system which destroys individual initiative.

Perhaps it is easier to defend this fair land against alien enemies than against slowly creeping insidious doctrines, gradual surrender by a careless or inactive citizenship.

Against the armed enemy we rush forward to do our part in defense of our country.

Often peacetime undermining of our civic structure comes in such pleasing disguise as to lead many to give it welcome and encouragement.

We are apt to forget that history teaches that government by the people is not eternal and that such governments have fallen victim to internal decay due to careless and inactive citizenship.

In paying our debt to the heroes in whose honor Memorial Day is dedicated, let us be as vigilant in protecting our country against our own apathy as against foreign foes.

May we, as citizens of this great Nation, be inspired in peacetime with the same spirit of loyalty, service, and sacrifice which is demonstrated in wartime.

In our hearts, may we give assurance to our honored dead, that we make no distinction between wartime patriotism and peacetime patriotism.

The American form of government is only for those who appreciate it, who deserve it, and who are not only willing to fight for it, but also able to defend and maintain it against all enemies at home or abroad.

Let us resolve, that no matter what the cost, we will deserve our form of government, that we will protect it, and pass it on without impairment to those who are to follow us.

Tomorrow and tomorrow, next week, next month, let us take time to recall in grateful appreciation the services and sacrifices of those who have made possible for us the blessings of the free institutions which we enjoy.

Let us make Memorial Day truly a dedication day.

Jobs Go Hunting for College Grads

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SPRINGER. Mr. Speaker, nowhere is the economic condition of the country more thoroughly tested than in absorbing the 700,000 graduates who come out of high schools and colleges each year and go into the labor market.

At no time in history have the prospects for college graduates been as rosy as in 1956.

Some of us who graduated from college in the 1930's and found it tough to find a job look on this situation as the best indication of the future for college graduates.

I append herewith one article from the Decatur (Ill.) Herald of Wednesday, May 30, 1956, on the job situation of the graduates of James Millikin University, Decatur, Ill.

I append another article by Walter Bazar, which is the fourth of a series of articles in the New York Journal-American of May 31 with reference to jobs for college graduates.

The articles follow:

[From the Decatur (Ill.) Herald of May 30 1956]

HIGHER SALARIES, MORE JOBS FOR JAMES MILLIKIN UNIVERSITY SENIORS

The employment picture for Millikin University's graduating seniors is one of higher salaries and more jobs.

This was reported yesterday by spokesmen for the business and teacher placement bureaus at the university.

The average starting salary for Millikin men students entering the business field will be $362.17 a month, compared with $348 last year, according to Glen R. Smith, director of the Millikin business placement bureau.

Dr. V. F. Dewald, head of the Millikin education department, said the average first year salary for graduating seniors entering the teaching profession will be from $3,650 to $3,700.

The average a year ago was about $3,550.

Both Smith and Dawald reported an increase in the demand for graduating seniors over a year ago.

More than 60 companies have interviewed senior business candidates at Millikin this spring, Smith said.

Most of the 49 seniors registered with the business placement bureau have received more than one job offer, he said, and some have been offered as many as 8 jobs.

Thirty-two men have taken business positions with starting salaries ranging from $310 to $430 a month.

The business placement bureau has six women registrants from the senior class and all have either taken jobs or are considering offers.

Starting salaries for the women range from $250 to $389 a month.

Business candidates who have not taken jobs include several who are planning to enter military service or graduate school.

"Engineering, accounting, and sales are the fields with the greatest demands for graduating seniors," Smith said.

Millikin seniors majoring in engineering administration will have the highest average starting salary of $401 a month.

Industry majors in the senior class will average $383 a month.

Sixty-two members of the Millikin graduating class are prepared for teaching careers and 45 have accepted positions for next fall. The other 17 do not plan to begin teaching next year.

Dawald said the starting salaries for the teachers range from $3,600 to $4,350.

The number of calls for teachers handled by the Millikin teacher placement bureau reached a new high this spring, he said.

[From the New York Journal-American of May 31, 1956]

JOBS GO HUNTING FOR COLLEGE GRADS—AGENTS OF BIG FIRMS SCOUT CAMPUSES FOR CAREER MEN

(Fourth of a series)

(By Walter Bazar)

One day recently, a small "bombshell" dropped on college campuses around the country.

It came in the form of letters to certain groups of June engineering graduates.

The letters were from the International Business Machines Corp. offering the students jobs. If they accepted, the letter stated, the grads would go on half-pay status effective last April 23.

They would remain on half-pay until they finish their studies and report to work after graduation. Then they would go on full pay.

The placement director of a leading university—he asked that his name be withheld—told what happened when the letters were opened by the students:

"The news spread like wildfire. Now the engineering and science students, who have been deluged with tempting job offers, are wondering what other inducements large companies will be offering."

ENGINEER SHORTAGE SPURS RECRUITING

Why did IBM make the offer?

"Like other companies dependent on engineers, we have a problem in hiring graduates," said L. A. Johnson, director of IBM recruiting.

"Our letters to a select group of graduates were prompted by a shortage of engineers. We wanted to know as quickly as possible how many we can count on to work here."

IBM doesn't stand alone in its needs. Firms which employ engineers, chemists, physicists, or mathematicians cannot get all such men they want.

Here are some sample comments:

Sperry Gyroscope Co., division of Sperry Rand Corp., Great Neck, Long Island: "We're looking for graduate engineers. A good number of third year engineering students are being taken on for summer jobs also. Graduates of technical high schools also will find our employment offices open to them."

Republic Aviation Corp., Farmingdale, Long Island: "There is a prime need for engineers. We canvass about 60 colleges for them. We've got a summer training program for college graduates and students."

Esso Standard Oil Co.: "We plan to pick up 165 college engineers."

Remington Rand, division of Sperry-Rand, 315 Fourth Avenue: "We've got plenty of openings for engineers, mathematics majors, and accounting and business, sales personnel able to do an analysis job. We provide intense training programs for all these people."

JOB HUNTS THE MAN, SKY'S THE LIMIT

Ask United States Steel, General Electric, among others, and they'll all tell you they want engineers, scientists, and technicians.

Science and engineering grads don't have to go job hunting. Company representatives come to them on the campuses offering jobs.

Take Columbia University, for example. Samuel Beach, placement director, gave the following ranges of monthly starting salaries dangled before graduates with these degrees:

"Bachelor of science—$400 to $475; master of science—up to $550. For the doctors of philosophy the sky is the limit."

Good salaries aren't the only inducements. Graduates are invited to visit the firm's plant and—if married—"bring along your wife."

If the graduate "signs up," his moving costs are taken care of by the firm.

Some firms offer to help finance his education toward a graduate's degree.

In order to meet the demands, employers sometimes have to be less strict in their standards in hiring stenos, typists, clerks, file clerks, billing-machine operators, and comptometer operators.

UP TO $55 WEEKLY FOR STARTING STENO

The New York State Employment Service puts beginners' weekly wages thus: Stenos from $45 to $55, the majority starting at $45. Typists at $40–$45, most starting at $40. Clerk-typists between $35–$40 depending on typing ability. Clerks $35–$45. Bookkeeper assistants $40–$50. Office boys, pages or messengers $35–$40. Office-machine operators, $35 for trainees to $45–$50 for inexperienced business school-trained workers attaining necessary speeds.

Now let's turn to teachers. As we said, the need is great. New York City alone needs teachers in all departments.

Greatest need is in the junior high schools, especially in the math and science courses. There's a great need also for those who teach retarded children, shop classes, etc. Starting salaries are from $4,000 to $4,400 yearly, depending on the degree a candidate holds.

Nursing also has a critical shortage:

"Nurses are in demand in every State," says Dorothy Weddige, director of nursing service and nursing education of the Department of Hospitals.

"A nursing career guarantees a girl financial security. She can return to her profession at any time in her life."

Graduates of accredited high schools who want to enter nursing training schools should act immediately. Preference given to girls with academic diplomas. Applicants must be 17, have at least 2 years' high school science courses and/or 16 academic or college preparations credits.

Both city and private hospitals nurse training courses have an initial fee. It'll be at least $150. Staff nurses in city hospitals start at $3,500 a year and can make up to $4,800 a year.

Appreciation to the Members of Congress

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include a letter recently addressed to me by a young man who lives in Concord, Mass., and who recently attended a college in the district which I represent. He expresses appreciation to the Members of Congress. It reads:

MY DEAR MR. CURTIS: On June 3, 1956, through the generosity of my great country, I will graduate from Boston University. My entire formal education was provided for by the American people through the legislation organized and passed by Congress for veterans of the Second World War.

The purpose of this letter is to express my deep gratitude to the Members of Congress of the United States for giving so many of us this opportunity. * * *

It is with the greatest sense of loyalty and pride that I thank God for the right to be an American citizen.

Sincerely yours,

PETER BENTON.

Dedication of Kyger Creek Electric Power Plant

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Beckley Post-Herald of June 1, 1956. It was written by Dr. Shirley Donnelly, whose daily commentary on historical events, personalities, and current news is very popular with readers throughout our part of West Virginia.

This description of Dr. Donnelly's visit to the facilities which are generating electricity for the atomic energy installation in southern Ohio is of interest to those of us who come from the districts which produce coal, the principal source of electric power. It is also a vivid picture of one important phase of the Nation's defense structure, which is of interest to every one of us. I comment it to the attention of my colleagues, for I believe that this column is eloquent testimony of the enormity of the physical structure and work that are necessary in order that the Atomic Energy Commission can fulfill its duties in the national-defense program.

TOUR OF BIG KYGER CREEK POWER PLANT

(By Shirley Donnelly)

On May 24, I was guest of Appalachian Electric Power Co. at the formal dedication of the great Kyger Creek electric powerplant in Ohio.

My good friend and fellow townsman, O. C. Hall, local representative of the Appalachian Power Co. at Oak Hill, had invited me some weeks ago. He was at Upson Downs on the dot at 8 a. m., Thursday to whisk me to the big doings in the Buckeye State that day at noon. Along with us went Paul Bavely, the public accountant of Oak Hill. It was a lovely day and the company was so congenial that I failed to note the rapid passing of time.

I always enjoy getting out on a jaunt with bright young men like these two fellows. Before we could attend the formalities in Ohio, we had to be given security clearance by the national powers that be. Evidence that we were to be trusted was a badge about the size of a saucer—a small saucer, I mean—with our names printed on it. This badge was worn on our coat lapel that the armed guards might see we were approved people. I never felt so important in all my life when I got that big badge on with my name printed on it. They even had my name spelled correctly; and that is something.

Maybe you'd like to know what the big Kyger Creek plant is all about. Well, it is an electric power enterprise that is so vast

that it rightfully takes two or more people to tell you just how vast it is. It was like this. In 1952, the United States Atomic Energy Commission decided to build a giant atomic plant in Pike County, Ohio. Now Pike County, Ohio, is in southern Ohio where there is a lot of water in the form of the Ohio River. Atomic plants like the Pike County one require whole heaps of electric power. This Ohio atomic plant wanted its electric power in one great big hurry, so the Atomic Energy Commission turned to the private electric industry of the Ohio Valley and asked, "Can you all supply us this power?"

Fifteen electric companies of the region got their heads together to see could it be done. They answered in effect, "Can do." Those 15 companies organized the Ohio Valley Electric Corp., and called it OVEC for short. It was chartered in Ohio on October 1, 1952. Then they formed a subsidiary outfit and called it the Indiana-Kentucky Electric Corp.

This last named corporation they called IKEC. One of the 15 companies in OVEC is the Appalachian Electric Power Co. of our midst. The 2 plants are about 200 miles apart but both are on the Ohio River because they need more water than anybody. These plants cost around $385 million. Every single penny of this was provided by private financing. These two plants are the largest generating plants ever built by private enterprise. The one I saw at Kyger Creek was so immense that it staggered my mind and threw me into a tizzy.

Those two plants were built and completed ahead of schedule which shows what Americans can do when they have a mind to work. I can't begin to tell how much stuff they used in putting up those plants. You wouldn't believe me if I told you. One instance will have to do you, but that ought to hold you for a while. In building the 2 plants they used enough concrete to more than build a 2-lane highway all the way from Charleston, W. Va., to Columbus, Ohio. Can you imagine a thing like that? Oh, it's clear out of this world.

Philip Sporn, a native of Austria, heads up OVEC. He has more electric know-how than almost any man who has lived since the Lord God said, "Let there be light," way back there in the dawn of creation. These two plants have a total generating capability of 2,365,000 kilowatts of electric power. That slays me. Thus it is that the two plants can supply the Atomic Energy Commission in Pike County, Ohio, with full electric power requirements. This power is being used and will be used in producing U-235, the vital component of America's growing stockpile of atomic weapons for defense of the Nation. In atomic technology the key operation is uranium diffusion, a thing that requires worlds of electric power. Please don't ask me to explain this as I don't know a thing in the world about it. But it is something pretty deep, you know.

To run these two big plants they use coal. In 1952 OVEC signed a 15-year contract to buy 7½ million tons of coal a year, the largest single coal supply commitment in the history of the world. It is all to be delivered by river barge. What's more OVEC has signed a contract to deliver 1,950,000 kilowatts of electricity annually to the atomic plant in Pike County, Ohio. The contract is to run for 25 long years, too. Whew.

I forgot to say the Kyger Creek plant is at Cheshire, Ohio. Down the river at the United States Atomic Energy Commission plant at Portsmouth they have a sign that is pregnant with significance. It reads: "No cameras, no firearms, no intoxicants of any type allowed." That's up there at the Portsmouth, Ohio, project.

The two plants I have been raving about today have a total generating power of 2,365,000 kilowatts when they run at capacity. They tell me that only 10 of the 48 States in the good old United States of America, annually consume more power than the Portsmouth, Ohio Atomic Energy Commission plant. Those 10 States are New York, Pennsylvania, Ohio, Michigan, Illinois, Kentucky, Tennessee, Texas, Washington, and, of course, California. Next time you fuss about how big your light bill is, think of the electric bill the Portsmouth project will receive. It'll run way up in the tens of millions of dollars a year. The total generating capacity of 27 of our 48 States today does not add up to the block of power the Portsmouth deal requires. Wires that carry the big juice out of the Kyger Creek plant look to me to be as big as a man's wrist.

The Need for Action on Equal Pay

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, President Eisenhower has repeated his hope that the Congress will enact legislation to stop wage discrimination that is based upon the sex of the worker.

In his state of the Union message, the President said:

> Legislation to apply the principle of equal pay for equal work without discrimination because of sex is a matter of simple justice.

Again on May 24 the White House listed this legislation among the 28 bills which the President hoped would receive favorable action this year.

Both political parties favor such legislation. Each has had equal pay planks in their platforms for many years. In this, the 84th Congress, both Republicans and Democrats have introduced bills. Four identical measures were sponsored by Mrs. GREEN, Mrs. ROGERS, Mrs. GRIFFITHS, and Mr. HAYWORTH. Identical bills expressing the administration's concept have been introduced by Mr. KEARNS, Mr. RHODES of Arizona and myself.

In my study of the similar bills I find wide areas of agreement among us. There are provisions in each which could lessen unfair competition among employers, raise living standards, contribute to maximum labor force efficiency and increase the prestige of the United States among the nations of the world. A meeting of minds would therefore not seem to be difficult.

These bills were proposed in good faith for the benefit of the women who work outside their homes. The principle of equal pay is generally accepted as a matter of simple justice. It is a basic principle of our whole free enterprise way of life, important to both employees and employers alike.

The benefit to employees, which is obvious, often obscures the gains to be made by employers if this legislation were enacted. It is to industry's advantage that workers be able to move freely, as the situation demands, from one job to another. But the artificial barrier set up by unequal wage rates prevents industry from employing workers on the most efficient basis. The widespread establishment of a rate for the job, irrespective of sex, would make a genuine contribution toward creating labor mobility and increased industrial efficiency.

Mr. Speaker, my belief that this legislation will be in the public interest prompts me to urge that the Committee on Education and Labor, to which these bills are assigned, scheduled hearings with all possible speed. The hearings will focus public attention upon the need for this legislation and will produce greater understanding of the subject.

I hope people everywhere—especially the leaders of those fine organizations which have worked so hard for this legislation in the past—will request their Members of Congress to act on equal pay before the close of this session.

Unprepared for 3 Years

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I includes the following editorial from the Raleigh (N. C.) News and Observer:

UNPREPARED FOR 3 YEARS

The first paragraph of an Associated Press dispatch in yesterday's paper read as follows:

"There are signs that President Eisenhower's approval of the new farm bill largely caught the Agriculture Department unprepared to put the soil bank into effect this year."

The above illustrates the condition of the Agriculture Department since Secretary Ezra Taft Benson took over more than 3 years ago. The Department has been unprepared to administer the laws enacted by Congress.

There is always an excuse, but never a good one. When Mr. Benson took office he was unprepared to administer the laws on the books because he disliked those laws and was devoting his time and attention to trying to get Congress to pass new laws more to his liking. It was 1954 before he could persuade Congress to pass his flexible price support law and that law did not become effective until January 1, 1955.

By the time that date arrived, the people had elected a Democratic Congress, showing that the flexible support plan was not nearly as popular as Mr. Benson had thought it would be. Mr. Benson was then busy trying to decide on what changes in his own law he would be willing to support. He was then unprepared to administer flexible supports with any vigor or consistency.

Late last year Mr. Benson threw his support to a soil bank—completely reversing his former position. At first he wanted it to be effective in 1956, then favored a completely indefensible proposal to pay farmers in 1956 for what they might or might not do in 1957.

The Congress adopted the original Benson proposal without change, but Mr. Benson is still unprepared to administer it.

What the country needs is a Secretary of Agriculture who will be prepared to administer the law of the land from the day he takes office. The only way to get such an official is to elect a new President.

The Klamath Indian Termination Program

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HALEY. Mr. Speaker, many Members of the Congress have made inquiry regarding the status of the Klamath Indian termination program as spelled out in House Concurrent Resolution 108 and the act of Congress, August 13, 1954, Public Law 587, 83d Congress, Sixty-eighth United States Statutes at Large, page 718.

Many of my colleagues have had inquiries from their constituents concerning this program. As chairman of the Indian Affairs Subcommittee, I instructed a staff member of the committee to ask the Bureau of Indian Affairs for a progress report on this program.

Under unanimous consent, I include in the Appendix of the RECORD the report rendered by the Bureau of Indian Affairs. I do this so that this information will be available to the other Members of the Congress.

UNITED STATES
DEPARTMENT OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
Washington, D. C., May 3, 1956.

Mr. J. L. TAYLOR,
Staff Member, House Interior and Insular Affairs Committee, House of Representatives, Washington, D. C.

MY DEAR MR. TAYLOR: This will refer to your telephone conversation with Mr. Carl J. Cornelius of the program coordination staff on April 23, regarding inquiries you have received on House Concurrent Resolution 108 and the act of August 13, 1954 (Public Law 587, 83d Cong., 68 Stat. 718).

Letters received in this office from those indicating interest in Indian affairs generally imply a misconception of House Concurrent Resolution 108. This resolution basically expresses the sense of Congress regarding the removal of Federal supervision over the affairs of the Indian people. A careful study of the intent reveals that the removal of Federal supervision is not to be carried out arbitrarily, nor through hasty action. Primarily the resolution directs the Department of the Interior to initiate programs with the Indians to terminate Federal supervision. The underlying purpose of resolution 108 is not a new or radical effort to change the status of the Indians. Rather, a review of records pertaining to Indians reveals that as early as 1876 studies and recommendations were made to remove Federal supervision. Similar studies and recommendations were made from time to time, including a recommendation on February 8, 1947, which categorized the readiness of all the tribes and which specifically named certain tribes that were ready for immediate removal of Federal supervision. The intent of resolution 108 is recognized by the Department of the Interior and the Bureau of Indian Affairs, and in the development of legislation to remove Federal supervision over the affairs of certain tribes, full consideration was given to the needs and readiness of the Indians concerned to assume the responsibility of managing their own affairs.

Planning for terminal and other programs involve extensive consultations with the Indian tribes concerned. The principle of consultation with the Indians which was originally established by President Eisenhower lies at the heart of the whole policy in the field of Indian affairs. It will be of interest to those studying Indians that there is a great variation from tribe to tribe in social and economic environment, economic maturity, demonstrated capacity for managing their individual affairs, and prospects for self-sufficiency. There is a corresponding variation, of course, in the degree of Federal supervision and assistance in the affairs of the different Indian tribes. Likewise, the States and communities are in different stages of readiness to assume the responsibilities of providing such community services as education, health, welfare, roads, etc. A number of States would be particularly hard pressed to meet such responsibilities because of inadequate financial resources, lack of facilities, and lack of personnel. In some cases, legal obstacles requiring legislative remedy would severely circumscribe any measure the State would be disposed to undertake. It is readily understandable that in addition to consultation with the Indian people, extensive consultations must be carried out with the State officials to properly coordinate plans for the removal of Federal supervision.

Termination of Federal supervision does not mean extinction of tribal organizations, nor does it preclude the Indians from the opportunity to continue to hold their property in tribal status. All the bills enacted by the 83d Congress involving readjustment of Federal Government-Indian relationship contained express provisions permitting the tribe, band, or group of Indians to form legal organizations under the State law to hold and manage tribal estates.

Essentially, the Klamath Act (Public Law 587) is a compromise between two internal groupings of the tribe, permitting those members who choose to do so to convert their interests in the tribal estate into cash and to withdraw from all membership in the tribe, and those who choose to do so to retain the residual tribal assets in common ownership, but under State law.

Much of the work leading to the partition of the tribal assets including management plans is set out in section 5 of the act.

Under date of May 9, 1955, the Secretary of the Interior entered into a contract with three management specialists. Since the approval of the contract the management specialists have:

1. July 29, 1955, entered into contract with Stanford Research Institute to (a) develop guidelines for selecting economic units, (b) determine equitable way of apportioning tribal assets among tribal members, (c) assist in formulation of a plan to stimulate tribal economy, (d) consider appropriate methods of managing residual tribal assets.

2. September 29, 1955, entered into contract with Stanford Research Institute for (a) mineral resources survey.

3. February 17, 1956, entered into contract with Western Timber Services for (a) appraisal and inventory of Klamath tribal assets.

4. April 12, 1956, entered into contract with Stanford Research Institute for (a) development of information as to appropriate number of economic units to be established as it relates to marketability.

Most phases of item 1 have been completed. The survey under item 2 has been completed and most of the work under item 4 has also been completed. Western Timber Services is making satisfactory progress in the appraisal and inventory of tribal assets.

Section 3 of the act provides that the tribe shall prepare and submit to the Secretary a proposed roll of the members of the tribe. This was executed by the tribe but due to objections raised by some members of the tribe concerning certain discrepancies in the proposed roll, such roll was rejected and the superintendent of the agency instructed to prepare the proposed roll. The proposed roll was published in the Federal Register on May 12, 1955. Appeals have since been received in the office which are currently being processed for submission to the Secretary for final action. Some delay was encountered in the processing of the final rolls for the reason that it was necessary to give priority to the California, Ute, Menominee, and western Oregon rolls.

Section 26 of the act provides that "prior to the issuance of a proclamation in accordance with the provisions of section 18 of the act, the Secretary is authorized to undertake, within the limits of available appropriations, a special program of education and training designed to help the members of the tribe to earn a livelihood, to conduct their own affairs, and to assume their responsibilities as citizens without special services because of their status as Indians."

On March 10, 1955, the Bureau of Indian Affairs entered into an agreement with the State of Oregon for a special adult education program. Reports by the State education department indicate that considerable interest has been shown by the Klamath people in this program. Training in this program comes in two main categories: (1) Off-reservation training which includes any regular college or training school chosen by the student applicant; (2) on-reservation training centers around social economics and vocational training such as business management, insurance, bookkeeping, agriculture, and homemaking. The interest in the on-reservation training was at first very slow; however, current reports indicate that a keener interest has been taken by the Klamaths.

Pursuant to section 9 of the act effective February 13, 1955, State law was applied to the probate of all property, including trust and restricted property of Klamath Indians who die on or after that date. Probate of Klamath Indians who died prior to February 13, 1955, would be processed by the Federal Examiner of Inheritance.

It is not yet possible to determine whether additional time will be required other than the deadline set in the act. The work contemplated and accomplished under the act will be a determining factor as to whether any extension of time will be needed. We do not feel that this is an appropriate time to consider any extensions.

We trust the foregoing will serve to give you the information you have requested on the current progress under the Klamath Act. Should you need additional information, we will be happy to furnish it.

Sincerely yours,

THOMAS M. REID,
Commissioner.

The Late William T. Granahan

SPEECH
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. BYRNE of Pennsylvania. Mr. Speaker, I was shocked and grieved to learn of the sudden and untimely death of my dear friend and colleague, BILL GRANAHAN, with whom I have been associated for many years. His contributions to the welfare of his district and the State of Pennsylvania are numerous and he will be greatly missed by his host of friends. We shall miss his friendly smile, his geniality, and his general statesmanship, for he was a fine example of kindness, integrity, and American citi-

zenship. His passing is our loss, but he has gone to his great reward.

My deepest sympathy goes out to Mrs. Granahan in her great sorrow, and I am sure she will be consoled by the knowledge that BILL is so kindly remembered by such a throng of good friends and the memory of a husband of such fineness of character and noteworthiness.

Eisenhower Scores With Choice of Interior Secretary

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SPRINGER. Mr. Speaker, there has been a great deal in the newspapers with reference to the choice by the President of Fred A. Seaton to be Secretary of the Interior.

Fred Seaton has been a member of the Ike team for several years and thoroughly understands the Eisenhower philosophy of government. He has demonstrated his administrative ability in many ways and his choice as Secretary of the Interior is a good one.

Mr. Seaton is a member of no faction of the Republican Party. As he has always said he is just doing the best job that he can for the President and the country.

If he continues to do that, he will have received the acclamation and the best wishes of all of the people of his country.

Mr. Speaker, I append herewith an editorial from the Decatur (Ill.) Herald and other Lindsey-Schaub newspapers of Thursday, May 31, 1956, commending the President on the choice of Fred A. Seaton as Secretary of the Interior:

EISENHOWER SCORES WITH CHOICE OF INTERIOR SECRETARY

Since this is a presidential election year the Senate probably will push around briefly President Eisenhower's nomination of Fred A. Seaton to be Secretary of the Interior.

Confirmation is assured. Seaton, now a Deputy Assistant to the President, is a former United States Senator from Nebraska, and the Senate almost always takes care of its own.

The Seaton appointment has been endorsed by Senate leaders on both sides of the aisle. Most important of all, it has the "enthusiastic endorsement" of Senator WAYNE MORSE, of Oregon, the Republican turned Democrat after a brief transitional career as an official Independent.

Senator MORSE is one of the most outspoken advocates of public power and conservation of natural resources. He has been bitterly critical of Department of the Interior policies under the direction of Secretary Douglas McKay who resigned from the Cabinet to challenge the MORSE bid for reelection. McKay has administration backing in the Oregon senatorial campaign.

The choice of Seaton was a surprise. Most speculation had centered around the chances for promotion of Clarence Davis, Interior Department Under Secretary who had worked closely with Secretary McKay.

Secretary-Designate Seaton already is a member of the Eisenhower team. He enjoys the President's personal friendship and has worked closely with him in the White House executive offices.

He says he will carry out the Eisenhower administration's power and water policies, that is, he upholds the President's policy of partnership between public and private interests in developing power resources for public use.

The general approval of the Seaton appointment is further endorsement of President Eisenhower's personal popularity.

Those who denounced the actions of the Interior Department in dealing with power and public lands called them policies of Secretary McKay, not of the Eisenhower administration which was and is responsible.

General approval of the Seaton appointment is endorsement of the Eisenhower partnership approach which has taken much of the politics out of what had been expected to be a major power issue in the campaign. As Seaton has said, "the partnership idea makes sense and means progress."

The Middle East Burns While Dulles Fiddles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. MULTER. Mr. Speaker, the following article by Joseph Alsop, written from Amman, Jordan, appeared in the New York Herald Tribune of June 3, 1956. It contains important information, well known to almost all of the world except our State Department. Or am I wrong? Is it some more information Secretary Dulles has been sleeping on?

MATTER OF FACT
(By Joseph Alsop)
THE YOUNG MEN

AMMAN, JORDAN.—In this time of the old men, when 80 is no more than a ripe age for national leadership, it is a bit odd to find the leadership of any nation entirely in the hands of a boy of 20, and his friend aged hardly more than 30. Yet this is now the state of this little country of Jordan, where all power has suddenly been centered in young King Hussein and his new-made commander of the Arab Legion, Gen. Ali Abu Nuwar. Moreover Jordan now has an importance out of all proportion to its size. For if Jordan finally gives full allegiance to the Egypt-dominated bloc of Arab States, the effects will be downright volcanic, both in western-orientated Iraq, and in the vital, oil-rich sheikdoms of the Persian Gulf. It was an experience to ponder, then, meeting the two young men almost at the moment when they concentrated supreme power in their own hands. Of the two, beyond doubt, Ali Abu Nuwar is the greater enigma.

He is a handsome fellow who seems always to be tense with an excess of energy. Ambition burns in his dark Arab eyes, which have a hyperthyroid cast that perhaps explains both the ambition and the energy. And these qualities also explain why Gen. Sir John Bagot Glubb sent Ali Abu Nuwar off to Paris as Jordanian military attaché; for Glubb Pasha had a habit of providing this kind of comfortable exile for young officers who had the look of potential troublemakers for Jordan's long-established British-controlled regime.

Unluckily for Glubb Pasha, the Paris post gave Ali Abu Nuwar the perfect opportunity to make friends with Hussein when the young king visited France. King Hussein, who already had no liking for the role of figurehead, then, insisted, over Glubb's protests, that his new friend return to Amman as his chief aide-de-camp. Lt. Col. Abu Nuwar was already installed on the palace staff when Gen. Sir Gerald Templar was sent to Amman to bring Jordan into the Baghdad Pact.

Along with most of the older generation of Jordanian leaders, the young king was himself convinced that Jordan should join the pact. But the Middle Eastern Troika—the Egyptian propagandists, the Saudi Arabian bribe givers and the Communist organizers—rallied the enraged, embittered mass of Palestinian refugees. In the crisis of the ensuing riots, with Ali Abu Nuwar's strong encouragement, the Baghdad Pact project was hastily abandoned.

That paved the way for the young king's personal coup d'etat, when he ordered Glubb Pasha's summary dismissal. Beyond question, Ali Abu Nuwar was Hussein's chief adviser in this momentous step. As Glubb Pasha departed, Ali Abu Nuwar and his allies among the younger officers also took over the real power in the Arab Legion. And now the logical next step has also been taken. The young king is openly ruling through a puppet cabinet, and Ali Abu Nuwar has assumed open command of Jordan's armed forces.

Besides ambition, then, what are the guiding motives of this young officer who has played such an enormous role in altering the political pattern in this region of the Middle East? There are those who say that he used to be one of the young intellectuals of the violently antiwestern, passionately pro-Egyptian Ba'th Party. In the course of a very long, very frank talk with him, I formed the impression that this might well have been true at one time.

Today, at any rate, Ali Abu Nuwar is still deeply suspicious of the British, warmly friendly to Egypt's Gamal Abdel Nasser, and strongly inspired by the surge of Arab nationalism that Nasser has come to symbolize. But will Ali Abu Nuwar be led by these emotions to accept for Jordan the kind of dependent and colonial relationship to Egypt that has transformed the Egyptian Ambassador to Syria into a sort of viceroy?

The answer to that key question seemed to be far less certain. All his enthusiasm for Arab unity has visibly not converted Ali Abu Nuwar to taking orders from anyone, even including Egypt's Nasser. And if he and the young king maintain their established partnership, the chances of Jordan entering the Egyptian bloc will be still further reduced.

Although Hussein is a boy in years and in appearance, and although he still gets pleasure from such boyish pursuits as driving his fast cars about the countryside at appalling speeds, the King does not make a boyish impression. Except for his Circassian guards in their old Cossack uniforms, the atmosphere of his palace is singularly colorless and businesslike, seeming to assert the young King's decision to carry on his country's business in person. When I saw him, he had just come from a meeting hastily called to soothe senior Arab Legion officers who were displeased by Ali Abu Nuwar's sudden promotion to command them. Yet in these fairly tense circumstances, he showed no trace of nervousness.

He spoke, rather, with considerable quiet decision. "Jordan's role," he said, "was to form a link in the Arab world between Iraq, on the one hand, and the Egyptian bloc on the other hand." Therefore he was opposed to entering either grouping and would refuse to do so. When he was asked about the active Egyptian interventions in Jordanian politics and the flood of Saudi Arabian money pouring into the country, he answered

calmly, but a sharp resentment glittered visibly in his eyes.

"Yet all Arabs," he said, "must work together for the solution of the palestine problem." He added, moreover, "that matters had now reached a stage where a solution of the problem on the basis of the United Nations 1947 partition frontiers for Israel would no longer be acceptable."

Such are the views on the main problems confronting them of these two your men who now rule Jordan together. As there is reason for deep disquiet in their extreme view of the Palestine question, there is also reason for encouragement in their seeming conception of Jordan's future role among the Arab states. But the full power of Egyptian propaganda is still beamed at Jordan. The Saudi money still pours in.

The pressures, in short, are very terrible and the dangers are commensurate. And despite the young King, Jordan is eventually likely to join the Arab procession into the anti-Western camp unless the United States rapidly takes the lead in developing a coherent Western policy in the Middle East.

Reasonable Flood Insurance Protection Is an Imperative National Need

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. DONOHUE. Mr. Speaker, I am pleased to include at this point a very timely editorial appearing in the April 21, 1956, issue of the Worcester (Mass.) Telegram, explaining the vital importance of at least beginning a flood-insurance plan at the Federal level to prevent a recurrence of total economic catastrophe descending upon hundreds of thousands of American homeowners and small businesses.

Let us hope that the Congress will soon adequately deal with this flood-insurance problem that will contribute so much to the continuing economic health of millions of American taxpayers who cannot otherwise obtain any protection against the colossal damage periodically coming from nature's unrestrained elements.

The article follows:

FLOOD-INSURANCE PLAN

All of us hope there will be no need for any flood insurance this coming summer. At the same time, we hope that, when and if new floods do come, there will be some kind of flood insurance for homeowners and for industrial plants.

Flood losses were enormous last August. In Southbridge, the American Optical Co. saw thousands of dollars swept under the swirling waters—and no insurance. The New Haven Railroad lost more than $15 million—and no insurance. Hundreds of small-business men watched helplessly as the waters inundated their years of savings and effort.

And tales were heartbreaking about the number of small homeowners who saw their houses washed away—and no insurance.

It's encouraging that Uncle Sam is making progress toward setting up a flood-insurance program which, while relatively small, is at least a beginning. The Senate Banking Committee recently completed work on such a program, to be presented to Congress.

This bill would have the Government pay up to 40 percent of premium costs, and would limit coverage to $250,000 on business property and $10,000 on a home. The $250,000 limit, while small when applied to large industry, would at least offer protection to smaller companies.

The most significant feature of the new bill is that it would deny flood coverage to property in areas subject to frequent flooding, and to property that was built in areas which had been zoned as restricted because of fear of floods. True enough, much property would be denied coverage under such clauses, but the banking committee's plan does at least mark a beginning toward a flood-insurance plan, so badly needed.

No; Our State Department Does Not Know

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 31, 1956

Mr. MULTER. Mr. Speaker, the following article, written by Joseph Alsop, from Damascus, appeared in the New York Herald Tribune of May 30, 1956.

If the facts set forth are not contained within the reports filed during the last several years from the Middle East, then all of our diplomats in that area, who omitted them, should be fired. If the facts are in those reports, then our Secretary of State should be fired.

The article follows:

MATTER OF FACT
(By Joseph Alsop)
COMMUNISTS AND NATIONALISTS

DAMASCUS.—Here in Syria, which is a small country, the diverse elements that make up Soviet middle eastern policy stand out in sharp relief. Since this policy appears to be completely misunderstood at home, it is worth listing the elements, item by item, and then seeing what they add up to.

Item: Damascus is still agog over the aftermath of the Khrushchev-Bulganin visit to London. This was the revelation to the Syrian and Egyptian Governments, by the Soviet Ambassadors here and in Cairo, of the alleged main theme of the Soviet leaders in the Downing Street talks. According to the Ambasadors, Khrushchev and Bulganin flatly declared that the progressive and peace loving bloc would be squarely behind the Arab States in the event of a renewal of the Arab-Israeli war.

The Soviet diplomats alomst certainly misrepresented what passed in London. But their version of the London talks has of course been delightedly accepted here, and is reportedly credited in Cairo as well.

Item: In the last month, Soviet diplomats here, in Cairo and in other Arab capitals have begun to talk with Arab leaders about the possible terms of a settlement with Israel. The Arab response may be easily imagined. It is a fair bet that these Soviet feelers are the prelude to a solid indorsement by Moscow of the United Nations 1947 plan for the partition of Palestine, as the only fair solution of the Arab-Israeli problem.

A return to the U. N. plan of 1947, which was put forward, remember, before the Israeli victory over the Arabs, could mean reducing the area now held by Israel by almost 40 percent. It is what the Arabs have been asking for. Any such Soviet move in the U. N. Security Council will leave the American and British Governments as gasping and helpless as hopelessly beached salmon. We shall be made to seem the enemies; the Soviets will appear as the special friends and protectors of Arab nationalism.

Item: On the subdiplomatic level three kinds of activity are being carried on concurrently. The local Communist parties have been given a very special mission, not to increase their own strength, but to reinforce in all ways possible the strength of the non-Communist, anti-Western forces here. The Syrian Communist leader, Khaled Baqdash, has been using all his considerable charm to convince the more conservative elements in Syria that he is just another nationalist bourgeois at heart. His organizers, in similar false whiskers, are being sent out to assist any political grouping or movement with an anti-Western tendency.

Item: The nationalist apparatus is being powerfully backed up, in turn, by a commercial appeal. All sorts of Soviet and satellite trade missions are swarming through this country and the other Arab lands, making tenders on locally important projects of every sort. Because of the wages paid the workers in the workers' paradise, it is possible that many of these bids are quite honest. In any case, they are almost invariably much lower than bids by Western firms. Meanwhile, great efforts are also being made to persuade local business, political, and cultural leaders to visit the Soviet Union and the satellite States for the full red carpet treatment.

Item: The desire of the Arabs for more and more arms against Israel is constantly being exploited. Besides the new arms deal that seems to be in the making with the Chinese in Cairo, the Syrians here are completing negotiations to purchase another $25 million worth of surplus Soviet arms through the Czechs.

What, then, is one to make of the complex pattern of diplomatic, economic, propagandistic and underground action? The first point that sticks out a mile is that, for the present, the Kremlin is making no serious effort whatever to promote communism as communism in this part of the world. Gamal Abdel Nasser has sternly suppressed the Communist Party in Egypt, but here in Syria the local Communists are more pro-Nasser than Nasser himself.

The second point that also stands out a mile is that the Kremlin is making the most desperate efforts to capture the Arab nationalist movement which Colonel Nasser symbolizes and effectively leads. The aim, of course, is to use Arab nationalism to destroy every western position in the Middle East, and to substitute Soviet influence for western influence everywhere throughout this strategically vital region.

This is the aim, in turn, because the whole western alliance can be brought down in ruins here in the Middle East. Let the oil which is Britain's and Western Europe's lifeblood once be shut off, even for a very short period of time, and the ensuing economic catastrophe in Britain and Western Europe can be counted on to break the Anglo-American partnership, to destroy NATO, and to achieve, almost autoomatically, pretty nearly every other Kremlin goal on this side of the Atlantic.

If this brilliantly conceived operation succeeds, it will be time for the Kremlin to deal with the Arab nationalists, who will then have about the same chance of survival as a naked man in a dark room with a grizzly bear. But here in Damascus, as in Cairo, the emotions that are driving these Arab patriots to serve the Kremlin's purposes are so strong and so inflamed that they never pause to think soberly about the dangers ahead. And as long as the British middle eastern policy is largely based on despair, while American

middle eastern policy is a minus quantity, the Kremlin's plan for the Middle East can be expected to go forward from success to success.

Economic and Political Unity Must Be Fostered if the North Atlantic Treaty Organization Is To Endure

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely editorial appearing in the April 26, 1956, issue of the Worcester (Mass.) Telegram explaining the vital necessity of expanding the NATO organization into economic and political unified activity, as well as military.

The article very pointedly reminds us that unless there is a firm basis established of economic and political unity among the 15 nations of NATO, the military cooperation will increasingly deteriorate in the face of the persevering Russian attempt to gain economic control over Western Europe.

The article follows:

ECONOMIC UNITY UNDER NATO

The North Atlantic Treaty Organization has always emphasized its military aspects. It has been built, primarily, as an alliance of collective military defense.

But the Soviet Union is now trying to bypass this military grouping by an economic offensive. The United States is countering by the announcement that, from this point on, there will be more stress on economic unity among the 15 NATO partners. Secretary of State Dulles in May will meet with foreign ministers from other NATO countries to outline the United States plan in more detail.

The treaty which established this collective security organization makes broad provisions for just such a policy. Article 2 of the NATO treaty provides that members "will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them."

There has been some progress along these lines, too, but it has not been easy. It took years to arrange the coal and steel pooling arrangement among France, West Germany, Italy, and the Benelux countries. The General Agreement on Tariffs and Trade (GATT) has had bumpy going from the start. The proposed European Defense Community failed to come into being, and economic disunity of Western Europe was one of the reasons for failure. But there can be no let-up in the effort.

In his first annual report at NATO's supreme Allied commander in Europe, Dwight D. Eisenhower pointed out that "all human progress in the military or other fields has its source in the heart. No man will fight unless he feels he has something worth fighting for. Next, then, is the factor of the strength of the supporting economy. Unless the economy can safely carry the military establishment, whatever force of this nature a nation might create is worse than useless in a crisis. Since behind it there is nothing, it will only disintegrate."

If NATO is going to hold up under the Soviet economic drive, it must certainly look to its own economic strength and unity. This view was the principal theme of the address by President Giovanni Granchi, of Italy, during his recent visit in the United States. A glance at the most recent economic indexes shows why.

Of the world's total manufacturing capacity, North America accounts for 40 percent, Western Europe 30 percent, and the Soviet bloc 20 percent. It has been pointed out that, as long as North American and Western Europe stick together economically, they have a 7-to-2 lead over the Reds. But if the Reds win economic control of Western Europe they will have a 5-to-4 advantage over North America.

These are the considerations behind the new NATO policy Dulles is talking about. We cannot afford to let the Soviet Union get the upper hand economically.

House Resolution 303

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. MULTER. Mr. Speaker, the following item, which appeared in the New York Herald Tribune of May 25, 1956, points up the necessity for the adoption of my resolution, House Resolution 303, which I introduced on July 7, 1955:

SPROUL FAVORS BANKING INQUIRY—SEEKS BROAD STUDY BY UNITED STATES OF SYSTEMS

ATLANTIC CITY, May 24.—Allan Sproul, retiring president of the Federal Reserve Bank of New York, called today for a broad national inquiry into the banking and monetary system of the United States.

Addressing the opening session of the 53d annual convention of the New Jersey Bankers Association in the Haddon Hall Hotel here, Mr. Sproul told the 1,500 banking executives that "to serve such a purpose I should think a Presidential commission of somewhat the same general character as the so-called Randall Commission * * * would be a useful device."

The Randall Commission completed a study of United States foreign economic policies in January 1954.

CREDIT POLICY

Answering recent criticism of the credit policy of the Federal Reserve, Mr. Sproul pointed to the rising trend of prices, that "may have reflected strains upon existing capacity in some instances, and then upward push of costs on prices in others that it was not something to be facilitated and encouraged by too easy access to reserve funds at too little cost."

"There has been no shying away by the Federal Reserve System from its responsibility to supply the reserve funds needed to meet necessary demands for bank credit," he continued. But he noted that "with this responsibility goes the equal responsibility of trying to see to it that bank reserves are not so readily or cheaply available as to foster and promote expansive efforts which are temporarily beyond our physical capacity for balanced growth."

The most recent rise in April of the discount rates of the Federal Reserve banks, which has received much public comment, was intended to give public notice * * * of the pressure being exerted on the commercial banking system by business demands for credit. In this way the banks would be further encouraged to make adjustments within their own loan and investment portfolios to meet these credit needs, and to screen more carefully the necessary demands for credit from speculative or fringe demands.

COSMIC JEST?

Mr. Sproul described as "a sort of cosmic jest" the recent claim that the Federal Reserve's policy of credit restraint had contributed in part to difficulties in the automobile industry. He attributed the difficulties to a misuse or abuse of one form of credit during the lush days of 1955, and suggested that we are paying for it in 1956.

However, he conceded the possibility that criticisms of Federal Reserve policy made in behalf of small business might have some validity.

"Although I doubt if categorical proof can be produced, I suspect that the impact of a policy of credit restraint is greater on small business than on big business," he said. But he also expressed grave doubts about the value of recent surveys purporting to support the criticism.

"The social and political implications of this problem have troubled the country for a long time, and need some new thinking based less on emotional and inherited dislike of business than has been the case in the past," he observed. "The Federal Reserve System, the instrument chartered by the Federal Government to exercise general credit control, should not be blamed for discharging its responsibility, even though it may seem at times to add to this problem."

Soil Bank No Answer for Area's Problems

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following editorial from the May 28, 1956, issue of the Tupelo Daily Journal, Tupelo, Miss.:

SOIL BANK NO ANSWER FOR AREA'S PROBLEMS

The farm bill recently approved by Congress will probably become the law of the land this week.

And with it will come into being President Eisenhower's now-famous soil bank, a proposal which has caught the imagination of the Nation as a sort of cure-all for whatever ails American agriculture.

In spite of the hundreds of millions of dollars to be paid to farmers who put their land in the bank, however, we doubt that northeast Mississippi will benefit materially from the new plan.

And there is a possibility that we will lose more than we gain from the Republican farm program.

A few of the reasons why the soil bank is likely to be of only limited values—and possible long-term detriment—to this area can be listed as follows:

1. As a general rule, only the larger farmers can afford to take still more land out of cultivation in addition to that already stripped from them by acreage allotments.

The man who, for example, has only 8 acres in cotton is barely eking out a living from his crop now. And he can't afford to

take another couple of acres out of production to put into the soil bank.

And a farmer already down to a net cash income of $800 or $1,000 a year can't stand a reduction of even another $100 without suffering seriously.

He has only his labor to sell. And if he puts a portion of his already limited cropland in the soil bank he causes himself to be unemployed an even higher percentage of the time, as he is unlikely to be able to get part-time seasonal work in town.

The farmer who needs help most—the man over 45 years of age who is cropping only 8 or 10 acres—is unlikely, therefore, to benefit materially from the soil bank.

As a result, most of the millions to be spent under the farm program will probably go to larger farmers who employ hired labor and can come out fairly well by accepting small payments for retiring from production some of their acreage.

2. Our area of the country consists chiefly of two economic groups—the farmers and the small towns which service them.

When land is put into the soil bank, it ceases to produce commodities which require the sale of fertilizer, tractors, seed, etc., and it requires the services of gins, oil mills, banks, compresses, and similar institutions.

As a result, the economy of the typical small town in this area will probably suffer almost as much under the soil-bank program as it would if farmers had merely been given another acreage cut without the soil-bank feature.

3. There will be a serious temptation for farmers participating in the soil bank to let their land wash away after it is put in the Government program.

The typical hill farmer won't get enough out of the new farm program to justify his fertilizing and seeding properly the land he puts in the soil bank; hence, he will be tempted merely to pocket whatever money the Government passes out and let his land lie unprotected.

In theory, the Government's new farm program no doubt has an answer for this problem.

But the soil bank is not a program designed to help the small hill farmer of northeast Mississippi. And whatever benefit we get from it is likely to be of a fringe nature, perhaps even being outweighed by the cutbacks in our overall economy which it will bring.

We must not, therefore, assume that our area's farm problems have been solved by enactment of this new law.

We will still need as badly as ever—and perhaps even worse than ever—industrial jobs to provide full-time employment for rural residents who are being caught in a squeeze where they can no longer make a decent living from the soil.

And we should not wait until the soil bank proves its ineffectiveness before doing our utmost to meet our problems through increased payrolls in town for those who are seriously underemployed in the county.

The Late William T. Granahan

SPEECH
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. ADDONIZIO. Mr. Speaker, I was shocked and saddened at the death of my esteemed colleague and good friend, WILLIAM T. GRANAHAN. His loss will be keenly felt.

BILL earned the respect of his colleagues and the people of his district for his outstanding ability and devotion to duty, and their deep affection for his sterling personal qualities. He was a truly effective Member of Congress because of his ability, sincerity of purpose, trustworthiness, and dependability. It was a privilege to know BILL GRANAHAN, and his passing is a personal loss to me. My deepest sympathy goes out to Mrs. Granahan and the other members of the family.

Urban Renewal Promotes Local Improvement and the National Welfare

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include an excellent editorial appearing in the April 19, 1956, issue of the Worcester (Mass.) Evening Gazette, pointing up the substantial civic gain that accompanies well-planned urban redevelopment programs and the resultant contribution to the national welfare.

A great many cities have been enabled to eliminate these unhappy breeding places of juvenile crime and delinquency with the cooperation of the Federal Government.

Let us hope that every community in the Nation will take advantage of this opportunity to rid their localities of slum areas in order to afford opportunity to every American family to live within a healthy, Christian atmosphere.

The article follows:

WHAT URBAN RENEWAL CAN MEAN

What is the most profitable financial enterprise ever proposed to American cities? Experts gathered by Architectural Forum magazine say it is urban renewal.

That term covers two activities. One is the complete redevelopment of rundown neighborhoods. All buildings are torn down and a fresh start is made. That is what Worcester plans to do in the Salem Street project.

The other is the sprucing up of sagging neighborhoods. This involves tearing down buildings that are beyond repair, and coaxing or forcing property owners to fix up the rest. The term "urban renewal" is sometimes applied specifically to this process.

Both bring large returns for property values rise sharply when whole neighborhoods are set back on their feet.

Worcester is trying redevelopment; it hasn't tried rehabilitation. Other cities are attempting it. Cambridge is working out a program. Quincy is considering something of the sort. Portland, Maine, has made substantial progress.

If a formal plan of rehabilitation is adopted, Worcester can qualify for Federal financial aid. This works on the same basis as does redevelopment. The Federal Government pays back two-thirds of any net investment the city has to make.

The city could spend money to take over dilapidated buildings and tear them down. It could spend money for street and utility improvements, and for other purposes. But this has to be done within a specific area and for the purpose of elevating the whole physical character of that neighborhood.

The key to it all is systematic enforcement of housing regulations. Worcester doesn't quite have that now, although there are many inspectors on the job.

Two full-time fire department inspectors checks fire hazards, and report violations of the building code or other regulations. So do about 100 officers in the department, on a part-time basis.

The bureau of public buildings has four building inspectors to enforce its code. It also has plumbing inspectors and elevator inspectors. The bureau of wires has three wiring inspectors.

The health department has a housing code adopted just 1 year ago. It has a staff of sanitarians who help enforce it, when they have time.

By coordinating and concentrating all these efforts, the city probably could do much to improve decaying neighborhoods. Cities like Chicago and St. Louis have found that the public investment is tiny compared to the civic gain. When certain property owners are forced to repair and paint old but usable buildings, other property owners often voluntarily make such improvements to their buildings.

Some neighborhoods are beyond redemption in this manner. Then redevelopment becomes the only answer, as in the case of the Salem Street project. It is partly because of that project that no formal rehabilitation effort has been undertaken here. Proponents of the project didn't want to confuse the issue.

But that danger is past. A start on the redevelopment project awaits only final court clearance. It is not too soon to begin thinking of rehabilitation and renewal of other areas before they, too, reach the point where complete redevelopment is necessary. Worcester cannot afford to pass up this most profitable financial enterprise.

Fluoridation: A Vital Defense Measure

EXTENSION OF REMARKS
OF
HON. CHARLES P. NELSON
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an article entitled "Fluoridation: A Vital Defense Measure," by Dr. Alonzo H. Carcelon, director of the division of dental health of the Department of Health and Welfare of the State of Maine:

FLUORIDATION: A VITAL DEFENSE MEASURE

We live in an age of peril. We know that Soviet Russia now has the capability of atomic attack upon us. We know that this capability will increase with the passage of time.

In the last two great wars, our European allies bore the brunt of the early stages of the conflict. Their lands were overrun, their cities destroyed, their industries ruined; their social, civic, religious, and family activities were disrupted. But we escaped these calamities, thanks to the Atlantic Ocean and to the precious time bought at such a price by our allies. Never again will we have the time we had after the start of World War II to mobilize our resources.

Either we get ready now, or we will wake up to the fact that there are certain things

we could have done which it will be impossible to do because of the terribly swift pace that will characterize any war of the future.

Because of our imminent danger the warfare world, not the welfare state, accounts for most of today's Government expenditures and for most of the increase in Government expenditures during the past 40 years. War and defense costs dominate the budget of the Federal Government and the combined expenditures total of the Federal, State, and local governments. In 1953, 58 percent of all American Government expenditures was devoted to national defense and veterans.

Distribution of all American public expenditures, 1953

Purpose:	Percentage
National defense and veterans	58
Education	8
Social welfare and health	8
Interest	7
Agriculture and national resources	6
General government and miscellaneous	6
Highways and streets	5
Protection	1
Trust funds, debt retirement	1
Total	100

Yet, despite the urgency of our mobilization needs, not all of our defense dollars can go into direct defense. During fiscal year 1953, for example, it was necessary to divert more than $100 million from defense to provide dental services for the Armed Forces, veterans, and other direct Federal beneficiaries.

When we talk about cutting dental decay by two-thirds, through fluoridation, think of how much we could do in the way of defense with two-thirds of $100 million. Better still, think of how much we could do with two-thirds of $100 million cut off our tax bills.

But, if it is stupid to waste money and material, it is treasonable to waste manpower. Yet, that is precisely what we have been doing.

Among the first 2 million men examined for selective service in 1941, 900,000 were rejected for physical and mental disabilities. Dental defects were the leading cause for rejection.

Distribution of rejections, first 2 million examined, 1941

Cause:	Percentage
Dental defects	21
Eye defects	14
Cardiovascular diseases	11
Muscular-skeletal defects	7
Venereal diseases	6
Mental, nervous diseases	6
Hernia	6
Ear defects	5
Foot defects	4
Lung defects	3
All other defects	18
Total	100

In Maine dental defects always have been a serious manpower problem. In World War I, for example, only two other States had higher rates of rejection for loss of teeth. Among naval recruits in 1934, the average number of decayed, missing, and filled teeth was higher in only seven other States. Among aviation cadets in 1943, the average number of decayed, missing, and filled teeth was higher in only one other State.

The seriousness of this problem becomes apparent when we remember that the War Department Mobilization Regulations of August 31, 1940, only required six serviceable opposing teeth and normal gums.

That we should have found ourselves in this position in 1941 is all the more tragic when we consider what Sir James Crichton-Browne told the British Dental Society in Cambridge, England, on June 22, 1892: "It is clear that a supply of fluorine, while the development of the teeth is proceeding, is essential to the proper formation of the enamel and that any deficiency in this respect must result in thin and inferior enamel. * * * I think it well worthy of consideration whether the reintroduction into our diet * * * of a supply of fluorine * * * might not do something to fortify the teeth of the next generation."

Today, two generations later, with the clock on the wall ticking off precious minutes, we still are haggling over whether or not we will strengthen our defenses with this simple fortification. We are letting what the Hartford Courant has called "one of the greatest aggregations of quacks and medical phonies in history" scare us out of solving our No. 1 military manpower problem, rejections for dental defects.

Shortly after Pearl Harbor, Government research conclusively demonstrated that, where the water supply contains the right amount of fluoride, dental decay rates are two-thirds lower than in areas where the drinking water contains no fluorides.

Once this decay-inhibiting effect is established, it continues, undiminished, throughout life.

Careful, scientific studies of men taking physical examinations at Armed Forces induction centers, in 1943, demonstrated that there are no harmful effects.

More than 3 million people, in the United States alone, have been drinking water containing up to 27 times the recommended amount of fluoride all their lives.

More than 7,000 technical articles have been written on fluorides, in the scientific literature, and not 1 of them ever has demonstrated that the continuous consumption of drinking water containing the right amount of fluorides has harmed or can harm any living thing.

Those who oppose the efforts of the American people to improve their physical fitness keep screaming that fluorine is a cumulative, toxic poison that will kill you from heart disease, cancer, or afflictions of the brain, kidneys, or liver. They even have some trick statistics to support their claims. But careful scientific investigations have demonstrated, repeatedly, that there is no truth to these assertions.

The also scream that fluoridation is a violation of their constitutional rights, despite the fact that the constitutionality of fluoridation has been upheld in the courts of 13 States, and that, on 3 separate occasions, the Supreme Court of the United States has refused to review fluoridation cases because there was no Federal question involved. We must never get to the place, in this country, where any individual is denied a fair trial of his case, on its merits. But, on the other hand, we cannot let phony claims of the violation of constitutional rights, and a never-ending succession of appeals, so tie our hands that we become the helpless victims of our own civil liberties.

Then, in what is probably the master stroke of deception, these people, who are trying so desperately to prevent us from strengthening our manpower potential, warn us to look out for Communists. "With one turn of a valve," they say, "the Communists could wipe out the entire population, with an overdose of fluorides."

The fact is that sabotage is technically impossible. In order to sicken, not kill, an adult with an 8-ounce glass of fluoridated water, a saboteur, for example, would have to sneak 108 freight-car loads of fluoride into the New York City water supply, all at one time.

As a result of the studies of men at the Armed Forces induction centers, and other investigations, the Federal Government, in cooperation with State and local authorities, began an investigation in Grand Rapids, Mich., before the end of World War II, to determine the feasibility of fluoridating community water supplies. Separate studies were undertaken by State and local authorities in several other places.

More than 10 years of intensive investigation has demonstrated, beyond the shadow of a doubt, that fluoridation is safe, effective, economical, and a constitutionally permissible public health measure under our form of government.

Fluoridation has the endorsement of the American Medical Association, the American Dental Association, the American Water Works Association, and every other professional and technical organization that speaks with authority on health matters.

Fluoridation also has the endorsement of the Department of Defense, the United States Army, the United States Navy, the United States Air Force, and the United States Public Health Service.

Today, the average boy graduating from high school in Grand Rapids and entering the Armed Forces costs the Federal Government at least one-third less to put into fighting shape, so far as dental work is concerned, and the savings to taxpayers will continue to mount up.

Moreover, it makes no difference whether he plans to make the service a career, or to return to civilian life. That boy will have better teeth throughout his entire life. His sister, too, will have fewer cavities, fewer toothaches, fewer dental bills, a more attractive smile, thanks to fluoridation.

This has not been an easy victory, however. When the Armed Forces planned to begin fluoridation of the water supplies at military establishments, the opponents attempted to secure the passage of the so-called Weir bill, which would have prohibited such action. Secretary of the Army Robert T. Stevens wrote and Maj. Robert W. Hobson appeared before the Wolverton committee, representing the Department of Defense, to make it plain that, in the opinion of the Department of Defense, fluoridation of water supplies is a public health asset, and that prohibiting fluoridation would be detrimental to the public interest.

As a result of the efforts of the Department of Defense, and others, this proposal was killed, and the Armed Forces have been able to go ahead with fluoridation.

The United States Air Force has approved fluoridation for its bases. The big Ramey Air Force Base in Puerto Rico, and the Barksdale Air Force Base in Louisiana have started to fluoridate. In addition, 14 other bases are now installing fluoridation equipment and are obtaining the compound.

The United States Army has approved fluoridation for all military installations throughout the world. Installations have already been started for Schofield Barracks, Fort Shafter, and Wheeler Field, in Hawaii, and plans are underway for the fluoridation of Alaskan posts.

The United States Navy has started fluoridation at the Naval Air Station at Lakehurst, N. J., and is completing the installation of equipment at its huge Great Lakes Naval Training Center.

In addition, as of April 1, 1956, 1,140 American communities have begun fluoridating civilian water supplies serving more than 22 million people. More than 74 percent of the entire population of Rhode Island, for example, has been using fluoridated water since February 1955. The District of Columbia water supply has been fluoridated since June 1952.

However, in a number of communities, local officials have resorted to what the New York Times calls "an evasion of the responsibility of high office, a knuckling under to a minority whose assertions receive no confirmation in scientific circles," by submitting fluoridation to a referendum. We never have voted on compulsory vaccination against smallpox, compulsory immunization against diphtheria, compulsory vaccination of dogs against rabies, chlorination of our water sup-

plies, or any other similar health measure. In the case of fluoridation alone, the opponents insist upon having a referendum. They are certain they can successfully destroy public confidence in our recognized scientific authorities as easily as they destroy the confidence of our municipal officials in State and local health departments, and in State and local medical and dental societies, when they intimidate these officials into placing fluoridation on the ballot.

But, thanks to the patriotic support and vigilance of organizations like the American Legion, the National Congress of Parents and Teachers, the United States Junior Chamber of Commerce, and the American Federation of Labor and Congress of Industrial Organizations, more and more communities are being awakened to the true nature of the opposition to fluoridation.

As Chemical Week, the business magazine of the chemical-process industries, has pointed out, the hard core of resistance to fluoridation rests with a relatively small handful of people who have caused a stir out of all proportion to the merits of their arguments.

The fundamental question at stake is this: "Shall we permit a few individuals, who can't get any authoritative professional or scientic organization to believe them, to continue to deprive future generations of Americans of better health? Or, shall we stand shoulder to shoulder with the Department of Defense, the United States Army, the United States Navy, the United States Air Force, the American Legion, and 22 million Americans throughout the length and breadth of our land, who sincerely believe that strengthening our defenses with fluoridation is in the public interest?

As we listen to these people rant and rave against what the Department of Defense has called "a public health asset;" as we listen to them try to break down our confidence in American institutions, to make us believe that our health departments are engaged in some fantastic plot to poison us, to make us believe that the American Medical Association and all the other scientific authorities do not know what they are talking about when they say fluoridation is safe, to make us believe that all the research workers in the United States and Canada have juggled their figures for pay; we should ask ourselves two questions, "Who stands to profit by keeping dental defects the largest single cause of rejection for military service? Who stands to profit by undermining public confidence in our American institutions?"

When we see that, however, well intentioned some opponents may be, opposition to fluoridation accomplishes objectives the Soviets dearly love to achieve, we will waste no time in getting on the same team as the United States Army, the United States Navy, and the United States Air Force, and adopt fluoridation. It is a winning team, and with God's help we're going to keep it that way.

The Late Miss Lucinda Rayburn

SPEECH
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. KILGORE. Mr. Speaker, it was with a great sense of loss that I learned of the untimely passing of Miss Lucinda Rayburn, sister of our beloved Speaker.

During a long and fruitful life, Miss Lou, as she was lovingly known, was a constant companion and helpmate to Speaker RAYBURN. For many years Miss Lou was the Speaker's official hostess and during her visits to Washington endeared herself to all who came to know her. Hers was a life of devotion and good works and she will always be remembered among the great women of the Southwest.

Mrs. Kilgore and I join with Mr. RAYBURN's many friends in the 15th District of Texas in expressing our heartfelt sympathy to our Speaker and to his family and pray that our Lord will sustain him in his hour of grief as He has guided him throughout his life.

Improvement of Our Security Program Is in Order

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. MULTER. Mr. Speaker, the following article, which appeared in the New York Herald Tribune of May 27, 1956, is deserving of the attention of our colleagues:

WASHINGTON
(By Roscoe Drummond)
AN R. S. V. P. TO SENATOR CAIN

President Eisenhower gave one of his rare one-syllable answers during his press conference last week. Usually he is more outgiving; usually he amplifies, and it is his amplifications which contribute so much to the insight which the White House press conference yields. But this time, the very brevity of the President's reply was revealing. It was a 1-word answer to a 42-word question. The authorized transcript records it as follows: "Question: (Garnett D. Horner, Washington Star): Mr. President, former Senator Harry P. Cain said recently that he had been trying unsuccessfully, to get directly to you his views about the Government security program. And I am instructed to ask if Senator Cain can see you if he wants an appointment?" The President: "Yes." Behind this unusual instance of a White House reporter asking whether an official of the Eisenhower administration could have an appointment with the President is a very human, a very understandable, and a very regrettable story.

The President said "Yes"—Senator Cain could see him if he wanted an appointment. It was an affirmative answer, a carefully courteous answer, but every correspondent knew that it was not an enthusiastic or even a very cordial "Yes."

Here is a lifelong Republican, a former Senator from the State of Washington, an Eisenhower appointee to the Subversive Activities Control Board, where he has rendered able service for several years.

Senator Cain knows what real Communist subversion is, how the real Communists work, how they try to penetrate and disguise their penetration. He isn't fooled by them; he isn't soft on them.

This is why it is so regrettable to see a veil of miasmic misunderstanding, bordering on hostility, let down between Senator Cain and the President.

Obviously, Senator Cain has annoyed some officials of the administration because he has become the most articulate, the most widely heard, the most effective advocate of changes in the employee security program. There were some in the administration who simply didn't want the shortcomings, the injustices and the unfairnesses of the program brought sharply to the fore. They didn't actually deny that there were shortcomings, that a number of bad mistakes had been made, but they preferred not to have them mentioned above a whisper on the ground that in due time everything would be ironed out.

The truth is that needed corrections in the employee security program have been very slow in coming. There are important reforms which still need to be made, and it is my considered judgment that Senator Cain's earnest, able, documented, respected advocacy has been indispensable to much of the progress that has been made.

Senator Cain is not talking about weakening the program. He seeks changes which will strengthen the program by guaranteeing fuller and quicker justice to everyone affected by it.

He advocates (1) confrontation of witnesses; (2) greater speed in reaching decisions, employees being at present kept dangling sometimes 8 to 14 months with the most grievous charges hanging over them; (3) the shifting of security-questioned employees to nonsensitive jobs until a decision is reached; (4) greater specification of charges to preserve due process of law, and (5) a more prudent use of the Attorney General's list of so-called subversive organizations as a means of testing loyalty and security.

In the concrete cases of miscarriage of justice which he has publicized—and nearly all of which have subsequently been corrected—Senator Cain has been proved right again and again.

Senator Cain has, I think, been a faithful, loyal, intelligent, worthy ally of exactly the way President Eisenhower would like to see his security program conducted. I am convinced that if the President lends an open mind to the appointment with Senator Cain—putting aside some of the prejudiced things which have been said to him—the interview will usefully clear away the misunderstanding.

The Last, Best Hope of Earth

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. DONOHUE. Mr. Speaker, under unanimous consent, I include a very pertinent article entitled "American Freedom Was Born in Blood," appearing in the April 19, 1956, issue of the Worcester (Mass.) Evening Gazette, containing a most timely reminder that the substantive virtues marking a great beginning must be ever practiced if the end is to be "the last, best hope of earth."

The article follows:

AMERICAN FREEDOM WAS BORN IN BLOOD

On the quiet green of Lexington stands a monument inscribed with a brief list of names. These are the men who died 181 years ago today in the first battle for American liberty.

The years pass and memory fades, and the raw anguish of those deaths so long ago is dulled. In its place is a romanticized glory, which clings imperishably to the events of that famous day in history. The American pageant, moving impressively down the long road of the years, casts a reflected splendor

that would amaze the people who were present at that simple, brutal scene.

For to them, it was not sudden glory with a happy ending. To them, it was shock, fear, suffering, defiance and in some cases—death. It was uncertainty, remorse, and despair—and the hope of eventual victory.

But those are the substances of which great beginnings are made. And April 19, 1775, marked one of the greatest beginnings in all human history. On the day before Lexington, America meant one thing; forever after Lexington it meant something radically different.

On that day the American dream of freedom, justice and equality was born. It was born in blood, violence, and fear, but it has grown to be what Lincoln was later to call it, "the last, best hope of earth."

Address by Hon. Frank Chelf, of Kentucky, Before the Lebanon, Ky., High School Graduating Class

EXTENSION OF REMARKS
OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. WATTS. Mr. Speaker, I ask unanimous consen to have printed in the Appendix of the RECORD a transcribed ad lib speech made by my colleague, FRANK CHELF, on Monday night, May 28, 1956, to the Lebanon, Ky., High School graduating class, of which his oldest daughter, Caroline, was a member.

The speech follows:

Superintendent Johnston, distinguished members of the school board, members of the faculty, you fine graduating class of Lebanon High School, my old and dear friends of Lebanon and Marion County, and you good ladies and gentlemen who have honored us tonight by your presence from the adjoining counties, I have had many thrills in my time, believe me, certainly many, many more than I have ever deserved. I can recall not too many years ago—but certainly enough, at that—when I was a barefooted, ragged, dirty-faced youngster out in an orphanage, and I never shall forget the greatest thrill that had ever come—the first real thrill of my lifetime. It was when Babe Ruth came to see the youngsters at the home and he was knocking fly balls out into the outfield, and as a youngster and member of the team I put my heart into catching one of those balls, because the rule was if you caught a ball you could come in and Babe would autograph it and shake your hand. Well, I want you to know, boys and girls, that I caught one of those balls. I made it my business, Jim, to catch one. And you talk about a fellow rocking, rolling, wheeling, and dealing—I really came in from that outfield into that infield and got in there and shook Babe Ruth's hand. He autographed that ball, and today I have it as one of my most prized possessions in a glass case there on my desk in Washington. Someday, if little Frank behaves himself, I might pass it on to him. That was a great thrill.

Then, you know, 30 years ago tonight I graduated from high school, and that, too, was a real thrill. Of course, I was so young when I graduated—fact is, I was only round about 9—well Jack Benny is only 39. Well, Caroline looked at me pretty closely, so maybe it was twice 9, Caroline. At any rate, it was a happy occasion, believe you me.

And then later on, as my good friend Denny pointed out here, I had some other wonderful things happen to me—when you good people here elected me as your county attorney and later when Miss Lou agreed to walk down the aisle with me; and later on, it was a real thrill when Caroline, our first baby, came, and then Bonnie and then Frank—oh, what a wonderful thing it was. Later, yes, I had my shingle hung out; the war came thereafter and I did what I could to help win it. I shall never forget the thrill that came to me the day of our graduation from Officers Candidate School when I got my commission, and when I was promoted to a captain and later to a major. When I came back, you good people rallied around me here in Lebanon and Marion County and throughout this great fourth congressional district and you gave me the nomination and elected me as your Representative in Congress. Oh that was a thrill—that was the high-water mark in my life, make no mistake about it.

Then still later on, by hard work, I was permitted to serve as the chairman of a subcommittee that won some national prominence and they were kind enough to me to let it be called the Chelf Investigating Committee. All that was wonderful. It was fine, my friends, when I was permitted to meet the great Franklin Roosevelt, shake his hand and to serve with him in his Congress and later, President Harry Truman and now President Eisenhower. They were wonderful things to happen to me but I want to say to you from the bottom of my heart, the greatest thing that has ever happened to FRANK CHELF is to be permitted to come here tonight and to address this fine graduating class in our hometown—56 fine young men and women representing one for each year from the beginning of the 20th century. I think it is a good omen, Mrs. Johnston—I do indeed and I am so happy, so pleased, and I am so proud that you were able to hold your line and to keep them all together. I understood that one dropped out but later one more came and took the place. I was happy and I know that all of you thrill because of that. To me, I repeat—that is a good omen—believe me it is.

What I have to say to these fine young men and women tonight probably will be old stuff to you fathers, mothers and you loved ones and certainly to the members of the faculty and you teachers. It will be old stuff, yes, and so if you want to tune me out, go to sleep or drive out to the Parkette, it is all right with me; we will go right ahead here with this thing. I know there have been times when you wanted to say something to the youngsters but maybe they were going to a dance, going to that football game or that basketball game, or maybe they were headed out the door to class and maybe what you had to say to them didn't quite register at the time. Then on the other hand, maybe you were too busy to get it over, as I have been, and it really is a shame that I haven't had more time with my family. If you haven't seen me at home as much as I feel that I ought to be, just bear with me and please understand that you good people elected me to represent you in Washington and there are certain things that go with public life that you must make in the way of sacrifices. My family have borne the brunt of that sacrifice by not being with them as I would like to be. My dear friends, tonight we have this happy senior class here on the stage. They can't run out on us tonight, Mrs. Johnston, they can't go to any dance and they can't get away from us until they hear my plea. We have got them cornered tonight—they can't leave us tonight—so on behalf of your fathers, mothers, and you loved ones and the members of the faculty, I am going to tell them off for you tonight for just a few moments—bless their hearts.

Yes, this is the first appearance that I have made in the way of a commencement address in 12 long years and the reason for that is when there is a rollcall in Washington that means something to our people—to our farmers—and there is a vacant seat there where CHELF sits—I think that that is just about the most inarticulate and just about the worst representation that people can have. That's the reason I have tried as best I could to stay there and be on the job when legislation that you needed most was before the Congress for action. I was trying as best I could to set an example for other youngsters who came along behind me because I shall never forget, Pauline, when I was elected to Congress that a lot of my dear friends voted for me with their tongues in their cheeks. I know they thought this boy is too young, he is a good boy, but he is too young, and they were afraid. I know in their hearts they worried about me, and that was probably the thing that drove me and made me work as hard as I have worked—certainly to my own detriment from the standpoint of my health but, nevertheless, it did drive me on and on to prove that a young man or a young woman could do a job if it was entrusted to them. I had in mind the fine young men and young women who were coming on behind me. I knew that if I didn't make good, then the people might not consider opportunities for those who followed me. Therefore, it was incumbent upon me to make a success and I had to do it.

Tonight I have no prepared speech. I am going to talk from the bottom of my heart, what's in my heart and on my mind. I don't have a prepared speech because I remember the story of Senator Barkley many years ago when he said that he was honored when he was a young county attorney to make the commencement speech to one of the little high schools in McCracken County. He worked so hard, oh, he stayed up several nights preparing his speech and he thought that he had a masterpiece when he had finished and so, on the day in question, he delivered the speech. When it was over, he waited for the congratulations and the applause and none came. He was rather disappointed; he waited a little while longer and no one came to congratulate him and even the superintendent of the schools stood by and said nothing. So finally he couldn't stand it any longer and he said: "Superintendent Jones, how did I do—did you like my speech?" The superintendent said: "Do you want the truth or do you want me to tell you something that you want to hear?" He said: "I want the truth." The superintendent then said: "Well, it was terrible. There were three things wrong with it. You read it, you read it poorly, and it wasn't worth reading to begin with." So, tonight, I am just going to tell you what is on my mind and in my heart.

I was fortunate, I guess, after all was said and done. I don't claim any credit for anything that I may have been able to do because I think that those things are in the cards. Sometimes, I think that what is to be, most generally will be, but certainly we want to try to help things along, as best we can. The point I am making is this—I can remember when I was just a little fellow around about 5 years old, and shortly before Dad died—my dear, sweet old Aunt Lucy took me into the courthouse where my father was circuit judge and I saw him there on the bench (ill though he was) and I made up my mind then and there that I wanted to be a lawyer. From then on, I worked hard because I knew what I wanted to do; I knew where I wanted to go, and I charted my course and I set my sails and I worked hard for it. Well, it is something that helps and I don't think there is any doubt about that. I believe that young

folks sometimes by not having their minds definitely set upon the thing that they want to do, who are willing to let it ride along until after they have graduated from high school before they will even discuss it or talk about it—sometimes these young folks allow the other fellow to get a jump on them. I believe this sincerely—that deciding early in life what one's goal is to be keeps to a minimum, shall I say, at least confusion, indecision, and certainly delays.

I am reminded of a story—speaking of confusion—about when I was a youngster working on a farm, during the summer months, a friend of mine with whom I was staying that summer asked me to go over to the neighbor and borrow a clock. He said that the clock he had there had quit running, his neighbor had three, and they were all running pretty well. So I went over to the adjoining farm, borrowed a clock, and brought it back. Well—the clock didn't seem to do so well. After about a week, everybody in the Woodward household was really in a state of confusion and almost shock over that clock. Finally, Mr. Woodward asked me to take the clock back, thank the man for its use, and tell him that he would take his own clock into town as soon as he could and have it repaired. I took it back and told him what Mr. Woodward had said. He thanked me for bringing it back but he said, "FRANK, I will tell you something, that is a good clock and it runs; it does all right but the trouble with it is, I forgot to tell you about its peculiarities and idiosyncrasies." He added: "You know, that clock runs well but I forgot to tell you that when both hands stick up to high noon and it strikes 3, that means it is 6 o'clock." When you fine young men and women have both hands up at high noon, I don't want you striking 3 and saying it is 6 o'clock. That is most confusing.

There are five things that I would suggest here tonight. Your parents have traveled the road before you. I have no secret formula to offer to you for success, though I wish I could give you one. I know that the teachers do not have a secret formula for you. We can't wave a magic wand. If we could save you one tear or one disappointment, we would be delighted to do it.

While I am talking, I want to congratulate you fathers and you mothers tonight, for raising such fine young men and young women. I know of the heartaches and the sacrifices a lot of you have made. I know of those things and I am sure this fine class does, too. By the same token, I want to congratulate the members of the faculty—each and every one of the teachers—for the wonderful, magnificent contribution, the selfless devotion to duty given throughout all the years that this class has been in school and other classes who have gone before and the ones who are yet to come. I, personally, want to thank them on behalf of you good people assembled here tonight for the love and the devotion given and the sacrifices that they also have made. Young men and young women, you may not realize it now but the time will come when you will appreciate them all the more and with each passing year, they will become more dear to you. I know that maybe you haven't thought about it, but I am sure that you realize that every one of them, with their qualifications, their intelligence, their ability, and their integrity, could go to Louisville and get a job there with almost any organization or company and make twice, three times, maybe four times the salary that we are able to pay them here. This is not because we don't feel that they are not worth it here but because after all is said and done, the tax dollar can go only so far. I want to say this to you—and thank heaven, I am not on the ballot tomorrow and nobody can say it is politics. I do think you are entitled to know that I have always been for some form of Federal aid to education. I am for it now and I shall continue to be, because I think that you good people are the most underpaid and, sometimes, I am afraid the least appreciated folks that we have—and you are the ones who mold the character of our future citizens. I have not forgotten you and I know that these parents here will always remember what you have done for their loved ones.

Yes, I repeat, young men and young women, that I can't give you a magic formula but if I can save you one heartache or one tear—just one—I will be grateful for this opportunity tonight. I know that when Caroline last fall wanted me to take her out to Columbia, Mo., to see Christian College which she hopes to attend this fall, we became lost—hopelessly lost. We got off the main road and we were floundering. I pulled into a filling station and I asked the man if he had ever been to Columbia, Mo., and he said yes, he had traveled the road before. I asked him to get me straightened out and get me on the right road. He did and we went on without losing any more time at all. It was just that simple. As you travel life's highway, if you become doubtful, if you momentarily lose your bearings, if you get a wee bit "off stroke," or if you feel that you need some advice or counsel, don't hesitate to go to your father, to your mother, to your grandmother, or to some member of the faculty, or even write me. I would be delighted and would consider it a real privilege, an honor, and a pleasure to try to advise and counsel you even by mail, to try to help you, to guide you.

As you travel along life's highway—or any highway, for that matter—if you watch your guideposts and signposts, you are not as likely to wreck or to get into trouble or to get hurt, if there is a sign that says "dangerous curve ahead," "slow down," "deadend street," "roadblock," or a "one-way bridge." Those suggestions that I would make would be five—and only five—and the first roadsign that I would suggest is that you take the Lord into your confidence; let Him be a part of your life, let Him be a partner in your business and always remember the golden rule and say a prayer each day. Youngsters of 18, 19, and 20 in World War II prayed and they did it unashamedly, too. No. 2, I would suggest to you that you work hard, work very hard. There is no, absolutely no, substitute for hard work. Speaker RAYBURN of the House of Representatives has often said that he doesn't want the most intelligent man from a given congressional district to come to represent his people in Congress but has said: "Give me the man with average intelligence, just average intelligence, but one who will work hard—real hard and I'll show you one of the most successful Representatives in the United States of America."

As you will remember, I told you good people when you elected me 12 years ago to Congress that there were, probably 350,000 people in Marion County and in the Fourth District who were smarter than I, but that I guaranteed you one thing—if you would send me there, nobody would work any harder or as long as I would to try to give you the representation to which you were entitled and to try to make up the difference in what I may lack in the way of experience, training, brains or talents. No. 3, I would say not to hold grudges, not to hate. That reminds me of a story about the old gentleman who was at a revival meeting, sitting there, 105 years old—Uncle Jim, by name. The minister said: "Is there anybody here in the sound of my voice in the church-house tonight that can truthfully stand up and say to all mankind and everybody here assembled that he loves everybody, that he has no ill-will toward anyone, that he holds no grudge against anybody?" Finally old Uncle Jim stood up, tottered on his cane, and said: "Parson, I love everybody and I don't hate anybody." The minister said: "Tell everybody—we want to know the formula, Uncle Jim, because we all need to know." Uncle Jim said: "I've outlived all of the dang rascals." Now, you don't have to do it that way—you don't have to feel like Uncle Jim. You want to do it honestly from the bottom of your heart.

The fourth road sign is to be honest, be fair, keep your word—let your word be your bond. Then you won't have to explain—you won't get caught in any lies. Elbert Hubbard says: "Never explain, your friends don't need it and your enemies won't believe you anyhow." You know that I have developed a theory over the years, and I would pass it on to you for what it is worth. I have often said—never ask a friend to do something that will hurt him spiritually, morally, mentally, physically, socially, financially, politically, or any other way. A man just doesn't ask his friend to do something he knows in his heart is going to hurt him. If you will remember that, I think it will help a little bit, too.

Last, but not the least, of the five signposts—let us be courteous, kind, and sympathetic—to the blind, to the lame, the halt, the widow, the orphan, the aged, the infirm, the sick, the indigent, and to the downtrodden. You do that, and you just don't know the real deep down satisfaction and joy that you will have. I was in Washington the other day, walking down the street, and a man came up to me. I thought he was a typical panhandler. He tapped me on the arm, and said: "Mister, can I have a little money for some food?" I gave him some money, and then I turned to walk away. He stopped me, and said: "My friend, I appreciate this very much. I am down on my luck now—I haven't got a dime but I am going to remember what you did for me tonight, and when I am back in my luck I am going to pass this on to some other poor unfortunate fellow." That stopped me in my tracks. I turned around and I looked at that man—it really impressed me. That was the first time in all of the years that I have been trying to help folks that I had had that kind of an answer. I guess the reason it startled me was because it was that sort of thing that I wanted to do myself—to try as best I could, with my limitations, to help others. Be kind, be sympathetic, be understanding, say a kind word to people. Courtesy is the least investment that you will ever have to make on anything and it will pay you the greatest dividends. The fact is, courtesy costs you absolutely nothing and the dividends that come back to you are wonderful. It reminds me of the story about the preacher who had been away because of an operation for quite some time. He was gone about 2 months, and when he came back he gave a rousing sermon that morning in church. When it was over everybody was impressed, and one of the members of the congregation came to him and said that it was a wonderful sermon, that it was magnificent, the finest he had ever preached. The preacher said: "Now, listen, save those compliments for the young minister who took care of you while I was away—it will give him some incentive, some inducement, and some encouragement to go ahead and to develop; why, those compliments for us old duffers is just like pouring water on a duck's back." She replied: "Yes, parson, but the ducks, they like it."

The ducks—we all—like a compliment, and it doesn't cost us anything. Let's hand one out occasionally as we go along. I am told by a fine old gentleman, Mr. Ancil Basham, of Louisville, Ky., now in his late eighties, that some 60 years ago my father, Caroline's grandfather, made this statement: "It is never too soon to do a kindness because you never know how soon it will be too late." That is really something to think about. I appreciate very much this grand old gentle-

man's writing me and telling me about that phrase which my father had coined.

Don't ever let anybody tell you that you are living in terrible times in the atomic age. You ought to thank God that you were born when you were because all the world is looking to America today for leadership and for guidance. We are one of the few countries that are left that have freedom, decency, democracy, and Christianity—that haven't been gobbled up behind the Iron Curtain. Those poor people who are behind the Iron Curtain are looking, praying, and hoping that some day, somehow, praise God, America will show the way to those who have no freedom. How can we show the way, Jim? We can't show the way unless you youngsters who are coming on now will take over because the job is going to be yours. You graduates of high schools, and, later on, of college—it will be your job. You stand on the threshold of life—young, eager, able, and sincere, and you want to do a job. You have it within your power this minute to make it a good life, a decent life, and a better life—a Christian life, on the one hand, or you can make it a bad life, a sorry life, a miserable life—a complete failure, on the other hand. It is within your grasp. Your parents and your teachers have done all they can for you. You are just about to be on your own.

Remember one thing more, please. Kentucky is the second State in the Union to grant to you at the age of 18 the right of suffrage. Tomorrow is election day. I am not on the ballot and I thank the Lord that I am not because, as I say, I don't want to be accused in any way, shape, form, or manner of bringing in politics, but I do think that since you are about ready to cast your first vote, no matter whom you vote for, vote for somebody tomorrow. Please do that and always set aside and dedicate an election day as a memorial day to our forebears who at Valley Forge, Yorktown, and New Orleans fought and won for us our liberty—and for those fine young men and women who gave their all in World War I in St. Mihiel and the Argonne Forest—and for those brave young men and women in World War II who gave their lives at Guadalcanal, in Sicily, Italy, and at the Normandy beachhead, so that we could be free and could vote—and later on, in Korea, to the tune of a million casualties in blood and $200 billion in gold and in treasure in order to preserve and protect the integrity and the decency and the Christianity of this freedom that we have. Oh yes, we inherited it but we have to fight this day and age in order to preserve and protect it. Tomorrow, please go vote for somebody and, as I say, every election day, dedicate that day as a memorial to those who willingly gave their lives that we—you and I—may be free.

And now I want to take this opportunity, once again, to recap the five road signs: (1) Take the Lord into your confidence; (2) work hard; (3) don't hate anybody; (4) be honest, be fair—let your word be your bond; (5) be courteous and kind. If you observe these, I will certainly have no worries about your success.

I want you to know that this night has been for me a decided honor, a real privilege. It has been a real thrill to have been able to come here to be with you on this occasion. In conclusion may I say—make friends and keep them always. As a lad, I learned this little poem:

"Making friends is a lot of fun,
Shaking hands with everyone,
Hearing what each has to say
As we meet them—day by day
Swapping smiles and trading cheer
Makes us happy while we're here
'Cause all the joy of life depends
Just on the art of making and keeping our friends."

I want to congratulate you for the splendid job that you have done and I hope and pray that the Master above who holds in the hollow of His hand the destiny of all men, all lodges, and all nations will keep you, that He will cause His face to shine upon you and give you peace, happiness, prosperity, contentment, long life, and success. Good luck. And may the Lord of Hosts bless you always.

The Mounting Pressure of Nationalism and Mr. Khrushchev's Toast

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 10, 1956

Mr. FEIGHAN. Mr. Speaker, on May 17 the Congress had the pleasure of listening to the stimulating and sound address of His Excellency President Sukarno, of the Republic of Indonesia. In this address several powerful observations were made on the natural force of nationalism as it has developed into full bloom in much of southeast Asia. As President Sukarno put it:

For us, nationalism means the rebuilding of our nations; it means the effort to provide equal esteem for our peoples; it means the determination to take the future into our own hands. For us, nationalism is the love of country.

No American patriot could disagree with this succinct description of the essence of nationalism. Yet many, for one reason or another, still fall short in appreciating the fact that within the Soviet Union, an empire in itself and the worst in recorded history, this force of nationalism is the most powerful threat to the continuance of Moscow's dictatorial and colonial rule—that is the greatest source of weakness in the Russian Communist preparation for world conquest. This patriotic and nationalist force, as represented by the unyielding struggle of the non-Russian nations in the Soviet Union to regain their national independence, is undoubtedly our greatest ally at the very base of Moscow's farflung colonial empire.

This vital matter receives expert treatment in the recent publication of The Great Pretense, prepared by our Committee on Un-American Activities. The committee is to be highly commended for its valuable contribution to American public enlightenment on the significance of the 20th congress of the Communist Party in the U. S. S. R. In this work, the significance of that congress from the viewpoint of non-Russian nationalism is skillfully developed by Dr. Lev E. Dobriansky, of Georgetown University, in the essay titled "The Mounting Pressure of Nationalism." Because of the striking importance of this essay and the objective reflection of its contents in the excellent editorial of the New York Times on Mr. Khrushchev's Toast, on Monday, May 21, under leave granted I insert in the RECORD the two writings:

THE MOUNTING PRESSURE OF NATIONALISM
(By Lev Dobriansky)

(Lev E. Dobriansky studied at New York and Fordham Universities. He has taught at New York University and is now professor of Soviet Economics of the Georgetown University Graduate School. He has written extensively on Soviet affairs and was president of the Ukrainian Congress Committee of America in 1949. Dr. Dobriansky has testified extensively before various congressional committees and has written over 200 articles, book reviews, and pamphlets on Soviet politics and economics.)

This analysis of developments in the Soviet Union since the 20th Congress of the Communist Party has been developed primarily on the bases of the Caucasian demonstrations, the colonial captivity of the non-Russian nations in the Soviet Union, and the portent of these phenomena for American policy and operations.

It appears almost in the nature of an empirical law that every Moscow crisis, turning point, or shocking development worthy of world attention is attended by serious reverberations and reciprocal effects in some non-Russian country in the U. S. S. R. This is not difficult to understand once the basic duadic character of the Soviet Union is grasped.

Since the formation of the Soviet Union by force in 1922, practically all critical changes have been accompanied by tensions or political cross-tides in the non-Russian nations. The death of Stalin, for example, encouraged a workers' rebellion in East Germany, disturbances in Poland, Czechoslovakia, and Ukraine, and strikes in the slave labor camps of Karaganda, Vorkuta, and Norylsk where, typically the inmates are predominantly non-Russian nationals. It will be recalled further, that the gravest charge lodged against Beria was that he had "activated bourgeois-national elements in union republics." Years of intensive campaign against Trotskyism will remain only episodic and minor in comparison to the permanent Moscow campaign against inextricable non-Russian nationalism.

The recently reported demonstrations in Georgia, Armenia, and Azerbaijen also support the expansive pattern of persistent non-Russian opposition. They cannot be construed as evidence of pro-Stalin sentiments, any more than the mass Ukrainian welcome given to the invading German armies in World War II was pro-Hitler. Whether under Stalin or the dictatorship of the present collective leadership, the Caucasian environment has always been a smoldering, hostile anti-imperialist and anti-colonial caldron for Moscow. Almost immediately after the 20th Congress—the period in which the third anniversary of Stalin's death occurred—a most opportune occasion offered itself for a further display of non-Russian dissent and resistance to the imperialist Moscow Government. It was only natural that students bred in the antiquities of independent Georgian history and workers, rather than functionaries or bureaucrats, led the demonstrations in Tiflis. Also, it was highly significant that the intense press campaign against bourgeois nationalism was not confined to the Caucasus but was extended also to the Baltic areas and Turkestan which likewise are important strategic parts of the broad non-Russian periphery of the Soviet empire.

It is quite understandable why Georgia was the most eligible center of such anti-Soviet Russian demonstrations; and it was here that swift action was taken by Moscow. For failure to suppress "elements of nationalism" the Tiflis University rector, Viktor D. Kupradze, was immediately placed under severe censure and the party leader at the institution, Sergei M. Dzhorbenadze, was dismissed. About 15,000 trained agitators descended on Georgia to expound not only the sins of the Stalin "personality cult" but even more the sins of "bourgeois nationalism." This conformed completely with the Moscow propaganda line, developed by Stalin and perpetuated by the present

dictatorial oligarchy, which denounces non-Russian nationalism as "another remnant of bourgeois ideology"

At the same time, the controlled Georgian press, led by the party newspaper, Zarya Vostoka (Dawn of the East), counterposed local nationalism with proletarian patriotism and complained vigorously about the lack of party diligence in "vigorously suppressing the slightest manifestation of elements of nationalism." Significant, too, was the overflowing output of published adulation for Georgia's "Russian elder brothers."

In the Moscow lexicon this usage is an oft-used expression of the totalitarian "big brother" myth cultivated by traditional Russian political racism which, in this case, is pointedly betrayed by the historical fact of Georgia's long national preexistence to the late emergence of the Russian nation.

Under Moscow's economic colonialism the relative material condition of the non-Russian nations has been conspicuously low and poor. But this cannot be regarded as a direct cause of the unrest and periodic uprisings in these areas. The real cause is the continuous and unabated struggle for national liberation and independence of these formerly free countries. The House of Representatives may well take pride in having created the Select Committee To Investigate Communist Aggression, which, in a monumental way, officially uncovered the basic forces at work in the monolithic structures of the Soviet Union.

The significance of the 20th Congress can be perceived only if the organization of the Soviet Union itself is understood.

Georgia, Armenia, and Azerbaijen—as, indeed, Lithuania, Latvia, Estonia, Byelorussia, Ukraine, Turkestan, ond others—are no more minorities or areas of "local nationalism" than is Poland or Hungary in terms of the entire totalitarian Russian Empire. Each of these constitutes a separate conscious nation with its own distinctive culture, language, history, customs, mores, and religion, all of which are supported by a geographical contiguity. Each has tasted national independence; and each has been fully exposed to most, if not all, of these Moscow-sponsored barbarities contained in the Trojan Horse of international communism: Genocide, manmade famines, purges, Russification, lingual defacement, anti-Semitism, deportations, political racism, and distortion of national histories.

The non-Russian nations constitute a clear majority of the population of the U. S. S. R. It is no wonder, then, that in the living spirit of Noah Jordania, the great president of independent Georgia whom Stalin both hated and feared, every Georgian patriot, at the mere mention of Stalin, is seized with this consuming thought—"Whatever history may say about him, to Georgians and Georgia he will always remain a traitor to his native country and a man who denied and rejected all that Georgia and Georgians have always stood and fought for."

Non-Russian nationalism, considered in terms of population, geography, tradition, and aspiration, is undoubtedly the most powerful single anti-Communist force in the empire, and is unquestionably one of the factors responsible for the supposed anti-Stalinism launched at the 20th congress.

On the surface, the deglorification of Stalin seems aimed at moderation and reasonable treatment in the interest of accelerated socio-economic activity. Another, but less important, reason is the satisfaction delivered to the army for the purges sustained in the 1930's. The role of the military has increased, but it is naive to think that its type of leadership can be converted into a target of governmental cleavage. The third and most pressing immediate factor is the use of desanctification by those engaged in the inner struggle for individual power. As in numerous other actions, this has followed a zigzag course since the death of Stalin, with resanctification utilized as late as last December. If the dynamics of historical leadership in relation to dictatorships are observed, its future long-run course should indicate the level of the indefinite contest before the tactic of desanctification falls into complete obsolescene.

Outside the Soviet Union, the exhibition staged at the 20th congress is intended to gain support for popular-front movements, and serve as an appeal to neutral nations, while further confusing the anti-Communist countries. However, taking into weighted consideration both the internal and external aspects of this apparent change, one cannot help concluding that substantively no real change has occurred; the basic Stalinist matrix remains.

While recognizing the limits to which even the collective leadership can go without seriously imperiling the foundations of its own dictatorship, and that of the empire, the present rulers are in pursuit of the same goals and are employing substantially the same basic means to achieve them. In this process they are resorting to the margin of opportunism that the institutional framework of totalitarian rule affords and which, at different times, even Stalin availed himself of. When it was convenient or necessary, the Stalin regime likewise made recourse to popular front techniques, peaceful coexistence, the temporary placation of non-Russian nationalism, appeasement of the military, and adjustments in doctrinal interpretations. It is this margin that accommodates the zigzag patterns of action which so frequently confuse and disarm various circles in the free world. Current examples of the utility of this margin in Moscow's propaganda efforts are the various types of planned tours, moderately reduced censorship, state visits, economic offers, and the like. This margin evaporates, however, at the thought of abolishing, for example, the Iron Curtain which is an institutional necessity for the type of Russian totalitarian rule which holds the Communist empire together.

The essential Stalinist character of the present oligarchy is seen clearly in relation to the force of non-Russian nationalism. First, it should be noted that A. I. Mikoyan, a Kremlin leader who was born in Armenia, initiated the main critical attack upon Stalin. The propaganda inference that Moscow clearly wished to be drawn is that one non-Russian Kremlin leader commenced the attack upon another, but from the patriotic non-Russian viewpoint, both Stalin and Mikoyan, as lifelong advocates of Russian imperialism stand as traitors to the nations of their birth. Ukrainians, Georgians, Armenians, and other non-Russians cannot be expected to accept such men as being reasonable and without criminal liability. Khrushchev's reputation in Ukraine is summed up in the title "Hangman of Ukraine." As Moscow's chosen satrap in Ukraine during the thirties and after World War II, Khrushchev built his record which brought him to his present position. That record is dominated by criminal responsibility for mass murders, deportations, induced famine, and bloody purges. Kaganovich's liquidation of millions of peasants resisting collectivization and de-Ukrainianization could scarcely be forgotten. Mikoyan's leading hand in the Caucasian purges of the twenties cannot be erased from the Caucasian mind.

Despite the criticisms of the 20th congress, Stalin is still being praised for his "fight against the hostile grouping of Trotskyists, Bukharinites, and bourgeois nationalists." Whatever subsequent action might be taken on the first two, one can be certain that even the greatest allowable margin of propaganda luxury cannot possibly include dispraise of Stalin on the third count.

The portents of the 20th congress may be summarized as follows:

(1) The oligarchical dictatorship remains substantively Stalinist with little risk assumed in its present desanctification approach. The political maneuvers are being effected within safe margins of totalitarian rule which precludes any genuine liberalization of the basic institutional framework. However, the margins are adequate enough to allow for a variety of flexible tactics, including disarmament concessions. These presently pose an even greater threat to the vigilance, security, and anti-Communist unity of free nations;

(2) In the shortrun, secure in itself, the collective leadership is skillfully playing for time to achieve the consolidation of its vastly expanded empire, a substantial increase in industrial output, marked advancement in military armament, and disunity in and among free nations through deeper infiltration and the exploitation of regional rivalries;

(3) In view of these general conditions, supported by the Communist-induced passivity of the free world, the prospect of any widespread revolt in the Communist empire is exceedingly remote. Manifestations of national patriotism as demonstrated in the non-Russian nations, which Moscow dubs as "bourgeois nationalism" but which we in America respect as the love of God and one's native country, will constantly reappear in diverse forms. Underground activity, which recently received further substantiation by the Red Banner, an organ in Ukraine, calling for the surrender of "armed anti-Soviet bands" in the Rovno region, will continue;

(4) The effect of the desanctification campaign on the Communist Party in the United States will be minimal. The shock produced by the Stalin-Nazi Pact was incomparably greater, but this arm of Moscow remained largely intact for the continuance of its conspiratorial work. With the revival of the popular-front technique and growing public relaxation fomented by the illusory spirit of peaceful coexistence, the danger of its activities may increase; and

(5) In our operational incapacity to meet adequately the challenges and twists of Moscow we are increasingly exposing ourselves in the short run to a peril of psychological isolation based on "too little and too late." The developments following the 20th congress are a case in point, where the maneuvers are unmasked. Moscow floods Asia and Africa with issues of the propaganda magazine Soviet Union, showing pictorially a framed paradise of nations in the U. S. S. R., while we fail to implement the McCormack resolution passed by Congress for the purpose of bringing to full light the colonialism and imperialism of Moscow since 1920. These and numerous other important cases point to the pressing need for moral strength and imagination that would release the energy of our rich traditions and render progressively insecure the hold of Moscow on the captive nations in its vast and aggressive empire.

Mr. Khrushchev's Toast

People who live in glass houses should not throw stones, the ancient proverb tells us. Nikita S. Khrushchev, a proverb quoter himself on occasion, would seem to disagree. Such was the plain import of his toast Saturday night in Moscow to the Arabs and all others who are struggling for national independence.

Mr. Khrushchev undoubtedly meant to affront French Premier Guy Mollet and hint at Soviet support for Algeria's rebels. But perhaps it was the evening's conviviality and the freely flowing supply of liquid refreshments that made him forget that he was throwing a rock at France while living in a most transparent and brittle tenement himself.

If Mr. Khrushchev is so concerned about peoples struggling for national liberation, he

has a great opportunity to show that solicitude right at home. Why should not the Ukraine be independent, or Byelorussia, or Latvia, or Lithuania, or Estonia, or Uzbekistan, or Kazakhstan, or Tadzikistan, or Turkmenistan, or Kirgizia, or Armenia, or Georgia, or Azerbaidzhan? Why should not the Finnish-speaking people of the Karelo-Finnish area be given freedom to unite with Finland? Or even just slightly in a wider area, why does not Mr. Khrushchev liberate from his domination Poland, Czechoslovakia, Hungary, Rumania, Albania, East Germany, or Bulgaria? If Mr. Khrushchev wishes to be known as a liberator, why does he not give these peoples opportunity to decide freely whether they wish to be governed from Moscow or to govern themselves?

But perhaps Mr. Khrushchev's unconscious self, aided by liquid refreshment, gave us the answer to these questions last Saturday night, too. Mr. Khrushchev told his guests the story of the czar who went in bathing, lost his clothes, and when naked could convince no one he was czar. Mr. Khrushchev concluded the tale by saying, "In the bath you cannot tell the difference between a czar and Khrushchev."

On the contrary, it is often hard to tell the difference between the two anywhere or any day of the year. The czars ruled a prison house of nations for centuries. Every action of Mr. Khrushchev shows that he wishes to continue ruling a similar prison, but one now far exceeding that of the czars. It is only other people's colonies Mr. Khrushchev wishes to see freed for a while until he can take them over. His own colonies, forming one of the largest colonial empires the world has ever seen, he proposes to maintain by every force and wile at his disposal.

My Obligation as an American Citizen

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an essay entitled "My Obligation as an American Citizen," by one of my young constituents, Miss Mary Varney, of Ronceverte, W. Va., which won second place in the West Virginia State contest sponsored by the American Legion in the spring of 1956. I believe that the fine ideals expressed by Miss Varney on the subject of citizenship will be an inspiration to all of us. Her essay follows:

MY OBLIGATION AS AN AMERICAN CITIZEN

There are those who say the most important part of citizenship is voting; others who say the most important part is paying taxes; still others who say the most important part is going to church, but these are only facets to the great gem of citizenship.

Let me compare citizenship to a diamond ring. Just as the diamond is composed of many facets, so is citizenship composed of numerous obligations that have fashioned it into the great institution it is today.

To name all of the obligations it is composed of would be too great a task, but I would like to list a few that center around my own life as a citizen.

I feel that the first and most important of my obligations is the privilege of worshipping in the church of my choice. My predecessors have established this country for religious reasons and they have embedded these reasons into my life to make it truly dedicated to the church.

Secondly, I feel my obligation to my home. To honor and obey my parents for giving me birth and shelter, for clothing me and for providing for my needs.

And, with this obligation, I can class a third of my obligations—to my school. As my parents prepare me for education, the Government maintains the schools and colleges I choose to attend.

My fourth obligation as a citizen is to love my neighbor. So doing, I must be a good neighbor. I must be a friend in need, I must be patient and kind, I must have respect for my elders, I must be fair and just in my relations with others, and above all, I must set good examples for the youth of tomorrow.

Fifth, I must uphold and support the Government. I must do my part in voting and paying taxes. Just what would our country be like if no one had to pay taxes? There would be no public schools. There would be no food inspectors to guard health. There would be no protection of property. Travel would not be safe. There would be no Armed Forces to defend our country.

I can only hope I will never be a part of a move like that to do away with taxes for I live off taxes just like every one else and I feel very much obligated to pay my taxes.

My sixth obligation is to accept responsibility, be it great or small. From closing an important business transaction to making a bed, I must be depended upon to accept responsibility. To illustrate this fact: Irénée du Pont, a struggling worker, founded the powder works factory around 1800. An explosion caused the complete devastation of the factory. His life's work was ruined in 1 second. Not being discouraged, he sought money from the bank with no collateral whatsoever. The bank loaned him a tremendous sum of money because of his honesty and integrity. He went on to found the billion dollar industry known today as the E. I du Pont de Nemours.

His courage and dependability in the face of disaster gave him a new start in life. There is nothing more satisfying in this world than to have an honest and upright character. I can feel proud to try to achieve this goal, but to do so I must bring in a seventh obligation.

I must have a cooperative spirit. I must be willing to work with other people and accept their ideas as well as express a few of my own.

As an eighth obligation, I must supply what material expense I can. I feel obligated to donate to the Cancer Fund, the Heart Fund, and the March of Dimes, for I never know when one of these diseases will hit me and I will need help from other contributions. I must do my part to keep the highways safe, have acceptable working conditions, and keep up the recreational facilities.

Ninth, I must have confidence in myself. A long time ago the American poet, Walt Whitman, said:

"There is no week, nor day, nor hour when tyranny may not enter upon this country if the people lose their supreme confidence in themselves."

I have confidence in my country. I have faith in the power to improve it, to make it grow, to forge ahead, and I have faith that someday I can be a part of bringing the fruits of our science within reach of all Americans.

My 10th obligation is to have ambition. If I fail to be ambitious, then I let all the opportunities of life pass me by.

To have ambition reaps great rewards.

There is a story of three boys who agreed one day to see who could make the straightest path with his footprints in the snow across a field. After each boy had done his best, it was found that the line of one boy's footprints was almost straight, while the footprints of the other two boys were very crooked.

When asked how he managed to walk in so straight a line, the winning boy said:

"When I started out, I fixed my eyes upon the big tree which was at the end of our stunt. I kept looking at the tree every second and paid no attention to my feet."

The other boys had been watching their feet.

So, in order for me to succeed, I must fix my eyes on my goal and not look at my feet as I walk toward it.

In abiding by these 10 obligations I can make America strong, beautiful, and proud.

To quote Herbert Hoover:

"My whole life taught me what America means. I am indebted to my country beyond any human power to repay."

Piatt County Journal, Monticello, Ill., Celebrates a Century of Service and Publication

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SPRINGER. Mr. Speaker, there is not a Member of the House from a rural area who does not realize the importance of the weekly newspaper in the creation of public opinion.

These newspapers come out each week in the towns not served by daily newspapers. The people in the community look to its columns each week in order to know the happenings of yesterday and to anticipate the things that are going to occur tomorrow.

Such a community is Monticello, Piatt County, Ill., a town of approximately 3,000 people.

In November 1856, at about the time Lincoln and Douglas were having their famous debate, Monticello was a town of 250 people. In that month was born the Monticello Times, the first newspaper in the town, as well as the county.

Later, the Monticello Times became the Sucker State and later on the Piatt Democrat.

In 1861, the newspaper was renamed the Conservative. Later the newspaper became the Independent and then, as the community became Republican, so its name changed to Republican, and in 1876 it became the Piatt County Journal. This newspaper passed through many hands and finally, in 1936, it was sold to George H. Chitwood, who is still the editor.

Mr. Chitwood is the typical weekly newspaper editor and publisher that you would find in most any community in the United States. This is an editor who realizes his responsibility to the community and accepts it willingly.

George Chitwood, as editor and publisher, sums up his philosophy of service to his community and his fellow man in this editorial of his anniversary issue of May 17, 1956.

I am sure the best wishes, not only of myself, but of all of this House, go out to George Chitwood and the Piatt County

Journal on the completion of 100 years of service which has indeed made history.

Mr. Speaker, the editorial of May 17 is herewith appended:

A century of service in Piatt County is a thrilling accomplishment. The past has brought many rewards and satisfactions.

We are proud of our heritage—of those far-sighted, pioneering, hard-working editors and publishers, many times working under adverse conditions. They were men of vision, hope and courage.

Their century of service challenges us to new achievements and commands greater toil and intelligence in leading Piatt County forward.

Today the Piatt County Journal and its corps of workers is ready to plunge into the tasks and problems of a second 100 years. We pledge you that we will strive henceforth as in the past to bring you a live, well-edited, pictorially alert and complete weekly newspaper, one supported by and interested in the development and prosperity of Piatt County.

We promise you a newspaper ever striving for accuracy and fair play, anxious to praise where praise is earned but willing to criticise or condemn when either is believed justified for the common good.

We trust that these will be the principles you would have us follow in the years ahead.

For the past we say "Thank you" on this anniversary to our loyal friends, readers, and subscribers, to our advertisers, and to our growing wealth of new friends.

For the future, our prime hope is that we shall continue to merit your interest and readership.

Only with this can we strive for another century of progress.

The Offer of the Republican Party

EXTENSION OF REMARKS

OF

HON. CHARLES P. NELSON

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a speech delivered by former Senator Owen Brewster, of Maine, at Colby College on May 3, 1956. This speech was delivered as one of a series of Gabrielson lectures on the general subject Issues Confronting the American Voter in 1956:

THE OFFER OF THE REPUBLICAN PARTY

I am happy to join in the tribute Maine may well pay to the Honorable Guy G. Gabrielson for instituting this series of lectures here at Colby College to refresh Maine citizens each year with a balanced presentation of the problems of the present.

In view of the all too frequent references to our democratic institutions I may be pardoned at the outset for pointing out that our Constitution in Article 4, section 4, provides that "the United States shall guarantee to every State in this Union a republican form of government."

I am not suggesting that our opposition should be pronounced unconstitutional, but only that we should remind ourselves that our founding fathers had very much in mind a distinction between a republic and a democracy. This accounted for the phraseology of the Constitution and the fact that Jefferson called himself and his party Republican. It should, however, in justice to academic neutrality, be pointed out that Jefferson then believed and feared that his opposition were really planning a monarchy with Washington as king.

Jefferson demonstrated his political acumen by adopting the role of a moderate or "middle of the roader" in those days between the exponents of a highly centralized and, as he believed, an autocratic central government (led by Alexander Hamilton) and the advocates of a pure democracy.

Jefferson thus became a champion of local self-government and eventually of State's rights. "The less government the better"—so far as the National Government was concerned.

Later, in Jackson's time, the party of Jefferson became known as the Democratic-Republican Party and eventually as the Democratic Party.

Let us all as Americans recognize and do our part to preserve the system of two-party government.

The stability of Anglo-Saxon governments all over the world under a two-party system is in glittering contrast to the paralysis of responsible government that brings complete frustration to all too many of the peoples of Europe under the bloc system.

Groups, in their parliaments, form and reform from day to day under the leadership of one or another popular leader. Deals are the order of the day—like a glorified poker game, and frustration is the inevitable result.

We have a right to expect of political leaders in office and in the party organization some sense of loyalty to the principles of their party—not necessarily to the interpretation of those principles by someone else.

That is the minimum requirement for responsible party government.

The rank and file are in a different situation and enjoy a much greater freedom to choose their candidates and their party—subject only to what we may hope will be their recognition of the grave importance of maintaining, so far as practicable, a two-party system.

With an electorate of one hundred million voters it is only through the medium of some sort of responsible party government that the individual American can give effective expression to his views.

Conceive of America without a two party system or with the multi-party bloc system of France which must ultimate as have all pure democracies in a dictatorship—and already this is being talked of in France.

But you may properly ask, What does the Republican Party stand for? Perhaps one of the best statements is found in the answer of President Eisenhower on April 17, 1956, to the question: "Why did I enter political life as a Republican?" Here is his answer from the New York Times of April 18, 1956:

"No party has a monopoly on brains or idealism or statesmanship. We—Republicans and Democrats alike—are motivated by the same loyalty to the flag; by the same devotion to freedom and human dignity; by the same high purposes for the Nation's security and its people's welfare. Within our hearts and minds in all things that are vital to the Republic, we cannot be partisans. We are all Americans. But in the practical pursuit of national objectives, we differ in our methods, in our traditions, in our philosophy of government's responsibilities.

"As a Republican, I share my party's deeply trust in what free men can do—a fundamental trust in the nature and capability of individual human beings.

"I believe the Republican Party, in its methods and traditions and broad philosophy;

"Offers the best hope of preserving the self-reliance and vigorous independence of individual Americans;

"Best serves the Nation in the search for peace with justice and freedom;

"Best fosters a competitive enterprise economy whose purpose is a wider prosperity fairly shared;

"Best keeps economic decision-making in the hands of the people and out of the hands of Government;

"Best answers the concerns of people for the meeting of their human needs;

"Best assures our children, and their children's children the heritage of an America rich in all the resources of nature, dynamic in great traditions and ideals and purposes.

"I so believe because the Republican Party remains true to its heritage.

"Our party was born to vindicate the equal dignity of all men, their equal right to life, liberty and the pursuit of happiness. The dedication of its earliest days still animates our party in this age when world-wide corrosion eats away at freedom, and justice, and opportunity for men.

"The Republican Party has fostered the development of an economy, dynamic in its challenge to release men's energies. Vast, unfettered production for vast, unfettered consumption is the economic expression of our political belief: All who work to produce should share equitably in the fruits of their labor.

"Today, under the policies of the Republican Party, our economy is more immense than ever before its productivity, more bountiful in its widespread benefits, more dependable and more creative.

"The Republican Party, by all its traditions, is committed to support men's aspirations and convictions as individual citizens. We reject any attempt to treat them merely as members of pressure groups or as serial numbers in the files of a Government office. The individual—in his God-given talents, in his limitless potential—is the source of every advance in the material and intellectual good of humanity.

"That fundamental principle in the Republican credo has a corollary—every American is equal before the law and the conscience of Government."

EIGHT REPUBLICAN PRINCIPLES

President Eisenhower then goes on to develop eight principles to implement what he calls his "Personal testament" as to why he is a Republican.

These eight principles of Republicanism are as follows:

1. The individual is of supreme importance.
2. The spirit of our people is the strength of our Nation.
3. America does not prosper unless all Americans prosper.
4. Government must have a heart as well as a head.
5. Courage in principle, cooperation in practice make freedom.
6. Their purpose of Government is to serve, never to dominate.
7. To stay free we must stay strong.

THE OPPOSITION

The opposition cry that this is now a government of the rich, by the rich and for the rich and that the ordinary person is the forgotten man.

The only difficulty with this argument is that it collides with the facts.

To be sure we have a greater prosperity in this country than we have ever known in peace or war. We have a greater national income. Is it not fair and important to ask who is benefiting by this larger national income? Today, labor is receiving a larger share of that income than it ever received under any Democratic administration.

In 7 years under Truman labor received 65 percent of the national income.

Under a Republican administration in 3 years labor's share of the national income has risen to 69 percent.

On the other hand, the corporations whom the opposition love to attack have seen their share of the national income (after taxes) decline from nearly 8 percent to 6 percent—a shrinkage of 25 percent.

Labor income has averaged about 75 percent of "personal income" under Eisenhower, while it averaged about 71 percent under Truman.

In 1952 the income of individuals less taxes averaged $1,508. Under Eisenhower this average has risen to $1,630.

THE RECORD

The Bible tells us that we shall be known by our fruits. Let us then look at the record. What has happened to America in 3 years under a Republican President?

More Americans are at work today, producing more, earning more, spending more, investing more and building more than ever before in our history.

Under a Republican President working men and women are enjoying the unprecedented combination of higher wages, lower taxes, and a stable cost of living, all at the same time.

Under a Republican President the millions upon millions of Americans who have savings-bank accounts, savings bonds, building and loan shares, life-insurance policies, and pension rights are no longer seeing the value of their savings shriveled by inflation.

Under the Eisenhower administration the largest tax reduction in our history was enacted, and of its $7.4 billion in benefits nearly $2 out of every $3 went directly to individuals.

Under a Republican President the Department of Health, Education, and Welfare was established to give these vital concerns of our people permanent representation in the President's Cabinet.

Under a Republican President 10 million additional Americans, including farmers and farm workers, have been brought into the social-security program, and retirement benefits for all have been increased.

Under a Republican President unemployment-insurance coverage has been extended to 4 million additional workers and, as a result of the President's initiative, 34 States have already increased maximum weekly benefits.

Under a Republican President the minimum wage was increased from 75 cents to $1, a move of great advantage to New England in its competition with the South, and a move long stymied under a Democratic administration dominated by the South.

Under a Republican President a board program is for the first time being formulated to help any American community blighted by chronic unemployment to help itself attain a better share of the Nation's good times.

Under a Republican President forward-looking programs have been presented to Congress, and will be presented again to help meet such pressing problems as the shortage of classrooms and the high cost of medical care.

Under a Republican President the inherited farm program, on the verge of total collapse from the weight of over $7 million of unmarketable surpluses which it helped generate, is being vigorously and conscientiously rebuilt.

Under a Republican President a 15-point rural-development program has been launched to attack on an organized basis for the first time the problem of helping our 1½ million farm families with incomes of less than $1,000 a year to better their position.

Under a Republican President a plan has been advanced to equip this Nation for the first time with a first rate Interstate Highway System adequate to meet the needs of our millions of car owners as well as the pressing requirements of defense and economic development.

Under a Republican President local groups, public and private, have been encouraged to help supply the Nation's electric power needs which will at least double in the next decade.

Under a Republican President enforcement of the antitrust law is today both vigorous and fair-minded. In the year ended September 30 last, the Justice Department brought 52 antitrust actions, nearly half again as many as were started in the last comparable period before the President took office.

CAMPAIGN PLEDGES AND PERFORMANCE

Let us look at the record of a Republican administration in implementing its campaign pledges. Surely this is the best way of determining whether the Republican Party is worthy of your confidence.

In 1932 the opposition was elected on a platform pledging the cure of the depression by reducing taxes 25 percent and by cutting the cost of our national defense "Now reaching the enormous total of $1 billion a year."

Eight years and $40 billion later the depression—with 8 million still unemployed—was ended (if that is the proper word) by our involvement in the Second World War.

PLEDGES

The present Republican administration has had the challenging opportunity to show whether a high level of national income and productivity could be maintained without war.

How well this Republican administration has succeeded is written in records that all may read. They have succeeded because they have taken seriously their contract with the American people expressed in their party platform of 1952.

HIGHLIGHTS OF THE REPUBLICAN RECORD IN FULFILLING THE PLEDGES OF 1952 REPUBLICAN PLATFORM

Peace

Promise: "We dedicate ourselves to wage peace and to win it."

Performance: "The 3-year-long Korean war was ended in July 1953. We kept out of the fighting in Indochina. Settlement of the Iranian oil dispute, Trieste problem, and Suez question and the ousting of the Communist regime in Guatemala have strengthened the cause of peace. The raging waters seem to be calming in the troubled Middle East."

Inflation

Promise: "The best assurance of preserving the benefits for which the worker has paid is to stop inflation which causes the tragic loss in purchasing power, and that we propose to do."

Performance: "Inflation has been stopped and the cost of living stabilized with an increase of only one-third of 1 cent on the dollar in nearly 2½ years."

Spending and taxes

Promise: "We advocate * * * * reduction of expenditures by the elimination of waste and extravagance so that the budget will be balanced and a general tax reduction can be made."

Performance: "Federal Government spending has been reduced $11 billion in the first 2 years. Progress toward a balanced budget was made by cutting the deficit two-thirds in the first year, from 9 to 3 billion dollars. Taxes were reduced $7½ billion in 1954, the largest cut in history.

"In this current fiscal year—ending on June 30, 1956—the budget seems certain to be balanced with a surplus in immediate prospect of between 2 and 4 billion dollars. This means a long step toward an honest dollar."

Tax revision

Promise: "We advocate * * * a thorough revision and codification of the present hodgepodge of internal revenue laws."

Performance: "The Tax Revision Act of 1954 completely revised and made some 3,000 changes in the tax laws, including benefits for working mothers, parents with working children, retired people over 65, families with high medical expenses, and persons receiving stock dividends."

Social security

Promise: "We favor amendment of the old-age and survivors insuranace system to provide coverage for those justly entitled to it but who are not now receiving it."

Performance: "The 1954 amendments to the Social Security Act extended protection of old-age and survisors insurance to 10 million more persons and increased benefits to all covered."

Labor

Promise: "We favor retention of the Taft-Hartley Act * * * We urge the adoption of such amendments to the Taft-Hartley Act as time and experience show to be desirable, and which further protect the rights of labor, management and the public."

Performance: "The Taft-Hartley Act remains in full force. President Eisenhower proposed 14 amendments to the act in 1954, many of which were favored by labor, but his program was killed by the solid vote of 48 Democrat Senators to recommit the bill."

Agriculture

Promise: "We favor a farm program aimed at full parity prices for all farm products in the market places. * * * Our program should include commodity loans on all nonperishable products supported at the level necessary to maintain a balanced production."

Performance: "During 1953 and 1954, the 90 percent of parity price support program for basic crops was continued as provided by law. The Agricultural Act of 1954 provided for 1955 price supports for basics between 82 percent and 90 percent of parity and variable supports for other commodities through loans, purchases, and other operations. Support levels are being geared to supply conditions with the purpose of adjusting production to the Nation's needs, alleviating the problem of high surpluses which have depressed prices, and enabling farmers to achieve parity of income without severe restrictions on operations which are inevitable with a rigid system of price supports."

The President's veto of the farm bill has saved Maine farmers $5 million in their feed bill this year.

Collective security

Promise: "We shall support the United Nations. * * * We shall encourage and aid the development of collective security forces in Europe, as elsewhere."

Performance: "The administration has worked through the United Nations in ending the Korean war, in opposing Communist aggression moves, and in proposing an international agency to develop the peaceful uses of atomic energy.

"We have contributed to the steady buildup of NATO forces in Europe—protecting Western Europe through the last 10 critical years—and approved the end of the occupation of West Germany and its admission to NATO with limited power of rearmament. Collective security in Southeast Asia was established by the Manila Pact setting up SEATO. Mutual security pacts have been concluded with Australia, New Zealand, the Philippines, Korea, and Japan and also with the Republic of China for the defense of Formosa.

"We are seeing a complete change of tactics by the Communists as a result of their former policies and our program is now in process of reorientation to meet this changed approach.

"The suggestion from certain partisan sources that our military posture is deteriorating under the leadership of one of the greatest military leaders of our generation is not likely to impress the American people."

Communism and internal security

Promise: "We will overhaul loyalty and security programs. We pledge fair but vig-

orous enforcement of laws to safeguard our country from subversion and disloyalty."

Performance: "A new loyalty-security program for governmental employees authorizing the dismissal of persons found to be "security risks" was put into force in May 1953 and about 7,000 'security risks' have been weeded out. Twice as many Communists have been convicted under the Smith Act and three times as many alien subversives deported under Republicans as in a comparable period under the Democrats. Thirteen new legislative aids to Communist prosecution were enacted by the Republican 83d Congress."

Civil rights

Promise: "We believe * * * the Federal Government should take supplemental action within its constitutional jurisdiction to oppose discrimination against race, religion, or national origin."

Performance: "Through executive action, racial discrimination has been abolished or reduced in every area possible, such as the District of Columbia, schools on military reservations, in V. A. hospitals, at naval installations, and the armed services generally. A Committee on Government Contracts is headed by Vice President NIXON himself, to prevent discrimination in Government contract work. The Justice Department appeared before the Supreme Court to argue that the Court had power to outlaw segregation in public schools, which it did in a unanimous decision on May 17, 1954."

I shall not apologize for accepting, with due humility, your complimentary invitation to discuss the offer of the Republican Party in 1956.

After 12 years as a legislator and Governor of Maine, and 18 years representing Maine in Washington as a Republican, I feel some confidence in my understanding of Republican principles.

In 1946 and 1950, I served as chairman of the Republican senatorial campaign committee in those 2 off-year elections.

In 1946, to the surprise of everyone, we won control of the Senate for the first time in 14 years only to lose the 1948 election when Truman defeated Dewey.

Incidentally, it is interesting to note that Guy G. Gabrielson, the generous benefactor of these lectures, was chairman of the Republican National Committee in 1946 and cooperated wholeheartedly with the leaders in the Senate and House in the so-called off-year campaign.

In 1950, it was facetiously suggested that it would be better to fall just short of control. That is exactly what we did. I should certainly claim no credit for so happy an outcome. As my grandson says: "That is the way the ball bounced." However, this was followed by a resounding sweep for the Presidency in 1952.

My credentials to speak as a Republican may claim, however, a rather august approval and thereby hangs a tale.

After the debacle of 1948, Republican hopes were at an all-time low. The exuberance engendered by the election of a Republican Congress in 1946 had descended to the depths of despair in the utterly unexpected defeat of Dewey by Truman 1948.

A statement of Republican principles to take the place of the evidently unappealing Republican platform of 1948, was an imperative necessity as we went into the off-year election of 1950.

Senator Taft as Republican leader of the Senate and chairman of the Republican Policy Committee of the Senate asked me to act as chairman of a subcommittee to draft a Republican statement of principles and designated as my associates the late Senator Kenneth Wherry, of Nebraska, representing the more conservative Midwest wing of the party, and Senator Henry Cabot Lodge, of Massachusetts, representing the more liberal eastern wing.

Senator Taft outlined my duties as developing a statement acceptable to these two Senators representing the extremes, commenting that if that could be achieved our troubles might be over.

House Members and national committee members were called in to assist in the preparation of the Republican statement of principles issued under date of February 6, 1950.

Two years later when Dwight D. Eisenhower retired from the Army in June 1952 and announced his entry into the political arena, he declared that the best statement he had seen of Republican principles was this statement of February 6, 1950, drafted by a committee of which I was chairman. I shall not submit this here because of its length. It contained something over 2,000 words and was criticized on this score by the only lady Member of the Senate, my colleague, Senator MARGARET CHASE SMITH.

Senator SMITH said the statement should make its 10 points in under 100 words. I suggested she try her hand.

The result was, undoubtedly, the most succinct, and yet comprehensive, political program ever proposed in this country.

Furthermore, in the language of Senator SMITH, this document in 89 words not only stated the Republican position, "but also constituted an indictment of the Democratic Party on 10 counts for the Democratic Party has not only failed miserably on each of these points, but also has made it clear that it opposes each of these points."

I do not conceive I can do better for a Maine audience than to give the concept of Senator SMITH as to "what the Republican Party stands for and what the Democratic Party is against":

1. Reducing taxes.
2. Balancing the budget.
3. Fighting deficit spending and Government waste.
4. Fighting communism here instead of complacently condoning it.
5. Making foreign policy truly bipartisan, instead of merely rubber-stamped.
6. Fighting and exposing something-for-nothing deception, whether it be so-called socialized medicine, socialized farming, or hidden taxes.
7. Preventing either management or labor from getting too much power at the expense of the public.
8. Maintaining an adequate social-security system that does not limit opportunity, nor discourage initiative and saving.
9. Opposing any curtailment of veterans' benefits.
10. Smashing the filibuster on civil rights.

And Senator SMITH adds: "No other political party can make that statement—much less the Democratic Party. Only 89 simple words to show the basic issues between the Republican and the Democratic Parties—to tell the difference between the parties."

Water Can Top Oil

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial which appeared in the World-Telegram of May 25, 1956:

WATER CAN TOP OIL

Oil is so intimately associated with the Middle East in western eyes it often is forgotten that for the people who live there water is far more valuable and important. They could live and prosper without oil—but not without water.

A dispatch by Scripps-Howard writer R. H. Shackford discusses the Jordan River development project which not only would create more than a quarter million acres of new arable land for both Arabs and Jews, but also would offer resettlement opportunities for about one-third of the 900,000 Palestinian Arab refugees.

The Arab nations and Israel could contribute greatly to stabilization of the area if they would forget their feud long enough to give a final go-ahead.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Daily Digest

HIGHLIGHTS

Senate cleared Interior appropriations bill for President and passed Labor-HEW appropriations and D. C. appropriations bills.

House sent highway bill to conference and passed sundry bills.

Senate

Chamber Action

Routine Proceedings, pages 8519–8567

Bills Introduced: 8 bills and 1 resolution were introduced, as follows: S. 3994–S. 4001; and S. J. Res. 178.

Bills Reported: Reports were made as follows:

S. 2827, 2864, 2959, 3000, 3009, 3100, 3208, 3402, 3579, private bills (S. Repts. 2103–2111, respectively);

S. 374, to provide for extension and suspension in cases of statutes of limitation on false swearing by Government employees with respect to subversive activities and connections, with amendment (S. Rept. 2112);

S. 2069, 2793, 2805, 2943, private bills (S. Repts. 2113–2116, respectively);

S. 3617, to amend the U. S. Code to authorize enforcement of State statutes prescribing criminal penalties for subversive activities, with amendment (S. Rept. 2117);

S. 782, to prevent citizens of U. S. of questionable loyalty to U. S. from accepting any office or employment in U. N., with amendments (S. Rept. 2118);

S. 2294, 2954, 3212, 3235, H. J. Res. 565, 581, 590, 535, 555, 566, 580, 472, 533, private bills (S. Repts. 2119–2131, respectively);

H. R. 7763, to amend the Japanese-American Evacuation Claims Act of 1948, to expedite the final determination of the claims, with amendments (S. Rept. 2132);

H. R. 7225, social security amendments, with amendments (S. Rept. 2133);

S. Res. 263, extending greetings to the German Bundestag, with amendment (S. Rept. 2134);

H. J. Res. 607, to authorize the disposal of Government-owned tin smelter at Texas City, Tex. (S. Rept. 2135);

S. 3778, to amend the act for the protection of walruses (S. Rept. 2136);

S. 3698, to amend the act of June 4, 1920, as amended, providing for allotment of lands of the Crow Tribe, with amendments (S. Rept. 2137);

S. J. Res. 178, authorizing an appropriation to provide certain costs for participation by the U. S. in the International Bureau for Publication of Customs Tariffs (S. Rept. 2138);

H. Con. Res. 232, extending congressional felicitations to the American Red Cross on the occasion of its 75th anniversary (S. Rept. 2139);

H. J. Res. 501, to authorize participation by the U. S. in parliamentary conferences of NATO (S. Rept. 2140);

S. 3527, authorizing State Highway Commission of Maine to construct and operate a free highway bridge between Lubec, Maine, and Campobello Island, New Brunswick, Canada (S. Rept. 2141); and

S. 3581, to increase the retired pay of certain members of the former Lighthouse Service, with amendments (S. Rept. 2142).

The Bricker Amendment and the Monroe Doctrine

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. BRICKER. Mr. President, the James Monroe Memorial Foundation is rendering a patriotic public service in maintaining the James Monroe Law Office in Fredericksburg, Va., and in collecting and preserving other property of the sixth President of the United States. The foundation is also engaged in educating the American people with regard to the ideals which prompted the enunciation of the Monroe Doctrine. Perhaps the most important objective of the foundation is the promotion of friendship and understanding among the American Republics.

On April 24, 1956, my legislative assistant, Mr. Charles A. Webb, addressed the board of trustees and the board of regents of the James Monroe Memorial Foundation at their annual meeting in Fredericksburg. I ask unanimous consent that Mr. Webb's address, entitled "The Bricker Amendment and the Monroe Doctrine," be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BRICKER AMENDMENT AND THE MONROE DOCTRINE

It is a great honor and a real pleasure to address the board of trustees and the board of regents of the James Monroe Memorial Foundation. In his first inaugural address, in 1817, President Monroe said:

"We must support our rights or lose our character and with it perhaps our liberties. A people who fail to do it can scarcely be said to hold a place among independent nations. National honor is national property of the highest value."

This foundation is dedicated to giving James Monroe's words a real and lasting application. Your job is not easy. We live in an age of excessive industrialization, extreme urbanization, and practically instantaneous communication. We travel so fast in this jet age that many of our sacred traditions are left behind, in a cloud of dust. The bulldozer is no respecter of ancient landmarks.

We live in an age of superficiality, some say decadence, marked by frivolous neglect of the deep and vital wellsprings of our freedom. James Monroe has not escaped the debunking of arrogant historians—historians who paint the past as bad, the present as good, and the future as inevitably better, with paradise on earth just around the corner. These historians speak of Monroeism as the reflection of a narrow patriotic and nationalistic spirit which is virtually outmoded.

Ideals should not be ridiculed merely because they are old. Wisdom did not spring full blown in the world with the signing of the United Nations Charter or at the first inaugural of the second Roosevelt. The Nation that does not cherish its history must fear its future. Or, as Edmund Burke, the great British statesman, so well said:

"People will not look forward to posterity who never look backward to their ancestors."

That is why James Monroe said we must recur frequently to fundamental principles; why we must go back often to our own beginnings.

My assignment today is to relate the philosophy underlying the Monroe Doctrine with that underlying the Bricker amendment. The philosophy underlying each is the same, although essential differences exist. The Bricker amendment deals with treaties and with other international agreements. The Monroe Doctrine, on the other hand, was not promulgated in the form of an international agreement but as a unilateral declaration of United States foreign policy.

In some quarters today the word "unilateral" has become a term of opprobrium. At least, in foreign affairs, many people subscribe to the theory that on all important issues we must act in concert with scores of foreign powers, never unilaterally. In his famous message of December 2, 1823, President Monroe said, in effect, that the independence of our good neighbors to the south is essential to the peace and security of the United States, and that their independence is not an appropriate subject for negotiation with countries outside of the Western Hemisphere. These words appear in the message:

"The occasion has been judged proper for asserting, as a principle in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers."

Despite the debunking of internationalist historians, the Monroe Doctrine, except for the Constitution itself, is still the most vital state paper of this country.

In a full-page advertisement in the New York Times on December 2, 1923, the 100th anniversary of Monroe's message, Mary Baker Eddy said:

"I believe strictly in the Monroe Doctrine, in our Constitution, and in the laws of God."

Even today, there are few more unqualified faiths than the faith of the American people in the Monroe Doctrine.

Adoption of the Bricker amendment would be in the nature of a unilateral declaration by the people of the United States that their constitutional freedoms are not to be made the subject of haggling at international conference tables. The key section of the Bricker amendment merely provides:

"A provision of a treaty or other international agreement which conflicts with any provision of this Constitution shall not be of any force or effect."

At this point, we might consider the difference between a treaty and an executive agreement. Former Senator Gillette, during the debate on the Bricker amendment in the 83d Congress, explained the difference. He had been informed by the Department of State that an international agreement which the President submits to the Senate is a treaty, while an international agreement which the President decides not to submit to the Senate is an executive agreement. This unsatisfactory distinction between the two types of international agreements was illustrated by Senator Gillette by this story:

"At that time I stated to the Senate that the reply of the State Department reminded me of the time when I was a boy on the farm, and asked the hired man how to tell the difference between a male and a female pigeon. He said, 'You put corn in front of the pigeon. If he picks it up, it is a he; if she picks it up, it is a she.' "

A dangerous loophole in our Constitution has developed from the construction placed on article VI, paragraph 2, in recent decisions of the United States Supreme Court. Article VI, paragraph 2, reads as follows:

"This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

With your intimate knowledge of American history, I am sure you understand why the Founding Fathers could not say that treaties, like laws, must be made "in pursuance" of the Constitution in order to become the supreme law of the land. At the time of the Constitutional Convention in 1787 several treaties were already in force, having been concluded under the Articles of Confederation. These treaties were obviously not made "in pursuance" of the Constitution.

Nevertheless, for almost 130 years American judges, lawyers and the general public assumed a treaty in conflict with the Constitution would be null and void. It was not until 1920 that the loophole in our Constitution became apparent.

In 1920, the Supreme Court decided the famous case of *Missouri* v. *Holland*. In that case, the Court assumed, erroneously in my judgment, that an act of Congress was unconstitutional except by reason of the fact that it was enacted to carry out the terms of a treaty. The Supreme Court upheld the statute, and in the course of the opinion Mr. Justice Holmes noted that whereas laws to be valid must be made in pursuance of the Constitution, it was "open to question" whether the phrase "under the authority of the United States" means more than simple compliance with the formal requirements to make a treaty.

In 1942, the Supreme Court extended the doctrine of the Holland case in *United States* v. *Pink*. In the Pink case, the Supreme Court held that an executive agreement, not ratified by either House of Congress, became, like a treaty, the supreme law of the land. The effect of the executive agreement involved in the Pink case was to override the law of the State of New York and to deprive a group of creditors of property contrary to the command of the fifth amendment. Because of the holdings in *Missouri* v. *Holland*, *United States* v. *Pink*, and other recent cases, Mr. John Foster Dulles, in an address before a regional meeting of the American Bar Association in Louisville, Ky., on April 11, 1952, issued this classic warning on the danger of treaty law:

"Treaty law can override the Constitution. Treaties, for example, can take powers away

from the Congress and give them to the President; they can take powers from the States and give them to the Federal Government or to some international body, and they can cut across the rights given the people by their constitutional Bill of Rights."

Beginning in 1946, the United Nations and its specialized agencies have attempted to exploit the loophole in our Constitution. Consider, for example, the following statement made by a former director of the U. N.'s Division of Human Rights:

"What the United Nations is trying to do is revolutionary in character. Human rights are largely a matter of relationships between the state and individuals, and, therefore, a matter which has been traditionally regarded as being within the domestic jurisdiction of states. What is now being proposed is, in effect, the creation of some kind of supernational supervision of this relationship between the state and its citizens."

The Bricker amendment merely provides that a treaty or other international agreement which conflicts with any provision of the Constitution shall not be of any force or effect. The issue raised by the Bricker amendment can be stated in this way:

"What provision of the Constitution do opponents of the Bricker amendment want to violate by treaty or by Executive agreement?"

We know that some opponents of the Bricker amendment want to use treaties and other international agreements to abridge the constitutional rights of the American people or to surrender to some form of world government essential attributes of American sovereignty. For example, Prof. Quincy Wright of the University of Chicago urges ratification of the U. N. draft statute for an international criminal court. This proposed treaty would make Americans subject to trial before an international criminal court sitting outside the United States, and not recognizing the right to trial by jury. That treaty is clearly in conflict with provisions of the sixth amendment. Nevertheless, Professor Wright has observed:

"Recently the Supreme Court has refused to review convictions by the Tokyo and Nuremberg tribunals on the ground that international tribunals established by treaties do not exercise the judicial power of the United States. Consequently, if an international criminal court should be established by treaty, its procedure would not be limited by provisions of the constitutional Bill of Rights."

Mr. Clark Eichelberger, executive director of the American Association for the United Nations, has urged that the United Nations be converted into a world government either by a series of treaties or by a "liberal interpretation of the charter." The Bricker amendment would make null and void any treaty or executive agreement authorizing United States participation in world government or any treaty or executive agreement which cut across the constitutional rights of the American people.

If James Monroe were with us today, I am certain that the debate on the Bricker amendment would remind him of the debate on the Constitution and Bill of Rights. At the Virginia Convention called to ratify the Constitution, James Monroe was a delegate from Spottsylvania County. He voted against ratification of the Constitution along with George Mason and Patrick Henry. Monroe was concerned because the Constitution did not then have the first 10 amendments known as the Bill of Rights. In the absence of a Bill of Rights, Monroe sided with George Mason who said:

"Treaties can be used to dismember the American empire."

He also appears to have been disturbed by the following statement of Patrick Henry:

"Sure I am if treaties are made infringing our liberties, it will be too late to say that our constitutional rights are violated. Suppose you be arraigned as offenders of a treaty? Will you plead a right to trial by jury?"

I doubt if James Monroe would be persuaded by arguments to the effect that "we must not tie the President's hands." Every action in the splendid career of the sixth President tends to prove that he agreed with the political philosophy of Thomas Jefferson expressed in the following statement:

"In questions of power let no more be said of confidence in man but bind him down from mischief by the chains of the Constitution."

James Monroe, if he were with us today, would also be concerned about the vitality of his famous doctrine. One of the main reasons why the Senate rejected the Covenant of the League of Nations was because of the fear that the covenant would undermine the doctrine. In the debate on the League of Nations, Senator Henry Cabot Lodge pointed out that if we try to have a Monroe Doctrine everywhere we may be quite sure that it will not exist anywhere.

It is still uncertain to what extent, if any, the United Nations Charter has made the Monroe Doctrine a dead letter. The possible conflict between charter and doctrine was disclosed by the Guatemalan revolution in 1954 which was considered by the U. N. Security Council. Secretary Dulles had described Communist infiltration in Guatemala as "a direct challenge to the Monroe Doctrine." Our U. N. ambassador, Henry Cabot Lodge, Jr., was unsuccessful in preventing a Security Council meeting on the ground that the dispute in Guatemala was the responsibility of the Organization of American States. At the meeting of the U. N. Security Council, Russia vetoed a resolution referring the Guatemalan question to OAS.

The Security Council passed a resolution calling for "the immediate termination of any action [in Guatemala] likely to cause bloodshed," and requesting "all members of the United Nations to abstain * * * from rendering assistance to such action." Fortunately for the United States, Colonel Armas, leader of the Guatemalan patriots, ignored the U. N. resolution and drove the Communist regime from office with machine-gun bullets.

Few Americans will deny that the world is becoming increasingly interdependent. Nevertheless, some subjects are so vital to the safety and the well being of the American people that they should be forever removed from the field of international negotiation. We do need a strong treaty power to deal with the life and death issues of American foreign policy, but international cooperation abroad should not be permitted to undermine liberty at home. We do need a strong network of mutual defense arrangements to stem the tide of Communist aggression, but it would be tragic to undermine the Monroe Doctrine by permitting European and Asiatic powers to intervene in matters which are the peculiar concern of countries of the Western Hemisphere.

Address by Hon. Alexander Wiley, of Wisconsin, at De Pere, Wis., Memorial Day Patriotic Observance

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a Memorial Day address I delivered on May 30, at the De Pere, Wis., patriotic observance.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FULFILLING THE MEANING OF MEMORIAL DAY, 1956: MORE B–52'S, B–47'S, GUIDED MISSILES ESSENTIAL NOW FOR OUR DEFENSE

(Excerpts of address delivered by Hon. ALEXANDER WILEY, of Wisconsin, at De Pere, Wis., patriotic observance, May 30, 1956)

Today, we decorate the graves of America's heroes of its past conflicts.

We lay flowers—in fact and in spirit—on the final resting places of those who made the supreme sacrifice that this Republic might endure.

We witness the proud marching formations of America's uniformed servicemen—the minutemen of defense of the atomic age.

HONORING HEROES WITH DEEDS

But I know that all who are in this audience would agree with me today on this: If we are truly to decorate the final resting places of our honored dead, if we are truly to cooperate with our Armed Forces, we must do so with constructive deeds, and not mere words, however sincere as truly those words are.

The challenge is, therefore, for everyone who is grateful to the heroes of Memorial Day—to rise to his or her own responsibility to help defend our beloved land.

FOUR-POINT PROGRAM OF DEFENSE

I should like to suggest a 4-point program by which we may prove worthy of the tradition which they left us.

1. Our first step is to protect this Republic from the menace from within.

That means promoting real brotherhood in America. It means strengthening the legislation by which we cope with the subversive, troublemaking forces in our midst.

Thus, a number of important anti-Communist bills are now pending before the Congress, including legislation to tighten penalties against seditious conspiracy (which I personally have cosponsored). This legislation must be enacted before Congress adjourns.

2. As a second step, we must fulfill our deep obligations to the Nation's 22 million exservicemen, and their families. Calvin Coolidge once stated, "A nation which forgets its defenders will itself be forgotten."

We must make sure that the compensation and pensions which our veterans have earned by their deeds of valor remain intact and are improved. We must make sure that pensions are brought up to date, are modernized wherever inflation may have so depreciated their purchasing power, as to make them currently inadequate.

3. Our third step is to make sure that we are today thoroughly informed of the Soviet military danger to our country, and (4) that we are thoroughly prepared against it.

In past times, as you and I know, we do not need to concern ourselves with what was occurring beyond the broad Atlantic and Pacific Oceans—on foreign shores.

We Americans are, after all, not meddlers. We do not and did not believe in interfering in other people's problems.

OUR NEARNESS TO THE ENEMY

But in 1941, a ruthless enemy streaked thousands of miles across the Pacific, and, on a quiet Sabbath morning, blasted the American flag at Pearl Harbor. And so, with World War II, the age of America's isolation drew to a close.

Today, every single newspaper, every radio broadcast and telecast confirms our nearness to the world—our nearness to a still more ruthless foe, the atheistic force of aggressive communism.

Already, 900 million people are in its iron grip, and it reaches hungrily for the one-third of the world which is still free and

which is committed against it. It reaches as well for the so-called neutral one-third of the world.

COMMUNISM'S LETHAL CLAWS

Its reach has deadly claws—super-modern intercontinental bombers, 400 submarines, fast developing missiles, the largest ground forces in the world.

Under these circumstances, it would be tragic folly if we lagged in our own defense. We must and will therefore step up our production of B–52's, of B–47's, of guided and ballistic missiles and every other weapon of offense and defense, including protection devices for our own cities.

OUR DEFENSE PACE MUST BE SPEEDED UP

We are definitely not doing enough right now. Despite the best of intentions and the best of military leadership, we are not advancing our defenses and our research at the necessary pace.

Remember, at this very minute, we here in De Pere are but a half dozen hours away from jet bases in Soviet Siberia. Moreover, the Communists are on their way to developing an intercontinental guided missile which will bring us within 30 minutes time of the Red rocket launching sites.

Under these circumstances, we dare not be uninformed, and we dare not be unprepared—or second best.

PRESERVE OUTER RAMPARTS

Throughout the world, we have erected outer ramparts of defense. Why?

So as to protect the weak and helpless. Moreover, our aim is simultaneously to keep the potential battlefield as far from our own shores as possible.

I am sure that everyone in this audience will agree, that if war should come, we would prefer not to have to fight it on our own continent, if possible. We would prefer to fight it at far distances from our own land.

And so we have erected these outer ramparts of our defense—far-flung ramparts on Formosa, on Okinawa, Iceland, Greenland, North Africa and elsewhere in the world. These ramparts are today threatened—not only from without but from within. In many places, Communist agitators are at work trying to stir up hatred so as to kick us out of our outer defenses. The Reds are trying to force us back to our own land, so as to reduce our overseas air bases and so as to make us more vulnerable to direct attack.

But, in cooperation with our friends, we must protect our outer ramparts. Our bases must remain intact.

Consider this analogy: There is no one in this audience today who has not seen fire engines rushing across town in order to put out a blaze before it reaches our own home.

So, today, we and our allies have set up an international fire department to try to put out blazes before they get to our shores. We have made military pacts with 45 nations to protect them and to protect ourselves from the Communist arsonists. Only a fool would sit back in his own home and ignore a fire, simply because it seems small and because it is still on the other side of the town. Once a fire breaks out, however small—once it goes unchecked—then every house everywhere is endangered.

COMMUNISM HAS NOT CHANGED

Today, communism—despite Joseph Stalin's death and the so-called Soviet new look—is still a form of deadly arson. Communist arsonists firebugs are lighting flames in north Africa, in south Asia, and elsewhere.

Meanwhile, they are spreading the false line that Soviet communism has actually changed for the better. They have denounced the memory of Joseph Stalin, but they have not denounced Stalinism.

They have not denounced the slaughter of Polish soldiers in the Katyn Forest or the mass murder of millions of Russian peasants in the mania for collectivization.

Moreover, they have not freed Poland or East Germany or the Balkans or the Baltics.

Why then should we accept their sirupy words at face value. Why should we be so naive as to swallow their lies?

We dare not be; we must not be; we will not be naive.

CONCLUSION

And so, under these circumstances, we must be both well-informed and well-prepared against the Communist menace.

By fulfilling a comprehensive program of defense, we will, in truth and in action, honor America's war dead.

If our heroes of the Civil War, of the Spanish-American War, of World Wars I and II, and the Korean conflict, could arise, they might say this: "We are grateful for your remembering us, but do not honor us with lip service; do not simply praise us with words. Praise us by your deeds. Preserve the Republic for which we died. Give to it your all, as we did. Make any sacrifice, financial or other, so that Old Glory will keep flying. Support the National Guard; support the Reserve; support the Armed Forces of our country—keep the Stars and Stripes proudly aloft forever."

This then, is the message of the heroes of Memorial Day in the year 1956, the 11th year of the Atomic Age.

Our Pledge to Our Dead—Memorial Day Address by James M. Landis

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a Memorial Day speech by the Honorable James M. Landis, former dean of the Harvard University Law School, at the Memorial Day exercises in the town of Harrison, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR PLEDGE TO OUR DEAD

Our observance of Memorial Day is now a tradition of American life. It is right that this should be so. For today we honor the dead—men who died that you and I might live.

These men are legion—men of all races, all creeds, and all faiths. Their history, their deeds, roll down through the ages. They were there at White Plains, at Valley Forge, at Yorktown, at New Orleans. Under the newly born flag of a newly born nation they sailed on the *Bon Homme Richard*, the *Chesapeake*, the *Constitution*. Years later they carried that flag with its ever-growing stars into battle at Antietam, at Gettysburg, through the bloody slaughter of the wilderness, to the final victory at Appomattox. Years later again the thunder of their guns was heard in the Argonne and at Chateau Thierry. And only a short decade ago, on land, on sea, and in the air, thsese men, scattered over the five continents of this globe, fought once again that we might live.

What names those are. Kasserine Pass, Anzio, Omaha Beach, the Bulge, Guadalcanal, Peleliu, Okinawa, Inchon. There is music in them—the music of battle, fierce, raucous, thundering, dying to a dirge as the smoke slowly clears. There are undertones of stillness in that music that tell of the isolation of the night fighter, of pilots, and bombardiers winging toward their distant targets, and of men under the sea searching for the enemy above them. There is pain and homesickness in that music; and the sudden, quick, sharp stab of death.

Yes; they have died. We live. The Star-Spangled Banner still waves. It is grief, of course, that we feel, but also pride—pride both in their achievements and in the country they have left us as their heritage.

One wonders always why they fought so well—men who a few months before knew nothing of military discipline, even nothing of the handling of modern military weapons. Unlike the enemy, they had not been conditioned through the years by the temptation of new worlds to conquer. They were not trained to a gospel of hate, to a belief in the divine superiority of their race. Instead they fought to preserve for themselves and for us a dignity, to which our history bears yearly more eloquent testimony—the dignity of man.

Because of them we have a heritage that is our dream, our promise of American life. True, America is dogwood and the greenery of spring: it is rolling prairies and the cornfields of the West; it is cotton and desert and deep forests and wide ranges; it is copper and steel and cities humming with trade and industry. But the men we honor today did not fight for a town, a region or a State. Whether they came from San Diego or from Maine, they fought equally as valiantly, equally as bravely, for the cause that is America.

We must therefore, today again examine that cause and rededicate ourselves to its preservation. What is this America? Poets have sought to describe it—Walt Whitman, Vachel Lindsay, Robert Frost, Carl Sandburg. Orators and statesmen have put it in their own terms—Webster in his reply to Hayne, Lincoln in his Gettysburg address, Wilson in his State papers, Roosevelt in his 1933 inaugural and his enunciation of the four freedoms.

Failing both poetry and oratory, I propose to put to you that cause in very simple terms—terms to which both you and I have again and again sworn our faith. They are the simple oath of the soldier, of the new citizen, of the civilian who in times of peace or war chooses to serve his government. These are the terms:

"I swear to uphold the Constitution of the United States against all enemies, foreign and domestic. So help me God."

No political document in the history of mankind deserves so unreservedly the allegiance of a free people. Welding together in 1789, the dividing forces of our Thirteen Original States, it made of us a nation. But in building the national power, through its system of checks and balances, the Constitution restrained the power if created so that we need never fear the menace of dictatorship.

More than this, it made of freedom an inalienable right, buttressed and guarded not only by the moral sense of mankind, but by the force of law. John Adams spoke truly when he said of the American way that its end is a government of laws and not of men.

Where would we be today without these freedoms? Suppose a majority gathered together in a State legislature or a village council could wipe out, directly or indirectly, our freedom of expression, would this be America? Or should a village council make burdensome and impracticable our freedom of religious worship, would this be America? Or should the Congress or the State deny to men accused the right of a fair trial, would this be America? Or if law at any level should draw distinctions between black and white, foreign born or natural born, Jew or Christian, Protestant or Catholic, would this be America?

The beaches at Leyte, the hedges at St. Lo, the foxholes of Korea, knew no such

distinctions. The Constitution knows none.

These are the freedoms that are America. This is the heritage of the men who died that these freedoms might live. That heritage is ours—ours in this little town, either to betray or to preserve.

Each one of us is surrounded by personal and petty considerations, particularly in these days of plenitude. But if we would rise above a pettiness of spirit, a fear of fear; if we would forget personal considerations in behalf of an ideal and a faith; we will then make real the promises of American life.

This is the challenge of our honored dead—to hold fast to that for which they died. And so, once again, in their absence but in the light of their eternal presence:

"We, of the town of Harrison—legatees of our immortal dead—swear to uphold the Constitution of the United States against all enemies, both foreign and domestic. So help us, Almighty God."

Hon. Alexander Wiley, of Wisconsin, Presents 20-Point Legislative Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by me over radio station WGN, Chicago, June 3, 1956, in connection with my 20-point legislative program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HON. ALEXANDER WILEY, OF WISCONSIN, PRESENTS 20-POINT LEGISLATIVE PROGRAM—URGES BACKING OF PRESIDENT EISENHOWER WITH REAL DEEDS, NOT PHONY LIP SERVICE

Senator WILEY. Your United States Congress has but 2 months or so before it recesses its current session. During these next 60 days we must, therefore, act on a great many important issues. These issues affect the 48 individual States, affect the Midwest and other areas, and, most important of all, contribute to the well-being of our entire country.

I believe that each Senator and Representative should offer his own ideas of a constructive program for the Congress to enact during these remaining 2 months. And each of us legislators should not only have such a program, but we should and must fight for that program.

And so I would like to use the next few minutes to describe what I regard as an essential 20-point program.

I am going to urge my colleagues in the Senate and in the House of Representatives to enact what I regard as this vital program before Congress' adjournment.

Now, friends, I am going to answer some questions about this 20-point program. And I want to invite you, my listeners, to write in and give me your personal reactions to it.

Tell me what you frankly think—about peace, about our efforts against communism, about tax reduction, etc. It will be a pleasure to hear from you.

DOMESTIC AND FOREIGN PLANKS ESSENTIAL

Question. Senator WILEY, broadly speaking, what are the major parts of the program?

Answer. They are very simple—two in number. First, the program consists of enlightened action on our own domestic front—for a prosperous, sound, healthy America. And, second, there must be action on the world front on behalf of the great goal of peace—avoidance of atomic war.

AN EISENHOWER PROGRAM FOR AN EISENHOWER-MINDED AMERICA

Question. How would you characterize this program in general?

Answer. Basically, this program is an Eisenhower program.

It is not a partisan program. It is designed to carry out the type of clear, American, middle-of-the-road thinking, as well as the specific suggestions, of the great President of the United States.

I personally have pledged the President my continued loyal support. Of course, I don't believe in mere lip service—in emptily praising our President in words and not backing up with deeds. I believe in carrying out my pledges. And I think my record proves it.

But some people do believe in mere lip service for the President. They believe in giving only token support. They pretend to be Eisenhower supporters in their words, but they try to sabotage him with their actions. In particular, they try to sabotage his great efforts for world peace.

We've got to combat such sabotage.

We've got to rally behind Ike in the fight to avoid war. We Americans hate war.

Question. That, then, is the first point on your program—the sincere promotion of President Eisenhower's efforts for world peace.

WHAT MODERN WAR COULD MEAN

Answer. Absolutely. We must avoid war, avoid it with honor, with strength, not with dishonor or appeasement.

That, then, brings us to the second point of my program—invincible military strength.

Question. How would you define this strength, Senator WILEY?

Answer. I am referring to invincible strength in the air, with our long-range and medium bombers; invincible strength on the sea, with atomic submarines and surface craft; invincible strength on the ground. As regards our land forces, I don't want to see obsolete mass armies, armed with "pea shooter weapons." I want our men equipped with the strongest, most modern weapons in the world, so that they can be effective against the Communist menace, if ever it should strike again.

Question. Peace and invincible military strength against the Communist menace—points 1 and 2. Now, what is the third point on your program, Senator WILEY?

DON'T BE BLIND TO ANY PHASE OF RED THREAT

Answer. I have referred to the Communist menace abroad. That brings us to the Communist menace at home, because it is part and parcel of the worldwide threat. I say, enact every needed bit of anti-Communist legislation. Complete action on the Wiley bill for more effective registration of Communist foreign agents.

Use every law which we already have on our statute books, including the Smith Act, for an unending crack-down on the 22,000 Reds in our country and on fellow travelers.

Question. Peace, combatting communism abroad, combatting communism at home. What are the other elements of your program, Senator?

SPEED UP SEAWAY CHANNEL WORK

Answer. In the few remaining moments, I am going to just run down a few of them, briefly.

The next point—the fourth—is to complete as speedily as possible the 2,300-mile St. Lawrence seaway, and to complete action on the Great Lakes connecting channels—the chanels to the upper lakes.

Question. That is certainly an immensily important point. Now, how about other issues, Senator, on the home front? How about the farm problem?

Answer. Yes, indeed. Point 5 on my program is to halt the serious decline in farm income, the drop in agricultural purchasing power. This is June Dairy Month. Dairying provides the greatest single source of cash income of American agriculture as a whole.

The city man cannot prosper unless the farmer prospers. And so, I am taking action in this June Dairy Month and in every month to help the farmers of America's Dairyland—my own State—and to help the farmers throughout America.

I am glad that at least we are beginning to get some action under the new soil-bank law. It is unfortunate, however, that provision was not made to provide for prepayments to farmers this year who cooperate with the soil-bank program. But this is only part of our program.

What we must do is, of course, to increase our citizen's consumption of farm products. That means—eat and drink more wholesome, nutritious dairy products—milk, butter, cheese, ice cream, nonfat dry milk solids.

VETERANS, OLD FOLKS, SMALL BUSINESS

Question. Now, turning to other groups in our population, Senator, how about the veterans, how about the old folks, how about the small-business man?

Answer. Yes; how about them?

Congress must assure a square break for them. Taking the old folks first, Congress must and will liberalize the inadequate social-security system. Inflation has seriously depreciated the purchasing power of old folks' pensions. Not enough people are covered under these pensions. Elderly women are not provided a fair break. And so we must strengthen the pension system.

Now, as regards our veterans, the 22 million Americans who have saved this country on the field of battle with their heroism, Congress must reject—I stress—reject the unwise recommendations made by the Commission which would slash veterans' benefits.

Instead, Congress must take action as I have repeatedly recommended, to strengthen the program, particularly for combat-disabled veterans.

I have mentioned old folks and veterans. Now, I want to turn to another group which has also been having a hard time. That is, of course, the small-business man. I am a cosponsor of legislation to ease taxes on them. Right now, they are hit by a terrific 52 percent tax which prevents them from expanding and competing with bigger business.

If we are truly to prevent the dangerous growth of monopoly in our country, if we are to keep small business alive—small business which is the real backbone of our free enterprise economy—then we should enact this amendment to ease the taxload on on small business.

Question. Those are three additional points. How about taxes, generally, Senator?

Answer. Well, as a ninth point of my program, if we have sufficient surplus in the Treasury, I see every reason for us to provide a tax break of our people this year.

We should ease taxes particularly on the low-income brackets to the greatest extent possible. We should enact various liberalizing deductions.

Question. Thus far in your program, Senator WILEY, you have mentioned 9 points of your overall 20-point program. You have discussed the battle for world peace, the battle to support President Eisenhower, rather than simply giving him lip service.

You mentioned your fight against communism abroad, because of the desire of the Reds to conquer the two-thirds of the

world which is still not Communist ruled. You have turned to communism on the home front urging action on the WILEY and other antisubversive bills. You have mentioned the St. Lawrence seaway which is appropriately titled the Wiley seaway law. You have referred to the battle for fair dealing for old folks, for veterans, for the small-business man, and for 50 million American taxpayers.

Now, would you mention some of the other points in the program?

Answer. Yes. Here they are:

10. Floods: Complete action on legislation to provide insurance against flood disaster which have taken a terrific toll on our country.

11. Roads: Complete action on the Federal highway bill to modernize our horse and buggy interstate road system which is choked with 60 million cars and trucks.

12. Schools: Ease the terrific crowding of the Nation's classrooms by expanding school construction.

13. Health: Expand health research. Strengthen our hospitals and medical schools, so as to improve the health of our people.

14. Conservation: Strengthen our program to preserve the United States outdoor heritage—its wildlife refuges, its national parks and forests. Protect these beautiful national assets from being despoiled.

Question. What are the remaining points on your program?

Answer. Here they are.

15. Fair dealing: Pass civil rights legislation, legislation to assure a fair break for all Americans, regardless of race, creed, or color. But to do so with reason, with judgment, and with maximum voluntary—I emphasize—voluntary cooperation by men of good will.

16. And now, the mighty atom. Spur domestic development of atomic energy. That means providing insurance, so as to help cover the risks which are inevitably involved in dealing with this powerful nuclear force.

17. Here is point 17. Combat the underworld. Fight the hoodlums, the racketeers, the thugs who, for example threw acid in the face of columnist Victor Riesel. Pass the Daniel-Wiley bill against the terrible narcotics evil, the dope problem in our country.

18. Housing: Liberalize Federal credit so as to expand United States housing construction. This year, 1.2 million homes will be built, but with proper sound credit, that figure might well be increased.

19. My next to the last point is for clean elections legislation. The present bill before the Senate must be amended to include clean primaries, honest primaries, with all campaign contributions fully reported. In that way, the people will be aware of any dishonest lobby dealings.

20. And finally, my last point relates to governmental streamlining, Federal efficiency. I mean economizing whenever possible, by genuine reorganization and improved businesslike management.

CONCLUSION

Question. Senator, you have mentioned your 20-point progam for Wisconsin, for the Midwest, for all America. I know that your listeners have enjoyed your remarks. And I know, too, that they will take you up on your invitation by giving their reactions to your program.

I know that you mean this program and that you intend to carry it out. That it is not simply a paper program, but one which you will fulfill with all possible effort.

Answer. That is indeed my purpose in presenting it tonight. This is an action program, a battle program. I will be helped on it by hearing from my listeners.

I want to thank station WGN for its kind courtesy in carrying this broadcast. And I want to thank each of you for listening to it, and I hope, for giving me your reactions.

This is Wisconsin's senior Senator, ALEX WILEY, signing off from Washington.

Memorial Day Address by Harvey V. Higley, Administrator of Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a Memorial Day address delivered by Mr. Harvey V. Higley, Administrator of Veterans' Affairs, at the Veterans' Administration Center, Dayton, Ohio, May 30, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEMORIAL DAY SPEECH, MAY 30, 1956, VA CENTER, DAYTON, OHIO, BY HARVEY V. HIGLEY, ADMINISTRATOR OF VETERANS' AFFAIRS

We are gathered here today, on this day of solemn commemoration, to honor our war dead.

Deep emotion surges through our hearts as we look out over the graves of these gallant heroes. Yes; deep emotion, as we recall the many decades of noble service of this domiciliary in Dayton and recognize that it has been a silent witness to those who have fallen in the most devastating wars that have shaken our world.

For on this Memorial Day, we remember that we, the living, owe those whom we honor a debt of gratitude that is eternal.

Memorial Day brings to me a feeling of great inadequacy.

How can I—how can any of us—express in words so much as an iota of the love, the honor, the tribute that overwhelms us?

Each passing Memorial Day finds us even more deeply beholden to those honored dead. For, in commemorating their supreme sacrifice, we, the living, gain renewed determination from those timeless words of Abraham Lincoln, that "These dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth."

The freedom and liberty each of us enjoys today is a heritage preserved for us at the expense of life itself—the lives of those who lie silently here, unto eternity.

We must never allow the passage of time to obscure the fundamental fact that our Nation exists today free, proud, unafraid because of their willingness to fight, their willingness to die for the American ideals we hold so dear.

Since the founding of our country nearly 200 years ago, we have endured 9 wars to preserve our Nation and our way of life.

And how great a bond between past and present is this domiciliary in Dayton. Still standing today is the uncut stone that marks the grave of indomitable Mrs. E. L. Miller, the Little Mother of Soldiers, who, nearly 90 years ago, set out for Dayton in horse and wagon from Columbus, bringing with her the first 7 disabled veterans to receive care on these grounds.

In the domiciliary today are the gallant men who served so effectively in the Spanish-American War, more than half a century ago, as well as those who saw service in later conflicts in which Americans were engaged.

Yes, this domiciliary ties past and present, and serves to heighten the meaning of the more than 30 million Americans who, over the years, have answered the call to arms. Nearly 1 million of them never returned from battle. Other millions did return alive, but maimed and disabled for life, bearing lasting mementos of their service in war.

We owe our greatest and most profound debt of gratitude, of course, to those who laid down their lives * * * and to those who suffered disabilities in service, and still bear the marks.

But we must not, and cannot, dismiss as of no consequence the service in behalf of the preservation of our Nation, made by the millions of young men fortunate enough to return home alive and unscathed * * * men who can always be depended upon as a bulwark of defense, in times of national stress.

For these lucky ones, we must remember that they * * * like their less fortunate brothers-in-arms * * * engaged in a knowing gamble with the hazards of conflict. No man could tell, during those first bustling days of military service, who would live and who would die * * * who would return as whole men and who would return bearing the marks of battle.

The wheel of fate turns * * * and before it all men are equal.

So we gather here, on this Memorial Day in 1956, to remember the dead and to pay tribute to the contributions of the living * * * on this Memorial Day 91 years after the end of the Civil War, 58 years after the end of the Spanish-American War, 38 years after the end of World War I, 11 years after the end of World War II, 3 years after the end of the conflict in Korea.

I am more than a little saddened as I look out over these graves and think: How short is the memory of man.

I can recall as if it were yesterday, and I am sure most of you can too, the tremendous surge of gratitude toward our veterans that swept over this Nation immediately after World War I, World War II, and the Korean conflict. Americans were stirred with deep emotions of praise, of thanksgiving, of a sense of eternal debt to the veteran.

I wonder: Is that spirit as strong today as it was then?

Certainly we cannot, and we do not, expect heightened emotions to burn brightly forever. We cannot, and we do not, expect a feeling of gratitude to remain at an abnormally high pitch through the years. We do not expect it, and veterans would not want it.

But do you get a feeling that perhaps the pendulum has swung too far in the other direction?

Today I hear statements, and you probably have heard them as well, to the effect that bearing arms to defend your country in time of war is merely one more duty of citizenship; that it ranks no higher than paying your taxes, exercising your franchise by voting, and stopping your car at red lights.

Of course, we must never forget that every citizen in our land has the right to speak his mind on these things. But I wonder if they have reasoned matters out, in the light of fact?

Can any right-thinking man look at these graves, row upon row, and sincerely believe that the men who lie here have made nothing more than a usual contribution of citizenship? Can any man equate death with routine obligation?

Many of these men entered service, and took the same risks, as all the rest. Yet fate

decreed that theirs would be the supreme sacrifice.

Can any right-thinking man visit a Veterans' Administration hospital—any hospital—and see the sick and the wounded and the maimed and sincerely believe that their sacrifice is a routine contribution of citizenship? Can any man tell them that the pain and hardship they undergo is expected of them?

Yet these men too took the same risks as all the rest, when they entered into service for their country. And Fate's decree for them was the mark of battle, to be borne forever.

How can any right-thinking man consider the sacrifice of any veteran as routine? Is it a routine duty of citizenship, involving no more hardship than paying taxes, to leave your family, your loved ones, your home, your job, with the frightening knowledge that you may never come home again? Is it routine to lose valuable years out of your life—years that can never be recalled?

No, my friends; it is not routine.

Military service to country in time of peril is something more than a normal duty of citizenship.

Veterans have done all that their fellow citizens have done, plus something more. They served in the Armed Forces in time of desperate peril for this Nation. It is immaterial to say that others might, could, or would have served, had things been otherwise.

The fact remains that veterans did serve—that, by virtue of their service, they are deserving of extra considerations as veterans.

Let us never forget it. Even though war fades further and further into the distance of history, even though the first flush of joy of peace becomes but a vague memory, let us never forget it.

Let us always keep faith with our veterans—the living and the dead.

Let us keep faith in another way, by doing all within our power to maintain peace upon this troubled earth. For the sacrifices, the tragedies, the loss of life, the loss of limb would lose all meaning, were our Nation plunged into another war.

Peace—peace with honor—does not come by wishing for it. It must be forged by intelligence, by realism, by sacrifice, by the will to see it achieved.

Peace is part of human progress, and like progress it must be pursued. Like progress, it requires everlasting work.

Peace requires strong, dynamic leadership, the maintenance of adequate armed strength. Peace cannot be won when a nation's self-interest is permitted to smother its world role. It can be lost by surrender to doubt. It can be sold out by suspicion.

Unless we are willing to work with all our hearts and with all our minds, we shall not find peace. Unless we are willing to pay the costs of peace, it will continue to escape our reach.

By this time we should have learned that no one is richer by war. All are the poorer, especially the victors.

If war is costly, so also is peace. Until nations know that peace demands its price, they shall risk future conflicts.

These dead have already shown us the cost of war. By their death they have made it possible for us to strive for peace that may banish war.

To give anything other than our full share in the achievement of this peace is to break the faith we hold with them.

Let us make a solemn pledge within our hearts—each one of us—that we will not break the faith.

Let us pledge that each of us, in his own way, will work for peace in the world, just as we will work at home to prevent the sacrifices of our war dead from being tarnished by the slurs of the thoughtless.

Let us remember our dead forever, and what their sacrifice has meant to us, the living.

For their sake and for ours let us this day, under God, dedicate ourselves anew to building a world in which men may live in freedom without fear.

Soonerland, U. S. A.

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. EDMONDSON. Mr. Speaker, next year the State of Oklahoma will celebrate the 50th anniversary of its admission to the Union as the 46th State to have its white star added to Old Glory. The year 1957 will mark a historic milestone on the path of history along which our pioneering State is marching with giant and never-faltering strides.

An outstanding editorial in connection with this coming semicentennial celebration has been written by Mr. Howard Bonham, editor and publisher of the East Oklahoma Tribune at Sallisaw, Okla. This editorial, which I should like to insert into the RECORD as a part of these remarks, has caught and drawn with remarkable clarity both the inherent greatness of our State and the vision and spirit of its people.

I take pride in this fine editorial, just as I take great pride in Oklahoma and its progressive people. In paraphrasing Shakespeare's words as they appear on the National Archives Building, "What is past is prologue," Mr. Bonham aptly quotes a phrase which indeed applies to Oklahoma: "For its colorful history is but the threshold of its bright and promising future."

The editorial follows:

SOONERLAND, U. S. A.

As Oklahoma approaches its 1957 semicentennial celebration, those of us who are its citizens would do well to take inventory of our State's extraordinary wares.

Blessed with a vast store of natural resources, Oklahoma has moved forward at an almost unbelievable pace during the last 50 years. Here, indeed, is a commonwealth which knows no peer in all the land for progress. It has grown from teepees to towers in less than a man's average lifespan. In a little longer period of time, Oklahoma has emerged from the tragic end of the Trail of Tears among its Cherokees to national renown.

In recent years, Oklahoma's leadership in business and finance, in education and culture, and in water resources and recreation, has left many other States, twice its age, far behind. And now, its stepped-up road-building program as well as its ever-increasing appeal to industry, bids fair to give it a national ranking undreamed of by its early pioneers. From the presses of its smallest weekly newspapers to the halls of Congress, Oklahoma's many virtues are being extolled. At long last, it is receiving growing recognition which it so richly deserves.

Soonerland means many things to many people. A sizable number of unenlightened strangers are still apt to associate this State only with Indians on the warpath, oil wells, and incomparable gridiron squads. To be sure, it has the latter two assets, and also its Indians. But, far from overdrawn Hollywood versions of them, Oklahoma's tribesmen are a proud and peaceful lot, who form an integral part of this State's citizenship.

Today, Oklahoma is forging ahead in a dozen different fields with the gait and spirit of a thoroughbred. In its long-range planning, occasional obstacles, such as a drought or an unexpected freeze, have checked its development here or there, but only temporarily. On the long pull, this State overcomes such setbacks because the fiber of its people is sinewy and strong.

To those of us who are its native born, Oklahoma means far more than just another proud, white star, which was sewn into Old Glory's symmetrical field of blue a half century ago. Oklahoma is truly a state of mind or a way of life, cherished most by those of us who know it best.

Here is a State humming with enterprise, yet very simple in its tastes. A State which is economically sound and aggressive, yet as friendly and as casual as the boy next door.

Here we know that there is sound reason back of every historical marker along the way. Here we know that something more than economic status gives a man high courage and fortitude in the leaner years. The answer lies, not on the surface, but deep in Oklahoma's rich heritage. This kaleiodoscopic view of progress on parade tells a compelling story of Soonerland.

Let us pause here long enough to look behind the tapestry—to share a panorama of this ever-changing Oklahoma scene.

Here are things that we either sense or see as we peer out over Oklahoma's vast countryside:

A field of ripened grain waving in the breeze.

The rig of a wildcat well or a gusher rising in the distance.

Long ribbons of concrete unwinding before the eyes of a million weekend travelers.

Smokestacks belching the news of industry at full tilt.

A teeming metropolis stretching its fingers toward the sky and offering culture as well as gayety to its visitors.

A packed stadium echoing the pride and thrill that only national champions can feel.

School bells heralding another day of classes, or perhaps vacationtime.

Medical centers, equipped with the greatest advances known to men of science.

A picnic spread upon the good earth for young and old alike to enjoy.

A rodeo with a hundred cowpokes, reflecting Oklahoma's true western lore.

A cowboy hall of fame to help strangers understand a Sooner's heritage.

Indians at a stomp dance chanting in unison, with their lithe bodies silhouetted majestically around an all-night bonfire.

A score of alluring lakes, blue against the sky and flanked with State-owned facilities which match the finest in the land.

A laughing fisherman, holding high his string of fresh bass or crappie for a coaxing cameraman.

A melon patch with a barefoot boy thumping the finest specimen on the vines.

Berries ripening faster than the pickers can clean the field.

Dogwood trees, jutting out irregularly from other native growth, along a picturesque, matchless trail.

A covey of native quail, fluttering across the rural scene.

And at each county seat and in the capital, a courtroom where right and justice prevail.

Newspapers, large and small, chronicling the changing times.

The whimper of a newborn baby.

The reverence of a funeral procession, slowly worming its way to a graveyard.

A boy and a girl and wedding bells.

Children playfully romping in a gentle winter snow.

The unforgettable, early morning smell of freshly mown hay at harvesttime.

The aroma of hot biscuits, homemade sausage, and country sorghum, reaching a weary traveler down the road.

A sublime sunset, sending up its shafts of light that defy the finest artist's brush.

Motor trucks and diesel-powered trains, crawling across the countryside, with ever-increasing cargoes of merchandise.

And finally, a fun-loving people who have learned to relax.

Happy people, banded together, because they are Oklahomans.

All of these scenes, multiplied a thousand times, make up this State's growth and development as well as its pulse and heartbeat.

For these are genuine closeups of Oklahoma, my native land—where the past is prologue. This is Soonerland, U. S. A.

All's Well With the World

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. ASPINALL. Mr. Speaker, an informed and active electorate is vital to a functioning democracy. Under leave to extend my remarks, I should like to include an editorial on this subject from the Daily Sentinel, of Grand Junction, Colorado. This editorial highlights some of the causes of present disinterest on the part of many people with regard to politics. I recommend this analysis to the Members of the House:

ALL'S WELL WITH THE WORLD

Columnist Marquis Childs thinks people are too busy to be bothered with politics. That may be one reason. Another could be that they are too confused by the varied pronouncements that come out of Washington to try to develop opinions of their own. Or could be they are lulled into complacency by the optimistic statements of the President and other administration officials.

The President bemoans the fact that there is too much pessimism about the state of the world and about fluctuations and changes on our national scene. He infers there is nothing to be concerned about. And AEC Chairman Lewis Strauss thinks Americans are prone to overestimate the Russians. While General Gruenther, head of NATO, says in one speech that "NATO's present ability to retaliate almost assures that no war is imminent" and "NATO will be fully effective against possible Soviet aggression within 3 or 4 years." (So take your choice as to NATO's defensive ability.)

One day Secretary Wilson takes great satisfaction in the fact that the military services are squabbling among themselves. The next he is warning that any military man who raises unpleasant questions had better keep his head down.

Harold Stassen expresses the belief the Russians may be sincere in wanting to reduce armaments, but Secretary Dulles scoffs at Stassen's idea. (There are times when we suspect that the Eisenhower team is not working very well.)

And since we shall not know for some time the effects of the hydrogen-bomb explosion, there is no need to think about that. And why should busy people take any note of the staggering amount of private debt that is piling up; or of the unemployment that abounds in the auto industry; or of the never-publicized fact that Government expenditures are constantly increasing, and there is no prospect for any cut of taxes in any near future?

Congressman Carroll D. Kearns Reports on His Mission to the Far East

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. KEARNS. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I submit the following report on my recent mission to the Far East:

CONGRESSMAN CARROLL D. KEARNS REPORTS ON HIS MISSION TO THE FAR EAST

Mr. Speaker, under leave to extend my remarks I would like to take this opportunity to pay high tribute to the United States Air Force and its capable Secretary, the Honorable Donald A. Quarles, for good discretion in sending the United States Air Force Symphonic Band to the Far East on a mission that was cosponsored and approved by Secretary of State John Foster Dulles. The mission was not only timely but will prove to be a great investment in the years to come.

I want to pay special tribute to Col. George S. Howard, his staff, and the members of the band—whom I call our music ambassadors—for the marvelous performances they gave on this mission.

I know that each and every Member of Congress, and each and every citizen of the United States, would have been happy and proud if they could have seen these representatives abroad. In fact I find it is practically impossible to envision any American product which, when presented for the consideration of foreign nationals, could meet with such an overwhelming unanimity of acclaim.

The band's tour of the Far East—and unfortunately I could not accompany the group on the first part of their tour—began in Hawaii on April 12 where a concert was heard by 25,000 people, breaking all previous attendance records for a musical event in Honolulu. The impression that the United States Air Force Symphonic Band made in Hawaii will last for a generation. Mrs. ELIZABETH FARRINGTON, the Delegate from Hawaii, suggested that this band should repeat its tour of the Pacific and Far East, and emphasized that its friendly efforts are in a different but supplementary field from those of previous international aid programs.

Next stop was Japan and the tour there was a colossal success. Besides playing for nearly 100,000 people, and turning away almost an equal number because of inadequate seating capacities, the band had a radio audience of 32 million and a television audience of close to 5 million.

Thus practically everyone in Japan either heard—or heard of—the United States Air Force Symponic Band. Press coverage of the events was the widest and most prolonged ever accorded a visiting artist or cultural group, and the concerts proved even greater than anticipated.

In Hiroshima, for example, where the memory of the atom bomb is vivid 11 years after the war, 6,000 Japanese jammed into Peace Memorial Hall that normally seats 1,800. Another 15,000 had to be denied tickets and were turned away for lack of standing room.

Mayor Watanable, of Hiroshima, who previously had never attended a concert by foreigners, wrote to an Embassy official: "The band certainly brought music nearer to our hearts than has any other great orchestra visiting this city and thereby has brought the hearts of our nations closer together."

Throughout Japan the band set startling attendance-breaking records. In Kyoto, cultural capital of Japan, the largest crowd ever assembled for a single event turned out for the band. 20,000 crowded into an open-air theater that normally would hold only 5,000. Outside, students perched in trees; old men clambered to high places to see inside; and women with babies on their backs (traditional Japanese style) pushed and jostled to get inside. The overflow was so great that the mayor, as a last resort, got up on the stage and announced that thousands of people would have to leave before the concert could proceed because serious injury might result to the mass assembled.

In Fukuoka, where the concert was held in one of the largest indoor arenas in Japan, a capacity of 10,000 secured seats. They were the lucky ones; they had stood outside in queues 3 blocks long, 5½ hours before concert time.

Press comments throughout Japan, all of them favorable, filled hundreds of columns of newspaper space. What amazed the critics most was the versatility of the band. "They have something for every musical taste," one said.

Marcel Grilli wrote in the Nippon Times: "In its physical makeup this 84-piece combination is a purely military band, though its spirit is far from martial. In its musical conformation it is a far cry, too, from the days of such stalwart bandmasters as John Philip Sousa and Arthur Pryor. * * * From romantic music to jazz, and from operatic arias to folk songs, this ensemble can elicit the special flavor of different musical styles."

Masato Yamamoto, chief of band music of the Tokyo Academy of Fine Arts, wrote: "We who are concerned with band music certainly learned much from the performance of the United States Air Force Symphonic Band. From now on we should give up our old concept of band music, stop imitation, and bend our efforts toward the development of this new form of band music."

The newspaper, Nishi Nippon Shimbun (circulation 452,000), cosponsor of the band in Nagoya, reported for days after the concert that letters of appreciation were flooding its offices. Commented the official in charge of special events: "We have never had this kind of response before to any project."

Our Ambassador to Japan, the Honorable John M. Allison, said in a letter to me that the cultural acumen of the members of the United States Air Force Symphonic Band, coupled with their great professional ability and polished manner, generated a good will towards the United States, particularly to our military units in Japan, that would have far-reaching developments in Japanese-American understanding. Mr. Walter Nichols and Mr. Robert M. Allen of the United States Information Service in Japan made a great contribution to the success of the tour.

Following this phenomenal and unprecedented reception in Japan, the band took to the skies for its next stop, Korea. 50,000 people turned out for the concert at Seoul. Colonel Howard told me afterward that in his very wonderful conference with Syngman Rhee, the veteran President informed him that more Koreans went out and attended the concert of the United States Air Force Symphonic Band than any public performance heretofore held in Korea. Public Affairs Officer, John P. McKnight, cabled the State Department: "This concert of the United States Air Force Symphonic Band was received with even more enthusiasm than the NBC Symphony of the Air concert last spring. Korean audiences, normally undemonstrative, received the symphonic band with great enthusiasm and insisted on several encores."

Next on the itinerary was Okinawa, our supreme fortress of the East, where everyone, our military personnel, the Okinawans, and even the schoolchildren were unanimous in their enthusiasm for the band. The visit there was beautifully summarized by Father Kevin Smyth of the Catholic Mission at Naha

who wrote: "Being in close contact with the Okinawan people, I can say that such concerts do more to promote good will than many other direct methods. Here representatives of our Government meet the Okinawan people in mutual respect and share the riches of culture in a language that all can understand."

The next stop was Taipei in Taiwan, known to us as Formosa, where a 1-night concert was scheduled. That was where I joined the tour. Our distinguished Ambassador, Mr. Rankin, very graciously met us upon our arrival, and at 5 p. m. I had the pleasure of accompanying him on a visit to the President, Generalissimo Chiang Kai-shek. The Generalissimo and his lovely wife told me that this visit of the United States Air Force Symphonic Band marked a new milestone in our cultural relationship that had not previously existed. The response to the concert that evening certainly upheld Generalissimo Chiang Kai-shek's evaluation. Although rain fell all day long and into the evening, 15,000 people crowded into the semisheltered Armed Forces Stadium (again breaking all existing attendance records), and despite a leaking roof that made it necessary for the performers to wear raincoats—I recall loaning mine to one of the trumpet players—the concert was played to one of the most genuinely enthusiastic audiences of our entire tour.

The next morning found the band boarding our C–124 Globemaster bound for Hong Kong, the international city of the Far East, and probably the most fabulous city in the world. The first of our three concerts there was a VIP concert in honor of His Excellency, the Governor of Hong Kong, Sir Alexander Grantham, Mrs. Grantham, and our American Consul General, the Honorable Ernest F. Drumright and his wife. This VIP concert was held at the beautiful Empire Theater, with appropriate appointments for a concert of this type, and was attended in formal dress. The program began at 9:30 p. m. with a definite understanding that His Excellency, the Governor, had to leave at 11:23 p. m. The music proved so tasteful, however, that the Governor decided during intermission to abandon his 11:23 p. m. departure. He stayed for the entire program, and even remained an hour on the receiving line following the concert.

The other two concerts at Hong Kong were public concerts and were played for capacity audiences of civilians and schoolchildren. Here is the reaction of the Hong Kong Standard music critic, Mr. K. C. Harvey: "My few hours association with the United States Air Force Symphonic Band has confirmed my original belief that in this somewhat unique combination of symphonic and military band, chamber music and instrumental group, dance and rhythm band, lies a near perfect answer to music for every occasion." The United States Air Force Symphonic Band will long be remembered in Hong Kong.

From this international city we headed skyward for a visit to Clark Field, which is located on the large island of Luzon in the Philippines. There the band played to 5,000 wildly cheering military and civilian employees of the base.

The next morning, Sunday, May 6, at 8 o'clock, Colonel Howard and I greeted Gen. Laurence S. Kuter, Commander of the Far East Air Forces, who arrived from Baguio with the chiefs of staff of the 12 nations assembled at Clark Field to inspect the Air Force equipment of their countries. The inspection took 4 hours and was followed by a luncheon at the officers' club, after which I flew to Manila with General Kuter and the chiefs of staff in the general's private plane. General Kuter was kind enough to tell me on our flight to Manila that the repeated presence and sustained interest of a long-time Member of the United States Congress like myself was a source of inspiration to the members of the band and to all the members of the Far East Air Forces. In his opinion the fact that I traveled right with the band and personally conducted some of their brilliant numbers added greatly to the national stature and public acceptance of the Air Force Band.

At Manila that afternoon the greatest air show since World War II was given, participated in by all 12 nations of the Far and Near East, and witnessed by nearly everyone in the Philippines. One of the highlights of the show was the exhibition put on by Gen. Tiger Wang, of Taiwan, Commander of the Chinese National Air Force, who had his pilots do acrobatic stunts 10,000 feet in the air.

As the shadows of evening started to fall, thousands of people began to stream to Luneta Park in Manila, and by 6:30 p. m. some 200,000 had assembled to hear the concert of the United States Air Force Symphonic Band. On the stage was the Vice President of the Philippines, together with the chiefs of staff of the 12 nations, in full dress; and, of course, our boys were in full dress too. It was a most glorious concert, and all numbers were intermittently interrupted by wild applause from the crowd, indicating their approval of the repertoire which Colonel Howard had selected for this important concert. Following the concert, President Magsaysay entertained the chiefs of staff, Colonel Howard, and me at a formal dinner at his mansion. During my conversation with him at dinner, President Magsaysay expressed his gratitude to the Secretary of the Air Force, Mr. Donald Quarles, and the State Department for sending this marvelous musical organization to the Philippines. He said it had written another chapter in the great sincere feeling between the Philippines and the United States, which had been expressed in the afternoon in the might of the military, and in the evening by the beauty of music.

From Manila we flew to Saigon in South Vietnam, a country that just recently obtained its independence. The concert site was at the city hall, where stands had been erected and an audience of 20,000 heard the concert. It may be said here that the visit of the United States Air Force Symphonic Band during the early days of the independence of South Vietnam was highly significant and really made a terrific impression. President Diem was loud in his acclaim of the band and personally expressed his deep appreciation to Colonel Howard and me for this visit of the music ambassadors from America, saying it had had a wonderful effect upon his people.

The next morning, because of transportation difficulties, only part of the band could go to Phnom Penh in Cambodia. The others left in our C–124 for Bangkok in Thailand. The concert at Phnom Penh was most unique inasmuch as it was given at the Royal Palace with the royal family in attendance, along with a record-breaking crowd of 50,000 Cambodians. Here Colonel Howard was awarded the highest decoration ever given to any foreigner, with the exception of Vice President NIXON. Colonel Howard, in accepting the honor, was most gracious and told the people how pleased he was, but explained that he accepted it not for himself but for every citizen of the United States of America who would share the honor with him.

Next was Bangkok, Thailand (often called the Venice of the East), where the band was reunited and a VIP concert was given the first night, which was attended by the Prime Minister. It was his first appearance in his box at a concert given by foreigners. Seated with him were members of the royal family, Ambassador Max Waldo Bishop and his lovely wife, and Col. Ben Garland, the United States air attache, who had assisted with arrangements, and Mrs. Garland.

Our Ambassador, in introducing the band, praised the United States Air Force for sending their music ambassadors to Thailand and paid tribute to Colonel Howard and me for our musical talents and abilities. He stressed that there is much to be gained in the way of understanding, and mutual respect and regard, through cultural exchanges such as this—good things in life that come to us from our strength and from our freedom.

The people of Thailand obviously had not had much opportunity to hear classical music and seemed especially interested in the music of a lighter vein, particularly, American jazz; however, they were most enthusiastic about the numbers they liked and we evaluated our mission to Thailand as one of a pioneer nature which can be effectively developed in the future.

The Prime Minister told me later that he had never attended a concert that he enjoyed as much, and he though the band had brought to the people of Thailand a new concept of appreciation of the works of American composers. The Princess also expressed delight at the concert and said she had spent one of the most enjoyable evenings of her life.

We had two public concerts at Bangkok, attended by 25,000 people each night, and then returned to Tokyo for a command performance, which unfortunately was rained out. So the band left Tokyo on Tuesday, May 15, for the United States.

In all, 32 concerts were given, and the total personal attendance was 500,100, making an average attendance per performance of 15,625. In all cases admission was free of charge. Of the 500,100 persons who heard the band, 200,000 were Filipinos, 91,500 were Japanese, 50,000 Koreans, 50,000 Cambodians, 34,000 Okinawans, 22,000 Hawaiians, 20,000 South Vietnamese, 18,000 Thais, and 12,000 Chinese. Wherever they went, they made friends for America.

Mr. Speaker, I believe that the annals of American history will show that the United States Air Force Symphonic Band was the pioneer organization in what may be known in the future as "Cy-War"—that is, fourth dimensional or psychological warfare.

The role the Air Force Symphonic Band played exemplifies our boy in uniform—his rearing, education, specialized training, and many talents and gifts. He, by preference, enjoys sharing his talents and performing so that he can bring happiness to many, many people, not only at home but abroad. In the need of combat, however, he is just as affective and willing to perform. Thus there was a double significance to this great symphonic band, in full dress military uniform, putting aside military tactics to play the national songs of the countries they visited.

As a Member of Congress, I have been privileged to have one of the greatest experiences of my life, and I wish that each and every one of my colleagues would consider sometime during their tenure in Congress accompanying Colonel Howard on a tour like this so that they could fully realize the appreciation and affection overseas for our famous Air Force musicians.

The personnel of the United States Air Force Symphonic Band on this highly successful tour of the Far East is as follows:

Col. George S. Howard, conductor.

Maj. Samuel Kurtz, project officer.

Capt. Robert L. Landers, director, The Singing Sergeants.

Lt. Harry H. Meuser, assistant conductor.

M/Sgt. Michael R. Mudre, advance representative.

M/Sgt. Floyd E. Werle, arranger.

Clarinets: Russell A. Mitchell, Charles T. Foster, Oscar A. McGregor, George L. Dietz, Anthony J. Grado, Harold J. Rigg, Glenn J. Valmont, Leslie R. Ticknor, Bertrum S. Glick, Robert E. Gerken, Jay Hauenstein, James B. Preus, Robert C. Barker, Alan A. Dore, Raymond E. Stahura, George D. Yeatman, Robert J. Luther.

Cellos: Boleslaw D. Zukowski, Bert Kuschan, Chester G. Wood, Charles A. Baker, Carleton B. Spotts.

Harp: Phillip M. Young.

Flutes: Robert E. Cray, Erich R. Seehafer, Warren F. Halt, Jack V. Tuk, Thomas P. Perazzoli.

Oboes: Oscar Ghebelian, William J. Weber, Roger W. Sutherland.

Bassoons: Franklin M. Biskey, Stanley D. Petrulis.

Cornets: Arthur R. Will, Ivan D. Genuchi, Joseph A. Latinski, John A. Malocco, Delbert A. Dale.

Trumpets: Robert J. Markley, Charles J. Gorham.

French horns: Joseph Freni, George E. Roberts, Frank A. Dearstyne, John I. Strylowski, Edward E. Searle, Jr., Peter W. Siverson, Robert N. Drake, Harrison C. Raper.

Baritones: Edward J. Whitfield, Robert A. Sadler, Karl T. Humble.

Trombones: Edward J. Zeman, John A. Velke II, Alexander Nichiporuk, Bruce C. Whitener, Harry S. Beltz, Jr.

Percussion: Robert F. Moore, Paul M. Dolby, Frank D. Rinaldi, Jr., Ronald K. Holmstrand.

String basses: William J. Zschunke, Frederick Sollner, Jr., Edward C. Skidmore.

Tubas: Edward G. Grace, Glenn Orton, Raven E. Corn, Robert J. Chab, Jr.

Soloists: William K. Dupree, tenor; Thomas M. Edwards II, harmonica; Joseph R. Soprani, accordian; Robert D. Kerns, baritone; Edward G. Grace, typewriter.

Singing Sergeants: William S. Brower, Jr., Paul V. Hull, Howard J. Ruff, Harry H. Haywood, Jr., Henry E. Gerhart, Robert L. Conforti, Donald L. Boothman, William S. Jennette, Jr.

In conclusion, Colonel Howard and I, and each and every member of the band, are most grateful to the fine crew that piloted us safely on this tour of the Far East. Under the command of Col. Hollis B. Tara, this C–124 operation was a model of efficiency, safety and dependability. The fact that they were operating the world's largest production model transport did not concern them in the least. They handled their Globemaster at gross weights up to 190,000 pounds just as if they were flying an ordinary transport aircraft. The names of this efficient crew are as follows: Col. Guy Cooke, Jr., Maj. William E. Shelton, Capt. Henry G. Henderson, Capt. Wilbert C. Oltman, Capt. Wilkes A. Wilk, Lt. George R. Adams, T. Sgt. Marshall Purcell, S. Sgt. Glen Moore, S. Sgt. Garry Wilson, S. Sgt. Ted Grosshopf, S. Sgt. Harold E. Kozee, A1c. Terry Cassidy, A1c Robert Cantrell, A2c Thomas J. Wilson, Jr.

Heart of the Farm Bill

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of Thursday, May 31, 1956:

HEART OF THE FARM BILL

In signing the revised farm bill, President Eisenhower apparently decided accepting the features he opposed was not too high a price to pay for what he called the heart of the bill—the soil bank.

If the soil bank will match the President's hopes for it, perhaps even the taxpayers in the long run will come to regard the costs imposed on them by this bill as a useful investment.

Mr. Eisenhower says the soil bank can turn out to be "the most significant advance in the conservation field in many years." He predicts it will improve our use of soil and water on a lasting basis, that it will enlarge our supply of now short forest products, that it will reduce soil erosion and make for better use of land in the Dust Bowl.

And, if it lives up to its purposes, it will slow down the enormous accumulation of farm surpluses and help dispose of those already on hand.

Altogether, it's a big order. But it offers the promise of some return on the taxpayers' huge investment, in contrast to the billions of dollars paid out in farm subsidies which won no benefits for the taxpayers and created the unmanageable surpluses which depressed farm prices.

Moreover, if the politicians in Congress will give the program time to show its effects, and if they will stop trying to bolster farm prices through a futile system of Government handouts, we may have some hope of getting out of this mess. It is a long-shot hope, perhaps. But even that is something.

How Not To Save Money

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jeffersonian Democrat of Thursday, May 10, 1956:

HOW NOT TO SAVE MONEY

A needed $400 million hydroelectric project on the Niagara River in New York has been delayed for years for purely political and ideological reasons.

A group of taxpaying, publicly regulated private utility companies has long been ready to go ahead with it. But these utilities have been blocked by interests which want either the Federal Government or New York State to do the job. A bill favoring private enterprise development has been given an enormous amount of support by newspapers, and by commercial, agricultural, labor, and civic organizations. It once passed the House of Representatives by a wide margin, but that Congress adjourned before the Senate acted; and since then the blockaders have been successful in their delaying tactics.

An advocate of New York State development recently said that the power could be sold at about 3 mills by the State as against 4½ mills if private enterprise produced it. This claim was at once effectively answered. The 1.5 mill difference would result in a theoretical saving of $12 million a year on the 8-billion kilowatt-hours of power the project would produce. But, against that, private enterprise would pay water rentals and taxes totaling $23 million a year, whereas public development would be tax free. So the question arises: "Where is there any public interest in benefiting certain groups to the extent of $12 million a year and then penalizing others to the extent of $23 million a year?"

This tax factor is vitally important everywhere. The electric industry paid more than $1.6 billion in taxes last year, about $1 billion of it to the Federal Government. Every time a socialized, tax-free project comes into being, it means that the rest of us must pay higher-than-necessary taxes to compensate for the loss. Some saving.

An American Congressman

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond (Ind.) Palladium-Item of June 5, 1956:

AN AMERICAN CONGRESSMAN

There is grave danger that the independence of the United States may be lost through treaty promises to other nations.

Representative FRANK BOW (Republican, Ohio) is a Member of the Congress who sees this threat clearly.

Bow has been working to get a revision of the status of forces agreements between our country and the North Atlantic Treaty Organization (NATO) countries. He opposes a provision which subjects United States troops overseas to the jurisdiction of foreign courts.

This issue has been before the Congress for many months. The Eisenhower administration is opposed to making any change in this commitment.

Supporters of the foreign policies of President Eisenhower and Secretary of State Dulles say that this provision must not be changed.

They argue that "sovereignty conscious" allies are hostile to any move which would deprive them of legal authority over any one of our servicemen charged with offenses while off duty and off of the United States military base at which he is stationed.

Eisenhower administration officials say that to denounce this provision would be to invite NATO countries to withdraw their permission for us to use bases on their soil.

But what about our "sovereignty"? And what about the constitutional rights of our men in service?

As citizens of the United States they are entitled to the protection our Constitution gives them as free men. This includes a speedy and public trial by jury, with witnesses to confront them.

Article 8 of the Constitution says: "Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted."

Contrary to these constitutional rights, our servicemen are turned over to foreign courts by treaty agreement.

If our President and our United States Senate which approved this treaty can get away with this definance of an American citizenship rights, what is there to prevent millions of us living at home under constitutional law from being deprived of our liberties by treaty arrangement with one or more foreign governments?

Sovereignty is a big word that means supreme authority.

We have delivered our United States servicemen into the authority of foreign governments by treaty. And we recognize that foreign power as supreme in court action against our servicemen.

And why do we do it?

Because Mr. Eisenhower and Mr. Dulles have told our Senators that we must make this sacrificial concession to appease foreign officials who might otherwise throw us out

of their country and revoke the leases by which we have military bases.

It is our country that pulled some of these foreign peoples from enslaving disaster in two World Wars. Today we stand guard over their homes and their families in addition to supporting their bankrupt governments with billions of dollars poured out in a steady stream since 1948.

Representative Bow believes further economic aid should be denied any country which insists on exercising criminal jurisdiction in their courts over our young men stationed abroad for mutual military protection.

The Congress needs more Members like Bow.

Respect for the rights of our citizens has reached low ebb when we barter American liberty for temporary use of plots of foreign soil.

Dr. Robert T. Oliver, State College, Pa., Discusses the Editorial Attack on Dr. Syngman Rhee Entitled "The Stake in Korea," Appearing in the May 8, 1956, Issue of the Washington (D. C.) Post

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. VAN ZANDT. Mr. Speaker, recently Dr. Syngman Rhee, President of Korea, was denounced in an editorial in the Washington (D. C.) Post which was answered in the May 28, 1956, issue of the Washington Post by my constitutent, Dr. Robert T. Oliver, State College, Pa.

Dr. Oliver's letter to the editor of the Washington Post follows:

THE STAKES IN KOREA

Just what are the stakes in Korea discussed in your editorial (May 8), the letters from Dr. Frederick Brown Harris (May 14) and Miss Dorothy Allan (May 21), and in the speech by Senator WAYNE MORSE?

If the debate is over whether the Republic of Korea is an obedient satellite of the United States, then the measuring rod of "intractability" cited by Miss Allan is proper. If the question is whether the United States and the free world (as well as the people of Korea) profit from the maintenance of an independent and free government in Korea, then the inquiry returns to the grounds established by Dr. Harris.

The loose charges presented (as questions, and without any shadow of evidence) by Senator MORSE and Miss Allan, are answered with summary directness by the New York Times editorial of May 21, which declares that the election in Korea "has given a strong demonstration of patriotic democracy in action. It should have silenced the thoughtless charge of dictatorship in Korea."

Most significantly revelatory of the real political situation in Korea is the successful evolution of a workable party system. In 1946 there were 410 "political parties" registered with the U. S.-U. S. S. R. Joint Commission—which means there were none at all, in a real sense. In the election of May 15, 3 parties emerged with widespread support—and as a result of the election of Dr. Rhee by a plurality of 3 million votes and the election of Dr. Chang Myun on the opposing Democratic Party ticket, the result probably will be a stabilization of a 2-party system. This is a truly phenomenal development, with two highly significant consequences:

First, it insures the continuance of a stable Korean Government after the retirement from politics of Dr. Syngman Rhee. Of course he will be greatly missed, but with two strong parties about equally matched, the Republic of Korea demonstrates greater stability than is evident in many older democracies.

Second, the emergence of a genuine party system is absolute proof of the falsity of the loose charges of "dictatorship" indicated in several of the questions asked by Senator MORSE. There are many dictatorships around the world, on both sides of the Iron Curtain, but they do not hold free elections marked by vigorous campaigning and producing a divided result. This Senator MORSE is politically mature enough to know.

Some of Senator MORSE's questions are already answered by the election results. Others are so startling as to require at least minimal attention.

"Why has President Rhee so frequently altered the constitution?" He has never altered it. He cannot do so. It has been amended by "due process of law"—but thus far less frequently than was our own Constitution in a similar span of years. The major amendments provided for direct election of the President by the people, for establishment of a bicameral legislature, and for protection of free enterprise. Are those moves in the wrong direction?

"Does he (Rhee) directly control the press?" Sixty precent of the metropolitan press in Korea supported one or the other of President Rhee's opponents. This simple fact should put such a question to shame.

"Has the Rhee administration discriminated against American businessmen?" In fact, President Rhee has been criticized because he insisted upon purchasing aid supplies in the United States, rather than in Japan. There was a dispute over taxes levied upon Americans doing business in Korea—but this was settled to the satisfaction of the American Chamber of Commerce in Korea, and the American businessmen are still there—doing a profitable business.

"Is there a heavily financed Korean lobby operating in the United States?" Registration of all lobbyists is required by law; none is registered; none exists. There is a public information office for Korea—the Korean Pacific Press—which I have the honor to direct, as a part-time activity. It's very modest financing (far less than that available to most foreign governments in America) is reported quarterly to the Department of Justice.

It is unfortunate that from a few very vocal sources there emerges a continuous barrage of criticism of President Rhee and of the Republic of Korea—America's staunchest ally in Asia. Of course President Rhee does not always support our policies. As a matter of fact, the steady advance of communism in Asia indicates that our policies have not been notably successful. Naturally he opposes the truce—just exactly as we Americans would do if our own Nation were divided and half-occupied by a foreign Communist army.

The freedom of the May 15 election is encouraging. So is the economic recovery now becoming manifest. So is the staunch defense maintained in Korea against Communist inroads. Let us disagree with our Korean allies, when we must, in a spirit of mutual respect and understanding.

ROBERT T. OLIVER,
The Korean Pacific Press.
STATE COLLEGE, PA.

Fifty Years of Growth—Champion Paper & Fibre Co., Canton, N. C.

EXTENSION OF REMARKS
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an address by Mr. Reuben B. Robertson, president and board chairman of the Champion Paper & Fibre Co., Canton, N. C. The address of Mr. Robertson was delivered at the annual meeting of the Canton-Bethel-Clyde Chamber of Commerce honoring Mr. and Mrs. Robertson. Mr. Robertson gives an interesting review of the 50 years of progress of the Champion Paper & Fibre Co. and of Haywood County, N. C., since the year 1906 when Champion first came to western North Carolina.

Mr. Robert's address follows:

I happen to be among the few remaining ones who participated in early Champion operations back in 1906. It is said that after a person has been a half century in a particular activity, if he is not in his dotage, he is almost sure to be in his anecdotage—so, I hope you will bear with me if I dwell somewhat heavily on anecdotes of the past.

In these 50 years we have run the whole gamut of human experience. We have enjoyed the sunny skies of prosperity, endured the cloudy days of adversity. We have survived floods, financial disturbances, epidemics, two world wars, a host of political campaigns, and, more recently, the aggressive advance of world communism. But, through it all, there has developed here in Haywood County a balanced relationship between industry, agriculture and other activities that have placed our county among the top counties of the State having the highest standard of living.

Our county has come through its years of trial and has maintained progress largely through the fine character, the stability, the earnestness and the Christian spirit of our native mountain folk.

Champion came to Canton only a few years after its name had been changed from Pigeon River to Canton. Its population had been about 100 in contrast with its present population of nearly 7,000.

After construction of the mill got underway, great difficulty was experienced in getting a working force adequate for the job in hand. Very few of the men, native to the community, had, up to that time, engaged in what they called public works. They were accustomed to working as free agents and naturally felt a bit uneasy working under a boss.

At that time, immigration laws permitted admission of far more men of foreign origin than are allowed to come in today. Italians and Bulgarians were available, so, in desperation, the contractor engaged a large crew of these foreigners who were brought to Canton and housed in a camp located close to the mill pumphouse. With their large outdoor, plastered ovens constructed to produce their favorite brand of bread, European style, they made quite a unique and somewhat colorful addition to the community life.

Some of you will remember that at that time it took about as many engines as there were loaded cars to bring a freight train into Canton from Turnpike. Quite a contrast to

the mile-long, diesel-drawn trains that come into Canton today. That old method was good enough when our daily tonnage was 75 tons of sulfite pulp and 75 of soda pulp, but it would have collapsed completely under today's conditions when we produced over 10 times as much finished product as we did then.

I came to Canton at the beginning of a financial panic: Champion's mills were unfinished, and insufficient funds were available for either completion of construction or operation of the processes. During the first few years of my stay in Canton, my principal responsibility was to stave off creditors until we could get our plant into production, and profits began to come in. We did escape bankruptcy, but by an uncomfortably narrow margin. I believe, however, that the experiences of those early days provided for all of us valuable lessons in caution and in resourcefulness. And that enforced resourcefulness resulted, ultimately, in our developing many new and profitable lines of production. We have to our credit a number of firsts in the paper industry. Our mill was the first large pulp mill in the South. It was the first to make spruce sulfite in Dixie. It was the first to successfully convert chestnut chips into soda pulp. It was the first to make southern pine into bleached kraft capable of use in fine white papers. It was the first to install an electrolytic bleach plant in a southern mill—the first to develop biproduct power on a large scale through the use of high pressure steam boilers with exhaust steam withdrawn from turbines for process use. We also installed the largest and fastest fourdrinier paper machine in the industry, of that day, and disappointed our competitors and the prophets of gloom by making it work profitably.

Near the lodge at Lake Logan, there is a bronze tablet commemorating the fact that Champion cooperated with Dr. Schenck, the famous forester, in keeping alive the first forestry school in the United States of America.

In the field of human relations, we were the first pulp mill to organize a safety committee, first to establish a credit union, first to provide an old-age bonus, wage incentive plan, and, more recently, the first to establish profit sharing.

Many years ago, Champion adopted and has sincerely and conscientiously tried to apply in daily life, the principles of fairness, friendliness, and faith, which have been summarized in our shorter slogan, "Cooperation and Good Fellowship." Our intention was, and is, to apply this philosophy not only in our dealings with the workers who permanently risk their future with Champion, but to our customers, our stockholders, and, above all, to our neighbors. The response, especially from our workers and from our neighbors, has been magnificent and has given us the courage and confidence to plan for continued progress on into the distant future.

In these days of another cold war, we hear much of the dangers of communism. We know that democracy and communism have only one word in common—that word is "equality"—but it has different meanings. In democracy, it means equality in liberty and prosperity. In communism, it means equality in servitude and poverty. Communism divides, it cannot multiply. It distributes not wealth, but misery.

Here in Haywood County, through the mutual respect, consideration, and deep sense of civic responsibility that prevails in unusual degree, we provide a splendid example of democracy on the march.

Everyone enjoys the benefits of people's capitalism, and when such conditions exist, we need have no fear of subversive influences getting anywhere in our country.

There are no more helpful groups than this very valuable Canton-Clyde-Bethel Association which sponsors today's meeting.

The objectives outlined by Oliver Wendell Holmes—

> "One hand, one heart
> One land, one Nation
> Evermore."

may well be used as the watchword of this community.

Let us earnestly hope that it will be our guiding light as we move forward together into the problems and opportunities of an unseen, but challenging, future.

Agreement on an Illusion

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. McCORMACK. Mr. Speaker, there are a large number of Americans, of which I am one, who believe our policy in the Near East is confused and indefensible that Israel is being permitted to become the football of big power politics with oil as the dominating influence.

In my remarks I include an editorial appearing in the Washington Post of June 6, 1956, entitled "Agreement on an Illusion," a justifiable, critical editorial of a Security Council resolution that the editorial correctly states "finally filtered through the Arab and Soviet objections."

In a democracy in particular, when principle is sacrificed for material values, harm is the ultimate result.

AGREEMENT ON AN ILLUSION

Unanimity on the next steps in the Middle East dispute has been purchased in the United Nations at the expense of a resolution so watered down as to be almost meaningless. The Security Council resolution finally filtered through the Arab and Soviet objections authorizes Secretary General Hammarskjold to continue his good offices to obtain compliance with the 1949 armistice, but pointedly omits any reference to settlement. In effect, Mr. Hammarskjold will be permitted to urge peace as an objective so long as he avoids all mention of specific means for bringing real peace about.

The performance of the Arab states in the U. N. debate set something of a new low. The Arab delegates persistently refused to acknowledge the fact of Israel. Syria established the pattern by asserting that Israel was really a southern extension of Syria. The Syrian Ambassador to the U. N. also insisted that all U. N. actions on Palestine must be reversed and Israel in effect be legislated out of existence—a logical companion piece to the disgusting television performance in which the Syrian Ambassador in Washington demanded the erection of a screen between himself and the Israeli Ambassador.

But this performance, while deplorable, was not surprising. What made the difference was the capricious Soviet support of the Arab position. The deleted section of the British resolution, citing consciousness "of the need to create conditions in which a peaceful settlement on a mutually acceptable basis" would be possible, was adapted almost word for word from the Eden-Bulganin communique at the conclusion of the Soviet visit to London. Have the Russians now repudiated their announced willingness to work for stabilization in the Middle East? Does their continued whetting of Arab intransigence mean that they want a little peace but not too much?

Their articles on the British resolution certainly would indicate as much. That being the case, the question is whether an essentially phony agreement has not been purchased at a high price, and whether it might not have been better for the Western Powers to hoist the Russians on the inconsistency of their own words.

Soil Bank Plans Need Clarifying

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. EDMONDSON. Mr. Speaker, most members of the Oklahoma delegation are deeply concerned by the uncertainty in the Department of Agriculture concerning the soil-bank program.

Yesterday we read in the press a report on Secretary Benson's speech in Wisconsin which indicated that only limited use of the soil bank could be expected in drought and flood damaged areas. The reason given was the Secretary's desire to get a dollar's worth of value out of every dollar invested in the soil bank.

Today we read that the Senate Majority Leader has been advised by the department that no soil bank applications will be accepted before June 15, although we had been promised "immediate" inauguration of the program once enacted.

A Member of this House on the minority side, who has read the full text of the Secretary's Wisconsin speech, today assured me that Mr. Benson did not in any way intend to curtail the soil-bank program in drought or flood areas, but merely stated it was not intended as a "relief" program.

According to this colleague, a farmer in a drought or flood area will be given the same opportunity to participate in the soil bank as any other farmer—and can do so by all the means provided for by the law, so long as he signs up for the full period required in the acreage reserve.

I earnestly hope this is true, and the farmers who are victims of drought or flood are not to be discriminated against in the new program. It is not so much a question of "relief" as it is a matter of equal opportunity without penalty due to adversity.

The farmer who lives in a drought or flood area, and who puts land in the soil bank, should get the same "normal yield" credit as the farmer in a more fortunate section of the country—and to provide otherwise would surely be unfair and discriminatory.

Yesterday seven members of the Oklahoma delegation wired the Secretary of Agriculture to urge that he clarify at once his position in this regard.

We hope for an early answer to this wire, the text of which follows:

WASHINGTON, D. C., *June 5, 1956.*

Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.:

Under provisions of Public Law 540 as enacted last month you were given clear mandate to put soil bank in effective operation this year and all allotted acreage was made eligible by law for participation in soil bank. Legislative history clearly indicates intent to include farmers who are victims of adversity, as evidenced by remarks of Congressman POAGE and others on floor of House may 23. Associated press now quotes you in Wisconsin speech with remarks indicating soil bank plan will not be offered in drought or flood-damaged areas where full value in conservation or crop reduction not available to government. Please reply by wire clarifying your intentions in drought and flood disaster States and sections. We are reluctant to believe you intend to penalize farmers already victimized by disaster by reducing or limiting in any way their opportunity to participate in soil-bank program. This would deprive farmers most in need of assistance at critical time, and certainly would violate intent of Congress in passing this legislation. Under your reported interpretation soil bank would be reserved only for prosperous or fortunate farmers while denying farmers who are victims of natural disaster a chance to participate.

ROBERT S. KERR,
United States Senate.
A. S. MIKE MONRONEY,
United States Senate.
ED EDMONDSON,
Member of Congress.
CARL ALBERT,
Member of Congress.
TOM STEED,
Member of Congress.
JOHN JARMAN,
Member of Congress.
VICTOR WICKERSHAM,
Member of Congress.

Softening Up for Brainwashing

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HIESTAND. Mr. Speaker, Edward Hunter, of Port Washington, N. Y., replies to a contributor to National Review under date of June 6 so effectively on the question of brainwashing, I quote his letter for the RECORD:

I wonder if your contributor M. M. G. (May 16) who foresaw the type of mind that invited Hiss to Princeton next thinking up a movement called "Future Brainwashees of Communist Slave Labor Camps," fully realized how precisely he hit the nail on the head?

I have just returned to the United States after 2 years in Asia, studying the war for men's minds. In my new book, Brainwashing, I tell the pattern to preserve a brain against these totalitarian atrocities. I have probably talked with a bigger cross section of brainwashed individuals, of various nationalities and races, than anyone else. On the basis of what they told me and my research generally, I can say that no man can be broken until he is first softened up. I can also point out, not with any desire to be harsh on those young men and their faculty leaders who permitted Hiss to make his glamorful appearance at Princeton, the following basic fact:

The men and women who have broken under brainwashing pressures, and who created great and unnecessary suffering for their buddies, country, and themselves, were in a pathetic number of cases softened up for their crackup by just the state of mind exhibited in the Princeton episode.

This is a matter our schools, colleges, and universities should consider of critical importance, so that they no longer are manipulated into a position of weakening minds, for all their pretentious buildings and superduper equipment. This is a matter, too, for home and church to study and act upon.

EDWARD HUNTER.

PORT WASHINGTON, N. Y.

Your Assessment

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the followig editorial from the Daily Press of St. Marys, Pa., for Friday, May 25, 1956:

YOUR ASSESSMENT

Pennsylvanians would kick like steers, justifiably so, if they were assessed to help build New Jersey, New York, Delaware, or Ohio highways.

Yet the taxpayers of this State have to pay annual Federal taxes for the Tennessee Valley Authority that brings not one penny return to them—because it was a federally financed program and has to be financed yearly by residents of all 48 States in the Union because it does not earn its own way.

The proportionate share of States in TVA appropriations of $1,950,000,000 in the fiscal years from 1934 to 1955, saw Pennsylvania's share of this costly enterprise fixed at $145 million.

New Yorkers have been called upon to pay 290 million; Ohioans 118 million; Illinois 148 million; Michigan 100 million; faraway Texas 82 million; West Virginia 15 million; New Jersey 66 million; California 170 million. Those are the States called upon to kick in the biggest kitty.

Tennessee, where the TVA is located and has its headquarters, over the same length of time, paid in $24 million, the State most benefited by its construction. The State of Washington about as far removed from the Tennessee Valley as you can get, paid better than $31 million, $7 million more than the State directly affected.

One would think that Tennessee with the balance of United States paying a substantial part of the cost of producing electric power within the State, would be leading the parade of Southern States in business expansion; wouldn't you?

But such is not the case. It is far from being in the lead—as a matter of fact is next to last in the procession.

The Chattanooga (Tenn.) News Free-Press in a recent editorial had the following to say about TVA:

"All Tennesseans ought to be proud of their State and anxious to see it progress. That is why it is disturbing to note the low rating of Tennessee in southern business progress as rated in a recent Kiplinger Letter.

"The Kiplinger survey rates the States of the South in order of business progress during the past 5 years. This is the order of standing and the percentage of expansion, according to the rating system:

"Florida, 28 percent; Louisiana, 18 percent; Georgia, 18 percent; North Carolina, 16 percent; Alabama, 15 percent; South Carolina, 13 percent; Arkansas, 12 percent; Virginia, 8 percent; Kentucky, 6 percent; Tennessee, 3 percent; Mississippi, 1 percent.

"It's distressing to find Tennessee next to the bottom of the list, above only highly agricultural Mississippi.

"Of course, the Tennessee Valley Authority has made a habit for two decades of claiming credit for everything good that has happened in Tennessee, as though there would have been no progress without TVA. Perhaps TVA wants to claim credit for seeing Tennessee rank 10th in the 11 Southern States in business progress. The leading States don't have the blessings of TVA and seem to be doing very well with the American free-enterprise system.

"We hope progress isn't passing Tennessee by because of the socialism that has been established here."

Textile Imports

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including a letter written by Mr. L. W. Turner, Jr., president of the Southern Garment Manufacturers Association, of Nashville, Tenn., to the Washington Post and published under the heading of "Letters to the Editor," in the June 5 issue of the Post as follows:

TEXTILE IMPORTS

Our attention is called to your editorial of May 27 to the effect that the Senate Finance Committee takes the position imports of textiles and apparels from Japan are not offering sales competition to domestic industry. The Tariff Commission apparently has little grasp of the ruinous effect of these imports. Total imports of women's blouses and men's and boys' shirts alone in 1955 and thus far in 1956 seriously approach domestic production figures.

Japanese imports of men's and boys' shirts and ladies' blouses were several million dozen. What the Tariff Commission evidently does not understand is that it takes only a relatively small quantity of cheaper priced goods or articles to set the market price in a given market. In other words, 1,000 dozen men's and boys' Japanese shirts and ladies' blouses can set the market price for all American competitive garments in the city of Washington.

It is in this manner that Japanese imports of apparels and textiles are setting the market price for such domestic-made goods, thus pulling down the price structure with consequent discouragement to American producers. This we have seen happening right along for more than 1 year. Some plants are closed, the owners say, because of Japanese competition and some are running on short time for the same reason their owners say.

The Tariff Commission has rendered disservice in not getting the full facts and ascertaining the effect of Japanese compe-

tition on the textile and apparel industry which we have herein briefly explained.

There is reason to wonder whether textile or apparel industry has any friends at all connected with the Government.

L. W. TURNER, Jr.,
President, Southern Garment Manufacturers Association.

NASHVILLE, TENN.

This letter is very timely and has my wholehearted approval.

I too wonder, as Mr. Turner does, whether or not the textile or apparel industry has any friends at all connected with the Government and by that I mean the administrative branch of the Government and not the Congress.

The Congress has, refused to pass the OTC bill which would, in effect approve all that GATT has done in strangling the American textile and garment industry. Because we have not had the backing of the textile industry in our efforts to get legislation passed to prevent the destruction of this great industry, we have not been able to get such legislation reported out of committee. We can and will continue to fight OTC which, as I say, would be a ratification of the GATT agreements.

Apparently the administration believes the textile industry is expendable for the benefit of the steel, automobile and other huge industries which want all tariff barriers removed. They too are calloused and unconcerned just as the executive department of our Government is about the problem of the textile and garment industries.

The Tariff Commission, now dominated by the executive department although it is allegedly an arm of the Congress, has refused to get all the facts about the effects of Japanese competition on the textile and apparel industry and has apparently abandoned these industries to their fate.

It is often said that because Japan buys some of the American farmer's cotton, the cotton farmer of the Nation ought to support the disastrous agreements which permit the imporation of texiles from countries where wage scales are so low that our own textile and apparel industries simply cannot meet the competition. However, if the textile industry in America is destroyed, 60 percent of the farmer's market for his cotton will go down the drain with the textile industry.

It is encouraging to see now that Mr. Robert Jackson, the president of the ACMI, has learned the lesson that he cannot expect any help from the administration although rumor has it that most of the industry supported Mr. Eisenhower and his party. We Members of Congress who are so vitally interested in the preservation of the textile industry have been trying to convince Mr. Jackson and the ACMI of this fact so that we might get the necessary backing for legislation that would do what the administration fails and refuses to do. It is rather late now for any such legislation to be passed. It is understanable, however, that the American Cotton Manufacturers Institute was loathe to turn to the Congress for protection before all avenues of relief in the administrative department had been explored and found closed. We have at least been successful in holding up action upon the bill which would create a super-duper international organization in which the United States would have only one vote to control our foreign-trade policies.

Proposed Transfer of Freedmen's Hospital to Howard University

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by local 1, Government and Civic Employees Organizing Committee, AFL–CIO, on the proposed transfer of Freedmen's Hospital to Howard University.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Previous testimony before this committee and before the House Appropriations Committee has touched on the proposed transfer of Freedmen's Hospital to Howard University. Local 1 of the Government and Civic Employees Organizing Committee, AFL–CIO, the only employee organization to which a large number of the employees of the hospital belong, has given careful attention to the proposed transfer and holds the following views.

Local 1 supports the transfer only if the civil-service status of the civil-service employees now employed at the hospital is preserved. A careful study by the Department of Health, Education, and Welfare has shown that in almost every particular employees of Howard University have working conditions inferior to those under the classified Federal civil service. The particulars include: Salaries, leave, insurance, retirement benefits, counseling service, and others.

A majority of the employees at Freedmen's Hospital are long-term Federal workers with 10 years or more service. Our local recently conducted a careful poll of employees at the hospital. Of 390 responses to the questionnaire, only 13 (3⅓ percent) indicated that they would be willing to continue in their jobs at the hospital without civil-service status. Yet, unless special legislative action is taken, all hospital employees, no matter what their civil-service status, will lose their civil-service rights and become new employees at Howard when the transfer is effected.

From a practical point of view, the purposes of the transfer would not be served if the vast majority of employees preferred to take jobs in other Federal agencies in the District of Columbia, or elsewhere, where they would retain their civil-service rights. Indeed, it would be virtually impossible to operate the hospital under such circumstances. But equally important, it would be a breach of faith with the employees. These men and women have looked at their jobs at the hospital as careers. In so doing they have been responsive to the call of their Government for career employees. Having bought their homes, established roots in the life of the community, and made their plans on the basis of a reasonable expectation of the benefits which a grateful Government bestows on its loyal employees, it would be a blow at the entire concept of a career civil service as well as at 700 individuals and their families if they were now to be arbitrarily separated.

Either the legislation authorizing the transfer should include a guaranty of continued civil-service status for the present Freedmen's Hospital employees, or the legal structure of Howard University should be altered—by making it, for instance, a Federal or District institution—so that all its employees fall under the Federal civil service. We trust these alternative courses will be intensively studied and appropriate language drafted prior to consideration by the Congress.

Disabled Veterans Are Frightened and Worried by the Bradley Report

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I insert in the RECORD a letter I have received from Mr. Gerald S. Kelsey, national service officer of the Disabled American Veterans in my city of Portland, Oreg. This letter, I think, is an eloquent and forceful statement of the concern being felt by many of our veterans. I am receiving many similar letters almost daily. Reports available to me cause me to feel a similar great concern as to the report of the Bradley Commission. I hope the President, in the recommendations he intends to submit to the Congress based on this report, will give careful scrutiny to the dislocations in our present veterans' programs that it entails and will take account of the many protests from our veterans organizations.

DISABLED AMERICAN VETERANS,
NATIONAL SERVICE OFFICE,
VA REGIONAL OFFICE,
Portland, Oreg., May 23, 1956.

Congresswoman EDITH GREEN,
House of Representatives,
Washington, D. C.

DEAR MRS. GREEN: I am a service officer for the Disabled American Veterans in the State of Oregon. My office represents better than 15,000 power of attorneys on claims that are on file with the United States Veterans' Administration.

Most of our service-connected, disabled veterans have had the contents of the Bradley Commission report brought to their attention. I want to tell you that we service-connected, disabled veterans are frightened and worried. I do not believe that the contents of the Bradley Commission report has anything to do with Democrats or Republicans. I believe that the report of the Bradley Commission is strictly the radical ideas and opinions of a minority group in both parties.

It is a terrible thing to face these disabled veterans day after day and see the worried expressions and concern that they are feeling since the Bradley report has been made public.

I cannot believe that Congress, either the House or the Senate, would do anything detrimental to the service-connected veteran. Because of this reasoning and in order that the veterans' faith may be restored, I respectfully request that you give favorable consideration to H. R. 11310.

I realize that the supporters of the Bradley report will howl like wounded tigers but at the same time the feelings of the service-connected veteran and his confidence are all-important.

Very respectfully,

GERALD S. KELSEY,
National Service Officer.

The Civil-Rights Crisis

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 6, 1956

Mr. MORSE. Mr. President, on May 12, 1956, in Washington, D. C., Mr. Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, delivered an address before a dinner meeting of the ninth annual convention of Americans for Democratic Action. Among the other speakers upon that occasion were Mrs. Eleanor Roosevelt, the Senator from New York [Mr. LEHMAN], and the Senator from Oregon, and other speakers.

I ask unanimous consent to have printed in the Appendix of the RECORD an edited copy of Mr. Wilkins' address, which is entitled "The Civil-Rights Crisis."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The present sharpness of the civil rights issue is not, as some suggest, a result of a decision of the United States Supreme Court, or of the policies of the New Deal-Fair Deal, or of the activities of the National Association for the Advancement of Colored People, Gov. Allen Shivers, of Texas to the contrary.

As Dr. Charles Frankel, professor of philosophy at Columbia University, writing in the New York Times magazine asserts: "* * * the changes that have left us all so breathless * * * have been the results of social revolutions that have been coming to a head for a hundred years or more, of wars, of shifts in the structure of our families, churches, and businesses and, most of all the breakneck revolutionary development of military and industrial technology."

We, all of us, then, are faced today with the task of adjusting to these changes, of meeting the crises induced by them, and of fashioning a world in which men can live at peace and in the hope, at least, of a measure of justice and dignity.

There is no gainsaying the crises everywhere about us; political, economic, moral, sectional, national, and international. A short rollcall brings them readily to mind and calls up a dozen tangents: Moscow, the West and the Middle East; England and Cyprus and Ceylon; France and north Africa; Communist China, Formosa and the United States; the U. S. S. R. and her satellites; oil, uranium, sealanes, food disease; national sovereignty, public power, security and freedom, and a dozen others.

Here and now, for 16 millions of Negro Americans, for several times that number of white Americans, and for scores of millions of white and nonwhites over the globe a crisis revolves about America's attempt to make the theory of democracy work out in practice, across the color line.

These strivings toward democratic living, the successes and failures, are one of the concerns of this convention of Americans for Democratic Action. It is one of the reasons you are gathered here tonight, not primarily in the interest of Negro citizens as such, but in the interest of the examination and strengthening of Western democracy.

It has become a cliché to state that this pattern of living represents the hope of mankind for personal and group freedom, for dignity, equality of opportunity and justice. It is difficult, in the light of what we know of the principalities and democracies of the past, not to believe this cliche a truism.

Have we of the West not reared the most glittering superstructure of civilization known to man? Do not both entrepreneur and workman reap more for their toil and skill and daring than ever before in history? If there were ever wealthier men were there not more slaves? Do we not fly over the earth, talk and send pictures through the air, and perform, as a matter of course, dozens of other miracles each night and day?

Is this not sufficient vindication for the cliche? Is not the tractor the triumphant answer to the bullock and the wooden hoe? Well, not quite. In other days and in other regimes men sailed the seas, spanned rivers with bridges, built roads, reared beauty to the skies, and conquered continents.

The difference, we like to believe, lies in our concern for man and his spirit. We said here, borrowing some from the French and the English, the Greeks and the Romans, from the Jews and the Christians, we said: "* * * all men are created equal and are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness * * * to secure these rights, governments are instituted among men."

Stubbornly, often tenuously, we have clung to this ideal, through doubts and trials, fears, challenges, trickery and wars; even through the manifold temptations and dangers of success.

We stand today stronger both in spirit and in body, yet faced with a challenge hitherto unmatched except, perhaps, in the tests of our fledging years among the great powers of the world.

Shall all men, of whatever color, be free and equal in this land of the free? If the Declaration of Independence and the Constitution underwrite equality and freedom for whites only, will they not soon guarantee these for the strong, or the rich, or the cunning only?

What then shall become of America and of men who looked to the West? For, as we debate our whims and caprices, a strong, wily, and ruthless foe presses us upon every hand. We dare not take a leisurely generation to change our course. At stake is not the American who happens to be a Negro, for his fate, except to him, is incidental. At stake is all we have dreamed and built—not merely our wondrous material being, but our freedom and our souls.

We are caught between the social revolutions from within to which Dr. Frankel referred, and the emergence in the past 40 years of a gigantic social revolution from without. Fantastic as it may seem, what we do about freedom and equality for one-tenth of our population may determine the success or failure of our adjustment to our own revolution and our success in meeting the challenge from beyond our shores.

Appomattox ended a bloody war, but bringing order and justice out of its aftermath demanded soul-searching of such an agonizing kind—while the Nation was faced with the major task of binding up both its physical wounds and its economy—that we were relieved in 1876 to accept a "compromise" which gave the Southern States back their slaves, now called freedmen, to do with as they would.

A life for our Negroes was rigged within the United States, and the description is used advisedly.

First of all, they were denied the basic right and weapon of democratic freemen—the ballot. Thus the local and State governments were kept safely in the hands of former slaveowners and their descendants, to be joined later by the hitherto unnoticed whites who never had owned land or slaves.

The representatives of these lily-white State governments in Washington then combined their numbers and not inconsiderable talents in an increasing crusade to reverse the verdict of Appomattox. With cajolery, demagoguery, threats, parliamentary skullduggery and political blackjacking, they built and perpetuated an empire of exploitation—political, economic, and social.

The manifesto condemning the Supreme Court signed by 100 southern Senators and Congressmen is completely in character with the pattern of the past 90 years, a pattern which has insisted that first-class citizenship shall not be enjoyed by Negro Americans in that region, regardless of any opinion, or precedent, or authority, no matter how high.

It cannot pass unnoticed that this declaration comes at a time when both the executive and judicial branches of the Federal Government have taken successive steps forward in the matter of nondiscriminatory citizenship.

In addition to political disfranchisement, and to make certainty doubly certain, the Negro was crippled by being denied education, and chained down by ruthlessly imposed economic handicaps.

Thus, voteless, uneducated, and economically throttled, he was helpless before sheriffs, judges, governors, and mobs alike. His protests and his citations of the Constitution were of little avail.

As we look back, we realize now that our problem was enormously complicated by our acceptance of the formula of 1876. For that formula not only continued slavery under a different name, not only invalidated the Declaration of Independence and mocked the Constitution, but implanted and nurtured in the minds and hearts of millions of otherwise normal citizens the neurotically false notion that whiteness alone is a mark of greatness; and that whiteness carries with it an inherent right to special privileges and to domination over nonwhites.

For the disturbing fact is that the intervening 80 years have seen the minority, under the lash of hardship and injustice and inequality, legal and illegal, grow in every dimension, including dignity; whereas great sections of the majority in the region concerned have stood still, psychologically and emotionally.

Opposition to the 1954 Supreme Court ruling outlawing public school segregation stems largely from the refusal of the diehard areas to accept, or from their inability to comprehend, the concept of equality of citizenship.

They had their 1876 agreement. They had, in 1896, their *Plessy* v. *Ferguson* opinion establishing the separate-but-equal doctrine. On these foundations they built their way of life and they are bewildered and angry to see the foundation swept away.

In his lone, but notable and accurately prophetic dissent to the Plessy ruling, the late Mr. Justice Harlan wrote:

"I am of the opinion that the statute of Louisiana is inconsistent with the personal liberty of citizens, white and black, in that State, and hostile to both the spirit and letter of the Constitution of the United States. If laws of like character should be enacted in the several States of the Union, the effect would be in the highest degree mischievous. Slavery as an institution tolerated by law would, it is true, have disappeared from our country, but there would remain a power

in the States, by sinister legislation, to interfere with the full enjoyment of the blessings of freedom; to regulate civil rights common to all citizens, upon the basis of race; and to place in a condition of legal inferiority a large body of American citizens."

Ignoring the "equal" in the Plessy separate-but-equal doctrine, the Southern States proceeded forthwith to do exactly as Mr. Justice Harlan predicted. Upon the basis of race and race alone, they enacted legislation to regulate the civil rights "common to all citizens" in practically every area of living.

They did this, I strongly suggest, because at that time they could not conceive of the Negro as a citizen with rights as such to be respected and safeguarded by the States. Much of the thinking expressed today—60 years later—indicates that time and its changes have had little influence upon that conception.

The southern political leaders and lily-white State governments today are commanding time to stand still. A profitable, comfortable, and ego-feeding way of life has been dealt a body blow and the beneficiaries of the system have thrown into the breach every possible argument, including some that seem to have been disinterred from proslavery debates. They have utilized every tactic, no matter how reprehensible. They have massed economic and political power against a minority armed with little more than the conviction that it is right and that the higher law of the land is on its side.

Cowardly economic reprisals have been visited upon men and women for merely holding an opinion, belonging to an organization, or signing a petition. Whites as well as Negroes have paid a price for dissent from the segregationist view, with the result that in many areas of the South virtual thought control is in effect.

With newspapers and some governors and some United States Senators, to say nothing of mayors, sheriffs and chiefs of police all shouting defiance of the courts, it is not to be wondered that the hoodlum element has felt free to act. Threats and attacks have been made. Shootings have occurred. A mob has taken over a university campus and nullified a court order. Murder has been done.

State legislatures in Alabama, Georgia, South Carolina, and Mississippi have enacted punitive legislation against their Negro citizens and with Virginia have adopted measures designed to circumvent or defy the Nation's highest court.

In this hysteria we come into election year. Through their ballots Americans reveal their feelings and indicate their choices of men and parties. In many ways, directly and indirectly, they decide issues.

Today the civil rights crisis is properly under scrutiny and the factors that have contributed to it, as well as the possible solutions to it are being weighed.

It is a serious thing, for example, for Government of, by, and for the people when only 8,000 Negro citizens out of a voting-age population of 497,000 are permitted to register to vote, as was the case in Mississippi last year. The system by which this deprivation was accomplished is a proper subject for investigation and action by the Department of Justice of the administration in control of the Government—the Republicans. Yet nothing has been done, despite the plain indications on nearly every side that illegality on a racial basis is the unashamed and unconcealed handmaiden of the election machinery in several of the Southern States.

To be sure, the Democratic Party is in control in these States. To be sure, these States cite their right under the Constitution to see the qualifications for voters. But neither they nor the Republican Central Government denies that this right is exercised in such a manner as to result in purely racial disfranchisement; and neither pays any attention to the 15th amendment which prohibits disfranchisement on the basis of race and color.

The ballot is a basic and vital weapon in the democratic state. He who is deprived of it may thereby be deprived of his right to earn a decent living, to secure an education for his children, to be accorded due process of law, to have access to recreation and public accommodation—in short, to enjoy "Life, liberty, and the pursuit of happiness."

In States where they can vote, Negro citizens are certain to consider this year the failure of the Republicans to even attempt to break up this massive conspiracy to deny several millions of citizens their right to vote.

The Negro voter is certain, too, to judge the Republican administration's failure to give leadership to the movement to implement the ruling of the Supreme Court in the school cases. The impact of the decree has affected our national life and has posed grave questions of national policy, indeed, of the stability and integrity of the American way of life.

Our highest Court is branded as being composed of fellow travelers. Nullification resolutions are shouted through State legislatures. There is ponderous and nonsensical talk about the powers reserved to the States as though any of these conferred the right to deny to citizens within their borders guaranties embodied in the 1st and 5th articles of the Bill of Rights, and in the 14th and 15th amendments to the Constitution.

This mud-slinging attack upon the majesty, honor, and prestige of the Government and upon the hallowed traditions of the Nation have evoked only a few cautious words from the President. A substantial segment of the white population of the South and the entire Negro population wish to observe the law and desire to work out ways and means of complying with the Court's opinion. But the loud mouths and the hoodlums hold sway and the troubled citizens of the region, desperately seeking guidance toward peaceful and just methods, have received no encouragement or leadership from their President.

None of the many ways by which government can move to ease and resolve a crisis has been employed. It has been well said that this is no longer just the Negro's fight. It has become a question of rule of law, of the observance of traditional American procedures established to preserve the freedoms of all of us. The lack of leadership in the White House in this crisis has contributed mightily to the unhappy state of ugly tension in which many areas of our land find themselves.

But if he has been derelict in setting a firm tone against intolerable reaction with reference to school desegregation, Mr. Eisenhower has acted in his capacity as Chief Executive to eliminate racial discrimination in several important areas. In the District of Columbia, in naval installations, in schools, on military posts, and in the Veterans' Administration commendable advances have been made.

And the Democrats have failed, too, in the civil-rights field. Their party controls the State governments which have disfranchised and otherwise demeaned the Negro citizen. It is their State legislatures which have enacted restrictive, vindictive, and insulting legislation directed against a population solely because of its race and color. It is they who have standardized the filibuster as a tactic to destroy majority rule in the Senate.

It is their Representatives in the Congress, safe from retaliation because of the shackled Negro voter back home, who have vilified the Supreme Court and throttled civil-rights legislation through their seniority and their committee chairmanships.

It is past this obstruction that Negroes and their friends must try to move the civil-rights bills in the Congress, and the Federal judges who will be expected to dispense color-blind justice, and the attorneys who will prosecute violations of Federal laws.

The Democratic Party machines in the hard-core Southern States have done little to extend the franchise to the Negro citizen. Instead, many party leaders and legislatures devote their time and effort to devising new ways and means of perpetuating disfranchisement. And the national party organization seems obsessed with the idea of purchasing what they call unity with silence and inaction on the civil rights of Negroes. Only a handful of men in the northern wing of the party has refused to bow to the holdup tactics of the southerners. And no mention of this small band is conceivable without naming the two men on our platform tonight, Senator WAYNE MORSE, of Oregon, and that grand warrior for decency, Senator HERBERT H. LEHMAN, of New York.

The civil-rights bills in the Congress, particularly H. R. 627, the omnibus bill embodying the recommendations of the administration and many of the points covered by bills proposed by Democrats, offer both the Republicans and the Democrats an opportunity to alleviate some of the disappointment of voters who had hoped for much more than the zero they have received thus far.

The votes are here to pass H. R. 627 in both the House and the Senate if it is permitted to reach the floor. The present roadblock in the House is the Rules Committee. The sincerity and good faith of both parties and of each Member of the House can be measured by the action taken on this legislation. Over in the Senate the bill can be pushed through a filibuster if both the Republicans and the Democrats want to make good on civil rights.

In the superheated atmosphere engendered by the reaction to the Supreme Court's decree, both parties are on trial as never before. The hard and revealing language of revolt has made it much easier for the voter to discern the ambiguous phrase and the meaningless movement that heretofore have served so well as smoke screens at election time.

In similar fashion the Negro voter will weigh more carefully than in the past the civil rights planks in the platforms of both parties. The mere declaration that the Supreme Court has set forth the law of the land and that it must be obeyed will not suffice. Compliance does not materialize out of thin air. The Government and its elected servants cannot escape their responsibility for affirmative action to see that the law is obeyed.

Make no mistake about it, as far as the Negro American is concerned, desegregation is the topic of the day. In it is bound up his status as a citizen and the aspirations of himself and his children. If he had not thought too much about it (and what Negro could not think upon his daily lot?), those extremists who today declare he shall never come into his own—not in a hundred years—have forced decision upon him. No candidate or party equivocating upon his rights and upon his right to begin the enjoyment of them without discriminatory delay can command his allegiance.

We have heard much in these last months about "moderation" from both Republicans and Democrats, from editorial writers, and from candidates who declare, with fine impartiality, that they will go neither to the right nor to the left. Pronouncements, too, have been made on so-called extremists. Well, the Negro has been the soul of moderation. He has been patient to the point of resignation. It is almost 93 years since Abraham Lincoln signed the Emanicipation Proclamation, yet it is declared solemnly that the Negro is "going too fast" and "pushing too hard." He is warned even by many who have been his friends to be moderate.

As he looks back upon his painfully slow pace, at the mean obstacles he has had to overcome, at his crawling gait through the courts, winning one by one the citizenship rights that are automatically bestowed upon others, he wonders what moderation can mean. Does it mean movement more slow than his creeping of the past? Does it mean movement at all? Must he await a referendum of his fellows before he dares to speak a word or take a step? Is it extremism to go to court, win your rights, and ask satisfaction of the verdict? Is it moderation to organize mobs, throws eggs and rocks, burn crosses and incite to murder? Is it extreme to demand of the elected officials of Government and the aspirants to office that they say the words and do the things that will protect and secure freedom and equality for all citizens?

These are the questions and this is some of the history running through the minds of Negro Americans in 1956, 90 years after Appomattox.

These are some of the issues, the resolving of which will shape their decisions on candidates and parties to carry on the American dream. Skepticism and realism have their place, but in the end it is moral concern for man's spirit that constitutes the real America, that makes it somehow different from the materialistic regimes of other times. So, American dream it is.

These questions are also running through the minds of many millions of Americans who are not Negroes. How else could it be with issues so weighty that—like those of war and peace, security and individual liberties, wealth and poverty—they command the indivisable concern of all who value their citizenship?

They must, in short, be the concern of every man who would preserve and glorify this country, through these fateful years, as the refuge and the laboratory of free men at work under the verities that keep men free.

What Happened to Cotton

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of Wednesday, May 30, 1956:

WHAT HAPPENED TO COTTON

"Cotton decided to fight its battles in the legislative halls, while soybeans decided to fight in the market place."

Thus accurately did Secretary of Agriculture Benson point up, in a speech to margarine manufacturers, the real reason for the sad state to which King Cotton has fallen. And the contrasting prosperity of the other principal source of margarine.

At the time of the Civil War, probably no American farmer ever had seen a soybean, much less considered growing them. Even 25 years ago, United States soybean acreage was only 1 million.

In the last quarter-century, cotton acreage has had to be reduced from 43 million to less than 18 million, because American cotton growers preferred to cut their acreage for the sake of a high support price, rather than take their chances on a free market.

Meanwhile soybean acreage grew to 19 times what it was 25 years ago, making it the fifth crop in terms of farm income, because soybean growers did take their chances or a free market.

Cotton growers were "afraid to live with abundance," as Mr. Benson put it. They believed, and induced a gullible Congress to believe, that the Government could fix an artificially high price for a product and make it stick.

What happened is a lesson—for the taxpayers an expensive one—in the futility of trying to interfere with the iron law of supply and demand. Cotton remained high in price, only because the Government bought at the fixed "90 percent of parity" all the market would not take. (It owns 15 million bales now, the largest carry-over in history.)

Meanwhile, United States cotton was priced out of so much of its normal foreign market that exports are less than a third what they were 25 years ago, and foreign cotton production has doubled in the same period. United States cotton lost much of its home market to synthetic fibers, again because of its high price. Synthetic production today is 18 times what it was 25 years ago.

Fortunately, more enlightened cotton growers are coming to realize the deadly harm this fantasy has done to cotton. But some politicians still want the Government to carry on this ridiculous practice again—and the people to pay for it.

Defense in a Pigeonhole

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Defense in a Pigeonhole" which appeared in the Tuesday, May 22, 1956, issue of the Boston (Mass.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE IN A PIGEONHOLE

The great unanswered question of American defense is still unanswered after 7 years. Even yet we do not know what role the Navy should play in strategic bombing.

That rather than the new outbreak of interservice rivalries is the disquieting implication of recent events in Washington.

Consider what has taken place. First, we had the testimony from General LeMay of the Strategic Air Command that the Soviet now has more intercontinental jet bombers than the United States and will surpass us in bombing power in the period 1958–60.

Thereafter, President Eisenhower and Secretary of Defense Wilson both stated that the Navy could make an important contribution to strategic bombing.

The Air Force Chief of Staff, General Twining, however, insisted that the Navy's potential contribution was small.

And, finally, we have the publication in the New York Times and the Herald of the Air Force staff study belaboring with devastating data the contention that carrier-based aircraft could operate effectively against major targets inside Russia.

From all this we may deduce two things: (1) The present policy is to rely on the Navy to make up any deficiencies in the Air Force's strategic bombing capacity, but (2) the ability of the Navy to fill a strategic bombing role is still undetermined.

In other words, an uncertainty is the backstop for the vital Strategic Air Command.

Now the President is quite correct that this country ought not to try to match plane for plane with Russia. The numbers game when applied to defense makes no sense. But it is simple wisdom to demand that we know the value of the other elements in our total defense balance. And it appears that we do not know one of the most crucial of those elements, the Navy's role in strategic bombing.

Moreover, this is an old, old failure of defense analysis that stretches back into the Truman administration; back even to the B–36 squabble in 1949 and the famous revolt of the admirals.

In 1953, the publisher of this paper queried the then Secretaries of the Air Force and Navy on the relative cost and effectiveness of land- and carrier-based planes and learned that not only had no evaluation been made, but that none was planned.

Yet evidently nothing was done, for in the following year, 1954, Thomas K. Finletter published an unmistakable warning on exactly this subject in his book "Power and Policy."

"There is duplication in the planning for the NATO air atomic mission," he wrote. "The United States Air Force regards itself as having the whole responsibility. The Navy also is preparing to take part in the operation but its responsibility is not fixed. There are two disadvantages in this. It duplicate forces for the same task, and therefore wastes money—and this duplication runs into billions of dollars every year. * * *

"Now the point about this problem is not that a wrong decision has been made as to the respective roles of the Air Force's land-based planes, but that no decision at all has been made."

That from a man who had headed the President's air policy commission in 1947 and was Secretary of the Air Force from 1950 to 1953.

Yet the policy of no policy on the Navy-Air Force roles, the policy of temporizing with a basic issue of national defense is still with us. We do not know if carrier-based bombing planes can replace missing intercontinental bombers in the final resort, but we are gambling that they can when we fix on them the responsibility for backing up SAC.

There are a flock of interservice rivalries breaking out into the open—the Army says the Air Force has too many bombers at the cost of adequate ground forces, the Air Force says the Army's Nike air defense missile is no good, the responsibility for the development and use of all the various missiles is still undetermined. These, too, are urgent matters calling for decision and clear enforcement of decision.

But the issue of strategic bombing missions as between the Navy and the Air Force has been disgracefully evaded. It is defense in a pigeonhole.

The Late William T. Granahan

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. KEARNS. Mr. Speaker, on my return to Washington I was shocked to learn of the death of the distinguished gentleman from Pennsylvania, my friend and colleague, William T. Granahan.

Words are inadequate on such occasions. The Nation has lost an able legis-

lator and a fine American. I had a deep feeling of friendship and respect for Bill Granahan. He will always be remembered by those who served with him because of his kindly disposition. He will be missed by all of us here in the Congress and his passing is a distinct loss to the people of his congressional district.

To his loved ones left behind and to the people of his district, I extend my deepest sympathy in their great loss.

Nineteen Hundred and Fifty-Six Poll Results for the Fourth Congressional District of New Jersey

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, during the past several weeks I have been conducting a poll of my constituents in the Fourth Congressional District of New Jersey. This was done to ascertain their opinions on the many important issues facing the Nation on which Congress will be called upon to make decisions.

This poll was mailed to a cross-section of the voters in my district representing all shades of political opinion. The response was quite good, indicating a freshening of interest in national political issues in this election year. Significantly, of those answering the poll, the two questions receiving the greatest number of "Yes" or "No" answers as opposed to "No response" were those dealing with the deepening of the Delaware River Channel to Trenton from Philadelphia and the question of governmental sponsorship of a flood-insurance program. The question on which those polled showed least interest was that dealing with the Taft-Hartley Act.

I feel that the results of this poll will be of interest to my colleagues in the House of Representatives, and I include as a part of my remarks the questions which were asked, together with a breakdown by percentages of the responses I received. These percentages are based on a total return of 5,387 questionnaires. The results follow:

Questions	Percent							
	Total		Democrat		Republican		Independent	
	Yes	No	Yes	No	Yes	No	Yes	No
1. Do you think Congress should set up a system of flood insurance for so long as private companies are unable to provide it?	78	22	87	13	71	29	76	24
2. Charges have been made that Federal and State authorities have been lax in preventing the denial of civil rights for minority groups, including preventing Negroes from voting. Do you think Congress should establish a bipartisan commission to investigate these charges?	72	28	73	27	62	38	81	19
3. Do you think Congress should investigate possible abuses of union welfare funds to see whether legislation is needed to protect the contributors?	89	11	88	12	90	10	91	9
4. Do you think Congress should support the President's recommendation for a 1-cent increase in 1st-class mail rates to reduce postal service deficits?	62	38	54	46	67	33	64	36
5. What policy should Congress follow toward immigration:								
(a) Reduce present yearly quotas?	34	xxx	38	xxx	31	xxx	33	xxx
(b) No change in present law?	19	xxx	20	xxx	24	xxx	14	xxx
(c) Increase in present quotas along the lines recommended by the President?	25	xxx	15	xxx	33	xxx	28	xxx
(d) Replace present quota system with one not based on national origins?	22	xxx	27	xxx	12	xxx	25	xxx
6. Farm prices and income have been dropping. Do you think Congress should increase Federal spending this year to help farmers cut back surplus production?	55	45	70	30	49	51	47	53
7. What policy should Congress follow regarding the Taft-Hartley law:								
(a) No changes?	31	xxx	18	xxx	40	xxx	35	xxx
(b) Remove injustices claimed by union leaders?	21	xxx	29	xxx	11	xxx	23	xxx
(c) Put greater restrictions on labor unions?	30	xxx	20	xxx	49	xxx	29	xxx
(d) Repeal the law?	18	xxx	33	xxx	9	xxx	13	xxx
8. Do you think Congress should establish a Presidential fund for sending outstanding representatives of American culture—art, music, literature, education, industry, etc.—abroad on good-will tours?	54	46	59	41	47	53	54	46
9. What policy should Congress follow on public housing for low income groups:								
(a) Build less public housing?	11	xxx	06	xxx	12	xxx	14	xxx
(b) Build more public housing?	36	xxx	49	xxx	25	xxx	36	xxx
(c) Stop building public housing?	15	xxx	08	xxx	21	xxx	15	xxx
(d) Continue to build public housing at the present rate?	38	xxx	37	xxx	42	xxx	35	xxx
10. Do you favor reduction of the national debt, even if it means no tax cut this year?	83	17	70	30	90	10	90	10
11. What policy should Congress follow on economic aid to other countries?								
(a) Increase aid?	14	xxx	15	xxx	10	xxx	18	xxx
(b) Decrease aid?	32	xxx	32	xxx	35	xxx	29	xxx
(c) Keep aid at present level?	38	xxx	38	xxx	42	xxx	33	xxx
(d) Stop all aid?	16	xxx	15	xxx	13	xxx	20	xxx
12. Do you favor deepening the Delaware River Channel to Trenton?	91	09	95	05	86	14	90	10

NOTE.—Party percentages for those answering poll: Democrats, 43 percent; Republicans, 32 percent; Independent, 25 percent.

Peaceful Use of the Atom

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Toward Peaceful Use of the Atom," written by Neal Stanford and published in a recent issue of the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOWARD PEACEFUL USE OF THE ATOM
(By Neal Stanford)

WASHINGTON.—Is the United States or the U. S. S. R. going to lead the world into the land of atomic power plenty?

That is the nub of the hearing and debate now going on on Capitol Hill over the Gore bill—a bill that would direct the Atomic Energy Commission to build six power-reactors to demonstrate the practical value of atomic power for commercial and industrial purposes.

Strangely enough, it is a subject that is getting little public attention and less public interest—though it may well decide whether the United States or the U. S. S. R. becomes the mecca of the world in peaceful use of the atom.

What Senator GORE wants is some drastic, impressive, Government action to reclaim American leadership in this vast and important field. He is convinced that you can't get it by relying on private industry or private investment. The Government must step in and underwrite it—just as it did the Manhattan project in the war. This is not a hot-war necessity, but a cold-war necessity; for either the United States does something like this or it appears likely to lose the race to the Soviets.

Senator GORE has a worthy supporter in AEC Commissioner Thomas Murray, who earlier this year publicly urged a crash program of Government reactor construction. But he was outvoted by the other Commission members including the Chairman, Adm. Lewis Strauss—and his program died aborning. Now, however, the battle has been transferred from the executive to the legislative—and is out in the open, which gives Senator GORE at least some hope that he can get action on the matter.

While perhaps no once can say positively (though some do) that the U. S. S. R. is leading the United States in this field and moving ahead faster every day, there are accumulating reports to that effect. The United States, while it has five power projects on paper, has only 1 in the works—and that only under construction: the 60,000 kilowatt reactor being built at Shippingport by the Government.

There are four other reactors under consideration, involving industry participation, that can produce another 700,000 kilowatts of atomic power—but that is not only counting your chickens before they are hatched, but before the eggs are even laid.

By contrast the U. S. S. R. has an atomic powerplant already operating and has plans for producing 2,500,000 kilowatts by 1960. The British will begin delivering atomic power this year, and their blueprints call for development of an atomic-power capacity of

more than 2 million kilowatts in the next decade. Yet all Washington can point to is a hoped-for 750,000 kilowatts by 1960.

What makes the situation confusing is that despite these facts, which no one at least denies, Chairman Strauss continues to insist that the United States is still leading the world in this field, and that America has a weakness for overrating the capabilities of the Russians. And he does this in face of conflicting testimony by Mr. Allen Dulles, Chief of Central Intelligence, that the Soviets are undoubtedly ahead of the United States in this field. At the same time he opposes the Gore proposal for Government construction of six large-scale reactors even through private industry.

The Gore proposal is not premised on the belief that the United States needs this atomic power—a factor which plays a great part in Britain's drive to develop atomic power—but on two other postulates: that the cost of atomic power can only be reduced to competitive levels by Government experimentation in reactor construction; that the Nation which accomplishes this first is going to have all the underdeveloped and backward countries and areas of the world beating a path to its door.

Thus the question becomes for America not only can atomic power become economically available, but is it not a political necessity? Can the United States afford to let the U. S. S. R. dominate this field?

There are plenty of reasons why now is not the time for the Government to start a crash atomic-power program: Private industry should do it; it is totally uneconomic; there is a skilled manpower shortage; the AEC is too busy now to take on new assignments. But they do not reach to the heart of the issue—which is rather whether the United States should deliberately and publicly allow the U. S. S. R. to forge ahead in this field that is so big with hope the world over.

The psychological defeat the United States would suffer from a clear Soviet lead could be disastrous. So the question becomes not whether the country can afford a crash program, or needs a crash program as a power source, but whether it can afford to not have one—for global rather than national reasons.

Government Assistance in Education

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Mr. Peter Benton, 27 Peter Spring Road, Concord, Mass., in which he expressed his appreciation to the American people for the education he received through veterans' legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONCORD, MASS., *May 28, 1956.*

Hon. JOHN F. KENNEDY,
United States Senator,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR KENNEDY: On June 3, 1956, through the generosity of my great country, I will graduate from Boston University. My entire formal education was provided for by the American people through the legislation organized and passed by Congress for veterans of the Second World War.

The purpose of this letter is to express my deep gratitude to the Members of the Congress of the United States for giving so many of us this opportunity. A copy is being sent to the other Members of Congress from the Commonwealth of Massachusetts.

It is with the greatest sense of loyalty and pride that I thank God for the right to be an American citizen.

Sincerely yours,

PETER BENTON.

Facts Versus Lies

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. BRIDGES. Mr. President, there appeared in the Manchester (N. H.) Union Leader newspaper under date of May 31, 1956, an editorial entitled "Facts Versus Lies," which I consider pertinent to our current relations with the Soviet Government, and I commend it to the reading of my colleagues.

This editorial brings to us a sharp reminder of the kind of people the Communist leaders really are, and it should serve us as a guide in our Nation's consideration of any proposals made by the Soviet Government.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACTS VERSUS LIES

Stalin once said: "Words are one thing, action another. Good words are a mask for the concealment of bad deeds. Sincere diplomacy is no more possible than dry water or iron wood."

Today the United States and Western civilization are in greater peril than at any time in their history because the Communist goal of world domination is shrewdly concealed. Kremlin propagandists have been amazingly successful in making out Khrushchev and Bulganin as men who were never really bad.

Let's set the record straight—former United States Ambassador to Moscow William C. Bullitt recently supplied this true story to a House of Representatives committee's report on Communist activities. The story deals with Soviet President Voroshilov.

At a vodka-drinking banquet in the Kremlin in 1934 when Mr. Bullitt sat between Voroshilov and Marshal Budenny, Voroshilov said: "I think the most extraordinary thing we (Voroshilov and Budenny) ever did together was to capture Kiev without fighting."

"What happened" Bullitt asked.

"Well," said Voroshilov, "there were 11,000 czarist officers with their wives and children in Kiev and they had more troops than we had, and we never could have captured the city by fighting. So we used propaganda and we told them that they would be released and allowed to go to their homes with their families and treated as well as possible by our army. They believed us and surrendered."

Bullitt: "What did you do then?"

Voroshilov: "Oh, we shot all the men and boys and we put all the women and the girls into brothels for our army.

Bullitt: "Do you think that was a very decent thing to do?"

Voroshilov: "My army needed women and I was concerned with my army's health and not with the health of those women. And it didn't make any difference, anyhow, because they were all dead within 3 months."

Yes; let's keep the record straight. Here is proof indeed that Russian leaders are liars, and, more than that, lying fiends. Yet they continue to have their appeasers, and worse, in the United States.

Are American women and girls to be herded into Russian brothels?

For Safer Boating

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. MACDONALD. Mr. Speaker, I wish to call attention to an editorial in the Washington Evening Star of Wednesday, May 30, 1956, entitled "For Safer Boating." This thoughtful editorial emphasizes the fact that because of an increase in the number of boating tragedies throughout the country several large boating organiations have joined in urging Congress to study the problem, with a view to promoting water safety.

Mr. Speaker, with this in mind I would like once again to call attention to the fact that I have been very concerned about this problem for some time. In fact on July 21, 1955, I introduced H. R. 7536 which is designed to require certain ships and vessels carrying passengers for hire to be fitted with radiotelephone installations.

Those Members of the House from coastal States surely recall instances in which tragedy or near-tragedy was influenced by the absence or presence of radio communications. In my own State of Massachusetts, I would refer you to the case of the vessel *Pilgrim Belle*. On June 22, 1955, this ship struck a rock in Boston Harbor. On board were 272 passengers, mostly teen-agers, out for a carefree trip. Immediately help was needed. It was unavailable because of one stark, outrageous fact. The *Pilgrim Belle* had no radio. The captain managed to run his ship aground on Spectacle Island.

Fortunately, people on that island were able to call for help, and other vessels arrived in time to rescue all who had been on board. How easy it would have been for the story to have been different. But for the incredible luck of the sea which permitted this profit-making vessel to wallow to shore before sinking, there would have been black headlines in the newspapers and black despair in hundreds of families of Massachusetts. You also remember the tragedy which occurred here on Chesapeake Bay last summer, as a result of which many per-

sons lost their lives due to the fact that once again help could not be called due to lack of proper communication facilities. A similar tragedy occurred off the shores of Long Island, N. Y., last year. These are only typical tragedies that occur during the boating seasons throughout the United States.

There already exists legislation to provide communications safeguards for the large vessels which sail the high seas and even for most of the ships of the Great Lakes. Despite the fact that many thousands, yes, tens of thousands of boat owners are voluntarily adding radio telephones, there remains a gap in communications protection. My proposal is designed to fill this gap. Imagine, if you will, the diversity of craft, approximately 7,000 which presently carry passengers for hire on a permanent basis and yet are without radio telephones. The provisions of communications to meet distress needs are, in my opinion, as basic a requirement as the carrying of life preservers, life rafts, running lights, buoyancy tanks, and the rest of the other common requirements for vessels.

Mr. Speaker, it is my hope that the House Interstate and Foreign Commerce Committee will report out my bill in order that it may be acted upon by the House at an early date. In this way, we will have done our utmost to insure that reasonable safety measures have been taken to make this boating season and subsequent seasons free from disaster and death.

The editorial follows:

FOR SAFER BOATING

The remarkable development of small-boat activity in recent years—especially in the power-craft category—has been accompanied by an increase in the number of boating tragedies throughout the country. The situation has become so serious that two of the larger boating organizations have joined in urging Congress to study the problem, with a view to promoting water safety. The move is timely, for it is predicted that more inboard and outboard pleasure craft will be operating this summer in salt and fresh water recreational areas than ever before.

It has been estimated that there are now about 25 million small-boat enthusiasts who spend their weekends or vacations enjoying their favorite sport. Many of these are novices whose unfamiliarity with vagaries of weather and water and with elementary rules of navigation and boating safety may be expected to result in more accidents and drownings in the next few months. There is no regulation of small boating by the Coast Guard, and few local authorities exercise any effective control. But as Chairman BONNER of the House Merchant Marine and Fisheries Committee remarked, the rise in serious boating mishaps indicates "a possible need for greater precautions to be taken by both State and Federal Governments" in the small-boat field. The program might well include an extension of safety inspections by the Coast Guard to include boats smaller than the 16-foot-and-under group (now exempt) and tightening up by State and municipal authorities on safety requirements in recreational waters under their jurisdiction.

The proposed inquiry has the support of the National Association of Engine and Boat Manufacturers as well as of the Outboard Boating Club of America. This teamwork between industry and customers is logical, for both groups have an interest in making boating safer and more popular.

Woman Veep in Our Time Seen by Martha Griffiths

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article about the Honorable MARTHA GRIFFITHS, of Michigan, one of the most distinguished of the Members of Congress. The article is entitled "Woman Veep in Our Time Seen by MARTHA GRIFFITHS, and it was written by Marian Trainor. It appeared in Labor's Daily for Tuesday, June 5, 1956, and is as follows:

DETROIT.—The "coffee break" has become an integral part of the working day, but the first person to utilize it as a political weapon was a woman who wanted her district to send her to Congress.

When MARTHA GRIFFITHS decided to run for the House of Representatives after serving in the Michigan State Legislature, where she was acclaimed one of Michigan's 10 best legislators, she hitched up her trailer to her car and went into the 17th District, where she was seeking election, and invited the housewives to come to the trailer for coffee and political discussion.

While she drove slowly up and down each block, women volunteers who preceded her rang doorbells, soliciting to make sure MARTHA had a capacity audience. This method enabled her to reach 40,000 persons personally. The first time around in 1951 she lost the election by a narrow margin, but 2 years later, using the same device, she won.

In the meantime she was to enjoy the distinction of being the first woman judge to sit on the recorder's court bench in Detroit in its 112-year history, first as an appointed judge by her former law partner, Gov. Mennen Williams, and then as an elected candidate to fill a short term.

MARTHA GRIFFITHS first became interested in law when her husband was attending the University of Michigan law school. MARTHA met and married Hicks Griffiths while they were both political science majors at the University of Missouri. Hicks was so enthused over his classes that he wanted his young wife to share his pleasure and talked here into joining him as a law student.

One of their classmates was a young student named Mennen Williams. The three became fast friends, a friendship that still endures. To this day Williams frequently turns to the Griffiths for help. His first act on becoming Governor was to insure Griffiths' post as Democratic chairman.

MARTHA'S first political victory came when she made a successful bid for the Michigan House of Representatives in 1949 on the slogan, "Make Democracy a Living Force."

NO EASY LIFE

When she was defeated in her first bid for the United States Legislature, Governor Williams proved his gratitude to MARTHA and Hicks—who had organized the first rallies to nominate Williams for governor in their basement—by naming MARTHA to serve out the term of Judge Maher, who had died in office. The post had already been filled for the coming term but a peculiarity in Michigan election laws required MARTHA to run for election in November to complete a term which would end in late December. She won that election.

The life of a judge in recorders court is not an easy one for a woman. Judge Griffiths would try as many as 94 cases at a time—drunks, family trouble, petty thievery. In her nine months as judge, she passed on 2,400 cases including 450 criminal actions.

She matched wits with some of Detroit's best attorneys and gained a reputation for studious attention to the law and constant sense of fair play. Some were dubious of her ability. One attorney, stalling admittedly for time in a difficult case, asked for a written legal opinion from the lady judge, expecting a respite of several days. Judge Griffiths retired to her chambers and came forth 10 minutes later—with the opinion.

One of Dtroit's distinguished jurists, Judge Gillis, said of her, "You have brought to us a woman's instinctive and offtime intuitive approach to the many problems that perplex mere men like us."

Of herself, MARTHA said, "Sometimes as I sit on the bench and find it my duty to pass sentence on my fellowmen, I wish I had been judge before legislator. It is at least an unusual experience to assist for 4 years in making laws of state and then sit as a judge of people charged with breaking those laws."

FIRST WOMAN FROM DISTRICT

In her second bid for election to the United States Legislature she was victorious and became the first woman ever to be sent from her district to the Congress.

As she had won acclaim in the State legislature and as judge, so was she to win commendations in her national post. In 1953 she was cited by the Detroit City Council as 1 of 12 women of achievement and she also won the Ruth Houston Whipple award for women in policymaking.

As a Member of the 84th Congress, she introduced a bill to increase the pay of postoffice employees, pointing out that they earned less than hot-dog vendors; waged battle with SAM RAYBURN to put Congress on TV; sponsored a measure to establish Federal rural libraries; requested Federal aid to build housing units for single persons over 60, and demanded better facilities for care of the 4,500,000 mentally handicapped children in the United States.

She was drafted on the House Public Works Committee for two important assignments—a roadbuilding program and legislation to deepen the Detroit River and Great Lakes in preparation for the St. Lawrence seaway. She was assigned to the House Committee on Government Operations and Banking and Currency Committees.

On her holidays home, she is apt to be found urging groups to pressure Congress to act on pending bills for solution of juvenile-delinquency problems (crime costs the United States $20 billion a year, or $1.86 for every $1 spent on education); visiting high schools to answer senior classes' questions so that they may enjoy their graduation tours of Washington more, or encouraging women's groups with such predictions as there will be a woman Vice President in our time.

Her own unfulfilled dream is to write a book on the history of law.

The American Merchant Marine: Key to Trade and Defense

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a paper entitled "The American Merchant Marine:

Key to Trade and Defense," written by Francis Fallon, 46 Glen Road, Roxbury, Mass., for which he has just been awarded a national prize in the 1956 Harold Harding memorial essay contest.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE AMERICAN MERCHANT MARINE: KEY TO TRADE AND DEFENSE

(By Francis Fallon, age 16, Mission Church High School, Roxbury, Mass.)

The story of America's merchant marine is one marked by long declines, spurts of wartime building, the creation of huge fleets, and the passage of these fleets into a state of rest. Nevertheless, our merchant marine is needed today as much as ever before. Its purposes are twofold—first, the maintenance of our defense, and secondly, the preservation of our economy.

During the shipbuilding spurt caused by the start of the First World War, American shipyards constructed 1,774 large merchantmen in 5 years, mostly too late to help in the war. During the 4 years of World War II, our shipyards astounded the world by launching 4,915 merchant craft, nearly all of them in time for the overseas drives to victory. When the Korean conflict broke out, Congress hastily passed a bill providing for the expenditure of $25 million to recondition 134 ships. This action boosted the merchant marine to 1,390 vessels, enough to handle a localized war but hardly a full-scale war, such as a world war. If another world war comes, in which we will most likely be the main target, will America be able to build the ships on time as in the Second World War, or shall we be too late, as in the First World War? The answer to this question may mean the difference between whether the battle is fought on American shores or not. The two questions that now occur are: How badly will we need the ships? And how have the recently built ships been used?

First, the routes used in a new war will probably resemble those used in previous encounters—across the Atlantic to Europe or across the Pacific to the Far East. The Korean war has shown that, even with the advent of huge transport planes, the bulk of the transporting of food, supplies, and troops remains to the cargo ship, as the fighting to the infantryman.

Secondly, the active merchant fleet today numbers some 1,300 ships, mostly newer type ones. Approximatley 2,150 other cargo craft are in the reserve fleet, tied up in some back port. The sad fact is that 70 percent of these ships have the old-time reciprocating engines, installed only because modern turbines were not available at the time of the war rush. With the advent of the newer and faster submarines and destroyers, not mentioning the atomic submarines at all, these ships would be like sitting ducks waiting for attack. An idea of the disaster can be realized when we observe that 1,554 ships were lost during the Second World War when the ships were on slightly more even terms.

The shipbuilders and operators and the Government are once again troubled by the same problems that have been with them since the beginning of the merchant marine. High American costs, standards, wages, and insurance have made an American Merchant Marine an economic liability. However, experience has shown it to be an awfully necessary one. The problem is how much money is the Government willing to spend on it.

Presidential committees of businessmen have recommended that subsidies of 50 percent of construction costs be paid by the Government for the building of 46 passenger ships, including two 50,000-ton express liners, at a total cost of $600 million, plus an unspecified number of dry-cargo freighters and tankers as first replacements for wartime ships already obsolescent, such as the Liberty-type ships.

The need is evidenced by the following facts:

1. Before the war the United States had 127 passenger ships capable of carrying 38,000 persons. Today there are 36 ships in its service or prospect with a capacity of only 8,333 persons. In this respect the United States has yielded its supremacy to Great Britain and is lagging far behind other countries who are working diligently to improve their fleets.

2. Presently there is a serious shortage of ships suitable for coastal and intercoastal routes in the domestic trade.

3. There are not enough of the bulk-cargo ships for commodities such as wheat and ores.

4. Right now there are over 1 million tons of needed raw materials stacked in Indian and East African ports waiting for a ride to the United States. Because of shortages like these, the price on these materials will rise when there is actually no need for it to rise.

If these measures are not soon taken, the shipbuilding business will be completely extinct. Already, 19 out of every 20 workers used during the war days have been laid off. Of the remaining few, only a small number are engaged in the actual building. The rest are either repairing or reconverting ships. This work will keep only a small part of the staff at their jobs. As in the aircraft industry, the problem is not only of the business itself but also of the loss of the engineering and working skills that cannot be gathered as easily as they are dispersed.

On the operator's side, decisions must also soon be reached. Before the operators are willing to purchase ships they must be assured not only of 50 percent of construction but also of an annual subsidy so that American ships can compete with foreigners. This was in the power of the Maritime Commission but was dispensed with during the war. A bill for this grant is now before the Bureau of the Budget and must soon be passed if the American fleet is to survive.

The United States Ship lines have also in a quiet way lined up quite a few markets abroad for our products and by selling the foreign goods here have increased the purchasing power of allies.

With the current building drive going on in other countries and American wages and standards being what they are, there will soon be an era of sharp competition among countries. To combat this our Government must soon take some important steps, such as the passage of the bills now before Congress, in order to retain such a valuable asset as the American merchant marine.

Congressional Investigations of Subversion

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, in the Michigan State Bar Journal, our former colleague, Kit Clardy, a graduate of the University of Michigan Law School, a former assistant attorney general and chairman of the Michigan Public Utilities Commission, and who served with such outstanding distinction as a member of the House Committee on Un-American Activities, expressed certain views which deserve repetition and permanency.

These views were written in response to an article by Prof. Paul G. Kauper entitled "Government of Laws—Not of Men" in the August 1954 issue of the Michigan State Bar Journal.

Mr. Clardy's views are expressed in the following words:

CONGRESSIONAL INVESTIGATIONS OF SUBVERSION—A DISCUSSION OF THE COMMUNIST CONSPIRACY, THE WORK OF THE HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES AND THE CRITICISM LEVELED AGAINST IT

(By Kit Clardy)

"A group—like the Communist conspiracy—dedicated to the ultimate destruction of all civil liberties cannot be allowed to claim civil liberties as its privileged sanctuary from which to carry on subversion against the Government."—Dwight D. Eisenhower.

The Communist Party in the United States is an integral part of the worldwide Communist conspiracy. Stalin said that it is one to which "history has given decisive tasks from the point of view of the world revolutionary movement." [1] The only law it recognizes is that of force and violence. It is not a political party.[2]

An American Bar Association committee brief, prepared by a group of eminent lawyers, says that "while all members of the Communist Party of the United States are conspirators, all Communist conspirators are not members of the Communist Party. The most important, dangerous and influential Communists or fellow travelers may be forbidden by their leaders to hold official membership in the party. They may and do have special work to do."

"The safety of constitutional freedom in the United States demands, first, an exposure of Communist tenets and objectives—Marxism-Leninism—and, secondly, resistance to the advancement of their principles and the promotion of these objectives by any person, party, group, or organization." [3]

The Supreme Court of the United States, in recognition of these truths, has held that communism represents a clear and present danger. Most thinking Americans understand this challenge of the Communist movement, which invokes the freedoms that prevail in a liberal society in order to destroy it.[4]

There are those, however, who contend that all questions about communism relate to purely political beliefs or affiliations or heresy and unorthodox beliefs. They have invented a new civil right—the right to absolute immunity from congressional investigation—for Communists and others having knowledge about subversion. They plead that an overt act must be committed. They would not lock the barn door until after the horse is stolen.

Karl Marx published the Communist Manifesto in February 1848. But it was not until Lenin emerged from the sealed railway compartment in which he had been transported across Germany and into Russia that this revolutionary proclamation really took root. Even then it achieved success only through conspiracy, stealth, and force.

Since 1917, these same methods have crumbled the defenses of country after country. Fifth columns have softened the will to resist and spread a deadly haze over the eyes of even the patriots, until today it has become difficult to distinguish between the true and the false, the real and the sham.

Practically all the rest of the world has succumbed to the siren call of socialism—the prelude to Communist dictatorship. Even this country has sampled that cup of hemlock. But despite the never ceasing ef-

Footnotes at end of speech.

forts of the fifth column in our midst, until now we have remained the chief obstacle in the path of this world-conquering conspiracy. We must be destroyed if its final success is to be achieved. That is why the last quarter century has witnessed a fevered campaign by the left to undermine our institutions and break down our will to fight.

Increasing national awareness of these efforts caused the House of Representatives to create a committee to combat this fifth column. The present House Committee on Un-American Activities grew out of that first step. It is now a permanent committee. The Congress fully understands that no matter how many skirmishes or battles it wins, the war will go on so long as a single cell of this cancerous growth remains.

More than 50 statutes have been enacted as a result of the committee's work. Its very success is in large part the cause for many of the attacks upon it. These efforts to destroy or at least impair the usefulness of such committees range all the way from the clear Communist demand for instant abolition to the indirect and much more subtle approach of those who say "investigating committees are perhaps necessary, but."

Some time ago, an article of the "yes-but" class appeared in the Michigan State Bar Journal.[4] That article is subtitled "A Comparison of Congressional Investigative Procedures and Judicial Procedures with Reference to the Examination of Witnesses." It singles out the House Committee on Un-American Activities, on which I had the honor of serving for particular criticism. Since that article is typical of those in this class, I have made it the basis for this discussion.

The basis for all of the objections this article raises appears to be the serious charge that this committee is guilty of "abuse of power." The article says that this "abuse" stems from the addition of a new objective defined as "exposure and discrediting of people" the committee believes to be subversive. The entire thesis is built upon this unsupported claim. Having served on the committee, I can categorically deny this assertion. The committee has not declared "exposure and discrediting" to be an objective. The professor has confused result with objective.

If I correctly interpret Professor Kauper's article, his real objection is more far-reaching than this claim of abuse of power. Every argument in it is directed against congressional investigations of subversion per se. The objections are such that only complete abandonment of such investigations could satisfy or remove them.

There is nothing startlingly new in the article. It makes the standard contention that committee hearings are trials—that witnesses should not be questioned about subversion. It is based on the same misconceptions, and voices the same objections found in nearly every critical approach. It proceeds on a totally mistaken conception of the nature of the Communist conspiracy. It treats this treasonous organization as just another political party. All objections are rooted in the fifth amendment to the Constitution.

This House committee functions in the same manner as other congressional committees. Its methods and its procedure are identical; it calls witnesses and questions them; there is no other way to operate.

The Kauper article is concerned only with those known as fifth-amendment witnesses—those who refuse to answer all questions about their knowledge of, or participation in, the Communist plot to destroy us, on the ground that to do so would expose them to social consequences they do not like. The article is not concerned with those who willingly help their Government.

It is not the actions of the House Committee on Un-American Activities which causes this exposure or the discrediting—unless we assume that the mere act of holding hearings on the subject of the Communist conspiracy pins the blame on the committee. Basically, that is the real objection of all those crying out in vague, general terms about committee methods.

There are but two classes of witnesses—those who have real knowledge about the Communist conspiracy and those who do not. Only those with guilty knowledge can properly invoke the fifth amendment. Chief Justice Marshall has said that improper invocation of the fifth amendment is "as much a perjury as if he had declared any other untruth upon his oath." (*U. S.* v. *Burr* (25 Fed. Cas. 38, 40 (1807))).

No one can be exposed or discredited if he has nothing to conceal. It is significant that critics have yet to name a single witness who has been exposed without cause. If a witness without knowledge about the Communist conspiracy insists upon perjuring himself by employing the fifth amendment, is it a violation of his civil rights to call and question him?

If a witness does have guilty knowledge about the Communist conspiracy, are his civil rights invaded by committee questioning? Is it an improper exposure to subpena and question such witnesses? Is it an abuse of power to require witnesses to admit, deny, or refuse to answer committee questions about the Communist conspiracy? The article affirms that it is—that is the basic objection to congressional investigations.

Exposure is caused by the voluntary act of the witness in invoking the fifth amendment to avoid disclosing his knowledge about subversion. I cannot work up much sympathy for anyone who, when asked whether he has ever been part of a conspiracy to overthrow this Government by force and violence, pleads that an honest answer would incriminate or bring him into public disfavor. Nor can I believe that the American public will accept this as reason for ending congressional investigations.

The "discrediting" is no more chargeable to the committee than the "exposure." It is the direct result of the actions of the witness. The public understands that the use of the fifth amendment means that the witness is probably possessed of information which might lead to his incrimination.

There are but two ways to avoid these "results." The witness could be left to go about his plotting undisturbed, or he could give honest answers to the questions. The first solution would mean an end to congressional efforts to uncover the facts about subversion. That is the results most critics desire. The second would help his Government and would not bring about the consequences the professor deplores. For witnesses who assist their Government have almost without exception found that America's capacity for understanding and forgiveness is without limit. And no such witness has been prosecuted or punished. This is a "straw man" argument.

We may analyze the problems, therefore, with the sure knowledge that the criticism leveled against the committee is based on a deep concern for only those witnesses who invoke the fifth amendment. It is the assumption of all such critics that it is better to end these congressional investigations than to have witnesses, who do not wish to reveal their knowledge of the conspiracy, subject themselves to the social consequences he decries. And this regardless of whether or not there is justified fear of incrimination.

Through a reasoning process I cannot follow, these critics of committee investigations into subversives argue that this constitutional guaranty against self-incrimination may be properly invoked by those who have no guilty knowledge—that it may be used to avoid answering questions by those who could not possibly be incriminated. This stand reflects the "liberal" line that the tough anti-Communists who demand really effective security measures are undermining our civil liberties. It weighs the national safety against the imagined and theoretical possibility that some fifth-amendment witnesses may be wrongfully prejudiced in the public eye and casts its vote for that witness. It would, therefore, abolish congressional investigations into subversion. The article is a restatement of these ideas in quasi-legal form.

The portion of the fifth amendment causing all the trouble is that part which reads "no person * * * shall be compelled in any criminal case to be a witness against himself." The meaning and application of those few words have been greatly expanded and now cover many situations not contemplated at the time of its adoption. Eminent lawyers have traced its history and observed that there were strong arguments against its being included in the Constitution.

Chief Justice John Marshall, in the trial of Aaron Burr, said that "the principle which entitles the United States to the testimony of every citizen and the principle by which every witness is privileged not to accuse himself can neither of them be entirely disregarded." This basic conflict is at the bottom of today's controversy. Professor Kauper has argued long and well for what he believes are the rights of the witness, but he has not brought out the other side of this controversy—the counterbalancing public interest and safety.

He admits that ordinarily it is improper to compare committee investigations with court trials. He concedes that he would not do so, except where subversion is the subject under investigation. He claims that the House Committee on Un-American Activities has "declared its objective to be the exposure and discrediting" of people. Had he sought citations to support his claim, he would have discovered his mistake. He confuses the effect—the social consequences of a witness' appearance and refusal to testify—with committee objective.

Looking at his point as objectively as possible is it not clear that regardless of whether or not "exposure" is a stated committee objective, the "result" he suggests will flow from any congressional inquiry into any unpopular subject? Will not these results accrue whether or not it is a stated committee objective? And is it a really tenable, legal proposition to argue that the social consequences of exposure justify his criticisms and conclusions? If sound, is this not an argument against all congressional investigations? Can exposure be prevented by anything short of abandonment of such investigations?

Instead of applying his test, should we not first task ourselves whether there exists a criminal conspiracy to destroy us which demands legislative attention? And if that conspiracy does exist, has any citizen the right to withhold vital information—information that will help devise a defense—just because his standing in the community may be impaired if he testifies truthfully? Rather, is not Chief Justice Marshall correct in saying that the United States is entitled to "the testimony of every citizen"?

He does not claim that the committee has abandoned its proper objectives, he merely makes the unsupported assertion that it has added this new one. His entire argument depends upon the fragile contention that a claimed addition to proper committee objectives converts the hearings in unfair trials and amounts to an abuse of power.

How could the Congress obtain information upon which to base proper legislative acts to check the Communist conspiracy without holding hearings and "exposing" the witnesses to public condemnation if they resort to the fifth amendment? And is not

Footnotes at end of speech.

the resultant education of the public as well as all of Congress a desirable result?

Woodrow Wilson had something to say on this subject which bears repeating. He said that it was the duty of Congress to investigate because otherwise "the country must be helpless to learn how it is being served." He went on to say that unless Congress did investigate, "the country must remain in embarrassing, crippling ignorance of the very affairs which it is most important that it should understand and direct * * *The informing function of Congress should be preferred even to its legislative function."

Mr. Justice Black, while yet in the Senate in 1936, in defending his really rough "methods" had this to say: "This power of the probe is one of the most powerful weapons to restrain the activities of groups who can defy every other power." The late Senator George Norris summed it up when he said: "Whenever you take away from the legislative body in any country the power of investigation, you have taken a step that will eventually lead into absolute monarchy and destroy any government such as ours."

These outcries against congressional investigations of subversion bring to mind the old adage, "it all depends upon whose ox is being gored." When I hear "liberals" denouncing today's committee "methods and procedures" as all wrong and destructive of "civil rights" it has a most familiar sound—only this time the "liberals' have switched sides.

Today's "liberals" have forgotten, or never knew, of the Walsh and Wheeler investigations. There was an example of really rough-shod tactics. Every false accusation against today's committees would have been really merited in those days—when graft and corruption was the subject of inquiry instead of the criminal subversion of today. Then it was the "liberal" who rallied to the defense of the committees and their methods while roundly denouncing the "malefactors" invoking the fifth amendment and thus "impeding" the work of the committees.

It was Felix Frankfurter who in 1924 said that "the procedure of congressional investigation should remain as it is." It was he who said that "no limitations should be imposed by congressional legislation or standing rules. The power of investigation should be left untrammeled, and the methods and forms of each investigation should be left for determination of Congress and its committees as each situation arises." And it was he who said that any attempt to make congressional investigations conform to the rules of law and evidence applied in courts "would make effective investigations almost impossible."

The "liberal" mind has never been noted for consistency. Yesterday, the fifth amendment was denounced because it was employed by men whose actions met strong disapproval of those who called themselves intellectuals or liberals. Those liberals brought fourth no finespun theories then in defense of the civil rights of the witnesses under vigorous examination. The methods and procedure were all right then because the liberals of the day approved the objective of exposing and discrediting those they disliked.

An eminent and able New York lawyer, Mr. C. Dickerman Williams, authored an article which appeared in the Fordham Law Review some time ago in which he discussed the fifth amendment.[6] He put it extremely well when he said, "When businessmen and crooked politicians were under fire, comment on the fifth amendment in the law review and periodicals read by the intelligentsia was very hostile. Since the amendment has come to be invoked by intellectuals in the last few years, there has been a flood of highly sympathetic comment in the same publications. Would so many law professors of today be so highly indulgent toward those who invoke the amendment today if they did not resent, at least subconsciously, investigations of behavior which in their opinion was inspired of idealism."

The American Bar Association brief on communism commented on the "widespread ignorance and the confusion throughout the United States concerning the nature of communism and concerning the objectives and purposes of those people in this country and elsewhere who embrace and follow the Communist teachings. * * * The advancement of the Communist movement in America depends for success upon a general misunderstanding of communism and of Communist aims on the part of those outside the fold. If the real purposes, aims, tactics, and practices of communism were as clear to all Americans as they are, undoubtedly, to the Communists themselves, the popular revulsion of patriotic Americans against all who follow the conspiratorial cult and the Communist line would stop this subversive movement in its tracks."

President Eisenhower, in speaking of communism and freedom, said "these two ideas are as opposed as danger is to safety, as sickness is to health, as weakness to strength, as darkness to light. Great truths can, at times, be startlingly simple. This is one of that kind. It is so simple a truth that it seems almost obvious, almost stale. But let not our memories be too short. Only a few years have passed since many moved among us who argued cunningly against this plain truth. Their speech was persuasive, and their vocabulary clever. Remember? It went like this: 'After all, while we stand for political democracy, they stand for economic democracy. Fundamentally, these are but two slightly different roads to the same goal. We both believe in freedom.' We must all remember that sophisticated lie."

After some considerable discussion about the inroads made by this conspiracy, he made the significant observation that: "The Bill of Rights contains no grant or privilege for a group of people to join together to destroy the Bill of Rights. A group—like the Communist conspiracy—dedicated to the ultimate destruction of all civil liberties cannot be allowed to claim civil liberties as its privileged sanctuary from which to carry on subversion against the Government."

The fifth amendment has now become the privileged sanctuary of those who would destroy us. Most critics conveniently overlook this obvious fact. One writer goes so far as to argue that the privilege may be claimed even though there is no fear of prosecution.[7] As in the article under discussion, he feels that a witness with knowledge about communism may invoke the amendment if he merely dreads the social consequences of an honest answer.

The Kauper article expresses the fear that "the general public may infer conclusions that are not warranted." If invoked because of fear of prosecution, no wrong inference is possible. If improperly invoked, it is perjury. In either case, the fifth-amendment witness has no justified complaint.

An eminent authority on evidence[8] has said that "a due respect for the privilege is perfectly consistent with a strict contempt for the guilty offender, and does not require or condone his protection. * * *" Witnesses are accorded the protection of the Constitution, but that should not mean complete immunity from questioning. Certainly not when the witness has knowledge which cannot incriminate. Nor does the existence of the amendment carry the implication that Congress should not interrogate anyone about subversion.

I subscribe to the statement of Chief Justice Marshall who said that the invocation of the fifth amendment by someone who had no fear of criminal prosecution was "in conscience and in law as much a perjury as if he had declared any other untruth upon his oath." And I subscribe to the sentiments expressed by the Eighth Circuit Court of Appeals which, in an opinion dealing with a civil case arising out of the Teapot Dome prosecutions, said "Why is the plea of self-incrimination—one not resorted to by honest men—the refuge of (the witness)? * * * Men with honest motives and purposes do not remain silent when their honor is assailed." This is as true when before a committee as when in court.

Another illuminating discussion on this subject is to be found in the published remarks of President John Dickey, of Dartmouth. He said, "A man who exercises this privilege (under the fifth amendment) either genuinely believes his words may incriminate him, or he is using the privilege improperly."

"On the first assumption, he, by his own action, avows the existence of what can reasonably be regarded as disqualification for service in a position of respect and responsibility; on the other hand, if he has invoked the privilege without truly believing that he needed protection, he has acted falsely toward his Government."

Professor Kauper's argument leaves out of account President Eisenhower's point, and asks us to accept the thesis that adherence to the Communist cause is on a par with membership in the Democratic or Republican Parties. It speaks of "questions relating to political affiliations, such as membership in the Communist Party."

The real issue has been described as freedom versus slavery. For the first time in history, the world is confronted with a conspiracy which leaps national boundaries and has set up functioning fifth columns in almost every country. More than one thousand fronts are at work in this Nation alone. Shall we allow them to proceed to undermine our faith and our fredoms without interference?

It was in 1922 that Lenin gave us communism's blueprint for our destruction. He said, "First we wil take eastern Europe, then the masses of Asia, then we will encircle the United States. * * * We will not have to attack, it will fall like overripe fruit in our hands. We must secure the good will of teachers and professors in schools and universities, of liberal ministers of religion, and of the pacifists and reformers of the world in order to create a mental barrage in the minds of capitalistic youth which shall forever bar them from participating in a carnal conflict with the Communist order."

Congressional investigating committees are engaged in the thankless task of digging out the details of this plot. Should we allow this conspiracy to claim "civil liberties as its privileged sanctuary from which to carry on subversion against the Government"? Should we put out the eyes and ears of Congress and the Nation so that the conspiracy may enjoy the luxury of surprising us? Should we allow the social consequences which follow committee efforts to get at the facts outweigh the Nation's safety?

The critics rarely cite specific cases of "abuse" of power. Let's look at the record. Here are three typical questions and answers from the official record[9] of one of the hearings of the House Committee on Un-American Activities:

"Question. Witness, do you belong to any organization dedicated to the proposition that this Government should be overthrown through the use of force and violence?

"Answer. On advice of counsel, I decline to answer that queston on the previously stated ground.

"Question. Have you ever belonged to an organization of that kind?

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

"Answer. I decline to answer that question in that it is an invasion of my freedom of belief and association under the first amendment and on the basis of the fifth amendment (pp. 5347–5348).

"Question. During the period of time you worked in connection with projects of the Chemical Warfare Service, were you a member of the Communist Party?

"Answer. I decline to answer that on the grounds that the question is an invasion of the freedom of speech, belief, and association guaranteed by the first amendment of the United States" (p. 5333).

The witness invoked the privilege 49 times. He was followed by another faculty man who sought the shelter of the first amendment 54 times. Hundreds of similar examples can be supplied.

William Z. Foster, when asked by the committee, "In the event of war between the United States and Soviet Russia, would your allegiance be to the United States or Soviet Russia?" called it a hypothetical question, but finally said, "If the United States entered the war on an imperialist basis, I would not support it." He was obeying the Communist directive to "utilize a political trial to help the revolutionary struggle."

This attitude has continued down to the present. Communist tactics have not changed. On March 1, 1956, two former high Government officials were before the committee.

The committee was seeklig information about Communist methods of infiltration into government. One admitted having distributed Communist germ warfare literature even as American boys were dying in Korea. When asked if his conscience had not bothered him, he answered "not in the slightest." He and the others hid behind the amendment when asked whether they had been Communists while in important government positions.

This is a typical performance. Yet such things furnish the basis for the critics' claim that the committee is invading the civil rights of witnesses. It is this so-called exposure and discrediting which forms the basis for the critics' attack upon committee methods. Generalized assumptions and conclusions are resorted to rather than specific cases for the very practical reason that citations of actual testimony would be fatal to their position.

In conclusion, since the fifth amendment is at the root of the controversy, a report by the American Bar Association committee on Communist Tactics, Strategy and Objectives is decidedly in point. The report said "Communism is not a mere political belief—it is a continuing conspiracy against mankind and against free nations * * * Communism is the gravest menace to our Nation.

"We have considered it to be beyond questioning that any member of the bar in this country who avails himself of the fifth amendment of the Constitution to refuse to give testimony before a propertly constituted committee of the Congress, or before the courts, as to possible Communist affiliation or other subversive activities thereby automatically disqualifies himself from the practice of the profession in any State or Federal court." [10]

I subscribe to these views. If communism were no more than a political belief—if it were mere dissent or unorthodox thinking—instead of a criminal conspiracy, the situation would be entirely different. But this question is no longer debatable. The critics are highly illogical when they voice approval of committee actions so long as ordinary crimes are under investigation, but charge "abuse of power" where treason is involved. They do not appear to be aware of their inconsistency.

Footnotes at end of speech.

In the last analysis, therefore, it comes down to a question of how we shall best defend ourselves. We cannot have a "government of laws" if we do not hold hearings—so that intelligent legislation may be enacted. Hearings mean witnesses and witnesses mean questions. Facts about the conspiracy can only be obtained in this fashion from those who have knowledge. Accept the argument that questioning such persons will produce unwanted social consequences and therefore is an abuse of power, and we reach a dead end—we are stymied.

Having been on the firing line in this contest between despotism and freedom, I know at first hand something of the problems and the seriousness with which they are approached by the committee and the Congress. If we lose this fight for freedom, then indeed will we have a government of men and not of laws. When and if the Communist tyranny takes over, there will be no academic discussion—there can be no argument with a firing squad.

Theodore Roosevelt Centennial 1858-1958: A Call to the American People

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. DEROUNIAN. Mr. Speaker, the Theodore Roosevelt Centennial Commission has been established by the Congress to decide upon appropriate plans for the celebration of the Theodore Roosevelt Centennial in 1958. It is our hope that through this centennial, we may recall for the American people those standards of personal and public conduct that Theodore Roosevelt established for himself and for our Nation, and to recapture his inspiration and guidance as "the greatest teacher of the essentials of popular self government the world has ever known." As a first step, the Commission has prepared a statement of purpose which I take great pleasure in stating herewith:

The Commission which has been charged by the Government of the United States to direct the observance in 1958 of the 100th anniversary of the birth of Theodore Roosevelt recognizes that this is a time less to indulge happy recollections of an earlier age than to summon the resources of the past to help men face the challenge of the present.

For us in America that challenge is to live America's answer to the question dividing the world: whether man has the capacity, under God, to govern himself, and to use the liberty that is his to build a civilization that shall endure. Hear Theodore Roosevelt's prophetic words: "The fate of the 20th century will in no small degree depend upon the type of citizenship developed on this continent."

Seeing in this perspective the responsibility and the opportunity laid upon it, the Commission is convinced that Theodore Roosevelt may be fruitfully commemorated only as that commemoration is related to this basic summons of our time. Mr. Roosevelt's achievements as political leader, statesman, and Chief Executive were epoch making. The personality which charmed his contemporaries with its gaiety, warmth and vigor, and dazzled them by the diversity of his interests and his instinct for action, was the very stuff of which legends are made. But richer in meaning to us and to all men struggling to achieve or to maintain free institutions is the man who demonstrated in his own life this basic truth of free government: that surpassing public service requires no surpassing gifts of intellect, only ordinary abilities raised to extraordinary power by those personal qualities that constitute character, and by the fire in the heart to give and to serve.

Closer to us than the President who cut an interoceanic canal or the mediator of a war between rival empires, is the citizen who showed in action his responsibility toward his city, his State, and his Nation, and inspired in others a devotion akin to his own; the summoner of men and women to live for something greater than themselves; the prophet thundering through the land the moral laws underlying a free society.

It is upon this shaper and molder of the soul of a free people that the Commission proposes to focus the commemoration.

Hear, above the strains and stresses of our time, this authentic American voice: "We know there are dangers ahead, as we know there are evils to fight and overcome, but, stout of heart, we see, across the dangers, the great future that lies beyond, and we rejoice as a giant refreshed, as a strong man, girt for the race. * * * The greatest victories are yet to be won, the greatest deeds yet to be done. * * * There are in store for our people, and for the causes we uphold, grander triumphs than have ever yet been scored."

Thus, Theodore Roosevelt speaks to us all.

To kindle in the American heart today the kind of fire that burned in Theodore Roosevelt's—his passion for his country, his faith in her future, his longing that the quality of American citizenship might become an inspiration and a beacon to mankind—that is our purpose in asking you, our fellow Americans, and, indeed, freemen everywhere, to join in the centennial observance.

Saving the Capitol's Front Lawn

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I

desire to include an article written by Mr. Earl S. Williams, of Washington.

The article follows:

SAVING THE NATIONAL CAPITOL'S FRONT LAWN

(By Earl S. Williams)

If you are one of the thousands of tourists who will visit Washington, D. C., this summer, you will spend most of your sightseeing time in what is probably the best known, most visited, and most significant place in this country—the central Mall and adjacent parks. This area, which may rightly be called the National Capitol's front lawn, extends from the Capitol to the Potomac River and southward to include the Tidal Basin and Potomac Park. Few Americans need to be told of the governmental and cultural center along the Mall nor of the magnificent memorials and and monuments so well placed around the parks. They know of the spacious beauty of these parks and of their rare simplicity so becoming in democratic America.

Here is neither a formal garden or a tangle of underbrush, but a natural blend of well-kept fields, groves and landscaped waterfronts. Here is a place for the education, recreation and relaxation of as many American citizens as can come here. The value of this area is inestimatable.

But how accessible is it? During the cherry blossom season this spring policemen were given special assignments around the Tidal Basin to keep traffic moving. Long lines of cars full of would-be sightseers were urged on past the Jefferson Memorial and other points of interest. Meanwhile hundreds of cars belonging to Government employees stood all day on both sides of the roadways around the Tidal Basin and Potomac Park. They are there on weekdays throughout the year, and for a good reason. These workers have no other reasonably convenient way to get their jobs.

Yet even more crowding is to be expected. Pressure is mounting to use this and that part of the Capitol's front lawn to build additional facilities to handle the growing flood of automotive traffic. Many plans are being made and proposals offered for construction work which will, in the opinion of many, do at least some damage to the attractiveness of downtown Washington. For example, it is proposed that public parking garages be built under a large section of the Mall; that the spacious grounds around the Washington Monument give way to new driveways and parking areas; that Roosevelt Island in the Potomac River provide part of the footing for a new bridge that will block the view of the river, overshadow the Lincoln Memorial, and reduce the Lincoln Memorial Bridge to a secondary role; that Independence Avenue be made part of a 50-mile-an-hour inner loop to speed traffic around the downtown area; and that part of upper Potomac Park be used to build connections from a new Highway Bridge to the proposed Southwest Freeway.

There is unquestionable merit in most of these plans and some of them should and, indeed, must be adopted in view of the critical traffic situation. But will the fabulous $400 million worth of proposed new construction solve the traffic problem? Many experts say no. It will simply mean more people can and will drive to work, the downtown area will became most congested and more parking space will be demanded.

As the population of the metropolitan area continues its unprecedented growth it is obvious that a great many people will have to depend on public mass transportation. This fact is stated often in the local press and the planning sessions, but apparently few suggestions are made as to how, when, and where to start building the rapid transit system that will surely be needed. An extensive study of the transit need is now in progress, however, and it is predicted that a start at some kind of rapid transit operation will be recommended. Meanwhile, suggestions that a subway be built are rightly rejected as costing too much, and existing commuter facilities are not depended on because Union Station is not located so as to serve the downtown area effectively.

The investigators of the transit situation will probably find a great deal that could be done between these extremes. Most of the major suburban centers are reached by railroad and some have stations easily reached by local transit buses. Between the small towns there are large areas that could be obtained for parking lots near possible station sites.

In the downtown area a station could be built in the southwest section near several large Government agencies and in an area now being planned for intensive redevelopment. Short line bus service could provide efficient distribution of passengers across the Mall to the larger business and Government centers. Eventually a railway link under the Mall might become desirable or even essential, and then a convenient station could be located near the busy Federal Triangle area. The Pentagon Building is already reached by a rail spur. If a station were built here and a rail loop completed, another huge employment center could be provided with rapid commuter service.

There are, of course, many obstacles in the way of a well-integrated transit system. The jurisdictional problem is complicated by the fact that the railways extend into 2 States, 4 or more counties, and several small towns beyond the District line. But financing the necessary construction and equipment is the major problem. Rapid transit equipment is expensive, stands idle a large part of the day, and does not usually make money. The high initial cost might never be regained through revenue from the operations here. It appears to be a job that only the Federal Government could do.

The Federal Government now recognizes its responsibility to build the necessary highways and bridges for automotive traffic. What is needed now is an amended policy under which money could be provided for a rapid transit system for the same reasons that highway money is appropriated.

The operation of an effective rapid transit system in the Nation's Capital should greatly reduce the need for expensive freeways, parkways, traffic interchanges, and bridges. It should save time and money for the commuter and parking space for those who must drive. But above all, it should save our parks and make our priceless showplaces and institutions around the Capitol's front lawn more accessible to all Americans. And here, I believe, is justification for a national investment in Washington transit.

The New Sod: Ireland Today

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Herbert D. A. Donovan, a distinguished scholar and historian whom it was my privilege to have as my history teacher when I attended Commercial High School in Brooklyn:

THE NEW SOD: IRELAND TODAY

The traditional loyalty of Irishmen to the land of their ancestors has made its name universally known as the Ould Sod. But Ireland, like the rest of the world, has changed and is changing radically in recent years, and, while the characteristics that memory and story have associated with its name are by no means gone, new developments have come on such a scale that the Green Isle is becoming a very different place from the land of whitewashed cottages and primitive living that most Americans picture it to be.

When the Irish Free State started, 30 years ago, on the course that eventually led to its present independence as the Republic of Ireland, it was faced with economic and social burdens inherited from generations of dependence and exploitation. Its forests were destroyed, its harbors neglected, large areas of its soil unproductive. Housing conditions were primitive in rural districts, and congested and unsanitary in the cities. Agriculture lacked organization and the application of modern science, electric power was undeveloped. Emigration absorbed the young manhood of the country to the extent that Ireland was the only civilized country whose population had declined steadily for 75 years. Manufacturing and banking were in the hands of English and Scottish capitalists, and industries offering profitable opportunities for Irishmen were almost nonexistent. The new government was faced with a heavy burden of debt and an unfavorable balance of trade from which to obtain revenue. Political conflicts had left such bitterness that cooperation in starting reforms was not easy to obtain. In view of these handicaps, the progress of Ireland in a single generation is one of the bright spots of our time.

The Republic of Eire is a little country, little more than half the size of New York State, and with a population about equal to that of the Borough of Brooklyn in New York City. The notable decrease in population has been stopped, but no significant increase has yet begun. Obviously, what has been accomplished here is not the result of natural growth or of the influx of foreign capital. Rather, it is due to the removal of unnatural burdens, the determination of the Irish people, and the intelligent direction of their leaders.

A foremost concern of the Irish Government has been the improvement of farming and of rural life. Ireland has always been predominantly a rural country, and expects to remain so. While a majority of its people live in the country, the tendency to move into the cities is alluring there as elsewhere. To counteract that tendency, careful plans are underway to aid the farmers in every way possible, and the results are gratifying.

In 1948 an economic cooperation agreement was signed with the United States, under which Ireland availed itself of aid under the Marshall plan. The counterpart fund thus established was to be used in Ireland for special projects to aid the Irish economy; the sum eventually amounted to nearly $18 million. By agreements approved this year, the projects helped include making ground limestone available to Irish farmers, to aid soil fertility; eradicating bovine tuberculosis; furnishing creameries with equipment for pasteurizing milk and sterilizing containers; aiding Irish agricultural societies; and, finally, about $5 million to set up an Irish Agricultural Institute—"which the Government plans to make as good as any in the world"—and $1,400,000 to establish an educational exchange program with the United States. Ambassador William Howard Taft, Jr., an outspoken lover of Ireland and things Irish, has enthusiastically supported all these projects.

Reclamation projects, too, are a prime concern in the new Ireland. Work was begun, last year, on the draining of some 52,000 acres in the counties of Galway, Mayo, and Roscommon, which will lead to the development of 22,000 acres of virgin bogland. The scheme provides for the deepening and widening of

about 125 miles of main rivers, besides the alteration or rebuilding of over 1,500 bridges, reconstruction of weirs, etc. The work will take about 10 years to complete, and is estimated to cost about $6 million, entirely defrayed from state funds.

The acreage of cereal crops in 1954 was 1,193,300 acres, as against 1,117,500 the year before. Wheat, in particular, showed a gain of 137,900 acres. The growing of sugar beets has had a remarkable development. In 1926 the first beet-sugar factory was built, at Carlow. Three additional factories have been built since, in other localities, with extensions in 1952. All belong to the Irish Sugar Co., which contracts with the growers, through their organization, for the season's price. Cooperative groups—of which there were in 1954 157, a gain of 35 in 1 year—are buying the most modern farm machines, to be used by the small farmers. The 4 factories can handle 1 million tons of beets, yearly, producing 140,000 tons of sugar. Last year, records were set in the amount of beets produced—808,625 tons—in average yield per acre and in sugar content. Beets are now the third largest money crop—surpassed only by wheat and potatoes—and seventh in acreage. The retail price of sugar, 7d., is estimated the lowest in any country, except Norway.

Probably no Irish product is better known in this country than bacon. Hence it is interesting to read that during the first quarter of 1955, the bacon factories received 297,895 pigs, compared to 277,348 and 219,855 in the 2 previous years. The figures furnished by the Irish Minister of Finance show, too, a remarkable gain in the export of cattle last year, rising to 216,000 cattle, valued at $35 million compared to 141,000 valued at $21 million the year before. Agricultural prosperity is reflected in the wages of farm workers, the index of which stood at 313.8 in July 1954, against 299.1 in 1953. This has halted, at least temporarily, the decrease in farm workers; and the industry is hoping that the changing trend may continue. During 1954, also, purchases of agricultural machinery from abroad increased 40 percent, including 5,377 tractors, against 4,360 the year before. In the fall of 1954 a meeting of 1,200 farmers from all parts of Ireland laid plans for a new national organization, to promote the efficiency of Irish agriculture. It is gratifying to know that each summer recently, boys from American 4–H Clubs and corresponding Irish clubs have traveled to each other's countries and observed each other's methods of work and ways of life.

Next to farming, the traditional occupation of the Irish has been fishing. Familiar to American audiences through the Man of Aran and other films, deep-sea fishing off the rough west coast, and salmon and other game fishing on inland lakes and streams plays a prominent role in Irish life, and has attracted to the country multitudes of visitors. Every effort is being made to improve and stabilize the fishing resources of Ireland. In 1952 a sea fisheries board was established by law, to take over the work of a cooperative association started in 1931, whose problems had been intensified by World War II, causing difficulties in procuring proper boats and tackle. The board has recently launched a new power trawler, better than heretofore in use. Last year, the Government made an appropriation for furnishing new boats to fishermen, who, if they are "competent, able, and willing to work hard," can obtain the new boats without prepayment or deposit. A survey of salmon and sea-trout fishing is being sponsored jointly by the Government and Guinness Brewers.

While it is not intended that Ireland will or should become industrialized to the degree that England is, it is realized that, for her own safety as well as to reduce the unfavorable balance of trade, the country's resources ought to be handled so as to make her people more self-dependent, and to increase her sales of manufactured goods, especially to the dollar area. Many avenues are being explored, with gratifying results. During recent months contacts have been made and markets opened in various countries for the sale of Irish goods. These include gypsum wallboard, to the U. S.; transformers, to India; cornflakes, to Portugal; lightweight tweeds, jams, and chocolates, to Canada, besides Waterford cutglass, the whole exhibit of which, at the Toronto Fair, was bought by one firm. A trade mission just returned from the British West Indies reports that a display held in Port of Spain, Trinidad, was opened by the Minister of Commerce, and awakened wide interest. Agents were appointed for more than 60 Irish firms. Irish products most in demand are meat and dairy products, stout, and prune wine. New contacts were arranged for confectionary sisal matting, Irish mist liqueur and Waterford cutglass.

In Ireland itself, factories recently established include a cotton mill in Sligo, a tannery in Kerry, and a factory for substitutes for sole leather in Cork. The Government has announced that an oil refinery is planned, three companies agreeing to join in its direction and operation. As a result of such activities, the industrial output of the country rose from $323 million in 1951 to $352 million in 1954. The number of factory workers—about 228,000—set a new high, and the index of their wages rose from 249.7 to 253.1. "Wholesale prices fluctuated little, and the index of retail prices was unchanged since August," stated the minister of finance, in introducing the budget in the Dail (Parliament), in May 1955.

As previously noted, Ireland is a debtor country, and hence makes every effort to reduce her trade deficit. Her success is shown by figures cited by the minister, viz, "Imports, last year, amounted to * * * almost $8,400,000 less than in 1953, while exports were $2,800,000 more * * *. We earned a slight surplus with the dollar area, which though it may be purely temporary, is a phenomenon without precedent in our records. * * * There is obviously much room for expansion of direct trade with the dollar area."

The promotion of industry and the expansion of trade involves the improving of means of transportation; and toward this end the Irish Government and people are devoting their best efforts. Ireland has numerous good harbors, including the magnificent harbor at Galway, the nearest European port to the United States. The chief ports at present are Dublin and Cobh, the harbor of Cork. The port of Dublin is being constantly remodeled, its deep-water berthage being now five times what it was as late as 1939. This improvement cost over $3 million and the work of deepening the bar, which took 2 years, was completed in 1951, at a cost of $1,400,000. Cork harbor is being provided with a new turning basin at the North Kuays, through a grant of $1,200,000 from the National Development Fund. To modernize the railway system, a new public loan was floated this year by the CIE (Gaelic for the Irish Transportation System), to provide money for 94 diesel engines, and the first of these have already been installed. It is intended to have all CIE rail services operated by diesels by June 1956.

Progress in air transportation is steady and encouraging. The airport of Dublin, from which the Aer Lingus Lines fly to Britain and all parts of Western Europe, and the great port of Shannon, the first eastern point of contact for Americans going to Europe, are a source of pride to the Irish, and statistics show that they are immensely successful. Aer Lingus carried 297,000 more passengers in the fiscal year 1954 than in the year before, and collected about $4¼ million in fares. Its freight increased 28 percent, its expenditures 4 percent, and its gross revenue 6 percent. It still operates at a loss—which is borne by the Irish Government—but the loss declined to only $175,000 last year. In May of this year, weekly services to Biarritz and to Barcelona were begun. Better known to Americans is the Shannon Airport, close to the historic city of Limerick. The number of landings at Shannon grew from 4,993 in 1951 to 8,208 in 1954; the number of passengers practically doubled, and the business transacted showed a healthy increase, including a good volume of typical Irish goods. The Esso organization has just installed there a hydrant refueling system, the largest and most modern in Europe. The Minister of Commerce says that the Government prides itself on the service furnished to passengers and on the technical assistance to aircraft; it is now studying the possibilities of developing the customs-free facilities of this port. An interesting example of the growing importance of Shannon was the beginning there, in January last, of transatlantic service by the German Lufthansa.

Ireland's recent progress is due in large part to the energetic development of her power resources, both from water and from the peat bogs, which exist in many parts of the country. While these bogs have always furnished a main source of fuel in the country districts, it was realized only recently that the peat is a valuable source of power. The Bord na Mona (Peat Development Board) has been entrusted by the Government with the task of milling peat into briquettes, which was first tried at the Bog of Allen in 1933. The work has been so successful that the whole future program of using peat in power stations is to be based on it. The Board proposes to use some sixty to seventy thousand acres of bog for developing electricity, thus changing the bogs from permanent distressed areas into a source of strength to the country, furnishing employment and helping the rural electrification program. This program, according to the Minister for Industry, speaking in the Dail in the spring of 1954, is "The most ambitious * * * development ever undertaken in this country." It began 8 years ago. The number of rural homes electrified each year is some 33,000, and it is hoped to complete the scheme in 6 more years. As of last year, it was announced that 36 percent of the rural population had access to electricity, and that in the completed areas 67 percent of the dwellings were connected. Most of it was used for domestic purposes, and a steady rise in demand for the larger appliances, such as cookers, water heaters, and washing machines, is shown. One of the four national power stations, that at Ferbane in Offaly, uses only milled peat for fuel. The peat is obtained from the bog of Boora, nearby, which not long ago was a treacherous swampy waste, but in which more than 3 million yards of drains and narrow-gage railways have been laid. When in full production the plant will have its own railway system, with about 35 miles of track, over 400 wagons and 400 tractors. Nearby a whole village of 104 houses has been built to house the married workers.

Housing is under the care of the Irish department of local government, and, thanks to its initiative, many of the picturesque but outmoded dwellings that used to draw unfavorable attention have disappeared. In their place we find new modern houses, of which about 42,000 had been completed between March 1947 and May 1955. Six thousand more were being built, 3,000 bid on, and over 10,000 sites were available. Even in remote parts, such as the island of Achill off the west coast, modern villages have been built up. The money spent on housing during 1952 was about $19 million—a substantial sum for so small a country. Aiding in the success is the fact that in 1954 Ireland

became self-sufficient in making its own cement.

Health and hospitalization have made spectacular advances in the country since independence came. Irish hospitals have received considerable publicity in America, on account of the Sweepstakes plan which partly supports them; hence, it will not be surprising to learn that the country is well equipped with hospitals of most modern construction and equipment. Under a new building program started after the late war, 11,000 beds in new or reconstructed hospitals are being installed, and in the 6 years, 1947–53, over $32 million was provided by the Government from the hospitals' trust fund for construction of hospitals; an example is the new Galway Regional Hospital of 486 beds, costing over $4 million.

Less talked about, but probably of greater permanent importance, is the striking gain in the control of diseases which formerly took great toll in Irish lives and efficiency. Due in part of the climate, in part to bad health habits, and not least to lack of care, the Irish people always suffered heavily from tuberculosis. Between 1947 and 1953, the death rate from this national scourge fell nearly 70 percent, the mortalities in this latter year being 1,900, or four-tenths per thousand. The numbers undergoing treatment have increased steadily, and many of the counties now have enough beds to take prompt care of all cases requiring institutional treatment. The total number of patients in institutions rose from 5,444 in 1950 to 6,870 in 1954. Tuberculin testing, BCG vaccination of the young, mass radiography, and blood banks are spreading.

Dental care, long neglected in Ireland, is stressed in the schools. Nearly 107,000 pupils received dental treatment in 1953, and pressure put on local authorities to increase their dental staffs led to the engagement of 24 new dental surgeons, which, of course, is only a beginning. Mental health service and reduction of infant mortality are other activities which are setting new records for the country. As concrete evidence of all this, the lowest death rate ever recorded in Ireland—11.8 per 1,000 population—was returned for 1953. The cost of the local authority health services was estimated at $31,496,400, one-half being paid by the Nation, the rest by local taxes.

Education, including the school system and all media of information, is progressing satisfactorily. School attendance in 1954 registered 476,000, an increase of 8,500; secondary schools 50,000, a gain of 2,000; there are about 20,000 in vocational schools. One of the early acts of the Irish Government was the appointment, in 1924, of a commission to inquire into and advise upon technical education for the country. Swiss and Swedish experts served on this commission, which issued its report in 1927. Legislation followed, resulting in two technical schools in Dublin, and the city of Cork also provides courses. University College and Trinity College, both in Dublin, conduct summer sessions, for which modest scholarships are offered to foreign students. Radio Eireann provides a comprehensive program of entertainment, sports, education, and news, which is heard over the whole country, and, in cooperation with the British Broadcasting Corp., is available in the other island. It is worthy of note that during 1954, 7,500 miles of additional trunkline telephone cable were laid in Ireland; and that the telephone traffic increased by 10 percent over the previous year.

Despite this strenuous domestic program, the Irish people and Government—no matter which party is in power—are showing on every possible occasion a healthy and vigorous interest in world affairs, to which they feel that they have much of value to contribute. While Eire has thus far been vetoed from the United Nations, and while she is prevented from joining NATO by the requirement of accepting the validity of the British occupation of her northern counties, she maintains the most friendly relations with all the free world. It is not forgotten that her great leader, Eamon de Valera, made his mark as President of the former League of Nations. Ireland is affiliated with many of the specialized agencies of the United Nations, especially with the WHO. Within the past 2 years, many international bodies of scholars and businessmen have met in Dublin—among them the European Broadcasting Union, the World Medical Association, an international optical conference and the International Astronomical Union. Irish delegates go regularly to similar meetings in other countries, such as the TB Conference in London, the Iserlohn Festival and the recent bicentennial of Columbia University. Next to England and Scotland, both of which countries have large groups of Irish residents, Ireland's closest ties are, as they have been for over a century, with the United States. Thousands of Americans, mostly of Irish descent, visit Ireland each year; on 1 day—December 11 of last year—10,000 bags of Christmas mail arrived in Dublin from America. But the hospitable Irish people have a strong desire to have non-Irish Americans go to see for themselves the Ireland of today.

An English economist who was for years London editor of the Montreal Daily Star recently made a very keen observation on the present position of Ireland, comparing her opportunities with those of Canada of a few years ago. He pointed out that the process of change from an agricultural economy to a balanced one does not eliminate recessions and other problems. But, "every recession in Canada has been followed by a spurt into a new high level of prosperity;" yet, "Ireland today is paradise to the eye of the constructive economist who has seen the growing pains of Canada." He said that it is only lately that practical men have fully realized the great advantages that Canada, a young nation, enjoys, and that to many of them the discovery came too late. He warned that this should not be true of Ireland, "a land of tomorrow," offering to young men especially great advantages, which will benefit most those who first seize them. In view of such facts as are here presented, it seems obvious that Ireland is destined to enter upon an era of prosperity which will come as a just reward from the vision, energy, and resourcefulness that have made her in these past 30 years the "new sod."

Government Secrecy

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. PRIEST. Mr. Speaker, I wish to insert in the CONGRESSIONAL RECORD a speech made by Clark R. Mollenhoff before the Washington chapter of Sigma Delta Chi Fraternity on May 23, 1956, relating to the work of the House Government Information Subcommittee.

Mr. Mollenhoff is a distinguished correspondent for the Des Moines Register and Tribune and the Minneapolis Star and Tribune. He is a winner of many newspaper awards, the most recent being the coveted Raymond Clapper award. He has been following closely the work of the House Government Information Subcommittee, which is headed by Representative JOHN E. Moss, of California.

As a former newspaper editor, I, too, have followed the excellent work of Mr. Moss' subcommittee in exploring the very important question of the availability of information from Federal agencies.

Mr. Mollenhoff's speech follows:

The Moss subcommittee has performed a great service for the press. With a minimum of politics, the subcommittee has accomplished these things:

1. It has put Government agencies on record on their information policies, and has compiled a book containing the answers each agency has given to a questionnaire.

2. It has served as a place for the press to register complaints, and has given the authority of a congressional committee to the follow-up on those complaints.

3. It has heard witnesses from the press, the scientific fields, the legal field and from the agencies on the specific problem of Government information policies.

4. It has obtained some changes in information policies in such agencies as Treasury, the Federal Power Commission, the Civil Service Commission, the Post Office Department, the Interstate Commerce Commission, the Agriculture Department, and the General Services Administration.

There is enthusiasm for what the Moss subcommittee has done among many who have been active for years in the fight against Government secrecy. Among those who have felt the Moss subcommittee has made a substantial contribution are Red Newton, head of the SDX freedom of information committee; Russ Wiggins of the Washington Post; Jimmy Pope of the Louisville Courier Journal; Kenneth MacDonald, editor of the Des Moines Register and Tribune; and Harold Cross, attorney for the A. S. N. E.

The enthusiasm these men express is not an endorsement of all of the committee's actions, it is merely an appreciation for an official body working toward the same basic end that they have worked for. These men have battled against Government secrecy for years. They know the frustrations of fighting to stay even in the fight against big government. They know the press needs all the help it can get if it is to make any real progress.

Some of these men while applauding the Moss subcommittee, have at the same time criticized it for not doing more about opening up more of the secret sessions of congressional groups. Measuring the Moss group against the ideal, we might find much to be desired. Measuring it against reasonable standards, I do not think it is overstating the case to say the Moss subcommittee has performed a great service for the press.

If the Moss subcommittee on public information never does another thing from this day forward, it will deserve our thanks. That thanks should be extended not only to Representative JOHN MOSS, the chairman, but to all of the members of the committee and to the staff members. Politics has been kept to a minimum, as it certainly should be when a committee goes into such an important problem as the rights of the public, the press and the Congress to information from our executive agencies.

Both Representative HOFFMAN and Representative DAWSON have been around Congress a long time. They have had personal experiences where executive agencies headed by Democrats or Republicans have sought to bar the Congress from access to information on Government operations. Both men have been infuriated by what they considered to be arbitrary action by the executive agencies that interferred with their rights to information. They have been aware of the way

the press has been frustrated in its quest for facts.

I think that an examination of the statements of Representative HOFFMAN and Representative DAWSON on the right of the public and press to access to Government information will find them both in essentially the same position. Although they are poles apart politically, both favor this general position:

The Government is meant to serve the people, and is not the property of those who happen to be in control of the executive agency at any given time. The people, the press and the people's representatives are entitled to the maximum of information on how laws are being administered and enforced, and what factors are influencing the administration and enforcement of those laws. The burden of proof should be on the executive agency to give good and sufficient cause in those cases where it is felt information should not be made available to the public, the press or the Congress.

Fortunately, the Moss subcommittee has been able to take up the problem of information policy outside of the framework of any of the philosophical disputes that tend to split Democrats and Republicans into opposite camps and cloud any basic problem of the public's right to know.

I am hopeful that the nonpolitical atmosphere will continue, and that the Moss subcommittee will do even more worthwhile work. However, this is an election year and anything can happen to a congressional probe in an election year.

I would be hopeful that all members of the subcommittee would continue to handle this subject on the theory that "The best politics is no politics." I would like to see the Democrats keep any criticism of the Eisenhower administration in perspective, and avoid any partisan overstatement. I would like to see the Republicans on the committee take the farsighted approach, and try to convince the administration to make the reasonable changes in information policy that Republican Congressmen would like to see set as a precedent for any future Democratic administrations to follow.

Out of it all, I would like to see the Sigma Delta Chi or the Moss subcommittee come up with a policy statement on public information that could be made a part of both the Democratic and Republican platforms in this election year.

Platforms may not mean anything, but I would like to see both major political parties stuck with a comprehensive information policy. I'd want it specific enough in its pronouncements, that it could be jammed down the throat of any public official who sought to hide his errors, his frauds or his policies behind some vague claim that his actions are "confidential."

I don't believe that this unqualified "confidential" claim can be properly asserted by anyone except the President in his relationship with his Cabinet and other members of his immediate staff.

Moving from what the Moss subcommittee might do to what it has done, I again assert that if the Moss group does another thing from this day forward, it will be deserving of a thanks from the press.

It is possible to name several agencies that have changed or modified their policies on information as a result of the Moss subcommittee action. In some cases, the agency had considered a change but the lethargy of big government slowed action to a walk or had even stopped it. In other cases, agency heads weren't just sure what their information policies were until they came under the scrunity of the Moss subcommittee. They had to be put on the spot.

Momentarily leaving aside the specific changes in individual agencies, I would like to discuss the one thing the Moss subcommittee has done that I know will have lasting value. The subcommittee sent a questionnaire to every Government agency requesting answers to basis queries on the agency's information policies. The answers given by the agencies have been put together in one printed volume that should be required reading for the Washington Press Corps.

If you don't care to search through it for stories on the information policies on the agencies with which you are familiar, it should be kept as a handy reference book when an information problem presents itself.

The accumulation of the statements of the agencies on their information policies was a starting point for the Moss subcommittee. It should be our starting point when a Government agency refuses us information that we feel we should have.

This volume does not solve your information problems, but it gives you something concrete. It gives you the agency's own position as related to the Moss subcommittee. It is something in black and white to use in comparing with the views of officials who seek to frustrate your requests for records.

Many of the things the Moss subcommittee has done, or will do, we could probably have done for ourselves if the press had been industrious enough and single-minded enough on one issue.

However, it took a congressional committee to put authority behind the questionnaire.

In answering the questionnaire, the executive agencies have been forced to go on record. If the answers they have given present a reasonable information policy, the press can use their own position against them if they seek to be arbitrary and change the position at some future time.

If the answers to the questionnaire show an unreasonable or public-be-damned information policy, the agency has made itself a fixed target for criticism until it changes those policies.

It is important that our targets be fixed. Most of you have had the experience of going to a governmental agency for information and having the request turned down on one ground. And if you have been successful in demolishing the law or logic put up at the first refusal, you have undoubtedly seen the agency shift to a new defense against giving up information that might be embarrassing.

This is what I call the shifting target approach of some public information folks that I think the Moss subcommittee has done a lot to nullify.

Another important function of the Moss subcommittee has been the accumulation of testimony from experts in the scientific field to give their views on the impact of Government secrecy on the exchange of information and scientific development.

Legal experts appeared before the Moss subcommittee in the last 2 weeks to discuss secrecy in the executive branch of the Government, the legal rights to keep certain things secret, and the court decisions and opinions of the Attorney General on this subject.

I was particularly impressed with the testimony of the legal experts, and I think that every reporter here would benefit from reading that testimony. In fact, I will go so far as to say I think every newsman in Washington owes a duty to himself and his publication to read that testimony.

I would suggest that you first read the April 27, 1956, report of the House Government Operations Committee entitled "The right of Congress to obtain information from the executive and from other agencies of the Federal Government." The report was prepared by Associate General Counsel William Pincus.

We must always face the fact that the right of the press to obtain information can never be any better than the rights of the Congress, and that our rights in this field are necessarily tied to theirs.

After reading that report, read the testimony of the lawyers who appeared before the Moss subcommittee. I would call special attention to the testimony of Prof. Bernard Schwartz, of New York University, and Harold Cross, attorney for the American Society of Newspaper Editors, who has specialized in the field of press access to information in Government agencies.

In my opinion, this report and the testimony of these lawyers completely demolishes the Justice Department's recent assertions that executive agencies can arbitrarily treat any intra-agency or interagency communication as confidential and outside of the range of congressional subpena or the inquiries of the press. The only explanations I have received from the Justice Department have been vague and unsatisfactory.

In fairness, I suggest that you then go to the Justice Department and seek an opinion—preferably written—with an explanation of the reasoning and law behind the doctrine that the public has no right to any more than the final decisions of executive agencies and cannot go behind those decisions.

There may be a few stories that would develop out of an examination of what the Moss subcommittee has been doing, but if you never write a word about the testimony or the report the study will be worth your while.

The least that can be expected of us is some little understanding of the laws and the court cases that effect our access to information. Here you will find much of it bound up in a handy package to read and to use. It is the kind of equipment that I don't think a Washington reporter can afford to pass by.

I have taken several secrecy problems to the Moss subcommittee, and have been pleased with the follow-through. The major problem involved the May 17, 1954, letter sent by President Eisenhower to Defense Secretary Charles E. Wilson during the Army-McCarthy hearings.

The letter was used to authorize Army Counsel John Adams to refuse to testify about conversations he had with Sherman Adams and Deputy Attorney General William P. Rogers. Many of you are aware how this letter has since been used by other agencies as authority for broad secrecy doctrine. In essence, this doctrine is:

The press, public and Congress can be barred from access to any intraagency or interagency communiation the agency feels is confidential.

This broad secrecy doctrine has been used from Dixon-Yates to the Chotiner memo. It is my feeling that in each case, the administration would have been better off to take the brief embarrassment and open the records, rather than engage in a long fight that is certain to end with the records being brought into the open.

Senator John McClellan stated recently that Attorney General Herbert Brownell or Deputy Attorney General Rogers had sent a memo to Justice Department attorneys stating that they should deal "cautiously" with Mr. Murray Chotiner.

Rogers has declined to give me this memo, or to state the circumstances that caused the Justice Department to urge "caution" in dealing with Mr. Chotiner. This is confidential executive department business, Mr. Rogers says. He states that such a memo is protected from scrutiny by the press or Congress by the doctrine of separation of powers.

If the department were to apply the same principle to the communications involving T. LaMar Caudle, his superiors, and Matt Connelly, those matters—now the basis for

criminal charges—would also be "confidential."

I don't believe the communications between Connelly and Caudle should be regarded as secret executive agency business. I think there is as little logic behind the secrecy surrounding the Chotiner memo.

Within the last couple of weeks, the Government Operations subcommittee of the House made a report stating that Brownell was wrong on some of his assertions on executive secrecy as set out in the May 17, 1954, letter. That report states there is no legal support for Brownell's assertions on a broad executive secrecy.

The Moss subcommittee has brought out testimony from other agencies showing they did not share the views of the Justice Department on the arbitrary right to withhold any interagency or intraagency communications.

The compilation of reports from various agencies showed how many agencies were relying on the May 17, 1954, letter as justification for secrecy, and how many were not.

As this subcommittee is helping to bring this matter to a head, it can also help bring your problems into focus. I would suggest that you take your problems to Chief Counsel John Mitchell, Staff Director Sam Archibald or Senior Consultant Lacey Reynolds.

This subcommittee must rely upon the press to bring cases of unreasonable secrecy. We should avail ourselves of this opportunity to solve some of our problems and learn some of our rights.

The Small Farmer Is the Modern Vanishing American

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire that there be included copies of two letters which I have recently received from small, family-size farmers in my district.

These letters were unsolicited responses made to a letter which I wrote to small cotton farmers explaining the provisions for cotton acreage allotments which were included in the farm bill just enacted. They speak for themselves, very plainly and very tragically. These farmers want the answer to their problems, but I frankly cannot offer them any encouragement.

Mr. Speaker, when you receive letters like this it makes you wonder if we here in Washington are not living in an ivory tower of heartless indifference to the human problems and concerns.

With names and addresses omitted, these two letters follow:

DEAR CONGRESSMAN: I am or was farming on a small scale, a one-man farm or family farm, but not any more. This sliding scale has already "slid" me and many others out. When the big acreage was cut the little acreage was cut, so I am out with several others and 1957 and 1958 will get the rest of the little fellows. So what are we going to do?

I am 59 years old, plenty able to work, but when I fill out an employment application and go in for an interview the first thing they do is look at my age and then say you are too old. If I was to ask for a pension, they would say you are too young. So, it's beyond me. I am too old and too young, so they say. So what?

I am an American, paid taxes all my life, raised two sons that went to the war. We could all have an equal opportunity in this land of yours and mine, but now I am out because I was a small farmer and out in the employment line because they say I'm too old. I have debts and responsibilities and, above all, I have to eat. But how?

Mr. BASS, I am waiting to hear from you on the solution.

DEAR SIR: I was sure proud to get this letter from you and to think that you have got feeling for the poor people. But for me it is too late to help me and my children in farming.

I had 40 acres of land and I had to sell some to live. I did not owe a penny on the land. It was all paid for. All we have now is truck patches. If something isn't done we are going to lose all that we have worked so hard for. This farm program has brought us down to truck patches. Give me the answer to this problem.

Indian Bureau Does It Again

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. BURDICK. Mr. Speaker, I have here an editorial which appeared in the Devils Lake (N. Dak.) Journal on May 26, 1956. This article calls attention to the irresponsible attitude taken by the Indian Bureau in regard to the welfare of the Indians and its arrogant disregard of the regulations to which it is supposed to adhere:

INDIAN BUREAU DOES IT AGAIN

Officials of the North Dakota Public Welfare Board and the United States Indian Bureau were all set for a conference last week when, without any apparent reason, the Federal agency called it off.

Selene Gifford, Assistant Indian Affairs Commissioner, was to meet with the State welfare board, the North Dakota Indian Affairs Commission and legislative representatives to clarify Indian policies.

Only the Indian Bureau can adequately explain why it suddenly got cold feet and refused to go on with the discussion. However, as has often happened in the past, the Bureau has no explanation for its actions.

Those of us who live near Indian reservations continually wonder at the justification for the actions of the Bureau. Nothing in that agency is done with a view to having either the Indians or the non-Indians understand its purpose.

There was poor public relations, both with the Indians and the adjoining communities, in the closing of the Fort Totten Hospital, which has now been replaced by a small clinic.

Fort Totten almost lost its school until the undercover efforts of the Bureau toward that end were brought to light.

Law and order came belatedly to the reservation, but only to end up with the Indian Bureau dictating who should serve as judge, rather than complying with reservation regulations, which provide for approval by the tribal executive committee.

Even the United States Indian Commissioner apparently has no explanation for the failure to keep faith with the people on the reservation. One of the first requisites in setting up instruments for law enforcement should be to abide by regulations. Unless the Government sets a good example, how can it expect the Indian people to have much respect for the law.

Authorities have enough trouble with law enforcement on our Indian reservations as it is without planting the seeds of disrespect for the law.

Has the Indian Bureau become so entwined in bureaucratic red tape that it has lost touch with the American citizenry? Does it have the right to flout regulations or to call off conferences without giving an explanation?

It would seem that the Indian Bureau stands as an example of what happens when an agency becomes too big and lacks a spirit of responsibility to the people it is supposed to serve.

For some reason, the Bureau has a different regulation for practically every Indian tribe. Actually no one knows what are its guiding principles.

Under the circumstances, perhaps it was too much to expect that it would be possible to get an official from the Bureau to sit down for a discussion. It could prove embarrasing.

Schenck To Confer With Residents of His District

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. SCHENCK. Mr. Speaker, it is my great privilege and honor to represent the people of the Third District of Ohio here in the Congress of the United States. I am humbly grateful for this opportunity to be of service, and it is my constant aim to serve my constituents in the very best way possible. As their Representative in Congress it has been my constant policy to keep in close contact with the people of the Third District so that I may know how they feel about the many important issues facing us here in Congress.

Our Third District is the largest congressional district in Ohio and one of the largest in the United States. Its great importance, however, is not dependent on size alone, but rather on the outstanding contributions of its fine citizens to the general welfare of our Nation. Not only is it the birthplace and cradle of aviation, but many of its other products and inventions are serving people throughout the world. Our people are highly skilled in many ways, and we have a district in which scientific projects, manufacturing, and agriculture are developed to an unusually high degree. As the Representative of this great district, I have considered it my duty not only to be well informed of the opinions of my constituents, but also to be of the greatest possible service to persons having problems dealing with agencies or departments of our Federal Government.

Five years ago I initiated the idea of holding grassroots conferences through-

out our district, and I have continued this practice each year during the time Congress is in adjournment. I also have a full-time congressional service office at the United States post office building, in Dayton, where I can meet with people personally at any time that my official duties permit me to return to the district.

During the time I am in Washington, attending to legislative and official duties, a competent secretary is in charge of my district service office to assist callers and to help them with requests for aid in dealing with the Federal Government so that I can be of every proper assistance to them.

In these ways I have sincerely tried to keep well informed as to the personal opinions of my constituents, and I have also tried continuously and sincerely to be of every proper service to them.

Members of Congress are constantly called upon to give careful and earnest consideration to legislation dealing with many complex national and international problems. These day-to-day decisions often affect the lives and living of every citizen in our Nation. Consequently, these personal and private conferences help me to serve all of the people in my district in a much more effective manner.

This year during our official congressional recess, I am again taking time to hold these "grassroots conferences" throughout our district at convenient public buildings. I deeply appreciate the fine cooperation of the many officials who have made these meeting places available to me as an aid in rendering this public service.

This is the schedule I have arranged:

Dayton post office, room 314: September 10 and 11, 9 a. m., to 4 p. m.

Miamisburg City Building: September 13, 4 p. m. to 8 p. m.

Germantown City Building: September 14, 4 p. m. to 8 p. m.

Hamilton Court House: September 17 and 18, 9 a. m. to 4 p. m.

Middletown American Legion, 116 South Main Street: September 19 and 20, 9 a. m. to 4 p. m.

Oxford Municipal Building: September 21, 4 p. m. to 8 p. m.

Fairfield, Butler County, City Building: September 22, 4 p. m. to 8 p. m.

Brookville City Building: September 24, 4 p. m. to 8 p. m.

Each year an increasing number of our folks have visited with me at these conferences, and the attendance has been most encouraging. It is sometimes surprising to see how much can really be accomplished when a citizen and his Congressman can sit down face to face and talk over problems of national concern.

Special appointments are not necessary for these conferences, and I sincerely urge individuals or groups to meet with me on the date an at the place most convenient to them. The knowledge obtained through those "grass roots conferences" will help me to render better service—both legislative and personal—to all of the people of our important Third District here in the Congress of the United States.

Telegram From Governor Meyner, of New Jersey, Concerning Federal Aid Highway Bill

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. CANFIELD. Mr. Speaker, I desire to call to the immediate attention of the House conferees on the proposed Federal aid highway bill and the House as a whole a telegram received today from Gov. Robert B. Meyner, of New Jersey. In this telegram the Governor vigorously supports the Fallon bill formula supported by the New Jersey congressional delegation.

The telegram follows:

TRENTON, N. J., *June 5, 1956.*

Hon. GORDON CANFIELD,
House Office Building,
Washington, D. C.:

The Nation felt that the proposed Federal aid highway bill was to have a logical and sane approach to the ultimate completion in 13 years of the National System of Interstate Highways, not only as a means of economic improvement of the States and the Nation but also as a most important facet to the defense of this Nation. The elements of the Fallon bill would have accomplished this with its basis of need and a provision to periodically review expenditures for purposes of balancing funds to meet the needs of the States. It is indicated that the formula method of the proposed Gore bill would find some 30 States receiving more funds than are required and 18 States and the District of Columbia receiving much less money than is necessary to complete the System within their jurisdiction. This is neither a statesmanlike nor a businesslike approach to a serious problem nor a forthright one. A review of the National Good Roads Association's analysis of the two bills reveals some startling facts.

For the most part the Midwest industrial States and the Pacific and Atlantic seaboard States, sources of materials and products and export areas in time of emergency, are, under the Gore plan, left without sufficient funds to complete the system of highways necessary to this Nation's well being. Under no condition will the roads of the Nation provide adequate service, if the roads of the States producing our war potential, and the roads of the States from which these products are distributed, are not completed and integrated with the remaining system. These very States, by reason of their development, are the ones which produce the highest traffic volumes in the Nation. New Jersey being 2d in population density, 6th in industry, 8th in motor vehicle registration and 45th in size has a traffic volume 7 times the national average, 5½ times that of Pennsylvania, and 2½ times that of New York with 200 million vehicles crossing its borders each year. It is difficult, if not impossible, to understand how Congress, representing all the people of this Nation, can approach this problem and solve it on any basis other than actual need and keep faith with the people they represent. The controversy arising from the difference in original figures submitted by New Jersey and Pennsylvania is one that has not been, on the surface, carried on by Pennsylvania for a very good reason. New Jersey when requested by the Bureau of Public Roads to submit its estimate of highway needs, undertook the assignment as a serious responsibility. Pennsylvania on the other hand apparently erred and submitted an estimate of needs which produced an average cost per mile of $577,000. We all know that a dual highway on interstate standards could not be constructed for this cost in their areas. Our State stands by its estimated needs and to demonstrate the cost of urban improvements on the interstate system a section of the Passaic Bergen expressway, relocated route 46, will average some $7 million per mile. Realizing the importance of your responsibility I earnestly hope you gentlemen will give due consideration to this factual presentation. Any influence you can exert with the Senate and House conferees will mean much to New Jersey.

ROBERT B. MEYNER,
Governor of New Jersey.

Proposed Changes In Excise Tax Administrative Structure

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. COOPER. Mr. Speaker, the Committee on Ways and Means today resumed consideration of the report of the Subcommittee on Excise Tax Technical and Administrative Problems. As I have done in the past, I will insert in the RECORD at this point a release which I issued as chairman of the Committee on Ways and Means with respect to the action taken by the committee today.

The committee will meet in executive session on Friday, June 8, 1956, to resume consideration of the subcommittee's report, as set forth in the press release:

CHAIRMAN JERE COOPER OF THE COMMITTEE ON WAYS AND MEANS ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

The Honorable JERE COOPER, Democrat, of Tennessee, chairman of the Committee on Ways and Means, announces the tentative decisions reached today by the committee with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. Previous announcements with respect to earlier decisions of the committee were issued on May 10, 14, 16, and 17, 1956. These announcements are printed in the CONGRESSIONAL RECORDS for May 10, 15, 16, and 17, 1956, and appear on pages A3818, A3918, A3965, and A4020, respectively.

Chairman COOPER stated that the committee would resume its consideration of the subcommittee's report in executive session at 10 a. m., on Friday, June 8, 1956. A table of revenue estimates relating to the subcommittee's recommendations is printed in the subcommittee report, beginning on page 13. A more detailed explanation of the recommendations appears in the subcommittee report beginning on page 16. The decisions reached by the committee today are as follows:

XI. TOBACCO AND ALCOHOLIC BEVERAGE TAXES

1 through 3. The committee deferred further action with respect to these para-

graphs until Friday, June 8, 1956, at 10 a. m.

4. Cigar manufacturers should be authorized by the Treasury Department to shift over to a daily return basis for reporting receipts. This should be optional with each manufacturer and should be effective July 1, 1956.

5. Refunds or credits for the tax attributable to losses of distilled spirits, beer and wine in a disaster, as declared by the President, should be made available directly to retail liquor and beer dealers as well as to manufacturers and wholesalers.

6. The phrase limiting refunds or credits in the case of alcoholic beverage or tobacco product losses attributable to a disaster, to the tax paid on products condemned by a "duly authorized health official of the United States or of a State" should be broadened to include health and police officials of cities and towns.

7. Refunds or credits in the case of the tax paid with respect to losses of alcoholic beverages or tobacco products in the floods and hurricanes on the east coast of the United States in 1955 should be made available in the same manner as is proposed for the future where a disaster is declared by the President. In addition, the committee adopted an amendment to allow refunds for beer lost, destroyed, or condemned as a result of the Mississippi and Missouri Valley floods of 1951, along the line of the refunds already allowed as a result of those floods in the case of distilled spirits.

8. The committee deleted the subcommittee recommendation which would have disapproved a proposal included in the ATTD revision which would extend to breweries operated by different corporations the right to transfer beer from the plant of one corporation to the plant of another corporation if the controlling interests in each of the corporations is owned by the same person or persons.

9. Under present law a drawback is provided under the distilled spirits tax with respect to $9.50 of the total tax of $10.50 in the case of spirits used in the manufacture of medicines, medicinal preparations, food products, flavors, or flavoring extracts which are unfit for beverage purposes. The language of the drawback provision should be changed to provide a refund of all but $1 of the distilled spirits tax, so this provision will not need to be changed with each change in the distilled spirits tax.

10. Provision should be made for the tax-free withdrawal from bond of alcohol for any pathological laboratory exclusively engaged in making analyses, or tests, for hospitals or sanitariums.

11. The right of the Treasury Department to waive the application of any internal revenue provisions relating to distilled spirits (except the taxes) where the Secretary of the Treasury deems it desirable from the standpoint of national defense expires July 11, 1956. The committee acted to extend this authority for 3 years to July 10, 1959.

XII. ADMINISTRATIVE

Action by the committee with respect to recommendations 1 through 3 of the subcommittee was deferred pending receipt of a report from the Commissioner of Internal Revenue on the information covered by these recommendations. It is expected that this report will be available by June 15, 1956.

XIII. ADDITIONAL COMMENTS

The committee took no action at this time with respect to matters referred to in this section of the subcommittee report.

XIV. MANUFACTURERS' EXCISES

The committee acted to reconsider its previous action with respect to recommendation 11 (f) under Section I, Manufacturers' Excises. This recommendation as previously approved by the committee would impose on tubeless tires a tax rate 1 cent a pound higher than tires requiring separate innertubes. The effect of the committee's action today is to delete this recommendation.

The committee adjourned to meet again in executive session at 10 a. m., June 8, 1956, at which time consideration will be given to recommendations 1 through 3 in section XI of the report pertaining to tobacco and alcoholic beverages taxes. Following the consideration of these recommendations, the committee will give consideration to those recommendations which had previously been passed over by the committee.

The Ambidextrous Dictator of Yugoslavia

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. OSTERTAG. Mr. Speaker, in the past 6 years we have sent more than a billion dollars to Yugoslavia under the delusion that such assistance would make Marshal Tito a friend of the West. Today, with Marshal Tito in Moscow, warmly reaffirming his undying loyalty to communism, I trust we are not going to reenact our fantastic annual ritual by voting more funds to him and his compatriots in Yugoslavia. If Tito qualifies for our foreign aid, why not all the other Iron Curtain countries? And if Tito now qualifies, then what is the purpose of the foreign-aid program? I, for one, will vote to prevent any funds going to the Yugoslav dictator.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the June 4 edition of the Buffalo Evening News on this point:

WHITHER TITO?

The United States has spent a lot of money—$1,100 million in 6 years in military and economic aid—to try to keep Marshal Tito of Yugoslavia in the Western camp. Now this shrewd operator is in Moscow being given the red carpet treatment by the Kremlin gang. Khrushchev and Bulganin are competing for his allegiance with the same bait—money.

Soviet Russia and the satellites haven't yet matched our gifts to Tito but they have been lavish. From the Kremlin treasury and satellite nations the Yugoslav leader has piled up about $300 million in credits at the ridiculously low interest rate of 2 percent and is avid for more. He'll probably get it, or the promise of it, on his current visit to Moscow.

In addition to United States handouts, Tito is getting substantial economic aid from Britain and France and the World Health Organization of the United Nations is contributing to his economy-on-the-dole. While accepting everything he can get with both hands, Tito piously protests that he doesn't accept the thesis that the world is "divided between East and West." That division, he says, is an "unhappy thing." Well, it hasn't been unhappy for Yugoslavia. He has blackmailed both sides and can be expected to continue to do so.

There is no sign from Washington that the generous flow of money and aid from the United States to Tito is about to dry up or even be curbed. His name is down for a big slice of the current foreign-aid appropriation whatever it turns out to be. It should not be out of place to suggest that we keep a sharp eye on his actions and words while he is hobnobbing with the Moscow conspirators. Any sign that he proposes to crawl back into the Kremlin fold should mean a prompt shutdown of his American pipeline.

Foreign Aid Rebellion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the Wall Street Journal of today has an editorial which is pertinent to the issues raised on the foreign aid bill which is about to be considered by the House. The editorial follows:

REVIEW AND OUTLOOK—THE FOREIGN AID REBELLION

The administration's $4.9 billion foreign aid bill comes up for debate and vote in the House beginning today. More than $1 billion has been sliced from the request by the House Foreign Affairs Committee because Congressmen are rebellious about some of the foreign aid programs.

In his book The Hoover Report Mr. Neil MacNeil tells a story that illustrates pretty well why the rebellion has come about. His story has to do with a postwar project in Italy investigated by the Hoover Commission. The United States Foreign Operations Administration had moved a group of Italians out of hillside caves into a modern-style American village. The village was a fine one, but the Hoover Commission investigator learned that there might be a final item of expense. That was for cement to plug the caves to prevent the people from moving back into them. The people had lived in the caves for almost 20 centuries and they liked them.

That, one may say, was a long time ago, and if it was a wasteful error it was committed by FOA and not by the International Cooperation Administration, which now conducts our foreign-aid economic programs. Also, one may say, some waste and some foolishness was bound to occur in America's haste after the war to give aid and comfort to distressed people. Surely, as time went on, the lessons would be learned.

Have they, though? ICA took up where FOA left off, and the 1953 road project in Iran followed much the same foolish, if comfortable, pattern as the village in Italy. ICA spent $1.2 million on a road leading to a dam that never was. ICA defended the expenditure on the ground that Iran's economy was failing, and the road supplied an urgent need in money and employment, even if there wasn't any dam at the road's end.

But is it a fair criticism to make a lot over such mistakes as the Italian housing project and the Iranian road program? Surely some mistakes may be forgiven and some waste forgotten as America works with quiet dedication to save countries' economies and raising living standards. Surely these are isolated instances of unsound planning.

Egypt provides another clue. Just the other day the General Accounting Office sent to Congress a 72-page report on aid to Egypt. Although the GAO said ICA showed improvement during the past 2 years, it also said that foreign aid was plagued by unrealistic planning, by conflicting policy decisions, by inordinate delays by United States officials, and by Egyptian reluctance to cooperate.

There was the survey of Egypt's industrial potential, financed by ICA in 1953 at a cost of $535,000. Nothing has been done about the survey except that Egypt had filed it away.

There were the 3 projects planned in 1954 for research and investigation in mining, at a cost of $175,000. The projects are at a standstill because neither ICA nor Egypt has the technicians to do the research.

And there was the 1954 case of the 12 bulls and the 30 rams sent to Egypt at a cost of $19,000 to improve the breeds there. When the bulls arrived they were underweight and some were ill, and so all were useless for breeding. After the rams arrived they developed a disease unknown in Egypt, and so all were destroyed.

These expenditures are, it is true, but a small part of the total of $55.8 billion spent in foreign aid since 1945, but they are indicative of the foolish ways in which we have spent our money. And they are indicative also of the sort of activities which Congress and the taxpayers want no more of.

There is one way to make sure that there is no more of this. That way is for the Congress to put an end to our quaint American way of trying to make over an unready world, and to limit foreign aid to activities essential to the West's security.

A survey that gathers official dust in Egypt, a road that leads in Iran to a dam that isn't there, a village in Italy the people don't want to live in—such endeavors contribute nothing but danger to that security.

Fred A. Seaton, of Nebraska, Secretary of Interior

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to insert an editorial that appeared recently in the Alliance (Nebr.) Times-Herald.

Fred Seaton is well known to Members of Congress and a large segiment of the American public. Born in Washington, D. C., and reared in Kansas, he has lived his adult life in Nebraska. Mr. Seaton has distinguished himself in many fields of public service. He is the owner of a number of newspapers in the Middle West. He also owns three radio stations and 1 television station with headquarters in Hastings, Nebr. He served as a member of the Nebraska Unicameral Legislature for two terms in 1945 and 1947, where he was well known and respected for the thorough and conscientious service he gave to the people of his legislative district and Nebraska.

Following the death of the late Kenneth S. Wherry, Fred Seaton was appointed to fill the vacancy created thereby in the United States Senate. It was during his term as a United States Senator that he first became acquainted with then Gen. Dwight D. Eisenhower. After the 1952 election, President Eisenhower called on Mr. Seaton to serve as the Assistant Secretary of Defense in charge of legislative matters. From there he was brought to the personal staff of the President as his special assistant. In all his career of public service, he has conducted himself honorably and devotedly. I am sure he will continue to do so in this very important Cabinet post.

In becoming Secretary of the Interior, Mr. Seaton joins the ranks of two other Nebraskans who, in the history of our great State, have had the honor and privilege of serving on the Cabinet of the President of the United States. I should like to join with many other Americans who say that the President's choice of Fred A. Seaton as Secretary of the Interior was a wise one.

The editorial from the Alliance (Nebr.) Times-Herald follows:

SEATON CHOICE FORTUNATE ONE AS INTERIOR SECRETARY

The popularity of President Eisenhower's choice of Fred A. Seaton as the new Secretary of the Interior is understandable to his fellow Nebraskans. It is doubly so as to the publisher of the Daily Times-Herald, who has known Secretary Seaton for more than 25 years—first as a young newspaper contemporary in Kansas, later as a boss for 2 years on the Hastings Tribune, and for the past 7 years as a business partner in the Daily Times-Herald.

Fred Seaton has done an outstanding job at every task he has tackled and his success, we believe, can be traced to a thorough grounding in the fundamentals of journalism, politics, and life, in general. Fred was born in Washington while his father, the late Fay N. Seaton, was serving as an assistant to a Kansas Senator. Later, when the elder Seaton bought the Manhattan Kans., Mercury, his life meant that Fred and his younger brother, Dick, were to be brought up in the newspaper business. And their father was a great teacher, whether the subject was journalism, politics, or citizenship. The Seaton boys weren't given the boss' son treatment that we saw on many another Kansas newspaper. They dug in and learned the business from the ink fountains up. Fred Seaton can operate a linotype machine today and can find out what's wrong with a balky press. We suspect Dick can, too.

Before he left Kansas to take charge of the Hastings paper in 1939, Fred Seaton had tried his hand in politics as a Young Republican leader and a campaign staff member for Alf Landon in 1936. At Hastings, he served two terms in the Unicameral to fit himself for an appointment to the United States Senate upon the death of the late Ken Wherry. The legislative work—plus a keen business sense developed in enlarging the family holdings to include eight daily papers, a farm magazine, 3 radio stations, and a television outlet—add up to a lot of valuable experience in the person of the new Interior Secretary. He knows Nebraska's public power system inside out.

We have watched Fred Seaton operate from a ringside seat and can understand, possibly better than the Washington press corps, why President Eisenhower chose him for this highly important post.

Fred Seaton can best be described in one word as "quick." Whether the problem is political or on the newspaper, his mind is analytical. He is a keen student of a situation and is uncanny in coming up with an early answer. Once arrived at, Seaton stays put. And he can afford to because he has quite a batting average for coming up right.

We happen to know that President Eisenhower recognizes these traits in Fred Seaton. We know, too, that Seaton wouldn't be the trouble-shooter he has been for anyone else but President Ike. He has more pleasant ways to make a living but is dedicated, like so many others in the administration, to giving the American people the program they deserve and so sorely need in these troublesome times. He'll give the Interior post the same devotion he gave the Unicameral, the Senate, and his previous assignments in the Pentagon and White House.

Here are some editorial reactions which add to our testimony that the appointment is a fortunate one for the people of America:

"[From the Rocky Mountain News]

"MR. SECRETARY SEATON

"In a political year, the Interior Department of our Government is a hot spot.

"For one thing, regardless of which party is in office, it is a whipping boy for one side or the other in the perennial dispute over the Government's role in supplying power and controlling our natural resources.

"President Eisenhower now has appointed Fred A. Seaton, of Nebraska, to head this Department. Even Senator WAYNE MORSE, the incesstant rebuker of the Eisenhower administration, says this is a good appointment.

"Seaton is a publisher, farmer, ex-Senator, knowing politician, troubleshooter, and long-range planner. He thinks first and shoots later. He has a smart sense of proportion.

"He looks like a man who could keep his Department on the beam, the pressure groups in their place and his foot out of his mouth."

"[From the Lincoln Star]

"SEATON IS NAMED

"The weeks of speculation on who shall succeed to the post of Secretary of the Interior, made vacant by the resignation of Douglas McKay, are over.

"The new Secretary is Nebraska's Fred Seaton.

"Hastings publisher, presidential aid, schooled both in administration policy and in the realities of his new responsibilities Seaton is an admirable choice for the Cabinet post. Nebraska has cause for gratifying pleasure for the Nation is well served.

"Seaton has made his mark as a publisher, a businessman, and a forward-looking Republican. His citizenship is recommendation enough. But perhaps even more important are his special qualifications for an understanding administration of the vitally important functions of his Department—the wise, prudent, and construction cherishing and development of the Nation's resources. No one in Washington is better prepared to define the importance of reclamation, of conservation and development of the resources as the man from Adams County who has watched, lived with, and participated in this State's conspicuous advance in flood control, irrigation, and public power.

"The climate in Washington has been cool toward the historic responsibilities of Interior thus far in the Eisenhower administration. It is to be expected that Seaton with his grasp of realities and his dedication to national welfare will change that. It is to be expected that the great cause will move forward again unvexed by diversions and distractions.

"For that Nebraskans and all conservationists have cause for rejoicing."

Atomic Power Supremacy

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For Atomic Power Supremacy," published in the Memphis Commercial Appeal of June 3, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Addressing the graduating class at Memphis State College on Friday, Senator ALBERT GORE, Tennessee Democrat, emphasized the fact that an international struggle for supremacy in atomic power is in progress. If the United States is to win, Senator GORE declared, the victory will be gained through coordination of the vast powers of the Federal Government with the might of private industry.

In analyzing the role private interests may be expected to play in building reactors for industrial uses, Senator GORE estimated they would spend around $300 million in 5 years, and we agree with him that this can hardly be regarded as an "adequate sum." It seems to us obvious, too, that development of atomic power at satisfactory speed will require the assistance of the Government.

Senator GORE designated the United States as in an also-ran position at present in the race for the development of atomic power. He put both Great Britain and the Soviet Union ahead of us. Britain already has an atomic powerplant in operation at Calder Hall and it is expected to provide electricity to the national grid.

According to the Senator's estimates, the Soviet program calls for the building of plants that will provide between 2,400,000 and 2,500,000 kilowatts of capacity between 1956 and 1960. The American program foresees 689,000 kilowatts of power generated by atomic energy by 1960. The lag is not one we can safely tolerate.

It is natural and dangerous for us that there should be less sense of urgency here than in Great Britain and the Soviet Union as to the need for developing facilities for creating power from atomic reactors. Both these nations are much less bountifully endowed with waterpower, coal, and oil than the United States. Our sources of energy are cheap as well as plentiful and prudent use of them will forestall any serious power shortage.

At the same time, however, we cannot afford to fall behind in the pursuit of means whereby the atom can be usefully employed. Senator GORE has no idea whatever of excluding private enterprise from the program, but he does desire to expand its part in the program. The meat of the matter is that satisfactorily rapid expansion demands cooperation between Government and private agencies.

In the successful prosecution of a program such as Senator GORE has in mind and which the best interests of this Nation and the free world demand, only the Government can command the resources and eliminate the obstacles. Apparently intensified effort is needed to get us abreast of the parade of progress.

Need for North-South Highway

EXTENSION OF REMARKS
OF
HON. WILLIAM R. LAIRD III
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 6, 1956

Mr. LAIRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Highway Bill Will Accomplish Much, But North-South Route Is Big Need," published in the Charleston (S. C.) Gazette of June 1, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Senate passage this week of the interstate highway bill meant that a bright new era in road construction is about to dawn. Only minor differences have to be smoothed out between House and Senate versions of the legislation before it goes to President Eisenhower for his signature.

West Virginia will get approximately $275 million for interstate construction as the measure now stands, most of it for use on U. S. 60 between Huntington and White Sulphur Springs. The remainder will be spent on short stretches of U. S. 40 in the Northern Panhandle and U. S. 11 in the Eastern Panhandle.

Citizens of this State are pleased, for the most part, that this generous slice of the Federal highway grant will be made available for their highway system. But they're disappointed, as Senator LAIRD pointed out in Congress Tuesday, that they have no North-South interstate allotment similar to that for U. S. 60.

"It is interesting to note," the Senator said, "that North-South routes are provided on the interstate system East and West of the Appalachian Mountains. However, there remains a wide corridor through these mountains that is currently void of any interstate North-South route."

Senator LAIRD asserted that failure to designate such a route on the 40,000-mile interstate system will force heavy Great Lakes traffic created by big developments in the area to "by-pass this natural southeast movement which leads direct to the Carolinas, Georgia, and Florida."

He called for an early congressional study of the interstate program to locate shortcomings similar to the one he outlined. By interference, he said, weaknesses might be uncovered that could seriously impair traffic movement in time of national emergency.

We wholeheartedly support Senator LAIRD in his study proposal, for we have advocated for sometime that a link from Cleveland to near Columbia, S. C., be built as part of the interstate. It would be strategic from an industrial as well as a national defense standpoint.

Some groups interested in better highways are rather cool to the idea because they believe traffic is insufficient to warrant spending Federal funds on it. They fail to take into account the fact that the interstate mileage was doled out 10 years ago and that since then industrial development has been tremendous in Ohio, West Virginia, North and South Carolina.

A route such as we have in mind would become increasingly popular after Cleveland becomes a major port on the St. Lawrence seaway * * * after billions now being spent transforms the Ohio Valley into an industrial empire without peer * * * and after construction blueprinted or planned makes the Kanawha Valley not the biggest chemical center in the Western Hemisphere but in the entire world.

No single section in the United States has enjoyed a decade of phenomenal industrial growth like that of the region through which an interstate would run southward from Cleveland to the Carolinas. Traffic surveys previously made, or any that could be made today, would be obsolete a year from now as a result of factory construction currently under way in the area.

This American Ruhr is the fountainhead for much of the Nation's coal, steel, chemicals, timber, textiles and foodstuffs * * * and in another 3 years it will gush forth a generous portion of the Nation's aluminum production. An expressway cutting through its heartland is an economic and national defense must.

Senator LAIRD in his Tuesday statement officially notified Congress of this great need. We only hope that he and other West Virginians interested in the project will press it forward by generating support in Ohio, Virginia, North and South Carolina.

Our junior Senator's voice was but one in a wilderness when he addressed Congress on the subject. But the voices of all Congressmen from five States would compound into a cry that could thunder through the halls of Congress if given the backing of an informed and interested electorate back home.

Home of Congressman Madden, a City Without Discrimination

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial from the Chicago Daily Defender saluting the city of Gary on its 50th birthday. Gary is the home of our able and popular colleague from Indiana, Mr. MADDEN, who has been a powerful influence in creating the municipal climate and spirit of brotherhood that today stamp Gary, in the words of the editor of this great Negro daily newspaper, as a city where "no public facility practices discrimination" and "minorities without regard for color, religion or national origins are integrated in industry, in public office and in education." The editorial follows:

A SALUTE TO GARY

A generation ago, Carl Sandburg sang of Chicago, the city of the broad shoulders, bustling, hog butcher of the world.

Today, some native son of Indiana might sing thus of Gary, the city of the iron sinews, bustling, vibrant, steelmaker for the world.

The city of Gary, 50 years old, largest raw steel producer in the world, already the second city of the State, celebrates its Golden Jubilee beginning Saturday. And with it unfolds one of the most remarkable stories of progress and industrial growth in American history.

Gary was literally hewn out of the sand hills and tangled scrub growth of the Calumet, to become a great city. Great dunes were leveled, a river was turned about in its course, railroads were shifted, and the wild country growths were pushed back to establish the site of the new United States Steel Corp. works.

Then came the people, the driven thousands from Europe, from the Americas, from the Southland, with renewed hopes and vigor to work and build. The monument to their hopes and their building is the huge industrial giant sprawling at the foot of Lake Michigan, dominating all north Indiana, feeding shops, factories, and whole industries with steel, the backbone of American enterprise.

Today, there are 150,000 people in Gary, 56,000 of them Negro. The city is facing up to the problems of urban growth—and urban redevelopment honestly. In its mushroom growth, there developed slums, and blight producing conditions. These are being dealt with through private and public housing, and the city has recently qualified for Federal aid to urban renewal.

In the absence of established institutions and planning agencies, group misunderstandings and racial tensions developed.

The turning point was reached some 10 years ago, with the full integration of public schools. Today, no public facility in Gary practices discrimination. Minorities, without regard for color, religion or national origin, are integrated in industry, in public office, and in education.

Gary can look forward to a future of accelerated industrial growth under the impact of the Cal-Sag development and increasing need for steel. It can look forward to increased population attracted by high wages and improved living conditions. And it can count on the full use of the abilities of all its citizens in its future progress because of the spirit of dynamic democracy that is its outstanding feature.

The Defender salutes Gary on its 50th birthday.

Let's Support Our Way of Life

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. WOLVERTON. Mr. Speaker, I am pleased, in accordance with the consent granted by the House, to include as part of my remarks a short address delivered by George E. Stringfellow, imperial assistant rabban, AAONMS, at the Aad Temple breakfast, Kitchi Gammi Club, Duluth, Minn., March 29, 1956.

The standing of Mr. Stringfellow is well known as one of the most patriotic and progressive citizens of the State of New Jersey. His speeches of a patriotic character have had wide publicity throughout our Nation.

The address of Mr. Stringfellow, to which I have already alluded, reads as follows:

LET'S SUPPORT OUR WAY OF LIFE

Illustrious Sir Clesson H. Wiles, potentate of Aad Temple, members of your gracious divan, heads of units, past potentates, and fellow Shriners. I am grateful to you for having me as your guest for breakfast and for extending to me the privileges of your palatial club.

This is my second visit to your fair city and I appreciate mightily your reception. Six years ago, accompanied by my good friend Capt. Eddie Rickenbacker, chairman of the board of Eastern Air Lines, Inc., I witnessed a most interesting ceremonial staged by Aad Temple, which is one of the oldest and one of the most respected Shrine Temples in North America. The class of that ceremonial was named in honor of Captain Rickenbacker, who led the parade and gave an inspiring address at the ceremonial. Captain Rickenbacker, in my opinion, is one of God's nobelmen. I know of no one who has a better understanding of America or who has a better conception of what makes our way of life tick than Noble Rickenbacker, and I know of no one more loyal to our way of life or who is a greater patriot than Captain Eddie, as he is called by his friends, who are legion.

While I am on the subject of patriotism and loyalty, I know of no group of men in America who, because of their heritage, have a greater responsibility to keep America American than we Masons and Shriners, for, as you know, our way of life was to a large extent conceived and implemented by Masons.

Within the last few years our way of life and our form of government have been subjected to severe and I think unwarranted criticism. This criticism comes largely from two sources. They are (1) the fuzzy-minded, egg-headed, self-styled liberals, who are in many instances totalitarians, and (2) the Communists.

The negative and unfair criticism has raised the blood pressure of loyal Americans, as it should.

In answering some of this criticism of our Government and our way of life, we might point to a few of our many assets. For example:

1. Our standard of living is the highest in the world.
2. Nowhere else in the world do men enjoy the liberty that we have in our country.
3. Our span of life is rapidly increasing.
4. Our mechancial genius has taken much of the burden from the backs of men.
5. We have 6 percent of the world's population and about 50 percent of the youth in institutions of higher learning.
6. We have more libraries and more serious printed words than the other 94 percent of the people of the world.
7. We have more hospitals and charitable institutions than the rest of the world combined.

We might also mention that we fought in two World Wars and we asked for (1) no indemnity, (2) no acquisition of territory, (3) no dominion over other nations.

We have given billions of dollars to save millions of persons in foreign countries from famine. We have given billions of dollars to foreign governments to prevent their collapse.

We might remind our critics that we in America have made more progress in the the last 170 years under our form of government than any other people have made under any other form of government in the past 6,000 years. Let us therefore support our way of life with enthusiasm and let us hold tenaciously to the basic principles that made ours a great country. In so doing we can help to preserve our liberties and thus be worthy of our great heritage.

The Challenge to the Court

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. YATES. Mr. Speaker, there have been many speeches made on the floor in recent months against the Supreme Court. Charges have been hurled of its unconstitutional usurpation of power. For the most part, the attacks had their roots in the decision of the Supreme Court which in effect required desegregation in public schools, decisions in which I wholeheartedly agree.

The clearest answer and refutation of the charges made appeared in a letter to the editor of the Washington Post and Times Herald on March 24, 1956, by Mr. James L. Morrisson, of Washington. I am pleased to attach it to my remarks so that Members of Congress may have the benefit of Mr. Morrisson's scholarly and reasonable argument:

THE CHALLENGE TO THE COURT

The recent "Declaration of Constitutional Principles," joined in by more than 100 Members of Congress, appears to challenge not merely the correctness of the Supreme Court's decision on school segregation—as to which lawyers can and do differ—but its constitutional authority to render the decision—which ought to be beyond dispute. The declaration characterizes the Court's decision as not merely erroneous but an act of "naked power" without "legal basis."

In part this challenge appears to rest on an assertion that the Constitution and the 14th amendment do not "mention education," from which it is apparently sought to be implied that the subject of education is not a proper subject of Federal constitutional concern.

The suggestions ignores the fact that the Court did not assume any power over education as such; it merely declared that in the conduct or suport of education, as in anything else it does, a State must act in compliance with the requirements of the Federal Constitution, including the express requirement that no State may deny to any person within its jurisdiction the equal protection of the laws. It thus applied the settled principle that on those matters on which it does speak, the Federal Constitution, as the "supreme law of the land," overrides any State action inconsistent with its provisions.

This principle, applied as early as 1796 in *Ware* v. *Hylton*, received its definitive formulation in 1819. In *McCullough* v. *Maryland*, Chief Justice Marshall declared that "if any one proposition cculd command the universal assent of mankind we might expect it would be this—that the Government of the Union, although limited in its powers, is supreme within its sphere of action. * * * The Nation, on those subjects on which it can act, must necessarily bind its component parts."

Any suggestion that the subject of education has a special immunity from the operation of the proposition thus stated by Chief Justice Marshall finds no support in principle or in constitutional history. The power of the Supreme Court to protect constitutional rights where education is involved was exercised as early as 1819 in the "Dartmouth College case," in striking down a State act amending a college charter to provide for additional State-appointed trustees.

It has since been exercised, for example, to prevent appropriation of funds of a land grant institution (*Vincennes University* v. *Indiana*, 1853); to render invalid a State constitutional provision requiring a test oath of any teacher in any educational institution (*Cummings* v. *Missouri*, 1867); to invalidate a prohibition against teaching modern languages (*Bartles* v. *Iowa*, *Meyer* v. *Nebraska*, 1922); to protect the property rights of parochial schools against compulsory public school attendance laws (*Pierce* v. *Society of Sisters*, 1925); to protect the religious liberty of students who were members of a sect conscientiously opposed to flag salutes (*West Virginia* v. *Barnette*, 1943); and to prohibit use of tax supported property for religious instruction (*McCollum* v. *Board of Education*, 1947, *Zorach* v. *Clawson*, 1952).

On like grounds the Court has entertained and rejected on the merits attacks on State laws reducing teachers' salaries (*Head* v. *University of Missouri*, 1874; *Dodge* v. *Board of Education of Chicago*, 1937); an order prescribing instructions in military science (*Hamilton* v. *University of California*, 1934); and legislation aimed at excluding from employment as teachers persons deemed subversive (*Garner* v. *Los Angeles Board of Education*, 1951; *Adler* v. *Board of Education of New York*, 1952).

Indeed, the very cases on which the Declaration relies, *Plessy* v. *Ferguson* (1896) and those which followed it, all rest on an assumption of the power of the Supreme Court to determine the scope of the constitutional right to equal protection as it relates to State action in various fields, including education. The signers of the Declaration would, it may be assumed, not contend that a State could constitutionally afford public education only to whites—or only to persons with red

hair—nor would they contend that a State could openly discriminate between two races in the quality of education afforded. Yet these admitted restrictions on State power derive from the authority of the Supreme Court to declare unconstitutional State laws relating to education which in its judgment violate the Federal Constitution.

A second argument implicit in the declaration is that the Court lacked power to overrule settled precedents. It is said that in doing so the Justices "substituted their personal political and social ideas" for the established law of the land. Quite apart from the question of how "settled" the prior Supreme Court precedents were—as to which there is room for debate—the proposition that the Court lacked power to reconsider them must be rejected.

The Supreme Court has never felt itself estopped from correcting constitutional interpretations, however long established, which upon reexamination appeared erroneous. As Mr. Justice Field stated in *Barden* v. *Northern Pacific Railway Co.* (1894): "It is more important that the Court should be right upon later and more elaborate consideration of the cases than consistent with previous declarations. Those doctrines only will eventually stand which bear the strictest examination and the test of experience."

The same view was expressed nearly 50 years earlier by Chief Justice Taney, who said, The Passenger Cases (1849) that he was "quite willing that it be regarded hereafter as the law of this Court, that its opinion upon the construction of the Constitution is always open to discussion when it is supposed to have been founded in error, and that its judicial authority should hereafter depend altogether on the force of the reasoning by which it is supported."

In footnotes in *Burnet* v. *Coronado Oil & Gas Co.* (1932) and *Smith* v. *Allwright* (1944), there are assembled over 40 cases of direct overruling of prior decisions, not to mention innumerable other instances in which prior doctrines have been substantially modified. Indeed, only through the Court's responsiveness to changed conditions and deeper understandings—such as the conditions and understandings referred to in the school segregation decision—can the Constitution remain a living document.

It therefore appears that the Court's authority to determine the scope of the constitutional guaranty of the equal protection of the law and to declare invalid any State action which infringes that guaranty is not seriously open to question. The declaration reduces itself to a disagreement with the correctness of a decision which the Court had authority to render, and which it rendered after the fullest opportunity to all interested parties to be heard. Such a disagreement, however deep and sincere, affords no warrant for disregard or disobedience of the decision.

JAMES L. MORRISSON.

WASHINGTON.

The Late William T. Granahan

SPEECH

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. MORGAN. Mr. Speaker, I was saddened and shocked by the untimely passing of our colleague and my dear friend BILL GRANAHAN.

BILL and I were both elected to the 79th Congress in 1944, and we became close, personal friends. He was a fine gentleman and a true friend. His death is a personal loss, and I shall miss him very much.

BILL was a man of integrity and ability. He served his constituents conscientiously, and I know his unselfish and devoted service to them will be greatly missed. Our State of Pennsylvania, as well as the Nation, has lost a very able, capable and outstanding legislator.

I wish to extend my deepest sympathy to his beloved wife, Kathryn, in her great loss and sorrow.

Radio Corporation of America Dedicates Enlarged Plant in New Jersey Expanding Capacity To Aid National Defense

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. WOLVERTON. Mr. Speaker, the Radio Corporation of America has made an enviable contribution to the cause of science by its continued and far-reaching research over a period of many years. Its numerous and varied activities in advancing the art of communications and related subjects has been of incalculable value to our Nation and its people in time of peace and war.

In its ever-expanding program and creation of new and additional facilities, to enable it to give even greater assistance in the cause of science, the RCA on Friday, May 4, 1956, dedicated a major enlargement of the RCA missile and surface radar engineering plant at Moorestown, N. J., representing an important expansion of RCA's capacity to aid national defense.

The ceremonies, which included demonstrations of some of RCA's latest developments in military electronics, were witnessed by military and Government guests, representatives of the press, and more than 1,500 employees at the RCA plant.

During the program Brig. Gen. David Sarnoff, chairman of the RCA board, announced RCA activity in the new defense missile program, as well as development of RCA's abilities to design and produce complex electronic systems for the military services.

General Sarnoff said RCA is developing and producing, under contracts with the Department of Defense, land-based tactical launching and guidance systems for the Talos guided missile, a defense weapon designed for use against enemy aircraft. This surface-to-air guided missile is being built for the United States Air Force by RCA, which also has the responsibility for a portion of a shipboard system for the United States Navy.

RCA'S GROWING RESPONSIBILITIES

RCA's growing responsibilities in guided-missile activities were commemorated by meetings at the Moorestown plant of the board of directors of RCA, the National Broadcasting Co., and RCA Communications, Inc.

General Sarnoff presided at the meetings and later joined with Frank M. Folsom, president of RCA, and other executives to welcome Government and military guests who included Maj. Gen. F. L. Ankenbrandt, director of communications-electronics, the Joint Chiefs of Staff, and myself as a Member of Congress.

Also present for the dedication were New Jersey State Assemblyman C. William Haines, Chairman W. J. Hall, and Moorestown Township Committee Members Thomas Cunningham, Irving Hollingshead, and J. Aubrey Sutton; Donald Dunn, administrative manager of Moorestown, and the Reverend Mr. Victor S. Griggs, pastor of the Second Baptist Church of Moorestown and president of the Moorestown Council of Churches, who delivered the invocation.

Climaxing the ceremonies General Sarnoff unveiled a plaque which officially commemorates the RCA Moorestown plant as a missile and radar systems center.

In accordance with the consent granted by the House, I now wish to include as part of these remarks, the address of General Sarnoff, and that of General Ankenbrandt, Dr. Engstrom, and T. A. Smith.

General Sarnoff, in his address, declared:

During the past decade, developments in electronics have revolutionized the ancient art of warfare. Foremost among these has been the development of the guided missile to a stage of perfection that makes it awesome in its capacity for destruction.

The German buzz-bombs that rained from the skies of Britain during World War II were as BB-gun pellets, compared with our modern guided missiles. The sobering fact is that our vast oceans and Arctic wastelands have been converted into highways for weapons that can destroy cities and their populations on a scale never before experienced by man.

The Soviet leaders Bulganin and Khrushchev have openly boasted of their "mighty guided missiles." We in the United States have no rational alternative but to meet the menacing competition whereby world communism has perverted science and technology to its evil purposes. For the sake of our own security and the survival of our civilization, we dare not permit the Kremlin to gain even a temporary monopoly on such appalling weapons.

The Radio Corporation of America has long been dedicated to the principle that our prime responsibility is to serve the Nation—by providing the Armed Forces with equipment vital to the success of their operations.

In line with this principle, we recently concentrated the engineering and production of military equipment in an operating unit devoted exclusively to this mission. This is our defense electronic products unit, and the organization here at Moorestown is a part of this unit.

"TALOS" PROJECT

General Sarnoff, in announcing the "Talos" project, stated:

RCA is developing and producing, under contracts with the Department of Defense, land-based tactical launching and guidance systems for the "Talos" guided missile. We have as partners in this program the American Machine & Foundry Co. "Talos" is a surface-to-air guided missile developed by the John Hopkins applied physics laboratory for the United States Navy Bureau of Ordnance. The initial land-based "Talos" system was developed by RCA under contract with the Navy Bureau of Ordnance.

RCA is building land-based "Talos" systems for the United States Air Force and has responsibility for a portion of a shipboard system for the United States Navy. This "Talos" project at the Moorestown plant represents one of the most comprehensive of all electronic systems, and utilizes the latest techniques developed by RCA.

This plant, and the people who give it meaning and significance, symbolize RCA's effort in the fulfillment of our foremost responsibility—to serve the Nation.

And so it is with a deep sense of pride in RCA's work on behalf of our national defense that I unveil this plaque, dedicating the RCA Moorestown engineering plant as a missile and surface radar development center.

REMARKS BY GENERAL ANKENBRANDT

In his remarks, General Ankenbrandt declared:

For some time it has been recognized by the military that the essential elements for true national defense includes far more than the Department of Defense and the military departments themselves.

This realization has grown from a very small beginning in the years leading up to World War II, on through that war and the succeeding days to the present, when all of us in the military are very conscious of the essential part being played by our partners—science and industry. That this realization has grown to its present proportions has been due in considerable measure to the expanding activities of such fine organizations as AFCEA (Armed Forces Communications and Electronics Association), NSIA (National Security Industrial Association), IRE (Institute of Radio Engineers) and the like. Parenthetically, as most of you know, the theme of this year's AFCEA annual convention in Boston later on this month is "military and industry: partners in progress."

However, in greatest measure, this realization has come from the positive results which have accrued to the military from this partnership—the tremendous outpourings of scientific, engineering, production, and servicing assistance from American industry, without which our present day advanced weapons systems for defense would not exist or could not be operated efficiently.

It is with this background that I take great pleasure, on behalf of all of us in the military, in participating in the dedication of this new and great facility here in Moorestown of the RCA, devoted as it is to the creation of highly sophisticated systems for the defense of our Nation—systems involving as most now do—heavy radar and complex electronic fire-control elements for missiles and weapons of all types—ground, sea, and air based.

I congratulate you, General Sarnoff, the board of directors of RCA, and all the members of your company, and this city who had a part in providing this forward-looking facility—a splendid testimonial to the teamwork of industry and military working together for our common national defense.

REMARKS BY DR. ENGSTROM

Dr. E. W. Engstrom, senior executive vice president of RCA, in his remarks preceding his introduction of General Ankenbrandt and General Sarnoff, said:

I am honored to participate in these ceremonies; for today we dedicate not merely a building, or a facility, but a major national resource in the field of missile and surface radar operations—one that is probably unequaled in the world. In these critical times, the significance of this operation to our Nation and to our traditional way of life cannot be overestimated.

RCA's pioneering in radar has contributed much to the extraordinary growth of this primary instrument of national security.

Our work in radar has continued and is continuing for the Navy, the Army, and the Air Force.

On this occasion, I think it is appropriate to point out the extent of RCA's engineering and productive capacity not only here in the Delaware Valley, but also throughout the State of New Jersey. Our activities here, for example, are closely integrated with the corporation's David Sarnoff research center in Princeton, N. J. We also have important plants and associated activities, for military or civilian goods, in eight other major locations in the State—Camden, Cherry Hill, Harrison, Jersey City, Woodbridge, Rockaway, Somerville, and Clark Township.

Total RCA employment in New Jersey, excluding Princeton and Clark Township, is 26,700 persons. The annual payroll is more than $135,000,000. As a former resident of Camden County, now residing at Princeton, I believe I can speak for all RCA employees in expressing deep pride in the contributions that we make to the economy of our State.

REMARKS BY T. A. SMITH

Theodore A. Smith, vice president and general manager, RCA defense electronic products, who welcomed guests to the dedication ceremonies, declared:

It seems only yesterday that we stood at this location to dedicate the original buildings in December 1953. At that time we expressed the hope that this was only the beginning of our expanded program in the broad field of radar, and that we would grow and flourish with the community.

Now, 2½ years later, much of that healthy growth has been accomplished. Our engineering capacity has been virtually doubled. From an employment standpoint we have grown from 600 to more than 1,500 persons. Far more important than physical statistics, however, is the fact that we are now equipped to make substantially increased contributions to national security.

DEMONSTRATION OF MILITARY ELECTRONIC PRODUCTS

To symbolize RCA's varied research and development activities for national defense, a program of demonstrations disclosed three major RCA developments in the field of military electronics:

A portable electronic detector for "nerve" gas—developed by the Army Chemical Corps and RCA. The first such detector accepted for military use, the unit not only can serve as a field alarm for military personnel and installations, but also can be utilized for gas-detection protection of population and industrial centers. It has possibilities as a detector for hazardous industrial and commercial gases.

An RCA-developed wide-spaced image orthicon tube, or television camera tube, which can be used for televising scenes and objects under light conditions as low as those of a moderately cloudy moonlit night.

Noise-canceling microphones and headsets for aircraft intercommunications systems, which RCA has developed and is producing for the United States Air Force. The highly selective and sensitive equipment provides clear communication under noise conditions which would make intelligible conversation virtually impossible by other known means.

The electronic "nerve" gas detector was demonstrated by special detachment of the Army Chemical Corps under the command of Lt. Col. Oliver R. Hertel, Chemical Corps, Engineering Command, Army Chemical Center, Maryland.

Described, but not demonstrated at Moorestown, was the RCA "cat eye"—an electronic light intensifier which is capable of seeing objects in the dark to produce sharp and clear television pictures. The Air Force has announced that the "cat eye" enables airmen to see in the dark with almost daylight clarity and that it is expected to become a valuable aid to the Air Force as a reconnaissance device.

SERVICE GUEST LIST

In addition to General Ankenbrandt, officers of the armed services attending the Moorestown dedication included:

Army: Maj. Gen. V. A. Conrad, commanding general, Ft. Monmouth, N. J.; Brig. Gen. Marshall Stubbs, commanding general, Army Chemical Center, Edgewood, Md.; Brig. Gen. H. V. Gaskill, Office of Chief of Research and Development, United States Army, Washington, D. C.; Dr. Colin Hudson, Office of Chief of Ordnance, United States Army, Washington, D. C.; Col. C. A. Poutre, Signal Corps Supply Agency, 18th and Locust Streets, Philadelphia, Pa.; Col. H. M. Murray, Frankfort Arsenal, Bridge and Tacony Streets, Philadelphia, Pa.; Lt. Col. Q. R. Hertel, Chemical Corps, Engineering Command, Army Chemical Center, Edgewood, Md.

Navy: Rear Adm. F. S. Withington, Chief, Bureau of Ordnance, Department of the Navy, Washington, D. C.; Capt. R. L. Taylor, Bureau of Ordnance, Department of the Navy, Washington, D. C.; Capt. A. C. Packard, Bureau of Aeronautics, Department of the Navy, Washington, D. C.; Rear Adm. H. C. Bruton, director, Naval Communications Division, Office of Deputy Chief of Naval Operations, Department of the Navy, Washington, D. C.; Capt. D. O. Lacey, United States Navy Aviation Supply Office, 700 Robbins Avenue, Philadelphia, Pa.

Air Force: Maj. Gen. G. R. Acheson, commander, Middleton Air Materiel Area, Olmstead Air Force Base, Pa.; Brig. Gen. I. L. Farman, Assistant for Electronic Supporting Systems, deputy commander, Weapons Systems Headquarters, Air Research and Development Command, Post Office Box 1395, Baltimore, Md.; Brig. Gen. S. T. Wray, ADES Project Officer, 220 Church Street, New Work, N. Y.; Col. A. R. Shiely, Air Research and Development Command, 220 Church Street, New York, N. Y.; Col. Jay Jaynes, Office of Deputy Chief of Staff, Development, United States Air Force, Washington, D. C.; Col. W. J. Adams, Eastern Air Procurement, 1411 Walnut Street, Philadelphia, Pa.

PRESS ATTENDANCE

Newspapers, wire services, magazines, and television stations represented at the RCA Moorestown program included: The Associated Press, Unted Press, Tele-News, station WRCV, station WRCV-TV, station WFIL-TV, the New York Times, New York Herald Tribune, Wall Street Journal, Aviation Age magazine, Tele-Tech magazine, Popular Mechanics magazine, Radio and TV Daily, Aviation Week magazine, Electronic Design magazine, Research and Engineering magazine, Philadelphia Inquirer, Philadelphia Daily News, Philadelphia Afro-American, Philadelphia Tribune, Camden Courier-Post, Pittsburgh Courier, Moorestown News Chronicle, Mt. Holly Herald, American Aviation magazine,

Electronics magazine, Popular Science magazine, Broadcasting magazine, Aeronautical Engineering Review, Radio Electronics magazine, Electrical Engineering magazine.

The 730th Air Force Band, under the direction of Chief Warrant Officer Dieter, Maguire Air Force Base, Trenton, N. J., participated in the ceremonies.

A Reappraisal of the Life of Jefferson Davis

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. COLMER. Mr. Speaker, on May 5 last a memorable occasion was held at Fort Monroe, Va. At that time the dedication ceremonies were conducted by the United Daughters of the Confederacy dedicating the Jefferson Davis Memorial Park.

On that occasion an outstanding citizen of the South, my distinguished colleague, Senator JOHN C. STENNIS, was the principal speaker. This was most appropriate since that great southern leader of the Confederacy, Jefferson Davis, was a Mississippian.

In view of the wealth of information concerning this truly great man contained in the address, it is appropriate that the remarks of Senator STENNIS on that occasion be given wider circulation. The address itself was a splendid one honoring this Mississippian, the leader of the Southern States in that unfortunate fratricidal strife.

Senator STENNIS' address is as follows:

A REAPPRAISAL OF THE LIFE OF JEFFERSON DAVIS

The United Daughters of the Confederacy do well to honor the spot where the very last drops of the lifeblood of the southern Confederacy were drained off, and the one man who was the symbol of that mighty cause suffered the ignominy and torture of chains and imprisonment.

The ironing of Jefferson Davis at Fortress Monroe, where at first he was thrown to the stone floor and held down by four soldiers while a blacksmith riveted heavy shackles on his ankles, was as a cup of vinegar to the South, as much as it was a mortifying and painful attack on the body of the President of the Confederate States of America.

But even the rigors of this Gethsemane never daunted the spirit of Jefferson Davis.

There he was:

That great and good man from my own home State of Mississippi; that gallant soldier who had been the outstanding military figure of the Black Hawk and Indian wars; that renowned hero who had given luster to American arms in the War with Mexico at Monterey and Buena Vista; that calm and dispassionate scholar who had been the friend and confidante of America's great military captains, and friend and advisor to three Presidents of the United States; that wise and provident counselor who had stood on the floor of the United States Senate with Webster, Clay, and Calhoun, and plead for measures of justice and conciliation that might have saved the Union and saved it without bloodshed; and finally that stalwart towering, and lonely figure, called by 13 American States to share their brilliant but tragic destiny in their second war of independence.

What could the stone walls and iron bars of Fortress Monroe do to a spirit like this?

In spite of chains, imprisonment, and utter defeat, the President of the Confederate States of America was no lost leader of a lost cause.

The South was fighting, not for slavery, not for any white-pillared aristocracy, not for its own independent economy. She was fighting for a principle as old as the hills and as sacred as the covenants of all God-fearing peoples. She was fighting for autonomy and local self-government, something that men call freedom, something known as liberty, which men had fought and died for since the dawn of civilized man.

The truth is, the frightful and bloody fratricidal war she was called upon to wage in defense of her soil and rights to self-government, was merely a single engagement in the still greater and continuous war, which has been waged for centuries by freemen everywhere for freedom, for the right of self-determination, for local self-government, and for freedom from colonialism and empirical controls.

For his spirit to live, Jefferson Davis had to be a great man. And he was.

Governor Brown of Mississippi in proffering him a seat in the United States Senate referred to his military career in these words:

"The people will never cease to remember with pride and gratitude that to you, sir, and the brave Mississippians under your command, is our State indebted for honors as imperishable as the soil on which you won them; honors which shall last as long as chivalry is respected or valor has a place in the hearts of men."

Perhaps, as one who occupies the honored position of a successor to Jefferson Davis in the United States Senate, and as one who has as his desk on the Senate floor Jefferson Davis' own desk, my own mind dwells with singular propriety on the great career the Mississippian carved out for himself as a statesman in that body.

Davis was only 39 years old when he first took his seat in the United States Senate. In a few brief years, he came to rank well up with such towering figures as ex-President John Quincy Adams, Daniel Webster, Henry Clay, and John C. Calhoun. When Calhoun, the acknowledged Southern spokesman, died in 1850, Davis was immediately recognized as his successor.

His spirited defense of Daniel Webster, a political enemy, when for cheap partisan advantage Webster's integrity was challenged in the Senate, his tireless efforts, as member and chairman of the Senate Military Affairs Committee, to enlarge and strengthen the Armed Forces of the United States; his wise and courageous battle against the Wilmot Proviso; his lengthy, brilliant, and arduous debates in behalf of a strict construction of the Constitution as to powers ceded to the Federal Government and those reserved to the States; and his magnificent resentment of the abolitionists and their attacks on the South, in and out of the Senate—all these marked Jefferson Davis as undisputed leader of the South and Southern thought.

But Davis was far and above the position of a mere sectional or partisan leader. He was well in the forefront of the national expansionists. It doesn't seem necessary more than merely to mention in passing the hiatus in Davis' Senate career when he went home to run for the Mississippi governorship and was defeated by 999 votes. For, when Franklin Pierce came to the Presidency in 1853, the Mississippi ex-Senator was literally drafted for renewed public service as Secretary of War in the new Democratic Cabinet. He became one of the outstanding War Secretaries in United States history.

With the termination of the Pierce administration, on March 4, 1857, Jefferson Davis resumed his career in the United States Senate, 24 hours after he had ceased to be Secretary of War, and 4 days before the Supreme Court rendered the Dred Scott decision.

From this time to the day when he had to rise in the Senate and announce the secession of his own beloved Mississippi, Jefferson Davis strove in every honorable way possible to find some way to preserve the Union as well as southern rights.

Jefferson Davis returned to Mississippi and offered his services to the State, and was made a major general of the Army of Mississippi.

But he had a rendezvous with an uncompromising and relentless destiny which was not to be denied; for on that fateful day of February 10, 1861, a messenger from Vicksburg arrived in hot haste with a telegram notifying him that he had been unanimously chosen President of the Confederate States of America. He thus became the leader, commander-in-chief and historical standard bearer of the most bloody, costly, and devastating revolution of modern times.

The whole life and career of this man, it would seem in historical retrospect, had been a schooling and preparation for such a climax. As Senator Yancey said, "The man and the hour have met."

Certainly, he had been one who never turned his back but marched breast forward.

I shall certainly not here pursue all the brilliant strokes of genius and doubtless grievous errors of judgment, of his tenure as President of the Confederacy. I do want to point out now that, on assuming the exalted office of President of the Confederate States of America, President Davis said:

"I come with diffidence and distrust to discharge the great duties devolved on me by the kindness and confidence of the Congress of the Confederate States. I will devote to the duties of the high office to which I have been called all that I have—of heart, of head, and of hand."

History records that in every sense of the word Jefferson Davis lived up to that pledge.

As he left the city of Richmond that he had so long and so magnificently defended, he had the right to look the world in the face and say, "I have fought the good fight, I have finished my course. I have kept the faith."

Today a bronze statue of President Davis, presented by my State of Mississippi to the Federal Government, stands in the Vicksburg National Park, which surrounds that heroic city. Also, his likeness stands in Statuary Hall in the United States Capitol as the greatest Mississippian. By his side stands the great and peerless Gen. Robert E. Lee, placed there by a grateful Virginia. These men live on forever; their greatness inspires us with patriotic pride. Our southern way of life will continue inspired by the thoughts and deeds of the heroic men of Davis' day.

For nations, as with individuals, times change. Old problems are solved, or pass off the scene. New ones arise. But principles live and remain the same.

As worthy descendants of our illustrious forebears of the time of Jefferson Davis, we must turn our faces not to the past, but to the problems of our own future. To these problems, we must apply the same high principles of public trust, personal honor, and devotion to duty, as were applied by that generation. We must have the courage of heart and mind to do more, regardless of the odds against us, for the great principles of government which we believe are sound and essential to our Nation's welfare.

Jefferson Davis, a man of vision, saw the necessity of preserving the powers of the States. Otherwise and inevitably a strong centralized government would eventually destroy personal freedom.

That truth was never better expressed than in the following words of the late Raleigh C. Minor, formerly of the University of Virginia Law School, and truly one of the great law teachers of our Nation:

"If a power is one reserved by the States, and, after long and patient trial and experiment, the States prove incompetent to exercise it properly and it is essential that it be so exercised, then let the power be transferred to the Federal Government by amendment to the Constitution. If the necessity is not great enough and evident enough to induce the legislatures of three-fourths of the States to assent to the transfer, it may be fairly assumed that the transfer is not so essential after all.

"But in any event let it not be accomplished by a forced construction of the Constitution. This is even now the canker that is slowly but surely eating away the reserved rights of the States and sapping their powers. If the process be not checked, the time must certainly come when the sovereign States will be nothing more than mere municipal corporations with only such powers left them as their Federal Government may choose to allow. God save the fair fabric of the Constitution from such a fate."

These words, written in 1913, were applicable in the days of Jefferson Davis, and they apply as well today.

If we would truly honor our forebears of that generation, we will face the responsibilities that come to our generation.

If liberty and freedom and sound principles of Government are to be preserved, it will be through the efforts of our generation—not the generation of Jefferson Davis nor the generation that is to follow us, but those of us who are living now.

God give us the insight to see our duty and our opportunity, and the courage to act.

Thus and thus only can we preserve constitutional government.

Governor and Mrs. Leader Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by William H. Sylk, of the Sun Ray Drug Co., Philadelphia, presented on May 28, 1956, honoring Governor and Mrs. Leader, of Pennsylvania, on the occasion of the Leader Woodland dinner sponsored by the Jewish National Fund. A woodland in Israel is being named in honor of Governor and Mrs. Leader in recognition of the friendship between the State of Israel and this country:

This magnificent gathering tonight, of good, purposeful and dedicated human beings, gives me something of the same feeling I had as a youth, absorbing highlights of the human drama, from a little professor who possessed a feeling for historical events.

It was many years ago, hidden far back in the corridors of time, that I recall a class at college. The professor was lecturing on momentous occasions in history. I can almost hear his voice now saying "with the Magna Carta, the great charter of freedom, mankind took a giant step forward and grew a head taller." The Magna Carta was in line with the universal brotherhood theme of the Hebrew prophets.

I wish I had this professor's historical gifts, for then I could grasp more fully, the grandeur and meaning of tonight and thereby, do more justice to my immediate task which is simply to present our distinguished guests and to tell you briefly why the Jewish National Fund is proud to honor them.

Long ago, I reached conclusions about events, and how things happen to be what they are, and at this moment, I see an affirmation of my experience. If I were asked I would say that in the life of an individual, success or failure is never determined by luck or an ominous fate. I would say, moreover, that triumph and disaster are not the slide rules with which to measure the worth of any one of God's creatures. I would say that high office or great wealth or social prestige are paltry things as compared with high purpose—a great heart or a vision of social justice. The ones mankind truly honors are the pilots who chart paths of hope and courage in the wilderness of cowardice, doubt, and despair.

We live in an era where a new and joyous prospect for humanity unfolds. We have split the atom, conquered problems of energy, and we stand on the threshold of space. The 20th century, the century of the common man is glorious, but what above all will be our century's legacy? It is, I suggest, the immediate prospect of bringing the benefits of modern technology; the benefits of modern civilization to the whole human race, regardless of color or creed or geographic location, and who will do it? It will be done by men and women like our honored guests whose genuine social and religious concern for ordinary people are the key to our highest hopes.

The narrow outlook and provincial greed are out of step. They must die with the age that is dying. A new age of universal motherhood is coming to birth and new affirmations are required.

I often think that the miracle of our America is our ability to produce men of stature in tune with the times. Men whose vision embraces the slowly rising sun of human motherhood. Men who truly believe that America is still an undiscovered continent, to be lovingly explored for the fulfillment of age-old dreams. America where the need arises, gives us men as the poet says:

"Tall men, sun browned
Who live above the fog
In public duty and in private thinking."

I recall a conversation, 2 years ago, with a sophisticated and cynical elder statesman. He was discussing the Pennsylvania gubernatorial election and he said: "this is in the bag."

Actually, it was in the bag, but not quite as he understood it. Events, as I indicated before, had predetermined the happy ending. A fighter had been turned loose in the political arena whose humility and concern for human beings were not affectations. His vigor, sincerity and determination had been tested in legislative halls, his principles, as in his courageous stand against the Peecham loyalty bill and for fair employment practices were unwaveringly in accord with his religious beliefs in the worth and dignity of every living human being.

Youth, personality, intelligence, humility, principle and respect for American traditions are the radiant symbols of this man's ascent to the highest post this commonwealth offers.

His grandfather, on to the fifth generation, was in the first contingent of troops from west of the Hudson, to join Washington's Continental Army. His honored father and mother are such people as make America invincible. He himself has given proof, again and again. His gracious wife, a well of joyous strength and quiet counsel, mother and sharer of the future, whose name as well, adorns this life-giving woodland in Israel.

During the last few years, our guests have demonstrated often, their regard for the vision of the people of the book, Israel, is to them, a living and permanent reality, and if I may say so, tonight, Israel with its memories of 5,000 years, affirms that this man and this woman shall always be remembered in the majestic woodland of life-giving trees in the once barren land of our fathers.

The Bible tells us that Moses called unto Joshua and said unto him, "Be strong and of good courage; for thou shalt bring the children of Israel unto the land which I swore unto them. And thou shalt cause them to inherit it." On this promise rides not only the hope of Israel, but also the hope of America and of all mankind. For this is a promise that people shall labor in the vineyard, and they shall eat the fruit thereof. This is a promise that wherever men dream dreams for all humanity, these dreams shall come to pass.

And if you think carefully, you will believe with me that this biblical song of strength and courage and the promised land is truly the American dream shared by every illustrious name in the book of our country's life.

Tonight, I feel that these words are here in this room, uniting in mysterious ways the ancient aspiration and the modern dream, the promised land the free world's hope I feel that the human chain of greatness from the prophetic Jews of the Bible to the noble men who built America has acquired a new and sturdy link. I believe that our honored guests are in the noble tradition of the Jewish vision of justice and mercy, and of America's hopes for a brave new world.

It is for this that a multitude has here assembled to proclaim its regard and it is for this that we salute and memorialize with pride and joy an eternal woodland in Israel, henceforth to be known as the Leader Woodland, named for George Michael and Mary Jane Leader.

Ancient Order of Hibernians

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions unanimously adopted at the county convention of the Ancient Order of Hibernians, New York County, held at the American Legion Hall, 155 East 88th New York City, on May 17, 1956:

Resolved, That we the delegates to the county convention of the Ancient Order of Hibernians, county of New York, meeting at the American Legion hall, 155 East 88th Street, New York City, citizens of the United States, who are interested in this country's independence, future prosperity and greatness, representing thousands of men and women of Irish blood, many of whom are veterans of recent world's wars, declare anew our allegiance to the Constitution of the United States and the institutions of Government founded thereon; and we declare our spiritual allegiance to the sovereign pontiff, Pope Pius XII, and implore God to shower His blessings on him ,and to give him health and strength to discharge the duties of his great office for many years to come, and we pledge our whole hearted support to the viscar of Christ in his efforts for world

peace based on the moral law, without which there can be no lasting peace; and be it.

Resolved, That we renew our denunciation of Communism, not alone in Russia and its satellite States, but in any place or country wherever it displays its poisonous fangs, because communism everywhere is engaged in a war on God and His sacred law, and in an effort to enslave the souls of human beings and destroy all religion; and be it

Resolved, That we again arraign the government of England in the court of public opinion for having arbitrarily dismembered the ancient Irish nation by the partition act passed in the Imperial Parliament in 1920 and for having set up a puppet government in Belfast which it persists in subsidizing and supporting for the evil purpose of fostering sectarian hatered among the people of different religious beliefs in that area for English Imperial purposes; and be it

Resolved, That we denounce the Imperial Government of England for the uses to which it is putting, and continues to put, millions of the American taxpayers' money, part of which has been used to keep the inhabitants of northeastern Ulster of different religious beliefs from uniting among themselves in Christian unity and with the people of the rest of Ireland for their mutual advantage and for their country's best interests; and be it

Resolved, That we request the Senate Committee on Foreign Relations and the House Committee on Foreign Affairs to report out, for the consideration of both Houses of Congress, at an early date, a resolution which declares it to be the sense of Congress that the Republic of Ireland should embrace the entire territory of Ireland unless the clear majority of all the people of Ireland, in a free plebiscite determine and declare to the contrary, and we urge the Members of the Senate and House of Representatives to vote favorably on the declaration of principles, contained in the resolution when it comes up for their consideration; and be it further

Resolved, That we again pledge ourselves, in cooperation with all the other American-Irish organizations to continue our support to the people of Ireland in their just demand for the abolition of the boundary which the English Parliament set up in northeast Ulster and for the complete political and territorial unity and freedom of Ireland and we promise this support until the right of the Irish people to the ownership and control of an undivided Irish nation is established and recognized.

JOHN J. SHEAHAN, *Chairman*.
MICHAEL CARTY.
JOHN BLAKE.
MARTIN A. MACNAMARA.

A Much Deserved Tribute

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. BAILEY. Mr. Speaker, under leave granted me to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues in the House to a well-deserved tribute to our Nation's outstanding labor leader—John L. Lewis.

In an editorial, on the occasion of the dedication of a group of miners' hospitals in West Virginia, Kentucky, and Virginia, the Charleston, W. Va., Gazette speaks highly of the achievements of Mr. Lewis in establishing and completing this great welfare project, and extols his many other achievements in the field of labor management.

The editorial follows:

UMW HOSPITAL PROGRAM IS SYMBOL OF STRIDES AHEAD FOR COAL MINER

A distinctive milestone in labor-management relations was passed in Beckley Saturday when dedication ceremonies officially opened a $27 million chain of 10 hospitals owned by the United Mine Workers welfare and retirement fund.

Prominent at the affair, with his eloquence of demeanor and speech, was UMW chieftain John L. Lewis, who did more than anyone else to bring to fruition an idea in worker welfare that he first mentioned publicly back in 1924. Lewis, it was easy to see, was proud of the achievement, and well he should be.

The hospitals—spreading their influence into 3 States—were but a masonry and steel symbol of a program that has given hope and comfort to more than a million people in 27 States, has helped stabilize employment in what was once an unstable industry, and has provided a blueprint for hospital service that is probably the best answer this Nation has for socialized medicine in other parts of the world.

Lewis has done many things for the workingman in his long and colorful life. He fathered the CIO, one of America's largest labor movements until its merger with the AFL last year. He lifted the miner from second-class citizenship to first-class standing, with the highest industrial wage scale in the United States. He also helped the miner to gain stature as a skilled worker by forcing mechanization on what was a horse-and-buggy industry when he started as a digger more than a half century ago.

But Lewis' program of worker welfare has not been helpful only to his card-carrying miners. Strange though it may seem in this State which has borne the brunt of many union-operator contract fights, it has helped others, too.

In 8 years the mine worker wage scale has climber an average of $5.25 a day, welfare-fund royalty payments have increased 30 cents a ton, and fringe benefits have given him comforts enjoyed by many so-called white-collar workers. Yet, in this same period, mechanization and mergers made necessary by these higher costs have permitted leaders in the industry to sell coal cheaper while still making a profit.

Coal mine employment in the United States has declined in 10 years from 400,000 to 250,000, and Lewis is bitterly blamed by his severest critics for this cutback. In some respects, perhaps, notably his ruthless use of the strike weapon, he deserves criticism. But by calm reflection we find that all is not grim that looks black.

Prior to World War II the miner was paid $5.30 a day, and West Virginia then had approximately 125,000 miners. Today, there are just about half that number working, yet the State isn't so bad off.

Miners are paid four times their pre-World War II wage * * * they are buying homes, farms, and small businesses which they operate during their hours away from the mines * * * and the State has taken steps to strengthen its economy by mounting a broad-scale find-work program for the unemployed through industrial diversification.

Those miners who have survived the cutback are the industry's best, they contribute substantially to the State's economy, and, by producing an average of more than 10 tons of coal a day as against 1.3 tons in the world's second biggest producing country, Great Britain, they are helping the American industry to locate a ready market abroad.

At the same time, thousands of pre-World War II miners are on pension, drawing $100 a month that a decade ago was going into the pockets of many absentee operators as profit, and living satisfactorily as respected citizens instead of as charges of the State.

Saturday's dedication in Beckley was, as past history shows, the capstone of Lewis' career. Younger men are challenging him for supremacy in the labor movement. They might well dethrone him before long, but challenging his record will be far more difficult than challenging the aging monarch of American labor.

His is a job well done for the workingman, and for the industry he obliquely served while sitting as its arch foe at the other side of the bargaining table.

The Fight for Fairer Prices Must Go On

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clarence Poe, editor and board chairman of the Progressive Farmer publication, which appeared in the June 1956 edition:

THE FIGHT FOR FAIRER PRICES MUST GO ON

(By Clarence Poe)

The farmers have lost one fight. But now they must make another. The farm bill the President vetoed clearly had some unsound features, but most of these could have been corrected now or later. We lost because neither the President himself nor enough farmers, townspeople, or Congressmen fully understood the farm situation. As we start a continuous battle to get fairer prices for farmers, let's first of all see what misconceptions brought loss in this recent fight and how to win the next one.

I

"It's just a bill to help farmers," was the feeling of the general public. Actually, of course, the manufacturers, merchants, laborers, and all classes of people with whom the farmer spends his money almost as soon as he gets it would have benefited almost as much as farmers. All, too, will suffer by reason of the bill's defeat.

II

"I just don't understand parity," many said, and all too few tried to understand it. As everyone should know, a "parity price" means a price which will enable a given quantity of cotton, tobacco, corn, pork, milk, eggs, or any other farm product to buy 100 percent as much goods as that quantity would have bought in some base period of years when farm prices were supposed to be fair. Originally, this was the 5 years, 1909–14, for all crops. While this has been raised in recent years, the period is still one regarded as fair to farmers and the public.

III

Many voters have thought 90 percent parity would virtually mean riches for the farmer—"all this and heaven, too." No sooner had this Congress started than a distinguished magazine, usually very fair, spoke of farmers as riding around in Cadillacs while begging for more price supports. The facts are that in 1949 farmers had 99 percent of parity, and in 1951, 107 percent of parity—and yet the average 1951 net income of farm workers and industrial workers compared as follows:

For farm workers	$1,718
For industrial workers	3,416

Actually, 100 percent parity would give farmers only a fairly decent income. And the term "90 percent" on its very face indicates not an increase but a decrease in some desirable goal. It takes a parity price—which is itself only fair—and then makes a straight, full 10 percent cut before the farmer gets it as a guarantee. On products for which any "variable price-support formula" is set up, it should be at 85 to 95 percent of parity—not 75 to 90.

IV

The two-way character of our farm program of recent years was all too often overlooked or ignored. Chairman HAROLD COOLEY said that Secretary Benson never seemed to realize that (1) in return for a guarantee of reasonable prices (2) the farmer was expected to cut his acreage or production to fit market demands. This two-way requirement has not been observed in all cases, but should be. Of course, the farmer can never be sure when he plants a crop whether he will get 50, 100, or 150 percent of a normal yield. Still, the price supports the farmer receives should be offset by programs which over the years might reasonably be expected to keep production in line with demand.

If farmers follow such programs as set forth by Government and burdensome surpluses nevertheless occur, should they not receive just and reasonable price supports until the surplus can be gotten rid of? Frequently, of course, this may not take just 1 year but several years. If this two-way feature of the program has been imperfectly carried out in the past, we should not end the program, but mend it. Last year's bumper cotton crop, for example, was in no way due to overplanting by the farmers. The farmers did what the Government asked, but the bumper crop came from record-breaking acre yields given by the Almighty.

V

The Department of Agriculture and some farm organizations seemed at times to be willing to see how little could be given the farmer and still keep him satisfied. To them the doctrine, "What is good for the country is good for the farmer," seemed sound, but didn't seem to work both ways. We never expect to see the Department of Labor trying to see how small a wage labor can be made to accept. Nor do we ever expect to see the National Association of Manufacturers trying to see how much tariff reduction manufacturers can possibly stand. Certainly now, at a time when labor's wages are the highest ever and the manufacturer's profits the biggest ever, the Secretary of Agriculture and our farm organization leaders should be the farmer's retained attorneys to fight for his full share of the country's prosperity.

VI

Whether or not he was badly advised and however good the intentions we give him credit for, we cannot escape the feeling that President Eisenhower himself should have consulted with plain, often hard-hit farmers. They would almost certainly have reminded him of his pledge as given in 1952 and in these exact words at Brookings, S. Dak., on October 4: "The Republican Party is pledged to the sustaining of the 90-percent parity price support, and it is pledged even more than that to helping the farmer obtain his full parity, 100-percent parity, with the guarantee in the price supports of 90." Furthermore, without questioning the highly religious character of Secretary Benson, we cannot escape the feeling that he should have strictly supported the explicit pledge which the President gave.

VII

The lack of unity on the part of farm organizations hurt. Even though they could not have agreed on a general farm policy, we believe they should have made much greater efforts to find areas of agreement. We also think that there is too much demand on the part of some top farm organization leaders for uniformity of thought and action by the general membership. North Carolina, South Carolina, Georgia, and Texas Farm Bureau members, for example, strongly favored 90 percent price supports for cotton, but the appeal for uniformity kept most of them silent to their own hurt. As we have said before, "We believe it is equally the duty of a farm organization member to support it when it is right and to try to correct it when it is wrong." A healthy and outspoken, conscientiously questioning minority is a fine thing for a farm organization—as it is in State or National Government—and frequently in our churches.

VIII

Finally, the plight of the small farmer, the little man, should have more attention. We hope we did not misjudge him, but we heard a nationally known farm leader say, in substance, "If farm prices go down, I can stand it until they come back again. The efficient farmers will survive and be better off with less competition." Unfortunately, however, we cannot even be sure that it's always the efficient farmers who survive. Does the man who survives always do so because of his superior efficiency? Or may it not often be because he is more fortunate in his inheritances, marriage, investments, or friendliness of financial connections? Or that income tax opportunities enable him to charge off his farm losses? On the other hand, are not many young farmers who are producing as efficiently as larger farmers nevertheless being bankrupted by low crop and livestock prices, and especially by mortgages and debts they incurred when such purchases of land or equipment seemed justified? They have simply had the rug pulled out from under them. More such struggling young farmers and small farmers should be put in places of leadership in farm organizations. Also, more farm leaders and farm organizations should get religion and acquire more concern for the man at the bottom—for the "needy when he crieth, the poor also, and him that hath no helper."

Can Egypt Be Appeased?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, under leave to extend my remarks I include the following article which appeared in the New Republic magazine of April 16, 1956. It is most enlightening:

CAN EGYPT BE APPEASED?

(By Walter Z. Laqueur)

President Eisenhower left Washington for his third vacation this winter without explaining his bewildering admission to a press conference that he knew nothing about the urgent message on the Middle East crisis sent him by Sir Anthony Eden. The world, therefore, remains in doubt as to whether the United States, like Britain, has become sufficiently disturbed by recent actions of Colonel Nasser to think twice before investing too much confidence in Egypt as an ally. The provocations for such a reappraisal, if it is taking place, are abundant.

When, in July, 1952, a military junta overthrew King Farouk, its action was generally welcomed, for corruption under the deposed monarch had been widespread; conditions of anarchy (culminating in the "Black Saturday") had assumed dangerous proportions. Even the Communists welcomed the intervention of the army; they were soon to change their line, however, and for 3 years, up to the Czechoslovak arms deal, Naguib and Nasser were "Fascist hangmen" as far as the Communists were concerned. But otherwise there was much optimism in Egypt and elsewhere; a "Kemalist solution" for Egypt seemed a distinct possibility; in the Israeli parliament Mr. Ben-Gurion expressed his hope for a speedy peace treaty with Egypt.

Under the Naguib-Nasser regime feudal became the worst invective, and the fat and boorish landowners the favorite target of Egyptian cartoonists. The political notions of these young army officers were extremely vague; they were not Socialists though most called themselves so; many had a record of Fascist and Communist fellow traveling (in that chronological order). They believed that the country would have to be given more efficient government, that the army should be strengthened, that certain social reforms would have to be carried out. But they had no knowledge of the working of the modern state and tried their luck rather clumsily, adopting as far as possible army methods to civilian life and exploiting the army mystique in every area. They were undoubted achievements, from the deposition of King Farouk to the agrarian reform (however fragmentary) and the dissolution of Muslim brotherhood which had been a purely destructive factor in Egyptian politics. But the new regime raised far more hopes than it could possibly fulfill. The workers and peasants expected immediate improvements, and the intelligentsia (especially the students) had hoped for more than obligatory, universal military training.

Weeks and months went by and life was little different for the Fellaheen, the worker, the urban middle class. There was, of course, a new style, not dissimilar to that of the French Revolution: Patriotism, the appeal for unity against separatist trends, brave phrases about social equality. But style, after all, is not enough. To recruit mass support, Colonel Nassar established a state party, the "Liberation movement." Within a few weeks it claimed more than 5 million members, making it one of the largest political parties in the world outside the Iron Curtain. But, in reality, the movement never became a political factor of any consequence.

By early in 1955 the junta, headed by Colonel Nasser, had succeeded in downing all its competitors; the Wafd and the other political parties were dissolved, the officer corps had been purged of deviators from General Naguib downward. But by last year, it had become clear that the opportunity for carrying through far-reaching domestic reforms had been missed. There was no lack of good will, but good will, like style, was not enough. With the dissolution of the old political parties the military movement had spent most of its momentum; there was to be no Egyptian Kemalism; for once Kemal Ataturk had won his battle against foreign intervention, he began to carry out his program of internal reform; he did not engage in vainglorious dreams about the reconquest of the old Ottoman Empire. For Ataturk the primacy of domestic policy was self-evident. Colonel Nasser, on the other hand, was to follow a different course, opting, as he did, for the primacy of foreign policy.

A curious situation had arisen in which a country like Egypt, however backward and internally weak, could almost attain great power status—at least tempararily. During the last 12 or 18 months Colonel Nasser and his colleagues have had several important successes. England agreed to evacuate the Suez base; Iraq, Egypt's main competitor in the Arab world, has been effectively isolated; Israel has been put under great pressure as a result of Egypt's purchase or arms from

the Communists; unscrupulous broadcasts of the "Voice of the Arabs" radio station have hammered home, day after day, Egypt's support for all anti-Western movements from Morocco to Pakistan to Kenya. Algerian rebels, according to French sources, call Gamal Nasser "Big Brother"; Bahraini newspapers overflow with praise of "Giant Salah-ad-Din Nassar"—an allusion to the great ruler who united the Arabs in the fight against the crusaders. Western and Eastern diplomats stumble over each other in their offers of assistance to Egypt and their courtship of the country which has emerged as the leader of a new axis in the Middle East.

However, Colonel Nasser's successes to date are, we are told, merely the first act in the drama of glory which is to come. The Cairo press envisages an Egyptian empire surpassing the realm of the Pharoah's and the conquests of Mehemed Ali. Egypt as the leader of all African national movements down to the Sambesi is one of the elementary articles of faith: It is the historic mission of Egypt to "liberate Africa" and to gain a supremacy similar to the one attained by China in the Far East. War against Israel is a very minor consideration to ambitions which now span whole continents: "A single Egyptian moudirieh [province] will be able to destroy Israel." The present Iraqi Government is to be overthrown; other reluctant Arab States (Lebanon and Jordan) will be drawn into a new axis headed by Egypt, to be joined at a later date by Morocco, Tunisia, and Algeria. The West will be brought to its knees by cutting its fuel lifeline: Cairo radio calls for the removal of American and British oil companies from Iraq, Saudia Arabia, and Kuwait: Aden, a British crown colony, is to be liberated, and the Red Sea closed to Western vessels.

All this and more is vividly described in detail in the leading Cairo weeklies, such as Al Tahrir, Rose al Yousef, Al Mussawar (from which we have quoted). Close observers of the Cairo scene, not unsympathetic to Colonel Nasser, already report that Spain and Sicily are included in the blueprint for the new Egyptian empire (London Times, March 19, 1956).

There is of course an element of fantasy in all that. But it would be dangerous to dismiss it as the harmless product of the imagination of people living in a dream world. Chances that the Cairo junta will ever achieve its foreign political aims are indeed dim: A minimum social and economic basis is needed on which to build empires, and this basis simply does not exist in Egypt: Colonel Nasser may profit from studying the lesson of fascism in Italy. But even if the Egyptian attempt to attain great power status should fail, as most believe that it will, it may in the process cause immeasurable damage.

In these circumstances there are two schools of thinking—diametrically opposed—as to how the West should handle Colonel Nasser. The one school, to which, according to many reports, Mr. Henry Byroade, United States Ambassador in Cairo belongs, argues that Colonel Nasser and his colleagues are essentially reasonable men, mainly interested in domestic problems. The main obstacles to understanding between the United States and Cairo are (a) the existence of Israel, and (b) French and English policies in North Africa and the Middle East. Support for Israel has been a mistake anyway, they say, the sooner the Jewish State is reduced or disappears, the better. America should also support Egypt's aims elsewhere in the Arab world and North Africa: These are, after all, just national aspirations; Western policy should support national movements throughout Africa and non-Communist Asia. Once these disputes are satisfactorily settled, Colonel Nasser will calm down; his more ambitious projects should not be taken too seriously; it will be possible to restrain the junta and direct its activities into more peaceful and constructive channels. There may be risks involved in such a course of action, but the only alternative (according to them) is to antagonize the Cairo junta completely, to push it into the Communist camp, thereby risking the eventual loss of the whole Middle East.

Such views deserve to be closely scrutinized. Of course, support of national movements in non-Communist Asia and Africa is an admirable principle. If Western statesmen had provided a larger measure of political sympathy and economic help for countries such as India, Burma, or Ceylon, the position of the West would be better than it is now. But very much depends on the manner in which support is given. The recent grant by the World Bank for the Aswan Dam is a perfect example of how it should not be done, for this grant was made out of the fear that Russia would steal a march upon the West, and there is an Arabic proverb to the effect that "if you give to a fool, he will say—this is because they are afraid of me." Western help to Egypt in these circumstances has been accepted as a matter of course, as some form of indemnification for the many "sins of the West." Not only cynics claim now that the only way to get speedy American help is to blackmail the West with the threat to play with the Russians.

But the ill-timed grant of Western economic help is trivial compared with the basic mistake committed by those who advocate Western backing for the political aims of Colonel Nasser—the equation of Asian and Middle Eastern nationalism. There is a profound difference between the two. In southeast Asia (as in Turkey, and possibly in Tunisia now) the struggle for independence went hand in hand with a general national renaissance. Indians and Pakistanis may quarrel over Kashmir, Indonesia may demand Dutch New Guinea, but territorial aggrandizement on a vast scale is not contemplated by any of these countries. They are not empire minded.

Egypt at the present stage of its development is unappeasable, to use a harsh word. Western collaboration with countries like India, Burma, or Ceylon is possible, indeed highly desirable, because the aim of these governments is to strengthen their newly won political independence, develop their countries, and have peace. The West has no other aims than these in Asia. No such common ground exists with Egypt's present rulers, whose single preoccupation is empire, who wish to prevent the West from taking part in the economic development of Africa, who wish to cut off the supply of oil—not just to cut the profits of the oil companies, who want to "liberate," for all we know, the European parts of former Arab, Saracen, and Mameluke empires.

Congressional Secretaries To Visit New York

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. ANFUSO. Mr. Speaker, this weekend, June 8, 9, and 10, the Congressional Secretaries Club, which includes the secretaries of nearly all Members of Congress, are making their annual trip to New York City. This annual pilgrimage has become traditional with our secretaries. Since I have the honor to represent a sizable portion of our fair city in the United States Congress, and since a large number of the secretaries making this trip are my personal friends, I want to extend a very hearty welcome to them and my sincerest wishes for a most enjoyable visit in New York.

I am naturally very proud of our great city of New York. I think it is about the greatest place in all the world, and there is no equal to it. I am also very proud of our employees here at the Capitol who assist us so ably in taking care of the needs of our constituents back home. Therefore, it is my distinct pleasure to welcome the "best" to the "best."

Mr. Speaker, as you and all our colleagues know, the Congressional Secretaries Club was formed in 1935 for the purpose of helping to obtain information so that the secretaries could better serve their Congressmen. The organization has grown from 25 members at the first meeting in 1935 to over 1,200 members last year. Practically every congressional and senatorial office is represented in the club by one or more of its staff members.

This year's trip has been arranged with the kind of cooperation of my good friend Milton H. Berger, one of the most outstanding public relations men in New York, whose efforts have always been directed towards the public good and the welfare of the Nation. He has been extremely helpful in setting up part of the itinerary, particularly the visit to Steeplechase Park in Coney Island, which is often described as the "Playground of the World."

The visit to Steeplechase Park is scheduled for Sunday, June 10, and this means fun in the sun, hot dogs, cotton candy and the like for the entire party. Mr. Berger has reserved combination tickets free for the entire group, including the amusement rides, food, and soft drinks.

I believe it is of interest to note that Steeplechase Park, which opened on May 19, is now in its 60th year of existence. It was founded by the late George C. Tilyou, one of America's greatest showmen. This amusement mecca for millions covers 25 acres in Coney Island and employs a crew of over 350 men to operate the park and its numerous rides and other attractions.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert at this point the itinerary of the Congressional Secretaries Club during the coming weekend:

CONGRESSIONAL SECRETARIES ANNUAL TRIP TO NEW YORK, JUNE 8, 9, 10

This is the complete itinerary as to the time of each of the planned functions. The time given is the departure time and it is suggested that you be a few minutes early on each occasion in order not to be left.

FRIDAY, JUNE 8

9:45 a. m., District of Columbia time: Special train will leave by B. & O. from Union Station. Sign will be on gate. Mr. Bob Petzold, of B. & O., will be with us the entire trip for any service he can render. Luncheon will be served on the train.

1:45 p. m.: Arrive at Jersey City. Board buses for transportation to Hotel Governor Clinton, 7th Avenue at 31st Street. Hotel rooms will be assigned on train and it is

urged that each person mark their name and room number on the baggage stubs which will be given them on train in order that bag may be placed in room on arrival at hotel.

3:30–5 p. m.: Cocktail party by Frank L. Sundstrom, of Schenley Industries, Inc., on the 37th floor of the Empire State Building, 350 Fifth Avenue. Tickets for the observation tower of the Empire State Building will be available for those who wish to visit the observation tower through the courtesy of Mr. Sundstrom. Transportation will not be furnished as Empire State Building is only 3½ blocks from Hotel Governor Clinton. Arrive at your leisure.

5 p. m.: Leave by bus from Empire State Building for Whitehall Club, 17 Battery Place, Manhattan, for cocktail party as the guests of the United States Lines. Busses returning to the hotel will leave at 7 o'clock from the Whitehall Club.

Rest of Friday evening open.

SATURDAY, JUNE 9

8:30 a. m. Buses will leave Hotel Governor Clinton at 8:30 for B. Altman's Department Store for breakfast and style show for ladies only. The show and breakfast will be in the beautiful Charleston Garden Restaurant at 9 o'clock. Charge of $1 addition is required for payment of breakfast. Corsage and door prizes will be given. After style show you will have free time for shopping, etc., until 12. Independent transportation back to hotel.

12:15 p. m.: Buses will leave Governor Clinton for pier 1, North River, Manhattan, to embark on Coast Guard cutter for cruise around Manhattan Island, and luncheon. Lt. Cmdr. Frederick Goettel will be acting commanding officer. Those having tickets to Perry Como dress rehearsal will debark by tug at pier 9. Others will continue to pier 1 and debark. Buses will take both parties to their destination.

Rest of Saturday evening open.

SUNDAY, JUNE 10

11 a. m.: Brunch at Governor Clinton Hotel.

12 noon: Those in party desiring to do so may visit Steeple Chase Park, Coney Island, through the courtesy of Mr. Milton Berger of that company. Tickets have been reserved for our entire group and should be requested upon arriving at the ticket office at Steeple Chase Park. They are being given a complete list of members and guests on the trip. To get to Steeple Chase Park, Coney Island, walk east to 33d and Broadway. Take BMT downtown express to Coney Island (ask subway cashier for route number of train). It is estimated that it will take 45 minutes each way. It is suggested, therefore, that those going to Coney Island leave by 3:30 in order to check out of the hotel and board last bus which leaves at 4:45.

4:45 p. m.: Board bus for Jersey City. Train leaves at 5:45. Dinner will be served on train and is included in your ticket.

9:45 p. m.: Special train arrives in Washington, D. C.

Those having tickets to Steve Allen show, "Tonight," Friday night, are required to be in the Hudson Theater, 141 West 44th Street, at least by 10:45. The shows lasts 1 hour and 30 minutes.

Those having tickets for the Perry Como dress rehearsal Saturday afternoon are required to be at the Century Theater, 57th Street and 7th Avenue, by 4:45. As we only obtained 100 tickets to each of the above shows, members can choose which show they wish to attend as long as tickets last. Tickets for these shows will be distributed by Bob Petzold at the Whitehall Club cocktail party.

Tickets to Radio City Music Hall and Roxy Theater will also be available when we get to New York.

Your tickets cover cost of hotel room. However, upon checking out please see cashier and pay incidentals such as telephone calls, room service, etc.

We will see that your bags are placed in your room upon arrival, but it is up to you to see that your bag is placed on bus when you check out. Customary tip is 25 cents per bag.

Busses are furnished to us by the courtesy of Mr. John E. McCarthy, president, New York City Omnibus Corp.

LONG-RANGE WEATHER FORECAST

New York City temperatures will average near or a little below normal. The highest temperature will be near 80° and the lowest near 63. Friday will be warmer, turning a little cooler late Saturday or Sunday. Scattered showers Saturday or Sunday. Not more than one-fourth inch precipitation expected.

Will Soviet Union Confess the Katyn Massacre?

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I presented before the political action committee of the Polish-American Congress at Philadelphia on Thursday, May 31, 1956:

WILL THE SOVIET UNION CONFESS THE KATYN MASSACRE?

Again and again my voice and my petitions have been heard crying out in my own country, to the nations of the world and to the high heavens, against the enormity of the crime perpetrated by the Soviet Union and known in the catalog of international outrages as the Katyn massacre. It may be asked of me in the Department of State in Washington, or they may ask it in the United Nations, or in the Kremlin itself: When will I forbear raking up old wounds, when will I cease the clamor for justice and the law? My answer, I am pleased to avow before this, the Polish-American Congress, is as simple, and as fair, as devoid of rancour and vindictiveness, and as righteous as the facts testify. My answer is that neither I, nor the Congress of the United States, nor any international tribunal in the United Nations, can shut its eyes to the horror of the calculated mass murder of the Polish officers and civilians in the forest of Katyn until the truth shall have been acknowledged by the perpetrators or their associates and successors and due contrition observed. For me or for any just official, or for any government in the free world, not to press for adjudication in this wise of an atrocity so enormous, is to make one's self a kind of passive accessory to the crime after the fact.

This I shall never be and thus I stand here today symbolizing, if you please, the conscience of the Congress of the United States and the people of this country. It is not enough that the select committee of which I was a member found unanimously in its investigation and study of the facts, evidence, and circumstances of the Katyn Forest Massacre that there was irrevocable and conclusive proof that this horror had been committed by the Soviet NKVD or People's Commissariat of Internal Affairs. It is not enough to establish the date as not later than the spring of 1940. It is not enough to conclude as the select committee unanimously concluded that the "Soviets had plotted this criminal extermination of Poland's intellectual leadership as early as the fall of 1939—shortly after Russia's treacherous invasion of the Polish nation's borders." I am quoting House Report No. 2430, 2d session of the 82d Congress, which goes on to say: "There can be no doubt this massacre was a calculated plot to eliminate all Polish leaders who subsequently would have opposed the Soviets' plans for communizing Poland."

I say it is not enough to have probed for the truth, unearthed it, exposed it, proclaimed it. For what is involved here is the very heart of the moral values for which World War II was fought, a war that cost mankind 40 million lives and $2 trillion. If we merely find the truth, as we have here, and then tell it and let it pass into history like a forgotten page in a book that is out of date we shall have performed a disservice to western civilization and the free world. For that is only half of the task. We shall have acted weakly and ineffectively and in a manner destined to make us look vapid and hypocritical in the eyes of posterity and pusillanimous before the bar of world opinion. It is one of the major prides of my career in the Congress of the United States that I have not permitted this matter to sleep in the archives of government. Nor could I rest comfortably in my conscience knowing that the job of the select committee, magnificiently accomplished both on American soil and in Europe, might evaporate without a fixed result, like a case tried adequately before a qualified court but without the resultant improvement to society that litigation is expected to yield.

If there is genuinely a new policy in the Kremlin since the death and desanctification of Stalin, I was determined to put it to the acid test.

Thus it was that on May 3 of this year—1956—I wrote Secretary of State John Foster Dulles asking that he transmit to the Polish Government the report of the select committee which is now a public document of the United States. I asked also that the Secretary of State transmit to the United States delegation of the United Nations the same report "so that all members of the United Nations," my letter to the Secretary said, "may be officially aware of the existence of this public document." And finally I asked Secretary Dulles that the report and hearings record of the select committee be placed in all our embassies and libraries overseas through the Secretary's efforts and that of the United States Information Agency.

Since then I have heard from Theodore C. Streibert, Director of the United States Information Agency, indicating that the Voice of America had broadcast my statements and that of my colleagues in the House to Poland and other Iron Curtain countries, in connection with Polish Constitution Day. Likewise Director Streibert in that same letter of May 18, 1956, informed me that on last April 13 they had broadcast a special commentary on the anniversary of the Katyn massacre. Other broadcasts, the letter said, were forthcoming that might be useful should the Polish Government initiate an investigation of its own into what may be termed one of the outstanding atrocities of the Soviet Union in World War II.

On May 18 of this year the Department of State in response to my letter informed me by letter that they had given practical effect to my suggestions. I was informed that the Department had even before my letter instructed Ambassador Lodge on January 30, 1953, to transmit to the Secretary General of the United Nations 70 copies of the select committee's report. Ambassador Lodge was

instructed to send a note, the Department's letter to me said, to the Secretary General of the United Nations describing the work of the select committee and asking him to transmit a copy of the report to the representatives of each member of the United Nations. This was done, and other steps were taken to reveal definitely before the pertinent body of the United Nations the details of the outrage which concerns us here.

As for the possible establishment of a Soviet or joint Soviet-Polish commission to examine the Katyn Forest massacre; that, the letter from the Department of State informs me, is still in the rumor stage with nothing to confirm the rumor's authenticity.

And that brings me to the issue of the day.

What we are in fact asking for is a second and a honest investigation from behind the Iron Curtain of all the facts behind the Katyn Massacre. The first investigation made by the Soviet Government yielded findings which perpetuated the fraud that sought to absolve the Soviet Union from guilt. We know, and the Russians know, and the Germans know—all the world now knows—that the Kremlin has murder on its hands for the Katyn Massacre. What justice and history, what the ethics of a religious society demand, is that the alleged new masters of the Kremlin who repudidated Stalin, now stand up and be counted. They are asked to give mankind for all time on the basis of a thorough investigation of their own the confession of guilt without which this case cannot be said to be closed. Abundant evidential materials and witnesses still exist. And on the basis of this confession the guilty should be asked to make whatever retribution is yet possible.

It is to this end that in my letter to Secretary Dulles on May 3, of this year, I asked that the Polish Government be furnished anew the report and hearing record of the Select Committee. It is easy enough to make the findings we made, powerful and conclusive as they are, and to now drop the matter. But this course of placid acceptance of a frightful wrong does violence to the most elementary precepts of justice that have evolved in our civilization since the dawn of time. We did what we could in the circumstances, but we must not stop now. The issue before the United States and the world is a strategic one and can be lifted now to the highest vantage point of international drama. It can be lifted to this exposed area because the Kremlin has professed to reform. Whether this is true or just another Communist fraud may now bluntly be determined by a simple question from the President of the United States to the so-called collective leadership of the Soviet Union. The eyes and the ears, the heart and the conscience of mankind, are riveted on these two mighty centers of executive power: the Kremlin and the White House. If Khrushchev and Bulganin mean what they say then let the President ask him to admit forthrightly the guilt of the unspeakable Stalin—on the corroborative evidence they must have in their archives—of this atrocity that brought the record of crime, even in war, to a new all-time high. This crime of crimes must be exposed for what it was just as world society had at Nuremberg condemned the overwhelming crimes of Hitler and his unmentionable associates.

But this time it should be done by confession arrived at by authenticated evidence, from within the Kremlin's own walls, not because the crime needs further authentication, but because this proposed open confession, voluntarily arrived at, is one of the basic penalties communism should be willing to pay in the interests of justice and as proof of the sincerity of its protestations of reform. We have to remember that when the Soviet Union sat in as a judge during the international military trials held in Nuremberg after World War II it came with blood on its hands and guilt in its heart. The adjudications of that court, in my judgment, were the adjudication of the outraged conscience of mankind and were valid, sound, and merited. But the Soviet Union, on the basis of its conduct in the forest of Katyn, came to the judgment table with an unclean soul. Moreover, the 20th century has been the special victim of the type of national fake by which the perpetrator of murder, arson, and torture fabricates the evidence and then the propaganda blaming his crime on the enemy.

The solution of the Katyn crime, in accordance with my suggestion, will help conclusively to nail this type of lie to the masthead of international publicity, so that in the future it will be more difficult to perform this kind of international fraud. Khrushchev and Bulganin must not be invited to come to the United States. They must first be persuaded to go to Canossa in contrition and in penance. Unless a world of justice and righteousness rubs the nose of mankind's ruthless enemies in the ghastly evil of their own deeds, what chance is there for moral progress? I ask you, the Polish American Congress, to join with me in an unrelenting and persistent determination to keep this crime alive in the conscience of the world until the Soviet Union shall have confessed and made amends even at this late date for an outrage that is beyond atonement.

Aid to Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. MULTER. Mr. Speaker, under leave to extend my remarks, I include the following item which appeared in the National Jewish Monthly of May 1956:

NON-JEW ASKS ISRAEL AID

(EDITOR'S NOTE.—The following letter, sent in by one of our readers, appeared in the Dallas Times Herald. It was written by the conductor of the Oak Cliff Symphony Orchestra.)

I am a Christian, but I would like to express my admiration for a people who from time immemorial have contributed so much to our civilization and enriched our lives with their culture. Though now surrounded by formidable enemies and forsaken by the very nations which have benefited by their culture and morality and adopted their religion as their own, they now stand alone to defend their new-born liberty with heroism reminiscent of Thermopylae and the Alamo.

Can we Christians accept the Bible and forsake the people who gave it to us? Can we live by the teachings of Christ and not lift a finger to help the Israelis? The Communists are arming the Arabs to exterminate the Jews. Is it too much for liberty-loving Christian America to give the Israelis a few guns in order to defend themselves? Give the Jews a break. They deserve it.—ARMAND DEMOND, DALLAS.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Racine Education Association Dinner

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 7, 1956

Mr. WILEY. Mr. President, on Monday night, May 28, 1956, it was my privilege to speak at the Racine Education Association dinner at Racine, Wis. I ask unanimous consent that the remarks I made on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY STRESSES EDUCATION AS KEY TO PROGRESS; URGES SEAWAY FUNDS, SUPPORT OF ENLIGHTENED EFFORTS AGAINST WORLD COMMUNISM

(Excerpts of address by Hon. ALEXANDER WILEY, Republican, Chippewa Falls, before the Racine Education Association dinner at Racine, Wis., May 28, 1956)

Good evening, I'm delighted to be here.

I'm always inspired, and challenged, when the opportunity arises to speak before an educational group, such as is assembled here tonight.

You, and the multitude of educators you represent, play a unique role in the development and progress of our citizens and our country.

Our future hinges, to a great degree, on your success in the field of education.

EDUCATION LEADS THE WAY

As you so well know, education leads the way for each of us, and for all mankind. Its guiding light pierces the dark mystery of the unknown—in the physical and the social sciences. By knowledge, we find a path among the "sticks and stones" of life's travels and among the world's dilemmas.

Our teachers and schools make an outstanding contribution to the welfare of our Nation. Our educational institutions give us scholars, teachers, scientists, engineers; undergird our industrial and technological progress; sustain our cultural pursuits; contribute knowledge through research in chemistry, biology, physics, yes, or—in psychology, sociology and the other social sciences, as well as in all other fields essential to our national progress.

Upon the graduates of our educational system we depend for the skill and vision to guide us through the future, to hurtle obstacles in our path, and to strengthen the foundation for continued peace and progress.

WE NEED MATURE AMERICANS

Upon your shoulders lies the burden of developing truly educated citizens. They must not simply be people with vast stores of facts, but, far more important, as you know, people who are genuinely mature—physically, socially, intellectually mature—grownup adults in every sense of those words.

REDUCE THE NUMBER OF IRRESPONSIBLES

You and I can see occasional instances of immature people around us—people who have unfortunately not fulfilled their adult responsibilities. These include shiftless people, lazy people, negligent parents; yes, these grown-ups include lawbreakers and alcoholics.

These are immature people whom society has failed and who, regrettably, have failed society. They are fortunately few in number, but they are nonetheless a drag on society, a burden wherever they live.

You, as builders of men and women, are determined, as I am, to help reduce the numbers of such unfortunates in time to come. It is your aim to develop the finest type of citizen—wide-awake, well-informed, responsible, wholesome, constructive.

A bit later on, I shall refer briefly to the problem of law enforcement and juvenile delinquency.

BUILDING CHARACTER, BUILDING AMERICA

But for now, I simply want to point up the contrast of the decent mass of law-abiding, worthy Americans versus the unfortunate ne-er-do-wells whom we occasionally see.

Real education, real building of character—that is your goal and mine.

But now let me turn to another phase—the building of America—building it, for example, through the St. Lawrence seaway, the type of outstanding project which all thinking Americans support.

COMPLETING THE SEAWAY JOB

Happily, the major battle for recognition of the value of the seaway is won. The Congress has authorized its completion and acted for the deepening and improvement of the connecting channels to 27 feet, for the accommodation of deep-sea vessels the whole 2,300-mile route. Our major task now is to secure the actual channel funds, in accordance with the authorization, and then to negotiate the toll arrangements for the liquidation of the seaway's costs.

There will be tremendous economic benefits. The seaway power phase is estimated to turn out 12.6 billion kilowatt-hours of electricity a year—more than all the powerhouses of the Tennessee Valley Authority.

The trade channels, it is estimated, will carry from 50 to 85 million tons of cargo annually—far more than the Panama Canal.

This reflects only to a smaller degree, the tremendous effects, direct and indirect, which the seaway will have for us.

EXPAND WATERWAY'S CAPACITY

We cannot, however, wash our hands of this and say, "We have won the congressional battle. Now let somebody else carry out the project."

The President, my colleagues, and I in the Congress have fought too hard and long to abandon thought of this tremendous tradeway, just when it is reaching its final stages of completion.

Our effort now must be directed toward resolving the problems of completing the job. You can depend on it; I will be in there pitching: until the last shovel of earth is moved; until each lock is open; until our harbors have been deepened and improved; and until our trade is expanded to the capacity of the seaway.

For example, one problem that we face is that the Welland Canal on the Canadian side of the border is going to be a seaway bottleneck—a serious limit on traffic capacity unless and until its existent locks are doubled.

And here on our side, a great many harbors must be deepened and improved so as to assure fullest seaway benefits.

FULLY UTILIZING THE SEAWAY

The real success of the seaway will depend, to a large degree, on how successfully we utilize this less expensive route to domestic and foreign markets. We must establish new transportation and trade patterns to take advantage of the fullest opportunities offered by this farsighted project.

We must develop and construct a more modern Great Lakes merchant fleet, sailing under American flags and American trade. We must modernize ports and terminals, warehouse facilities, and sidings.

SELLING THE SEAWAY

This requires a selling job. We must sell the seaway to our companies, industries, and people. All must be aware of the tremendous opportunities that will be opened by the seaway.

Agriculture, manufacturing, and other industries—and the related services—can expect to share in the economic boost that will result from full utilization of the seaway.

This will result in a development of existing industry and the movement of new industry into our State. Tremendous opportunities will open in terms of more jobs, better payrolls, and accelerated industrial development. Too, the construction and improvement of highways, railroad, and even airlines to handle the increased traffic will be an economic "shot in the arm."

SEAWAY WILL CONTRIBUTE TO FOREIGN POLICY

The seaway also can contribute greatly to the new philosophy of our international relationship. This new concept means trade instead of aid, for friendly countries. It means meeting the economic challenge of communism in this so-called era of competitive coexistence.

RED DANGER GREATER

Unfortunately, as we are all so well aware, the dark cloud of communism still looms large on the horizons of the free world. Our domestic and foreign policies must—unhappily—continue to be based on combating the serious threat of communism.

There is no turning back in our efforts. There must be no slackening. The danger today is actually greater, because it is more subtle; the Reds are more cunning, more adroit, more skillful, less crude and heavy-handed in their aggression.

Our way must prevail against theirs.

THE INDIVIDUAL—THE STRENGTH OF THE NATION

Our way of freedom, our search for truth, our valuing of human dignity—all this must prevail.

The great strength of our Nation, of course, is the development of the individual, possessing a rich heritage of human ingenuity, imagination, and character.

This is in sharp contrast to the Communist climate, in which—as Khrushchev at one point inadvertently admitted—the price of nonconformity is a bullet in the head.

The recent attempt of Soviet leaders to heap all the crimes of Communist policy upon the dead Stalin has resulted in failure. Exploding the myth of Stalinism—changing him from a Godlike sympol to an ogre of infamy, crime, murder, is supposed to cleanse the bloody hand of the Kremlin. But it will not. Stalinism still lives on. The current regime of communism is built upon, and

carries on, the traditional brutal concepts and tactics of the deposed villain.

As for ourselves, fortunately, for the most part, we have succeeded in blocking the efforts of communism to militarily take over new lands of the world. However, we must continue to stave off these aggressive tactics.

REAPPRAISE OUR POLICIES TOWARD NEUTRALS

As necessary our policies must be constantly adapted to meet new Soviet economic, military, and political challenges. We must reappraise, for example, our policies in dealing with the vast uncommitted, neutralist bloc of the world—a bloc ably and eloquently described by our current visitor, Dr. Sukarno, the President of Indonesia. He is learning about us, and we, fortunately, are becoming better acquainted with him and his people and their way of viewing the world.

Like us in 1789, they want to avoid what they feel are entangling alliances.

But unlike us in 1956, they do not realize that they are menaced actively, just as we are menaced today, but as we were not back in the days of our colonial isolation.

Somehow we must more effectively bridge the gap between our thinking and theirs. But this will take patience and understanding not as some people immaturely recommend—bluster or threats or attempted orders to them.

These neutralists are proud, independent peoples, deserving respect and understanding. That is what they are entitled to, and that is what they will receive from us, just as we, in turn, expect and hope for fair respect and understanding from them—from India and Ceylon, and Burma, and Indonesia, and the other neutral powers.

This can, indeed, come about.

CHALLENGE TO NATO

So, too, the challenge to NATO, now only a military alliance, to become a real political and economic instrument of the free world, offers great promise.

If this is successful with NATO, then SEATO—the alliance of South Asian nations—may also similarly operate effectively against communism in the political and economic sphere, as we are hoping it may be able to in time to come.

In other words, our foreign policy is not and will not be rigid or frozen. Rather we must be flexible and adaptable. That doesn't mean that we will compromise it or abandon principle. But it does mean that we recognize that the world scene is changing with breath-taking speed.

As you know, we have military security pacts with more than 45 other nations.

We must be realistic, however, by acknowledging that pacts are only as binding as the good faith of the member nations, and only as they are capable of fulfilling their commitments.

CRITICAL TIMES AHEAD

We face critical times ahead. Currently, the Mediterranean area has become a particular flaming cauldron. For example:

1. Algeria resounds with gunshots and the cries of dying men.

2. The Middle East is a tempest—with Israeli and Arabs sniping at each other.

3. Cyprus is aflame with nationalistic riots, resulting in serious bloodshed.

We must, of course, be alert to dangers, not only in the Middle East, but all around the world—in Asia, Latin America, Europe.

To cope with the dangers, we must maintain a strong America. This means that we must iron out whatever shortcomings exist—in domestic or international fields—to meet the present and future demands of our country.

WE NEED OPEN MINDS

Sound action will require sound thinking—the thinking of open minds, enlightened minds—not closed, bigoted, immature minds—not minds which fail to realize that we are living in the 20th century, in the jet-atomic age, when we are but 6 hours away from Soviet bomber bases.

You realize these facts, of course, but there are some Americans—yes, Americans who are nominally very well educated, who have nonetheless closed their minds to the facts of life. They ignore the facts which emerge from the ominous results of the H-bomb test explosions in the Pacific—explosions of perhaps 15 million tons of TNT power. They ignore the significance of jet flights of 1,500 miles per hour speed. They ignore the meaning of the NIKE sites around Milwaukee.

And so we need to strengthen American education—adult education and youngsters' education.

We Americans cannot expect to play our full role in world affairs, or to be strong in our domestic affairs, if we fail to adequately solve such problems as now face education in our local communities. Many of our areas, as you know so well, have found themselves continually handicapped by the shortage of trained teachers, and a lack of modern classrooms and equipment.

But, as you well know, too, there is legislation pending in the Congress which may have a vital effect upon our educational sytem and the future role of education in America.

FEDERAL AID TO EDUCATION IS CONTROVERSIAL

The topic, of course, is controversial. As we are all aware, many of the folks in our own State—right here in Wisconsin—feel very strongly about some of the features of the present bill before the House of Representatives.

Principally, of course, I think we can all agree that, whatever steps are taken, we must be careful—very careful—to prevent the long arm of Federal control from extending into our school system.

Second, we know that there have been objections as regards the increased cost of the program, if administered through the Federal Government.

None of us, of course, want unnecessary increases in our already heavy load.

KEY QUESTIONS ON EDUCATION

So, the questions are: How fundamentally is necessary Federal construction aid? Can the States be relied on to meet their challenge? Are the States now doing all that they should do, or are they passing the buck to Uncle Sam? And—Could the States pay our underpaid educators more, without undue financial hardship to the respective State treasuries?

These are far from easy questions to answer. But answer them we must.

And our general task is clear. We must get the facts. We must iron out the difficulties and the misunderstandings. We must weigh a program which will not jeopardize the independence of our school system, and yet which will provide adequately for the education of our children, particularly in very low-income States.

How do we do this? That is the challenge which will soon confront the Senate Education and Labor Committee.

A few of the facts of the situation are:

1. We do need new and more schools, and we need them badly.

2. We must provide these in the most economical manner.

3. We must achieve this without Federal control of our school system.

In effect, we must adhere to the fundamental principle, as outlined by President Eisenhower. That is: "Control of education should be as close as possible to parents and citizens in local communities."

CRISIS NOT TEMPORARY

The critical shortage of teachers and facilities is not just temporary. We face increasing demands on our school system, as you are aware.

According to studies made by the Bureau of the Census and other agencies, it is expected that the United States will grow from about 165 million in 1955 to about 190 million in 1965. The school-age population (ages 5 to 17) will increase from about 39 million to over 48 million—an increase of almost one-third of the present total.

OUR WISCONSIN NEEDS

In Wisconsin, for example, it is estimated that 5,975 classrooms will be needed by 1965—at an estimated cost of about $209,125,000. This is an average of $21 million per year.

We, of Wisconsin, rightly pride ourselves in our splendid school system. It is excellent, especially in comparison with that of a great many other States. It is a pacesetter—thanks to you—and you—and you. And yes, to a great and good man who recently passed on—our universally respected friend, John Callahan. God bless his immortal soul.

May we always be inspired by the wonderful innovations he devised, particularly to improve rural education.

The educational pattern in our State, and in America, of course, must constantly adapt to the needs of our changing times. There are many new requirements such as providing facilities for learning on the part of the mentally retarded, the handicapped, the emotionally disturbed, and meeting other special needs.

That includes the needs of the truant, the delinquent, the so-called troublemaker.

AID FOR HIGHER EDUCATION

We must carefully analyze too, the present pattern of meeting the needs of higher education—including scholarships, fellowships, loans and grants-in-aid, gifts—in addition to the students' efforts to "pay his own way." This is becoming an increasingly important problem and requires a national reappraisal.

IMPROVING RACIAL RELATIONS

We are all aware also of the difficult problem involved in racial relations, especially in the South, both in institutions of higher learning and in primary and secondary schools.

Fortunately, cool heads, sensible heads, understanding heads, will, I believe, prevail over the "hot-heads" in meeting this problem.

Integration is now the law of the land. The Supreme Court has spoken decisively and unanimously. But it has also spoken for gradualism, for steady but careful handling of the problem at the local level, under the guidance of Federal district courts. Under these circumstances, Congress would be ill-advised to approve the arbitrary Powell rider to the school bill—which would instantaneously—without gradual adaptation—ban outright all funds to unintegrated schools. However well intentioned, this amendment would violate the spirit of the Supreme Court's decision, and it would probably cause an endless filibuster in the Senate, in any event, thus serving to kill the school bill, entirely.

The Yellowtail Dam Resolution

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 7, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to place in the RECORD a press release I issued yesterday

concerning Senate Joint Resolution 135, the Yellowtail Dam resolution, and the vacating of the hearing before the Senate Interior and Insular Affairs Committee on the nomination of Wesley A. D'Ewart as Assistant Secretary of the Interior.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JAMES E. MURRAY

The article on the D'Ewart hearing and Yellowtail Dam resolution appearing in this morning's Washington Post and Times-Herald under the byline of Warren Unna, staff reporter, is absolutely without foundation in fact. I am surprised that a newspaper with the reputation of the Washington Post would carry such pure fiction as a news story.

The Yellowtail Dam resolution will stand on its own merit and President Eisenhower, I am sure, will have the advice of his deparment heads as to whether he should sign or veto the resolution. I have not discussed the President's action on the bill with any member of his administration and no one can produce any evidence that I have done so. Certainly I would not be a party to any attempt to imply that the President of the United States would enter into a cheap political deal or horse trade as the Post terms it.

I repeat there is not an iota of truth in the allegation.

As a result of this false charge I have no choice but to vacate the hearing that had been tentatively set on Mr. D'Ewart's nomination. After the President has acted on the Yellowtail Dam resolution I will consult with members of the Senate Interior and Insular Affairs Committee as to what procedure should be followed in connection with the D'Ewart nomination.

Statement of Policy by the American Chemical Society on Matters Relating to Education

---

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, June 7, 1956

Mr. STENNIS. Mr. President, in this technological age many of us are deeply concerned over the possibility of a future shortage of scientifically trained individuals. Much is being said and written on the subject. Many organizations and individuals are taking positive steps to effect changes in this situation.

I have just received from Mr. Alden H. Emery, executive secretary, American Chemical Society, a reprint of an article appearing in Chemical and Engineering News. The article is an official statement of the policy of the American Chemical Society on matters relating to education, and I believe will be of interest to every one. The American Chemical Society is a federally chartered organization with more than 77,000 individual members.

Mr. President, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEMENT OF POLICY BY THE ACS ON MATTERS RELATING TO EDUCATION

The United States can be proud of its educational heritage. In accordance with democratic principles, it has placed educational opportunities before all its citizens, a situation that exists in few other countries of the world. Paradoxically, this sound basic philosophy and the general availability of facilities are not meeting the educational requirements of our Nation.

Our great country was founded by people who believed in freedom. Many others who shared those beliefs have been drawn to our shores. Freedom of thought and the development of mental skills to their limits were traits of our forefathers. Yet, as the privilege of formal education has been extended to an increasing number of people, appreciation of the value of and need for a disciplined and rigorous education has decreased. Many who now crowd our schoolrooms are capable of absorbing better training. They do not do so because of lack of motivation or lack of opportunities. Parents and teachers alike are at fault if they do not vigorously and enthusiastically urge every pupil to develop his mental growth to the utmost. Roadblocks to educational opportunities must be eliminated.

In the past several years, there has been a sharp decline in the number of scientists and engineers graduating from our colleges and universities. The decline has been more rapid than the dropoff in the size of college graduating classes. Also, it has come at a time when demand for persons so educated to meet the needs of national defense and an expanding civilian economy greatly exceeds past requirements and promises to rise still higher. The situation imperils the prosperity and security of the United States because both depend on unceasing advances in science and technology.

Although many factors have combined to cause the drop in science and engineering enrollments in colleges and universities, it is generally agreed that one of considerable importance is the current status of science instruction in the secondary schools. Recent surveys have revealed the following disturbing facts:

1. There is a nationwide shortage of qualified high school science teachers.

2. The proportion of new teachers of science has been declining more rapidly than in other fields of specialization.

3. Only about 1 student in 11 enrolled in high school elects chemistry, approximately 1 in 16 elects physics, and the proportion who elect various mathematics courses has been on a decline for nearly a half century. About 1 student in 3 who graduate has taken a course in chemistry.

When high school science, including mathematics, receives so little attention, relatively speaking, it is scarcely surprising that the number of students who major in science and engineering has fallen off. If continued, this trend could have serious consequences to our Nation. Entirely apart from the shortages of specialists whose skills are needed, the situation is unfortunate for high-school students in general. All are destined to live in a world dominated, in peace or war, by the impact of scientific and technological progress. If they are to enjoy useful and satisfying lives in such a world, they must have some understanding of the goals, methods, and importance of chemistry and other basic sciences. If they wish to help mold their own futures, they must have an appreciation of these disciplines. Indeed, such an acquaintance with science is an essential mark of culture in our times.

From a national viewpoint it is eminently desirable that the voters of tomorrow possess some understanding of science. In a democracy the ultimate power rests with the people and they can use it wisely only to the extent that they comprehend the great issues confronting them. Many of these issues inevitably will be created by the march of science and technology.

Assuring chemistry and her sister sciences of proper recognition is but one of many problems facing our high schools. The shortage of qualified teachers afflicts many disciplines. Construction programs have not kept up with soaring school populations. The school tax rate in many districts is imposing a burden on its citizens. Any attempt to improve the position of science and mathematics in the high school is likely to fail unless it be a part of a broad effort to strengthen education as a whole.

Therefore, in the interest of the immediate and long-range needs of our Nation, it is the opinion of the board of directors of the American Chemical Society that every step feasible should be taken.

1. To provide increased educational opportunities for all, particularly those known to have unusual ability.

2. To encourage precollege training which will provide a sound educational foundation for higher education in all fields.

3. To assure maximum and uninterrupted growth of scientific developments by promoting a strong educational system at all levels which will provide an adequate flow of qualified, specialized personnel.

The board is of the opinion that these broad objectives are not being met with the vigor they deserve.

Therefore, it recommends that—

(a) The American Chemical Society strive for the improvement of our educational system as a whole through the efforts of its—

1. Members, who should assume personal responsibility for keeping informed of the current status of problems relating to education, and as citizens and professional people they should do all they can to improve situations in their own communities.

2. Local sections which should continue effective and useful projects and expand their programs to include such activities as vocational counseling, teacher and student aids, awards, continuation courses, lecture series, improved science instruction, and other projects especially appropriate for local sponsorship.

3. Divisions, which should continue, and wherever possible expand, those projects which are now being carried out such as improvement of instruction and the sponsorship of publications, tests, awards, conferences, institutes, and meetings related to education; and

4. Staff, which should accelerate its activities such as coordinating the programs of various society units, encouraging the cooperation of other interested organizations, publicizing educational matters, and studying problems of special importance to the profession.

b. Elementary schools increase their efforts to provide the important initial training in science and mathematics needed as a foundation for secondary school education and for understanding of the technological age in which we live.

c. Secondary schools increase their efforts to provide sound college preparation and that those advising students capable of higher education vigorously urge them to pursue the college entrance curriculum.

d. Secondary schools increase their efforts to provide sound science and mathematics courses for those who are not preparing for a higher education.

e. Colleges and universities increase their efforts to provide an adequate flow of qualified graduates in science and engineering

to supply the needs for uninterrupted growth of technological development.

The board realizes that the responsibility for carrying out these recommendations is as broad as the Nation and that the American Chemical Society is only one of many organizations interested in the educational problems of our country. It is confident that it has the support of its entire membership in pledging the cooperation with the Federal Government, State, and local governments, school systems, indivduals and organizations whose aims are consistent with those of the American Chemical Society. It hopes that all with an interest in solving these critical problems will take active steps toward rectifying current shortcomings and meeting future needs.

Kremlin Holds Onto Stalin's Loot

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of June 6, 1956:

KREMLIN HOLDS ONTO STALIN'S LOOT—REDS CRITICIZE DEAD DICTATOR'S CRIMES BUT AREN'T FREEING SLAVE NATIONS

(By Constantine Brown)

We have now entered the second phase of our relationship with the U. S. S. R. The cool war is replacing the cold war. The difference for the time being is that smiles and reassuring words are taking the place of threats and saber rattlings.

The fact is that none of our policymakers, despite their willingness to resume "cultural" relations with the U. S. S. R. can point to a single change in Moscow's fundamental objectives. American politicians who pretend to detect a change of heart in the Kremlin are practicing Coueism. So did the late British Prime Minister Neville Chamberlain and his cabinet associates in their dealings with Hitler and Mussolini.

How sincere are Messrs. Bulganin and Khrushchev in their anger toward Stalin? It is noteworthy that violent portions of the denunciations of Stalin by his once faithful subordinates at the 20th Communist Party Congress released Monday by the State Department were intended more for international than national consumption. The label of "murderer and torturer" affixed on the late dictator have not been widely published in the U. S. S. R. and its satellites. The "leaks" first to the foreign press in Moscow and now through foreign diplomatic channels indicate some deliberate "planting."

If Bulganin and Khrushchev were honest in their revulsion toward the "criminal" Stalin, they surely would have followed the standard pattern still in effect in the Soviet Union and made their statements in Pravda and not behind locked party doors. Hence the belief that the bitterness toward the dead dictator was more for the foreign than domestic market.

The same thing can be said about the recent "spectacular" change in the Moscow Foreign Office. The old Bolshevik, Vyacheslav Molotov, who served Stalin as faithfully as he has served the present rulers, was replaced by Dmitri Shepilov. The former editor of Pravda is expected to be even tougher than his "frozen face" predecessor. They are both past masters of intrigue and double-talk, with the possible difference that Shepilov is more so.

People who do not want to be fooled by the make-believe attitude, such as Senators WILLIAM KNOWLAND and STYLES BRIDGES and many others in both Houses of Congress, still insist that before embarking on extensive bouquet tossing with the Soviets we must have some deeds to prove their fine words are not all lies. They point out that so far the U. S. S. R. has shown no tendency whatsoever to relinquish any of Stalin's loot.

Free elections in Poland, Czechoslovakia and other satellites have never been mentioned. The tortured Baltic States (which, incidentally, we still recognize as independent republics and which have a full diplomatic representation in Washington) still are held incommunicado.

What the B. and K. team is now doing is to follow the pattern set by their criminal predecessor, but through other means than saber rattling. The NATO, shaky as it was from its inception, did prove a thorn in the side of the USSR. Now France, Britain and the lesser members of that coalition have told us that they want the military signpost removed from that alliance.

Actually, the Soviet general staff has not been particularly worried about the military potential of the two main American allies because of the neutralist winds in both countries. But they are worried about Germany, even partially rearmed. Stalin, before his death, offered the moon and stars to the Bonn government on condition that it would not reorganize militarily as a member of the NATO. The German government and German people had, however, at that time full confidence in America's determination to have a "peace with honor and justice" in Europe and in Asia.

The Bonn government, confident that we would not rest until Germany was unified, decided to join America rather than Western Europe in the struggle for preservation of western civilization. That was the time when we refused to be deceived by any of the Soviet gestures and insisted officially on "deeds not words."

The recent visits of American legislators, churchmen, artists and farmers (with some Soviet men returning them promptly) have depressed the German spirit. The recent announcement that the Air Chief of Staff, Gen. Nathan Twining, was going to Moscow—the first high ranking American military man since General Eisenhower visited that city in 1945—caused more than alarm in Bonn.

From the technical viewpoint, it is immaterial whether American and Soviet generals and admirals visit each other. From the point of view of the effect in Europe we have everything to lose and not a scrap to gain.

Address by the Ambassador From Brazil to the Knights of Columbus

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 7, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to insert in the CONGRESSIONAL RECORD a very able speech, brilliant in every particular, delivered by His Excellency, Ambassador João Carlos Muñiz, of Brazil, before the 16th annual banquet of the Fourth Degree General Assembly of the Knights of Columbus, in the main ballroom of the Mayflower Hotel, Washington, D. C., on April 26, 1956. In the opinion of the guests who, for many years, have had the good fortune to attend this event, the address of Ambassador Muñiz was a masterpiece in content and in style. I am glad to make this insertion at the request of my good friend, Father Joseph F. Thorning, associate editor of World Affairs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The responsibility for my being here tonight falls first upon the chairman of your Pan American reception committee, Mr. John H. Van Vleck, who invited me to be your guest at this dinner, and secondly upon my dear friend Ambassador Hector Castro, of El Salvador, who was instrumental in setting me up as the spokesman for my Latin American colleagues. As such, it is my pleasant duty at this time to express our collective thanks to the Honorable Robert C. Hill for his kind and expressive words of greeting.

I ask also to be permitted to make a few remarks of my own. As for these, I believe that my audience will be relieved to know that it is my intention to avoid dimming the genial mood of the time and place by too long an address.

The Catholic world must surely rejoice at the progress which has been achieved by the Knights of Columbus since the organization's modest beginning in 1882 until the present day, when its members are to be found in every State of this great Union, and even in neighboring countries to the North and South. In the present crisis of Western civilization, a society like yours, based on the Catholic faith and inspired by its guidance, can do much, if properly oriented, as a factor for moral and spiritual resistance to the shock of disintegrating forces.

The majority of my listeners here probably know that the countries which make up that part of our Western Hemisphere known as Latin America were guided since birth by the principles of the Catholic faith, which have inspired also their political and social institutions. Their cultures, though varied in outward form, are nevertheless closely bounded to that one faith, from which they cannot be separated without doing violence to nature itself.

My country, Brazil, with a population of 59 million, is today the greatest Catholic nation. Last year, we celebrated in Rio de Janeiro an Eucharistic Congress which surpassed all others ever held, in the number of devotees attending its ceremonies. Close to one million pilgrims made their way to our Capital, coming from all parts of the Catholic world. Those who had the opportunity to be there during those days kept a deep impression of a great spiritual force, uniting, comforting and creating a yearning for a better life under the inspiration of Christ, the Redeemer.

The need for a return to religion possibly has never been so great as in these times. There is a trend toward the abandonment of moral and spiritual values and toward the replacement of those values mainly by materialistic objectives. The discovery of America by Columbus opened new horizons to the world of those times, an abundance of fresh resources and a vastness of living space. It is my belief that destiny has called again upon the New World to come to the aid of humanity with a leadership based upon the principles of Christian order, to counteract the disruptive forces which threaten the spiritual foundations of man's existence.

While the progress of technique opens on one hand immense possibilities for enlarging

man's conquests over the material world, it carries on the other hand a grave risk of dehumanizing him by depriving him of the essential characteristics of personality, liberty and a sense of the divine. It is urgent, therefore, that we adjust our technical civilization to the great currents of spirituality which constitute mankind's most precious heritage. The Americas, by the very quality of their formative principles, are best fitted to carry out this mission.

The current crisis can be overcome only by the strengthening of spiritual values; in other words, by a return to transcendency. The uneasiness and unrest which are rife today throughout the world are proof that man cannot disregard his relationship with the Creator without denying and betraying his own nature.

There are indications, however, of a growing awareness on the part of the present generation that the uncertainties of the times do not come merely from economic and social contradictions, but rather from a deeper cause related to the spiritual nature of man. This is the explanation for the outbreaks of religiosity and mysticism which we notice occasionally here and there. Despite the grossness of some of these manifestations, they nevertheless denote a search for the Divine. The science of physics itself, which was the first to try to sever man's relationship toward his Creator, now is showing a reverse trend by the attitude of some of the most outstanding figures in that field, that the universe and the constitution of matter itself can only be explained as the work of a creator. The founder of modern physics, Planck, affirms that the creed of the religious man is perfectly compatible with the findings of physical science. Another great modern physicist states that the discovery of a natural law is a meeting with God. On entering his laboratory, the research worker can, with all propriety, repeat the words of the Mass: ad introibo ad altare Dei. To his eyes, the great adventure of scientific research, patient and thrilling, is a search for God and His thought. Science, in its modern form, thus constitutes a formal denial of the materialistic premises of communism. The alleged scientific bases on which Marx built his doctrine are obsolete today.

In spite, therefore, of the forces which act to subordinate man more and more to technique, to the detriment of the spirit, there are, fortunately, other factors at work for the reinvigoration of spiritual values.

Tte very excesses of materialism are of a nature to provoke reactions in favor of a revival of spirituality. This fact has been proven in the historical record of periods of materialism succeeded by eras of greater spirituality.

It is in this sense that a society like the Knights of Columbus, ever alert for the defense of the values of Christian life, deserves all encouragement and the determined support of men of good will.

Cut May Help Allies Face Responsibilities

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the June 5 edition of the Saginaw News entitled "Cut May Help Allies Face Responsibilities":

CUT MAY HELP ALLIES FACE RESPONSIBILITIES

The Eisenhower administration called NATO boss Gen. Alfred M. Gruenther to Washington where testimony of the "big gun" before the Senate Foreign Relations Committee is calculated to persuade the House that it made a mistake in slashing the foreign-aid bill by nearly $1.2 billion.

General Gruenther is an articulate, persuasive advocate. He has expressed fear that Congress is taking the Russian smiles, happy talk, and gay receptions too much at face value. He warns that the Russians haven't reduced their capability of launching an attack one iota by cutbacks in their standing armies.

We agree with the general. But we don't agree with the course of defense NATO allies have been taking, altogether too much at American expense. Back in 1953 when Gen. Matthew Ridgway was NATO commander, he too flew to Washington to testify on the need for continuing foreign aid. He warned that if aid were cut sharply the Allies might lose confidence in us.

Frankly, we've lost some confidence in the single-purposed determination of our allies. German rearmament has been discouragingly slow. The West Germans understandably prefer to put their economic gains into civilian enterprises—but so do we. The French have been apathetic about contributing to NATO defense. They have their hands full at home, where their Government is tottering precariously, and abroad, where their colonies are in open revolt. They've even taken NATO forces and diverted them to North Africa. Great Britain also has been slackening off its defense efforts in this so-called joint undertaking.

The United States, first, has underwritten the economic restoration of its friends and some former enemies; now it is underwriting the military defense of these friends who were supposed to be standing on their own two feet by this time.

The countries we've aided are directly "under the gun" of any Soviet aggression. If they haven't the will to sacrifice for the protection of their own freedoms, an American begins to wonder whether it is worth all the cost for the day that they will make up their minds.

Other than a growing American impatience with the footdragging tactics of our allies, this country's taxpayers needn't be made to feel guilty over any cuts now under consideration by Congress. It isn't as though the United States were pulling out of Western Europe, letting the defense system go by the boards after years of buildup. The foreign aid budget asked is for $4.9 billion. The cut under consideration is $1.2 billion. But in addition to this current appropriation there remain large unspent balances.

As recently as Monday the Council of State Chambers of Commerce released a study showing that the mutual security program would have available for expenditure in fiscal 1957 more than $10.5 billion, enough to carry the program 2½ years at the present rate of spending.

The council suggests, and we heartily concur that Congress make a thorough critical reexamination of the entire program. Congress has had to lean on testimony offered by those in the thick of the program. They aren't going to paint a picture that would invite cutbacks, so Congress doesn't have all the information it needs to deal intelligently with the program, present, and future.

A congressional investigation of the program would benefit both Congress and the American people. We'd all have a better knowledge of where this thing is carrying us, and a chance to weigh ultimate goals against further costs.

As it stands now, there appears to be ample foreign aid money appropraited, even after the contemplated budget cut this year, to carry the United States' share of the program while this study is being made. Then, 2 years hence, let's look at the new findings and see what is necessary. We've a suspicion our allies need a sound jolt from us before they will wake up to their own responsibilities. And apparently no one short of Congress is going to take the bull by the horns.

Darkness All Day Long

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 5, 1956:

DARKNESS ALL DAY LONG

The text of Nikita Khrushchev's sensational anti-Stalin speech reads, in large part, like something extracted from Arthur Koestler's Darkness at Noon or George Orwell's 1984. Although it probably is an abridged version, and although the State Department does not vouch for its authenticity, there is little reason to doubt that it says essentially the same things as were said last February to the Moscow Congress of the Soviet Communist Party.

As far as substance goes, the charges made in the speech have been known to the world for many weeks past. But the text greatly increases the original impact of the story. For the statements attributed to Mr. Khrushchev (he has yet to deny them) add up to as damning an indictment as anybody could deliver against Josef Stalin and the terrible decades of his one-man rule. Here we have a spine-chilling picture of a tyrant gone beserk with power—a supremely vain and evil man, a psychopath of the worst kind, who imposed a reign of terror on all of Russia. His will was law, and to carry it out he resorted unrestrainedly, and at times insanely, to lies, plots, counterplots, torture, blood purges, absolute oppression and merciless mass murder. And he came close to wrecking his country with his military judgments and decisions, including his refusal to listen to advance warnings against Hitler's attack.

When he told this story to the secret Moscow session last February, Mr. Khruschev merely confirmed what most free men had assumed for a long time before that. But he did not answer—nor does the purported text of his speech—a number of big questions that still puzzle even the best of our Soviet experts. He has failed, for one thing, to explain why he and Russia's other new "collective leaders" apparently did nothing to restrain Stalin but instead acted as his most fawning sycophants until the day he died (or was he murdered?). He has suggested that they were all too terrified by the man, but this is hardly explanation enough to absolve them of their own large measure of guilt for all that happened under his rule, not excepting the Korean aggression. Nor has anybody made clear as yet exactly why these men have decided to undertake so large and so risky a task as Stalin's deglorification from synthetic divinity to unspeakable devil.

Director Allen W. Dulles of our Central Intelligence Agency has said that this decision has been motivated only in part by the Kremlin's desire to acquire international respectability. The major reason for it, in his view, is that Mr. Khruschev and his col-

leagues have found it expedient, and perhaps imperative, to placate a large body of anti-Stalinists at home, and to that extent the development may mark the start of a significant liberalizing trend. But still, all of us had better keep in mind Mr. Dulles' warning that "the final and real test of the Soviet leaders will remain their willingness to accept those basic institutional changes that can give the Russian people and the world in general genuine assurance that a one-man or three- or four-man dictatorship cannot again plot in secret the massive domestic and international crimes" of Stalin's day.

As matters stand, such institutional changes—including particularly the creation of opposition parties, an independent judiciary and a free press—seem as remote as ever in the Soviet Union. Accordingly, unless or until they take place, the free world must continue to reckon with a dangerous Russian tyranny. The deglorification of Stalin has yet to alter that fact in the slightest. There is still darkness all day long in the Red empire.

Address Delivered by Hon. Marion B. Folsom, Secretary of Health, Education, and Welfare

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 7, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Secretary of Health, Education, and Welfare, Marion B. Folsom, before the Commonwealth Club, San Francisco, Calif., on June 1, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to meet with this club which has served as a forum for discussion of public affairs for so many years. I think most people seek something the Commonwealth Club helps to provide—new knowledge and understanding of the changing world about us.

In fact, within the life of this club over the past 53 years, there have been startling growth and change in America—growth and change unmatched by any other major country in history. In this period we have increasingly shifted from an essentially agricultural basis to an industrial basis—with all its economic and social adjustments. We have grown in population from about 80 million people to over 167 million. The number of workers has increased from about 32 million to about 64 million. In terms of constant dollars, the national product has increased more than four times. In the same terms, in actual purchasing power, the average income per man, woman, and child has more than doubled. And most important of all, in all these material advances, we have not neglected the strengthening of the freedoms and moral fiber of our self-governing society.

Nowhere has growth and change been more evident than here in California. In many ways, you in California have been in the forefront of the national advance. As business and professional men, many of you here have demonstrated the essentials of progress—imagination, hard work, a venturesome spirit, a willingness to invest funds and effort in research, in new ways of doing things, in new plants and new products. In your growth and progress, you have shown faith in forward movement. You have not been intimidated by the past; you have grasped the promise of the future.

Because the world is more complex and is changing more rapidly than ever, one thing is clear. If we are to continue to progress as a people, we must keep one eye on today's operation and the other eye on tomorrow's problem. We must not let the tide of changing conditions and new problems sweep over and beyond us. We must plan in the present to keep abreast of the future and meet new problems as they arise. In short, we must make a larger investment in those measures which give us vision and help us build for tomorrow.

The strange notion has been expressed in some quarters that the administration in Washington is interested solely in tidying up the Government and seeing that it operates smoothly and without waste. It has been suggested that the administration is standing pat and not recognizing needs and advancing new proposals to meet them—that forethought and planning are, somehow, the exclusive virtues of others.

To be sure, this administration does think that economy and efficiency are important—and I doubt that anyone will be foolhardy enough to label these qualities as sins in operating the people's business. But we believe something more. We believe that effective self-government demands imaginative and fruitful planning for human welfare in the future.

Acting on this belief, we in the Department of Health, Education, and Welfare are advancing a wide range of new proposals which we believe will contribute to the future well-being of the people. The administration is earnestly seeking to strengthen, to expand, and improve many of the Federal activities through which individuals may attain improved health, better education, and more economic security. To help achieve these goals, we are proposing a 24-percent increase in the Department's appropriations for the coming fiscal year, including $450 million in new legislation. And this is within the framework of a balanced budget.

This is the largest dollar amount ever sought for these activities in any one year. We are seeking this expansion because we know these programs build a firm foundation for the future. They advance the welfare of the individual human being. As the individual advances in health, education, and economic security, not only is his own life enlarged but the Nation as a whole is enriched. For progress in these fields is fundamental to progress in our expanding economy, our national security, our system of self-government, our very way of life.

In strengthening these programs, the aim is to bring to them a new emphasis, a forward look. We recognize that simply spending more money is far from the answer. We are seeking to emphasize the more constructive aspects of these programs—those activities which are most particularly concerned with the future. The proposed expansion involves new or improved research in every field in the Department. We want to explore some of the hard-core problems that have beset health, education, and welfare for many years. We want to look ahead and head off other problems before they become acute.

One of the best hopes for improving the level of health lies in constantly advancing medical research. Largely through progress in medical research, within the past 10 years the death rate has dropped more than 50 percent for pneumonia and influenza and about 73 percent for tuberculosis. The threat of paralytic polio is being lifted from millions of children. And yet, disease and disability still exact a terrible toll. Cancer, heart disease, and mental illness, for example, still present enigmas to medical science.

Federal funds for medical research, to be sure, have increased greatly in recent years. But they are still too low in relation to the need or the dramatic opportunities for the future. The administration, therefore, has asked Congress for the largest increase in funds for medical research ever recommended in 1 year. The proposal called for appropriations of $126½ million, an increase of $27½ million, for the national institutes of health, the principal research arm of the public health service. A major portion of these additional funds would be used to increase by 47 percent the Government's grants for research conducted by medical schools, hospitals, health agencies, and scientists throughout the country.

In this connection, the number of medical research grants to California scientists already has risen from 140 to 300 over the last 5 years, and the amount of these grants has increased from $1.5 million to $3.7 million.

Clearly, medical research cannot be expanded and improved without adequate laboratories and trained men to do the work. And yet, today, there is a critical shortage of modern buildings and equipment for medical research and training. We have proposed, therefore, a new, emergency program of Federal grants to medical schools and other nonprofit research institutions for the construction of modern research and teaching facilities. Under this program, over a 5-year period, $250 million would be provided in grants, to be matched by the institutions. The program not only would provide more and better facilities for research but would help train more scientists and physicians to fill a critical need.

Those of you who are familiar with the Stanford Medical School in this city will know precisely what I mean. The staff is of the highest quality, and if they had more adequate physical facilities they would be able to make a greater contribution to the Nation's medical research program.

The administration's program in the field of health includes many other steps. Proposals are now pending before Congress:

To expand and improve the training of practical nurses, professional nurses, and public health personnel.

To establish a continuing national survey to develop sorely needed basic information on the nature and extent of sickness and disability in the population.

To strengthen the effort to control the pollution of streams and rivers.

To provide grants to finance special demonstration projects to develop improved methods of caring for the mentally ill.

And to encourage the expansion and improvement of voluntary health insurance to help meet the rising costs of medical care.

We are hoping for early congressional action on these and other proposals which are designed to improve the Nation's health.

One of the best examples of constructive action for the future is the Federal system of old-age and survivors insurance, one of the Nation's strongest bulwarks against human distress. It is a program built on the principle that to relieve poverty is good, but to prevent it is better. I recall that at the outset of this program many people, including many businessmen, voiced fears that the social-security system would bog down in staggering administrative costs and redtape. But today the administrative costs are remarkably low—less than 2 percent of the contributions. Fears were expressed that the social-security system would dampen individual initiative, industry, and thrift. But today, after 20 years of social security, individuals on the whole have built more economic security for themselves—through private means—than ever before.

I recall the fear that political pressures would increase social-security benefits all out of line with a sound program. But the fact is that when this administration took office, we found benefits were too low. They had failed to keep pace with wage increases and living costs.

One of the President's first recommendations to Congress was a major expansion and improvement of the old-age and survivors insurance system. Benefits were increased for everyone under the system, and protection was made available to an additional 10 million workers. Today, 9 out of every 10 American workers can look forward to social-security benefits in their retirement. Should death take the family breadwinner, 9 out of every 10 families are protected with survivors benefits.

It is important to bear in mind that the purposes of old-age and survivors insurance is to provide basic protection—an economic floor upon which workers can build additional security. In the past 20 years, private pension plans have developed rapidly, and they should continue to expand and improve. If it were not for the social-security system and private pension plans, millions of additional persons would be forced to turn today to the public assistance programs to meet their essential human needs.

This administration is following a policy of keeping the social-security system as sound and fair as possible. We look forward to continuing improvements in this program, including extension of coverage to those groups who are still excluded. But we must be especially careful that proposals for new benefits are equitable and can be soundly administered—that they are actually in accord with changing conditions of our times. And we must remember there is a limit to the social-security taxes which should be imposed on the people if we are to retain public support for the system in all the years ahead.

Despite our progress in old-age and survivors insurance, and our prolonged and unprecedented prosperity, about 5 million people in this country today are receiving public assistance. These are the needy aged, the needy blind, the totally disabled, and children deprived of parental support. Under our system of government and the concept of Christian ethics, this assistance should be provided—efficiently, equitably, and with warm consideration for the individual.

But we have a deeper duty to those receiving public assistance than the mere payment of dollars to relieve distress. For those who can benefit, we should invest in services that will help them to build toward independence and a full and richer life. These are the services on which the administration is now placing new emphasis, and they hold the promise of human and economic rewards for the future.

The administration is proposing amendments to the public assistance laws to emphasize that their purpose is to provide services designed to increase self-support and self-care when this is possible. We are asking for Federal funds to help relieve a critical shortage of workers trained to deal effectively with the basic problems of people on public assistance. And we are urging funds to support new research and demonstration projects to shed more light on the factors that cause dependency and to show in actual practice effective ways of helping people overcome dependency.

Already there have been examples which give promise of what may be accomplished with this approach. In Allegheny County, Pa., for example, a demonstration program concentrated on 285 families who had received public assistance funds for as long as 10 years continuously or intermittently. At the end of 11 months, 64 families no longer needed assistance, and 53 families no longer required as much assistance. The other 168 families were receiving vocational rehabilitation services or other special forms of aid. One supervisor and 4 trained caseworkers, whose salaries totaled about $16,000, comprised the staff of the project. The reduction in public assistance expenditures achieved during the 11 months alone was $27,960—and this saving will continue.

In New York City, a skilled welfare staff undertook a 3-year program along similar lines. There were 2,700 cases involving people who had been unemployed from 1 to 19 years. As a result of services supplied in the experiment, 616 persons were restored to independence. The savings in the actual cost of assistance has been $616,000 a year. But far more important than the saving of tax dollars is the promise of a richer life for these men and women.

One of the most striking examples of the wisdom of investing in human resources is the Federal-State program of vocational rehabilitation. Under this program, the Federal Government and the States share the cost of restoring disabled persons to productive lives. A few years ago, the number of disabled persons restored to productive employment was declining. The President proposed and Congress unanimously adopted a major expansion and improvement, providing more funds, more facilities, more research, more training of personnel. Now there is a steady increase in the number of persons who are conquering the handicap of disability and finding new hope and dignity in a productive life. We are planning still further expansion and improvement in this program, which brings such rich humanitarian and economic rewards for today and for the future.

In California alone, 1,618 disabled persons were returned to employment and a self-sustaining life through vocational rehabilitation last year. These people were earning less than $186,700 a year when they started on the road to self-support. The first year after their rehabilitation, their earnings were estimated at more than $4.4 million. An unusual aspect of California's record is that 438 of those rehabilitated were receiving public relief payments as their major source of income. That is 27 percent of the total. Many others were receiving some public assistance payments.

In the Nation as a whole, more than 11,000 of those rehabilitated last year had been receiving public assistance payments. It cost about $8 million to rehabilitate this group—but it would have cost almost $10 million each year to maintain them on relief. Relief costs generally were stopped and earnings and tax payments were started, but the richest reward from this program is the conversion of misery and despair into hope, dignity, and a productive life.

Many factors must be employed to assure a bright future. None is more important than the education of children. For in education, we have at stake the quality and character of tomorrow's citizens and, thus, tomorrow's America.

A weakness in education, a failure to achieve full intellectual attainment, is more than a deep personal loss to the individual. the effects of inadequate education cannot be quarantined to a person, or a household, or a community, or a State. Poor education anywhere inevitably weakens our general welfare and retards our national progress.

In any age, it is foolish economy—penny-wise and pound foolish—to neglect the education of children. In this age of increasing challenge to our society and our way of life, it is doubly dangerous. Surely, as we increase our investments in those programs which enrich the future, we must increase our investments in education.

One out of every four Americans today—almost 40 million—is a full-time student in school or college. We have spent some $30 billion in the physical plant for their education, and we spend about $14 billion each year to operate our educational system, from kindergarten to college. And yet, in view of the fundamental importance of education, in view of the tremendous scope of the educational system, it is a shocking fact that the Federal Government has been investing annually less than half of $1 million in research to help make our educational system more efficient and more effective.

And so this year, President Eisenhower has urged upon Congress a major increase—from about $3 million to about $6 million—in funds for operating the Office of Education. This program would increase many services now provided by the office to schools all over the country, but the bulk of the funds would be employed to provide a comprehensive and far-reaching program of cooperative educational research for the first time in our history. Most of the research would be performed at colleges, universities, and in State departments of education throughout the country. A doubling of funds for the Office of Education may seem to be a big step. But a big step is needed if we are to illuminate some of the hard-core problems that have been retarding the progress of education for many years.

One of the problems we hope to study is waste of the Nation's young talent. Every year about 60,000 of the best students drop out of high school before graduation. And of those who do graduate, about half of the students in the upper half of their class do not go on to college on a full-time basis. We want to end this waste—to find a way to keep students in school until they have reached their highest potential. We need more study and more facts on the critical problems of housing and staffing our schools and colleges. We need research to help find the way to meet the educational needs of families with low incomes. We want to study how schools, having direct daily contact with children, can help detect and prevent juvenile delinquency; how schools can help the retarded child to learn more; and how they can help the child with exceptional mental ability to make the most of it.

Our investment in the future also is short-sighted and inadequate when we fail to provide proper physical facilities for the pursuit of learning. Today, close to a million children are attending half-day school sessions because of the critical shortage of classrooms in some communities across the country. Several million other children are preparing for tomorrow's complex world under the handicap of schools that are too old, too shabby, or too cramped.

One essential fact is clear and unmistakable. The classroom shortage has got ahead of us. And the shortage is acute in many communities.

During the depression we lacked funds for school construction. During World War II materials were not available. On top of this legacy, we are now in the midst of a rapid and sustained enrollment increase which far exceeds any in our history. Every 5 minutes, day and night, a new classroom of children reaches school age. Probably more than 12 million children will be added to our school population within the decade from 1950 to 1960—a 50-percent increase.

The States and communities by themselves have not adequately met the shortages accumulated from the past and the swelling tide of new students. Certainly the States and communities have the major responsibility, and certainly they must increase their efforts. But the fact is that they have already increased their building programs notably. Six years ago, they spent about $1 billion to build 36,000 new classrooms. This year they are spending about $2½ billion to build about 67,000 classrooms. But even so, they are still falling far short of needs.

President Eisenhower for many months now has been urging enactment of a sound and effective emergency program of Federal assistance to help needy communities build more classrooms for our children. The proposal has been designed to avoid any Federal interference whatsoever with State and local control of education. The program has been anchored to the basic principle that Federal assistance should encourage even greater efforts by States and communities. It has been devised so that Federal assistance would be distributed where the needs are greatest and local financial resources are weakest, so that Federal aid would return the greatest benefit not only to the needy local districts but to the Nation as a whole.

But another issue—unrelated to the merits of the school-construction proposal itself—has become an obstacle to progress of the school bill in Congress. This is the issue of racial integration in the public schools.

The commingling of these two issues profits neither school construction nor integration. They are separate issues, and they should not be confused. The problems of integration can best be solved under the procedures and the spirit set forth in the Supreme Court's opinions. The proposal to help wipe out the classroom shortage can best be solved on its own merits.

Children cannot wait. Children of all races need schools now. If we fail to meet this emergency now, the problem will only be compounded for the future. We are hopeful that Congress will act—within the next few weeks—to help build more schools for the Nation's children.

In the meantime, the administration has moved with forethought on another aspect of education—the increasing pressure on our facilities for higher education. Within 10 years we must meet the needs of 5 students in our colleges and universities for every 3 who are there today. While higher education is the responsibility of the States, localities, and private groups and institutions, comprehensive planning on a nationwide basis is needed. To encourage a broad-scale attack on the problems of education beyond the high school, the President recently appointed a group of distinguished citizens to make studies and proposals in this field.

Our education, our health, and our economic welfare cannot be static elements of our national life. They are, in fact, always on the move—in one direction or the other. As you in California have demonstrated, our direction must be forward. For if we fail to move ahead, problems only multiply; one unanswered problem begets many others. And so there is great prudence in progressive investments that look to the future.

Memorial Day Address at Annual Memorial Day Services, Post No. 591, the American Legion, Houtzdale, Pa., May 30, 1956

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to participate in the annual Memorial Day program conducted by Freeberg Post, No. 591, the American Legion, Houtzdale, Pa., at 2 p. m., May 30, 1956, at which time I delivered the principal address.

My address follows:

NINETEEN HUNDRED AND FIFTY-SIX MEMORIAL DAY ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE ANNUAL MEMORIAL DAY PROGRAM, CONDUCTED BY AMERICAN LEGION POST NO. 591, HOUTZDALE, PA., MAY 30, 1956, 2 P. M.

For the past 88 years it has been our custom—on the 30th day of May—to honor the memory of those who sacrificed their lives on the altar of freedom.

Memorial Day is, therefore, a day of reverence and prayerful meditation.

Memorial Day began in the year 1868 when Gen. John A. Logan, commander in chief of the Grand Army of the Republic, issued his famous order No. 11.

In that order he made official the example set by the women of Pennsylvania and Virginia when they decorated the graves of the Union and Confederate Army dead.

That is how Decoration Day—or Memorial Day—began.

And thus it has been ever since.

On this one day in the year we put aside, momentarily, our prejudices and our important and trivial tasks, to pay tribute to those who have successfully defended our right to think as free people.

Memorial Day is in honor of more than one million Americans who have died in combats waged since the Revolutionary War of 1775.

That is a mighty number.

It is greater than the populations of Boston, Baltimore, Cleveland, or San Francisco.

Those are the heroes of our land.

They gave everything they possessed—and we are the beneficiaries.

So we give them these few moments each year to express the gratitude that fills our hearts.

Our tribute is not lavish.

The words we use are very simple.

The poet, Henry Wadsworth Longfellow, described the whole process in these lines—

"Your silent tents of green,
We deck with fragrant flowers,
Your's has the suffering been,
The memory shall be ours."

Yes, our memories extend far back into history—and they span great distances.

Our tributes—are to the Americans—who have died in all the wars of history.

That takes us back more than 180 years and through more conflicts than most of us can recall.

The mortal remains of our honored war dead lie at rest in our homeland and at far distant places.

The American dead—are buried—around the earth.

The sun never sets upon them.

More than 100,000 of them lie under the American flag in Europe and Asia.

Some 30,000 others are buried beneath the waters of the seven seas.

Many of those—are the unidentified dead—known but to God.

Their memories are perpetuated in symbolic fashion by the tomb of the Unknown Soldier erected on the green slopes of Arlington National Cemetery.

Standing before the Tomb of the Unknown Soldier, one becomes aware that there are no strangers among our honored heroes.

There the inscription reads—"Here rests in honored glory an American soldier—known but to God."

There is no name upon the tomb.

The constant presence of a lone guard pacing silently, smoothly, briskly, back and forth before the tomb—day and night—signifies our Nation's mighty reverence.

The wreath at the base of the Unknown Soldier's tomb is silent except for an occasional stirring in the wind.

The Capital City in the distance is like a painted backdrop.

The tall slender spire of the Washington Monument and the domed Capitol building represent strength, vision and the law of our land.

Collectively—the whole setting stirs the blood and memories of all Americans.

This setting has great power because it reaches the innermost recesses of our hearts and makes us feel the kinship we have as fellow Americans with the Unknown Soldier.

Then comes the realization that the Unknown Soldier represents every lost comrade who gave to his country the last full measure of devotion.

Truly, there can be no unknown among our honored dead.

We can name each man clearly.

He represents the sons and brothers who have gone—all the schoolmates and comrades who joked and laughed with us.

He is each of them just resting there waiting for us to join him—as surely we shall when we have finished our earthly tour of duty.

This is truly a day of memories.

Some of them are vivid despite the passing years.

Every living man who has lost a comrade in war remembers the particular person, place, and moment of parting.

We are reminded of this when we read the lines written by the World War II soldier who described his experience on the island of Okinawa.

He recalls that following one hard battle he walked silently along the lines of American dead—just before their burial.

And later he wrote these words:

"Yes, I had known them.

"I remembered our intense conversations—our idle talk.

"I remembered their hopes, ambitions, and plans.

"When I have returned to the States there will be times when their voices shall echo across the miles of water to remind me that I had known them—to remind me that they were the price of my future."

Those were one man's memories.

Now we are living that future—in freedom, in peace, and in debt to the millions of friends who did not come back with us.

We are indebted also to the many others who did return—suffering the wounds of war.

Having this special day—this Memorial Day—makes it easier for us to remember those to whom we are indebted.

Surely nothing else in our daily lives can sharpen our recollection or appreciation as clearly as does Memorial Day.

We remember the victories because we were there to cheer and to celebrate the battles won.

Those were the battles for which we took credit.

But if we think that the victories were ours alone, then we have forgotten and our eyes have failed to see the men for whom the poet, Alfred Noyes, spoke when he wrote these lines:

"God, how the dead men grin by the wall,
Watching the fun of the victory ball."

What of the victory?

Have we won it with no strings attached?

Unfortunately not.

There is no absolute victory.

Because the transition to peace is not easy nor is it final.

We who have fought America's wars brought back with us the memories of our tortuous struggles up the steep road to victory.

And we remember those who were lost on the way.

We express eternal gratitude for their spirit, their courage, and their brawn, which enabled us to gain our goal.

Without them we could not have gained victory.

Without this hard-earned victory we would not be enjoying peace today.

We would not have saved our freedom except for the sacrifices of our fallen comrades.

The solemn atmosphere of Memorial Day reminds us of our eternal obligation to these honored dead.

Do we pay our debt to them in full, merely with our thoughts, our flowers, and our eulogies?

The answer to those questions is that the debt is never fully repaid.

The value of a single life cannot be measured with praise, flowers, or monuments.

Only through most worthy deeds can we express in small degree our humbleness and devotion to those who gave so much, so that we could retain the right to live in freedom.

The men we honor on this Memorial Day represent a true cross section of the America we love and cherish.

Even though we cast them in the single role of the dead, they were the vibrantly living youth of our land.

They were the boys who came from our cities, towns, and local neighborhoods; from our schools, churches, and playgrounds.

They were from families rich and poor.

They were the educated and the self-taught.

They were the Protestants and the Catholics, the gentiles and Jews, the native sons and the foreign born.

They were as different as you and I, but in the final analysis they were fellow Americans.

They had the same fine qualities of courage and loyalty.

They fought shoulder to shoulder with us to defend American security, honor, and freedom.

Because of that powerful unity in purpose and strength, binding all the men of our fighting forces, we were able to defeat the enemies of our land.

As a result today we are enjoying continued freedom.

Because of this freedom on this Memorial Day we are paying loving tribute to those who did not return.

But what of the future?

Is our security as a nation assured forever?

Frankly, freedom can never be taken for granted.

We must keep on guarding and fighting for it constantly.

We must remain ever alert to the call to duty—always willing to pay the price of freedom.

Most of us remember 3 ghastly wars waged for freedom within the past 39 years—World War I, World War II, and the Korean conflict.

As a result of these devastating wars we know that dictatorships can never be trusted.

Yes, we know too well that we dare not leave American ideals unguarded.

We know we must protect them boldly, positively, and will full awareness of the constant threats to our liberties—otherwise we fall victims to aggression—as have so many other nations of the world.

Truly—freedom is at a premium today.

There are nearly 3 billion people living on the face of the earth.

Less than half of the world's population enjoy individual liberties, which are the birthright of every American.

Those millions now living in virtual slavery have been deceived, overpowered by ruthless foreign aggressors.

Their pitiful plight is a warning so clear and so terrible that we dare not ignore it.

What has happened to the enslaved peoples of the world can happen to us unless we exert constant vigilance in guarding our precious liberties.

These should be our thoughts on this Memorial Day of 1956.

They should impress upon us the costly price of our freedom purchased in the blood of over a million American patriots.

On this day of memories we can hear the voices of those men, reminding us that we knew them and that we should not forget the great contribution they made in freedom's cause.

Finally, on this Memorial Day we should think more clearly of the past and of the future filled with challenges to the American way of life.

With hearts filled with loyalty and gratitude for the legacy of liberty and freedom, let us resolve on this Memorial Day to keep faith with those who gave their all in defense of Old Glory and who by their sacrifices have made it possible for us to utter the prayerful exclamation:

"Thank God, I am an American."

Channel Years, Channel Quarters, and Channel Crossings

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

LAW OFFICES, H. C. CHURCHMAN,
Council Bluffs, Iowa, May 16, 1956.

Hon. BEN JENSEN,
House of Representatives,
Washington, D. C.

DEAR BEN: Looking toward a single governmental source and to avoid requests for free copies of my channel years, I enclose a photostat copy and not only authorize but request you to have the same inserted in the CONGRESSIONAL RECORD.

This chart and description originated from my study at Longview Farm, beginning in 1945, and is, with generous aid from hundreds of sources, a product of my own funds. The channel chart is not a calendar. It is not a replacement or reform of any calendar. It may be used by anyone, including accountants, CPA's, businessmen, and governments in avoiding the 53d weekly payment in some years (52 in all years). It would avoid the 53d pay-as-you-earn (England's PAYE) withholding- and insurance-tax deduction and other nuisance products resulting from use of the weekly pay installment. It is amazing the number of businesses in the United States of America using a 7-day pay period other than the common Christian week. This chart aims to bring order out of chaos, to unify all these efforts around the earth, by starting the seasonal year with the mean southern solstice day, and 7-day periods with the first day following it.

A gradual, free, and voluntary enlargement of its use will result in 52 weekly paychecks and withholding-tax installments in all years of the Gregorian common calendar in all countries where that calendar is either officially approved or its use is legally permissive. It might be used commercially in Israel, in India, in China, as well as in Moslem countries throughout the world, without the slightest disparagement of their own religious and other cultural calendars, and with no amendment or displacement of their calendars.

It permits commonly numbered quarterly comparisons and reports, with each quarter in every tropical solar year containing the same number of 91 days throughout the earth. It might be used by the United States Government at some future date for payroll and other purposes. Its use in State workmen's compensation cases is possible, to determine from annual or quarterly or monthly wages the amount of a person's weekly wage.

Channel years and channel quarters are friendly toward the weeks of Hebrews, Christians, Moslems, Hindus, and all others. They are impartial among them, espousing or destroying none of them. All governments might successfully follow the channel year, displaying no partiality for or against any religious group. Each nation and each religion would still retain the right to enjoy, and actually to follow, its own calendar, its own week, its own holidays. Nobody would lose a holiday or birthday anniversary—each gains a second landmark for all anniversaries. Lincoln, for instance, was born on the 53d, Washington on the 63d, and you [Hon. BEN JENSEN, Member of Congress] on the 361st day after the mean southern solstice day, come what changes may to the length of Gregorian common calendar months.

Sincerely yours,

HENRY CLARENCE CHURCHMAN,
Lieutenant Colonel USAR Retired.
LONGVIEW FARM, COUNCIL BLUFFS, IOWA.

CHANNEL YEARS, CHANNEL QUARTERS, AND CHANNEL CROSSINGS

(By Henry Clarence Churchman)

In view of the increasing need for a shorter period of accounting which is related, like the month, to the solar year and to quarter years, it was thought appropriate to publish Churchman's Channel Years, Channel Quarters, and Channel Crossings.

1. The days of every regular tropical solar year, beginning with the mean southern solstice day, are numbered forward from 0 to 364, both days inclusive; and in leap years from 0 to 365, inclusive. The cipher day is matched with the present Gregorian common calendar day of December 21, the mean southern solstice day. The channel year, consisting only of consecutively numbered channel days commencing with cipher, is the simplest annual counting method conceivable. The channel year is correlated with the seasons as follows:

Channel day shown 0 equals mean southern solstice day, cipher day of the channel year.

Channel days Nos. 1 to 91 after 0 equals first quarter: London winter, Sydney summer.

Channel days Nos. 92 to 182 after 0 equals second quarter: London spring, Sydney autumn.

Channel days Nos. 183 to 273 after 0 equals third quarter: London summer, Sydney winter.

Channel days Nos. 274 to 364 after 0 equals fourth quarter: London autumn, Sydney spring.

Channel day No. 365 after 0 equals supplemental day in every Gregorian leap year.

2. The channel year of 1956 begins at midnight with the mean southern solstice day, December 21, 1955, of the Gregorian calendar system. It contains the same sum total of days as the Gregorian calendar year of 1956. Its initial day, cipher day, occurs 11 days before January 1 of all Gregorian calendar years.

3. Each day of the channel year is placed in one of seven impartial channels. The first day after cipher day each year is placed in the red channel, the second in the orange channel, the third in the yellow channel, the fourth in the green channel, the fifth in the blue channel, the sixth in the purple channel, the seventh in the white channel, the eighth in the red channel, the ninth in the orange channel, the 10th in the yellow channel, and the 11th day after cipher is always placed in the green channel, year after year after year. Every multiple of 7, between 7 and 364, both dates inclusive, is found always in the white channel. This gives us 52 channel periods of 7 days each, 13 in every

seasonal quarter, year after year. See chart for the seven impartial numerical channels described as red, orange, yellow, green, blue, purple, and white, in that order of succession, and note their permanent relationship to all seasonal solar years.

4. What business needs is not 12 months or 13 months (each has certain suitable advantages) so much as a seasonal solar year of 52 periods, divisable into 4 equal quarters of 91 days each. These channel periods are not weeks, but are a substitute for the present months. Like months and quarters, the 52 periods also have no relationship whatever to the historical weeks, but are tied to the seasonal solar years. Weeks change their position in each succeeding year and would continue to do so. The 52 channel periods equal the tropical solar year in length, and ride with it permanently. They in no way affect present holidays or holy days of any nation or group. The 52 account periods of 7 days each might be called prismos, from the Greek word prisma; sawed across, or, plain cross-channels or channel crossings.

5. The channel year is not a calendar. It is not in competition with or a modification of any present calendar system. Its reproduction is not permitted excepting alongside or in correlation or comparison with some ancient or current calendar. The last 7 days of the channel year will attach an extra day as the 365th day after cipher, in all years which contain a Gregorian leap year's day. These last 8 days of a channel leap-year will include the per diem for the 365th day if the employee is paid on a per diem basis. For one paid on an annual or quarterly wage base, one fifty-second part of his annual pay will be the compensation for each channel crossing or prismo, including the last 1 in leapyears, and the first 1 in all years. The per diem of the initial or cipher day (December 21) will be added to the first 7 days of the first quarter if one's earnings be computed per diem.

6. If employees be paid whatever is due them or one fifty-second part of their annual wages on, say, each of the orange channel days of the channel year, one such payday will fall on December 30 in every year, yet none will be taxed upon 53 weeks of earnings paid to him during any 1 calendar year. The same rule might be applied to weekly insurance premiums or deductions. Thus, your tax-year base may continue to follow the period between December 31 midnight and the next December 31 midnight, but, notably important to all, your total sales or your payroll per annum increase may be compared each year, by simple addition, within the accuracy of 1 penny. And you can tell in what season, and in what channel crossing or prismo the change began. In any week or year in which a channel payday would occur on a local or legal holiday in any part of the world, the payday is advanced to the next preceding workday, as now happens under similar circumstances if one is paid semi-monthly or monthly. In the next following channel crossing or channel year, the originally selected channel paydays are resumed.

Supplemental Day,							20

Seventy-fifth Anniversary of Thorp Methodist Church, Thorp, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, June 7, 1956

Mr. WILEY. Mr. President, on May 27 it was my privilege to speak at the 75th anniversary of Thorp Methodist Church, at Thorp, Wis., at which people of different faiths gathered. It was a great occasion, at which many oldtimers came from near and yonder to attend the little church. I am happy, at the request of those who were present, to ask unanimous consent that the remarks which I made on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY STRESSES NEED FOR STRONG, SPIRITUAL FAITH TO COPE WITH NEW PROBLEMS OF ATOMIC-NUCLEAR AGE—URGES CHURCH-MINDED AMERICANS TO WAR ON IGNORANCE, PREJUDICE, INDIFFERENCE

(Excerpts of address delivered by Hon. ALEXANDER WILEY, Republican, of Chippewa Falls, at 75th anniversary of Thorp Methodist Church, Sunday, May 27, 1956, at Thorp, Wis.)

I am happy to be here today.

I deem it a real privilege to join you in this inspiring celebration of the 75th anniversary of your church.

It is always gratifying to observe progress in the spiritual world. This is one of the most basic fields of human endeavor, in which we need to maintain full strength to meet the needs of the atomic-nuclear age.

ROLE OF CHURCHES ACROSS THE LAND

The hundreds of thousands of churches, of all denominations, erected across our great land are symbols of the "Living Faith in God" of the American people.

Dedicated to the higher things of spirit, we have learned that a church is not just an architectured mass of stone, cement, brick, steel, wood, or glass.

The real church is the living spirit of God within each of us.

Ultimately, in time, the mortar and stone will crumble. But the spirit of God, breathed into human life, will live on forever.

It is refreshing for a few hours, to withdraw from material problems, and to meditate upon the enduring values of spiritual life.

Here, in the sanctuary of God, we have the opportunity to explore spiritual problems; and to commune with our souls, with God, and with each other.

SIGNIFICANT CHALLENGE: FULFILLING OUR CREED

One of the most significant challenges for each of us, however, is the problem of relating our spiritual lives to the realities of the outside world.

We face the need for demonstrating modes of conduct which reflect characters of high-spirited principle.

Faith is not a thing apart. What a man really believes, be it good or evil, will be reflected in everyday acts of living.

"By a man's works, ye shall know him."

By the deeds of the members of the Thorp Methodist Church, this community has been enriched. And the name of this church has been honored, through three-fourths of a crowded century, crowded with service to God and man.

STRONG FAITH IN 1956

So, too, the critical year of 1956 is not a time for mere superficial gestures in religious life. We live in a crucial age in the progress of mankind in which the utmost faith, the most profound religious and spiritual understanding, are required.

The church has provided us with great and much-needed source of inner strength, wisdom, understanding to cope with the tremendous problems facing us.

PROGRESS BROADENED HORIZONS

The scientific and technological progress of the world has broadened our outlook, our view, our horizons.

Long ago, man often was hemmed in by the boundaries of his local community, or of his country.

Now, we are familiar with all the areas of the world. Indeed, we are peering curiously into "outer space"—millions of light years away. Soon we will have earth-satellites in the sky—to record the mysteries of the universe.

OUR NATIONAL ATTAINMENTS

Meanwhile, as a nation, here at home, we are making tremendous strides, of course. We possess streamlined automobiles, push-button homes, TV, radar, and supersonic air-travel.

We have changed the face of the earth—by moving mountains, and redirecting the course of rivers.

For example, during the construction of the St. Lawrence Seaway—mountains of earth—billions of cubic yards—have been displaced; islands have been removed or cut up; the gigantic flow of river waters has been changed and controlled; a river stairway of locks is being built to lift ocean vessels up the 600 feet between the ocean and the Great Lakes.

We have harnessed atomic and nuclear power—first, for war; and now, we hope for peace.

RELIEVING MAN'S TENSIONS

We have harnessed the mightest forces of nature. But we have yet to harness and put to constructive use the mightiest forces in man himself.

Peace of mind for man, relief from tensions, freedom from worry and anxiety—all this cannot come from men's push-buttons. They must instead come from men's hearts and souls, attuned to the everlasting leadership of God.

THE MIRACLES OF PROGRESS

In the material world, the great advances of today are what seemed, yesterday, to be miracles—just wild flights of the imagination of our prophets and dreamers.

Tomorrow, there will be even greater and more wonderful discoveries.

Yet, we need to realize: "None of this is new." Atomic and nuclear power has existed since God created Heaven and Earth.

EACH NEW AGE UNVEILS MYSTERIES

The people of each new age, however, are discovering more of the mysteries of the universe. Within the potential of the world about us, I believe, there are even greater miracles to be discovered by succeeding generations. Time and progress will unveil these new mysteries.

THE CHALLENGE TO MAN

For each man, the challenge is, within his lifetime, to adjust to the historical era in which he finds himself.

He must mature, as a human being.

He must develop an intellectual and spiritual understanding of himself in relation to the changing world, and he must establish a relationship with God.

THE STRENGTH OF PRAYER

This is not a simple task. It can be accomplished only with the utmost of sweat, study, thought, imagination, and above all, prayer.

Faith, without communion with God, is nonexistent.

We need prayer—the Lord's Prayer, and the voice of our own hearts—rising to God in the spirit of humility, compassion, and love. This means all men in all walks of life—whether you be a farmer, mechanic, storekeeper, musician, and yes, even—or especially, a man in political life.

POLITICS AND RELIGIOUS FAITH

Unfortunately, many people doubt that there is an intimate relationship between politics and religious faith.

However, I can assure you that—to a great many of us—a spiritual faith is a tremendous reserve of strength upon which we must often call.

Our great President, Dwight Eisenhower, often has emphasized, by his own conduct and by his public remarks, the need for a strong moral and spiritual fiber in the life of America.

Too, the prayer—with which each session of the Senate and House of Representatives opens—is not an empty gesture.

It is our realistic acknowledgment of the need of divine guidance in reviewing and resolving the problems facing our Nation.

GODLESS COMMUNISM

We are all aware of the tremendous challenge offered by godless communism throughout the world. Unfortunately, it has a significant effect upon all our lives, because of its constant threat to the freedom of all people.

Currently, the new tone of Russian propaganda, the new siren song of so-called peaceful coexistence, is no cause for us to relax or to lay down our arms. The lamb can still not lie down with the bear.

However, a few, little publicized, but comparatively important things have been occurring. These may contain a promise of more change in the Communist world. There is first, the recent report that, for the first time since 1926, Bibles were rolling off the presses within the Soviet Union. And second, the entrance of more western travelers, including clergymen, within the Soviet orbit may bring more of a touch of the free spirit which will leave its indelible mark upon the imprisoned people.

These may contribute greatly to a force which will require the leadership of the Kremlin to modify its totalitarianism.

COMMUNISM WILL NOT PREVAIL

Of course, whether the Politburo changes or does not change its plans, its wild dreams for world domination are doomed to failure. As a matter of fact, there are hundreds of millions of us who are dedicated to the Kremlin's failure.

In their individual lives, the Kremlin's atheists are forfeiting their souls by committing the unforgivable sin: That of denying the existence of God. By their swallowing of Marxist dogma, they have denied themselves the fruits of Heaven.

Based on inhumanity and utterly disregarding the dignity of individual humans, it it inconceivable that their brutal ways, so contrary to the aspiration of the human heart, could triumph over the moral efforts of mankind to live a free and fruitful life.

BIBLICAL PROPHECY OF WAR

But the Biblical prophecy of "wars and rumors of wars," unhappily, is still applicable to our time. The bullets are flying, and men are dying, in conflicts around the world: In North Africa, Cyprus, the Middle East, and in southeast Asia—in the embattled jungles of Malaya.

WE MUST STRENGTHEN FRIENDS

We are left with no alternative, therefore, but to be strong and to help keep our friends strong.

That is why we want to strengthen the United Nations—to strengthen NATO, SEATO, the Baghdad Pact, the Rio Pact, and other instruments.

Yet we must be realistic in acknowledging that agreements are only as good as the real faith of the signers of the pact.

With that faith, we can keep life in these pacts; without that faith, they become dead letters—scraps of paper.

What we need therefore, and what our friends need, is a revitalized awareness of our responsibilities. We need a revitalized awareness, too, of the presence of the living God.

We should recognize that a bold application of ancient principles based on love of God and humanity would wipe out many of the problems confronting the world. It would provide food for the needy, halt aggression of godless nations, stamp out ignorance, and achieve many of the other worthwhile goals we seek.

THE CHALLENGE TO CHRISTIANITY

Here, then, is a challenge to every churchgoer to fulfill his highest responsibilities, as Albert Schweitzer is fulfilling them in the heart of darkest Africa.

It would be unworthy of the churchgoers, of the Christian, to assert:

"What happens in Africa or Asia or Latin America is no concern of mine."

Rather, the Christian must say, as Schweitzer says, in effect:

"I am, indeed, concerned. I am my brother's keeper. I am not a meddler, but neither am I a shirker. In this shrunken world I will not close my eyes to reality, or to suffering, or to hunger, or to disease, or to insecurity, whenever it exists. My first responsibilities are to my own people—my own kinsmen. But I will not close my eyes to the atheistic, aggressive challenges beyond our shores."

There is ignorance, and we must fight it; prejudice, and we must combat it; indifference, and we must alter it.

No true Christian can turn his back on mankind. No true Christian can believe that we should "live unto ourselves alone," callously ignoring the fate of the world, as some "blind followers of the blind" would have us do.

Such heedlessness would not only be un-Christian; it could prove to be suicidal. For all the rest of the world would then gradually be grabbed up piece by piece by the hungry Soviet bear. That must not and will not happen.

MESSAGE THE WORLD NEEDS

And so the message the world needs is the message which is exemplified by the celebration of the 75th anniversary here in Thorp—a rededication by men of the world to higher things of the spiritual life.

The 75th anniversary testifies to the fact that for 75 years there has been a strong faith, a great spiritual strength in Thorp.

Over the years, the members of the congregation, the ministers, the deacons, the Sunday-school teacher have kept and maintained and fulfilled the mission of the house of God.

The world needs this kind of dedication—to give it the spiritual and intellectual strength so as to handle the great responsibilities which time, progress, and world conditions have placed upon our shoulders.

Over the years, this church has had a profound effect upon the life of the community.

It has been many good things to many people, bringing peace and spiritual guidance, solace and comfort; it has been a place of religious training for the youth, sanctuary of God, and a house of communion and prayer. What higher praise can anyone give of any building which has been constructed? How better can we serve our children in particular than by supporting this type of noble institution?

The greatest gift that we can give our children—the children of all America—is a knowledge of the Bible and the teaching of spiritual values.

Whatever the complications of life they face, they will always be able to use these immortal wisdoms.

FAITH FOR THE FUTURE

And now we must look forward optimistically to the future. To keep faith with our forefathers, we must have the vision to preserve this rich heritage bequested to us. This can be done by maintaining the following: Faith in God, faith in ourselves, faith in our churches, and faith in the future of a great free America.

With this type of deep belief we can go forward to peace and prosperity.

I am happy to have had the opportunity to talk with you.

Thank you, and may God bless you.

Traffic in Narcotics—I

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1956

Mr. ANFUSO. Mr. Speaker, in view of the recent investigations of the traffic in narcotics by committees of Congress and the current discussion of the subject in congressional circles, I want to insert into the RECORD a very interesting and informative article which appeared in the April 21, 1956, issue of The Nation.

The article, Traffic in Dope: Medical Problem, is written by Alfred R. Lindesmith, professor of sociology at Indiana University, who made a study last year of England's methods in controlling narcotics.

It was brought to my attention by my dear friend Judge Jonah J. Goldstein of the Court of General Sessions in New York. Judge Goldstein is a noted jurist, civic leader, and one of New York's most prominent citizens. He has long been interested in this field as a jurist and humanitarian and has advocated a system of controlled legal distribution of drugs to certain users.

Professor Lindesmith's article reads as follows:

TRAFFIC IN DOPE: MEDICAL PROBLEM

(By Alfred R. Lindesmith)

For 40 years the United States has tried in vain to control the problem of drug addiction by prohibition and police suppression. The disastrous consequences of turning over to the police what is an essentially medical problem are steadily becoming more apparent as narcotic arrests rise each year to new records and the habit continues to spread, especially among young persons. Control by prohibition has failed; but the proposed remedies for this failure consist mainly of more of the same measures which have already proved futile.

The number of heroin and morphine addicts (the use of marihuana, cocaine and other drugs is a separate problem not included in this discussion) is conservatively estimated by Mr. Harry J. Anslinger, head of the Federal Narcotics Bureau, at 60,000. This figure is a guess; its main virtue is that it is the lowest offered. Even so, the contrast with European countries is spectacular. For example, the English Government reports slightly more than 300 addicts known to the authorities in all of Britain, with a population of over 50,000,000. There are probably more addicts in the United States than in all of the other western nations combined, and more juvenile users in New York City than in the whole of Europe. Almost all English addicts are reported to be over 30 years old, while close to half of ours are under 25. What is even more significant, European users appear to add to the crime problem in only a minor way, and the illicit traffic there is feeble compared to ours. The American market is the hub of the drug traffic in the Western Hemisphere.

In recent years there has been a growing interest in the English system of control. General Sessions Judge J. J. Goldstein of New York mentioned it recently in connection with his advocacy of a system of controlled legal distribution of drugs to users. Dr. Hubert S. Howe, of New York, has also long urged such a plan, adopted by the New York Academy of Medicine, and has made references to the apparent success of the English system. Since about 1940, the writer himself has periodically suggested that an adaptation of the British idea be tried in this country.

The crucial difference between the American and British control systems is that the English physician is permitted to prescribe drugs regularly for the morphine addict while the American doctor is not. The decision as to whether or not regular prescriptions are to be given to the English user is left to the doctor, usually after consultation with another medical man. He does not have to report on the addicts under his care, but records must be kept both by him and by the druggists who fill the prescriptions. Through these sources the British Home Office and the police can secure information about addicts and keep close watch on them. Addicts are arrested for obtaining supplies from ilicit sources or from two medical sources simultaneously. The addict cannot be coerced into taking a cure, but there is pressure on the doctor to do everything in his power to persuade the user to quit the habit.

The British addict under medical care is included in the doctor's panel of cases under the National Health Act. Apart from the taxes he pays under this act along with the rest of the population, the addict's expenses for maintaining his habit consist only in the shilling (14 cents) paid for each prescription. It is therefore unnecessary for him to engage in criminal activities to get his drug. The black market is small, limited primarily to London and a few other large cities, and caters to users who either don't know that they can place themselves under a doctor's care or don't wish to do so. Sometimes an addict will refuse medical care because he is afraid his addiction will become known, or because he does not want to try to cure himself of the habit. All black-market activities are, of course, prohibited by law, and and the addict who patronizes peddlers risks arrest and punishment. In 1954 about 30 addicts were arrested, most of them for forging prescriptions or obtaining supplies from two doctors at once, and the majority were punished with fines up to a maximum of $280. The smoking of opium and the possession and use of marihuana are completely prohibited.

The obvious advantages of this system are that it removes the major motives for peddling narcotics and for the creation of new users, puts pressure on the addict to seek medical care and removes his incentive to engage in crime. And even though the addict is not treated as a criminal, addiction has not spread. The plan, in fact, has the opposite effect by making the doctor rather than the peddler the prime source of drugs. Another of the great advantages of the system is that a mantle of decent privacy is thrown over the unhappy details.

In this country the history of opiate-drug control has been very different. Because American patent medicines in the 19th century often contained opiate derivatives which were not controlled, relatively large numbers of addicts were created who were not, however, generally regarded or treated as criminals. The problem then was in no way as serious as now. Criminal addicts were few, the illicit traffic minor in nature and addiction was largely confined to adults (about two-thirds of them women). Because drugs were legally available at low cost the user did not have to become a criminal to support his habit. Even so, an increasing concern with the dangers implicit in the unlimited availability of drugs led to the trial of measures of control late in the 19th century and in the first decade of the 20th. Given time, this experimentation, guided by growing medical knowledge of the opiate drugs, might well have led to the establishment here of something like the English system. This did not happen because of the intervention of Federal authorities imbued with the prohibition mentality.

The present system of drug control began with the passage of the Harrison Act late in 1914. This act made no mention of addicts nor did it in any way indicate how they were to be treated. It was a revenue measure designed to bring the flow of dangerous habit-forming drugs into the open through the exercise of the Government's taxing powers. All persons and firms handling such drugs were required to obtain licenses and to keep records of supplies received and dispensed. Penalties were provided for violations. An exemption was made for the prescribing of drugs "to a patient by a physician * * * in the course of his professional practice only." The interpretation of this part of the law become crucial in the early years of enforcement because on it hinged the whole matter of whether the addict was to be placed under the care of the physician or turned over to the police.

Between 1919 and 1925 a number of test cases—the Webb, Jim Fuey Moy, Behrman and Linder cases—were brought before the Supreme Court. The first three involved doctors who had flagrantly violated medical ethics by dispensing large quantities of drugs at high prices to addicts. Rufus King has pointed out in the April 1953, issue of the Yale Law Journal that these cases were in effect rigged by the Government. The prosecution wanted a court ruling which would prevent addicts from obtaining drugs from doctors. They evidently hoped that the unprofessional action of the doctors in these three cases would influence the court to decide against them, which it did. From the language of the indictments the Government was then in a position to argue that these rulings had established that any administration of drugs to addicts by medical men, even when done in good faith to achieve a cure, was illegal.

The Linder case was designed to clinch the Government's position. Unlike the three earlier ones, it involved a doctor who had prescribed small quantities of drugs to a single addict in good faith and in what was clearly a professional manner. The Government attorneys asked the court for a ruling against the doctor on the basis of the precedent allegedly established by the earlier decisions. In this case, however, the court reversed itself by ruling against the Government. Despite this reversal, Federal narcotics authorities have continued to operate under a Treasury Department regulation which states that "a prescription issued to an addict * * * to keep him comfortable by maintaining his customary use, is not a prescription within the meaning or intent of the act; and the person filling such an order, as well as the person issuing it, may be charged with violation of law." Threatened with criminal prosecution, the majority of doctors naturally ceased to treat addicts; the minority found themselves in trouble with the narcotics agents, and in many instances were sent to prison.

In 1920 a radical change in the Government's attitude toward addicts became apparent after the enforcement of the drug laws was turned over to a newly formed unit in the Bureau of Internal Revenue which was also charged with liquor-law enforcement under the Volstead Act. From 1915 through 1919, the annual reports of the Collector of Internal Revenue included expressions of sympathy for the drug user and concern over the fact that previously respectable addicts were being turned into criminals by the operation of the law. The 1919 report notes that various local health authorities had been encouraged to consider the possibility of setting up clinics in which drugs could be dispensed legally to such persons. The 1920 report, however, reversed this stand. It deplored the fact that some 44 local clinics had already been set up and announced that they were to be closed down. Neither the 1920 report nor any subsequent one expressed concern with the fate of the once-respectable user who was being forced to the underworld to maintain his supplies.

It is a current myth that the clinics which operated between 1919 and 1923 demonstrated once and for all the perniciousness of any legal system of drug distribution and that they were closed solely because they failed. The facts are quite otherwise and more complex. It is true that the New York City clinic was generally admitted to have failed, but its failure was guaranteed in advance by the manner in which it was set up and operated. The stories of the other clinics vary. There is considerable reliable information extant about the clinic in Shreveport, La., established under Dr. W. P. Butler, which is discussed in some detail by Drs. C. E. Terry and M. Pellens in their book, The Opium Problem, a monumental and authoritative study. This clinic was originally set up by the Louisiana State Board of Health in 1919. In 1921 the board, after consultation with Federal narcotics authorities, withdrew its support and the institution was continued under the authority of the Shreveport City Council. In the same year it was unanimously endorsed by the Shreveport Medical Society; other medical groups and the local police also expressed their support. However, in 1923 the clinic was finally closed by order of Federal authorities in Washington. Dr. Butler reluctantly agreed to the closing after a conference with Federal narcotics agents who said they had been sent to shut down the clinic "because it was the only one left in the United States." When a Los Angeles clinic had been similarly closed in 1921, Dr. L. M. Powers, then health commissioner of the city, had remarked, "I have not been able to realize the actual purpose of the closing of our clinic for there has been some unseen motive prompting much opposition to clinics which I have not been able to comprehend."

The disappearance of the clinics marked the final triumph of the prohibition idea and the complete removal of the control issue from the medical domain. The drug problem is what it is today as the result of these moves by the Government. The huge illicit traffic, directed for profit by nonaddicted lords of the underworld, has become the focal point of new infection. These men are rarely apprehended or punished; it is the user, exploited by the system, who suffers the major portion of the heavy penalties that are imposed. Police suppression, by increasing the danger of distribution and reducing supplies, keeps up prices and profits.

It is a popular misconception that the increase of drug use among young people is entirely a postwar phenomenon. As early as 1921, Dr. E. Bishop, a noted authority on drug addiction, commented on the trend toward juvenile addiction and ascribed it to the prohibition control technique. Statistical evidence of the trend itself can be found in Uniform Crime Report of the FBI over the last 24 years. In 1932, for instance, only 15 percent of narcotic law violators were under 25 years of age; in 1940, the figure had reached 26 percent; today it is a little under 50 percent.

In 1930, drug-law enforcement was separated from liquor-law enforcement with the establishment, within the Treasury Department, of the Federal Bureau of Narcotics. Federal narcotics officials, both before 1930 and since, have combined their policing functions with an active and effective campaign in support of the punitive conception of drug control. The expression of dissident opinion was discouraged. How well their campaign has succeeded in mobilizing legislative and public sentiment is indicated by the fact that Congress, in 1951, passed laws that more than doubled the average prison sentence of Federal narcotics offenders. In January of this year a preliminary report of a Senate subcommittee indicated that the present Congress will again be asked to increase penalties, enlarge the budget of the Federal Bureau of Narcotics, and generally add to the punitive nature of the existing program. The report expressed sympathy for the addict but makes no distinction between him and the peddler. It admitted that the real culprits, the big profiteers of the traffic, are rarely caught, and proposed to deal with them by legalizing wiretapping. Although the report explicitly stated that the number of addicts in this country probably exceeds the sum total of those in all other western countries combined, no reference appeared in it to the control systems adopted abroad.

The treatment and cure of opiate drug addiction under the best of circumstances is very difficult. The main hope of control must be based on prevention. The punitive program now in operation neither prevents nor cures and it actually nullifies the rehabilitative measures that are being attempted. The addict belongs in the hospital, not in the prison. If we recognize that punishment cannot cure disease, if we want to take the profit out of the illicit traffic, we need to return the drug user to the care of the medical profession—the only profession equipped to deal with him.

Traffic in Narcotics—II

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. ANFUSO. Mr. Speaker, in connection with an article by Prof. Alfred R. Lindesmith on the traffic in narcotics, which I am inserting into the RECORD today, there appeared several interesting letters in the Nation of May 19, 1956. These letters discuss the pros and cons of Professor Lindesmith's views on the subject.

As a supplement to the article, I am also inserting into the RECORD the several letters so that readers may have the full benefit of these views:

PRO LINDESMITH

DEAR SIRS: Professor Lindesmith, whom I missed meeting in London by a day last year when I was on a similar study mission in England, has described accurately the narcotic situation in this country (April 21 issue).

Narcotic addicts are citizens like the rest of us. The punitive legislation which we employ must continue to fail because it has been erected on a fallacious foundation: That drug addiction is a crime. It is, instead, a symptom of psychical disorder, as the article emphasizes.

Appreciation of the addict as a sick man will permit his rehabilitation in hospitals or clinics without drugs where it is humanly possible to do this, and with them where no other course is feasible.

In accepting this responsibility medicine is acting in the highest spirit of altruism because the very nature of the problem will demand, for the most part, government hospitals and clinics.

The Senate subcommittee report which arrived in the mail almost simultaneously with Professor Lindesmith's article shows that our legislators are continuing the impossible task of trying to legislate morals; of seeking to cure disease with policemen's billies. It is another milestone down the unfortunate punitive path which we have been following all these years.

HERBERT BERGER, M. D.,
The Berger Clinic.
TOTTENVILLE, STATEN ISLAND, N. Y.

DEAR SIRS: The damage done by the interpretation given to the Harrison Narcotics Act of 1914 in preventing physicians from treating narcotics addicts and turning over to the police what is essentially a medical problem can be undone if the lawmakers are made to understand the nature of the problem as Dr. Lindesmith describes it so well.

N. H. COOPER, M. D.,
Welfare and Health Council.
NEW YORK, N. Y.

DEAR SIRS: I enjoyed the article on drug traffic by Professor Lindesmith in the April 21 issue and think it poses an interesting problem. My own belief is that taking drugs is no more a criminal matter than overindulgence in alcohol. I feel that unless there is a crime committed by the addict, addiction itself is not a matter for the police, the district attorney, or the courts. All too often, in my experience with judges, district attorneys, and probation officers, there has been an air of embarrassment as to what to do with a drug addict who is being charged with taking drugs. This I feel definitely is a matter for doctors, psychiatrists, clinics, and other specialists. I would not, however, advocate the use of drug clinics except on a nationwide basis.

CHARLES B. BRADLEY,
Youth Counsel Bureau.
BROOKLYN, N. Y.

CON LINDESMITH

DEAR SIRS: It was disappointing to me that Alfred Lindesmith missed the most important point. Opiate drug addiction is not, at bottom, an essentially medical problem, but an essentially sociological one. It is the more disappointing that Mr. Lindesmith, himself a distinguished sociologist, should have missed this.

Are we to draw no inferences from the fact that addiction has become a serious problem in our own highly secularized, competitive, unstable society, while it has remained a minor problem in the relatively more secure society of Great Britain? Is there no significance in the timing of the trend toward juvenile addiction, which, as Mr. Lindesmith points out, began during or shortly after World War I, and accelerated during the great depression and World War II? Were these not times when old ideals were crumbling, cynicism, disillusion, and despair grew fashionable and adolescents were given little besides inconsistencies to live by? Is it merely coincidental that drug addiction is most widespread among the portions of our population to whom we ration

or deny outright those prerequisites we define as the good things of life?

In his preroration, Mr. Lindesmith states: "The main hope of control must be based on prevention." No one, I think, would demur. But I fail to see how he reasons from this proposition to the conclusion that the medical profession must be our rod and staff in the matter. The medical profession is, almost by definition, limited in philosophy and practice to therapy. Treatment of drug addicts? Perhaps. Prevention of drug addiction? I cannot follow.

Nor is a medical education currently producing physicians competent to the task Mr. Lindesmith assigns them. Total preventive medicine will require that the physician be, to an extent, a social psychologist, applied anthropologist and social worker, as well as epidemiologist, psychiatrist and internist. It is conceivable that the arts and sciences of biological man and social man can be thus fruitfully combined and mastered by an individual with sufficient interest, talent and training. I believe the revolution of "social medicine" will, in fact, occur within a lifetime, perhaps within a generation. But I prefer not to make a solution of the addiction problem (read also the divorce problem, suicide problem, etc.) contingent upon the consummation of this revolution.

Mr. Lindesmith is much too impressed with the present capabilities of medical science. He is much too modest concerning the capabilities of social science. My hope (and my hunch) is that the social sciences are not quite so impoverished as social scientists, along with most of the rest of us, may think.

PAM ANDERSON.

BERKELEY, CALIF.

DEAR SIRS: The article by Professor Lindesmith makes two rather strong assumptions: (1) That the punitive attitude of the Government has increased addiction and (2) That only the medical profession can do anything about it. It will be hard to prove either.

Drug addiction has increased among young people only in a few places like New York and at no greater rate than juvenile delinquency. Generally, many contend that the withholding of punishment has caused such increase while Dr. Lindesmith holds that too much causes it. They cannot both be right. As a matter of fact, neither view is entirely correct.

While we hesitate to admit it, there are deepseated trends in our American civilization towards dependency and indulgence and away from self-reliance and self-denial, stimulated possibly by the action of Government during and after the depression—e. g., see the increase of relief rolls during high employment and prosperity, for one bit of evidence, and the Kinsey report for another.

As to Professor Lindesmith's second point, recent history demonstrates that mere hospitalization is no cure for a confirmed drug addict. Judged by results so far, both the fantastically expensive Brothers Island Institute in New York and the Federal hospital at Lexington, Ky., are failures.

No profession should claim the exclusive right to treat a social malady until it has a cure for it. In the same way that the cure of drunkenness and sex deviation is a compound of sociomedical and authoritarian effort, so it is with drug addiction. Psychiatrists who have especially studied this distressing phenomenon tells us that drug addiction is not a separable disease—to be isolated and cured—but a symptom of a general psychiatric disorder applicable to alcoholics and sex deviates, too.

Free dispensing of narcotics under doctors' orders may be a necessary and human palliative but it is not a cure. The trouble lies deeper in our complex social structure.

Here are some things we might do: Insist on international conventions reducing shipment of opium; prevent smuggling by employment of more Treasury inspectors; punish severely the pushers; stop whetting the appetite of some of the inquisitive young people in our less privileged areas by talking too much about a subject which 99.44 percent of them know nothing about and care less. I sincerely question whether "A Hatful of Rain" or even "The Man With the Golden Arm" has any beneficial effect in preventing addiction. Diversion of our young people into wholesome and healthful activities is, I would guess, more effective than sending a Robert Mitchum to jail for addiction and then headlining him in the movies on his release.

SANFORD BATES,
Former Director, United States Bureau of Prisons.

PENNINGTON, N. J.

MR. LINDESMITH'S REPLY

DEAR SIRS: Because my discussion of the drug problem was intended to be practical, I stressed a definite program which has been found to be effective abroad. This program, which places uncured addicts under the care of doctors, is also an attack upon the economic basis of the illegal traffic. As such, it is designed to supplement, not to replace, control measures of the type now directed against the black market which Mr. Bates mentions. Both Mr. Bates and Miss Anderson, in their concern over relatively remote historical and social factors in the drug problem about which little or nothing can be done, neglect the factor of availability of drugs about which something can be done.

I had uncured addicts in mind when I emphasized the central role of the medical profession. Only doctors can write prescriptions. It is true, as Mr. Bates says, that there is now no effective cure for addiction and that turning over uncured addicts to medical men is only a human palliative. It is, however, a vital step which would remove the stigma of criminality from addiction, besides undercutting the illicit traffic. I am surprised that Mr. Bates seems to attach so little importance to it. Once this vital step is taken, I will concede Miss Anderson's point that curing addiction is much more than a medical problem.

If one is to judge from arrest rates, Mr. Bates is definitely in error when he says that the increase of addiction in young persons has been confined to "a few places like New York." The figures in the Uniform Crime Reports, which reveal a trend toward increasing involvement of young persons, also show rising arrest rates in almost all sections of the country and in cities of all sizes.

ALFRED R. LINDESMITH.

BLOOMINGTON, IND.

Story of Red Cross in Action

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. CANFIELD. Mr. Speaker, we are all aware of the wonderful work done by the American Red Cross during great disasters, but very often these are far removed from our personal experience and are forgotten as tomorrow's headlines replace today's on the pages of our newspapers.

For this reason I submit the following article from the Passaic (N. J.) Herald News of June 2 that tells the story of the Red Cross humanitarian service when a disastrous fire in that city made homeless 28 families:

RELIEF FOR VICTIMS OF FIRE: STORY OF RED CROSS IN ACTION

Passaic residents, who have contributed for years to various Red Cros relief drives, are now being given a heart-warming first-hand view of how a Red Cross disaster program operates. A relief program for the benefit of the families who were burned out in the Monroe Street fires is now in full swing.

John Hopkins, of Butler, Red Cross national field representative who is in charge of the Passaic program estimates that the final cost will be about $10,000. So far, he said, 26 families have registered for assistance, and a total of $6,400 has been committed to help them get started again in new homes.

"The Red Cross uses the funds it has been given by the American people, not to replace luxuries such as television sets and radios, but to replace the essentials without which the families would be unable to exist," Hopkins said. Detailed interviews are conducted with the families to find out their circumstances, what their financial resources are, and how much they can reasonably be expected to do for themselves.

"The Red Cross tries to fill the gap between what the family can do for itself and what it needs to live," Hopkins said.

PRICES CHECKED

Careful safeguards are imposed to stop anyone from going overboard with what he mistakenly regards as a bonanza, Hopkins said. Average prices for various household items are obtained from local merchants and none of the families is allowed to go beyond that figure. They are, however, allowed to make the purchases wherever they have been in the habit of buying. The average prices are far from lavish, ranging from $20 for a wooden double bed to $55 for a studio couch.

The awards to individual families range around $600 to $700, Hopkins said, and usually include clothing, household furniture, and sometimes even an initial food order and a first month's rent.

Of the Passaic families who have registered with the Red Cross, Hopkins said, only two were insured and only one had any substantial savings. In all three cases, he said, the Red Cross assistance was held to a basic minimum. The heads of all of the families are employed, he said, and all have signified their intention to remain in Passaic. Hopkins praised the work of Mayor De Muro's emergency housing committee as a good example of community coordination. The Red Cross itself is navigating carefully in difficult waters, he said.

"We feel a dual responsibility to the disaster victims and to the American people who gave us the money for the job," he said. "We try to be fair to both."

Why Work in a City?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an article by Mr. Louis B. McCarthy, general manager and treasurer of the Macallen Co.,

which appeared in Dun's Review, May 1956, entitled "Why Work in a City?"

WHY WORK IN A CITY?

(By Louis B. McCarthy, general manager and treasurer, the Macallen Co.)

It's quite possible that someday the historians of our economy may decide that the tide of urban industrialization, which flowed so strongly through the earlier years of our era, turned back at the century's midpoint. At any rate, there's a sizable number of us newcomers to upper New England in general, and New Hampshire in particular, who appear to support this premise.

That early drift to big city markets and big city labor had been further aggravated, in this neck of the woods, by departure of the textile industry to the South, beginning with cottons in the 1920's and followed by woolens in the 1940's. It was seduced by promises of public financing, tax concessions, and, at least temporarily, cheaper labor. Textiles were unraveling for fair. Along many a stream or river, whose damned-up power had whirled a thousand spindles or moved a hundred looms, many a fine old brick or stone mill stood empty. As one Manchester bank president put it, not profanely, "There are more New Hampshire plants vacant, by a dam site, than there are occupied."

Yet, by 1950, northern Massachusetts, New Hampshire and southern Maine were already gaining new industries. In the intervening years this trend, steady, though as yet slow, has become increasingly apparent.

What leads a manufacturer to decide to move out of a city or a congested industrial area into the more or less wide open spaces? What are the things to look for in this kind of relocation? Most of all, how do the advantages and drawbacks stack up for employees as well as employers after the period of shakedown? As one who has recently been through this particular mill, along with many of his corporate neighbors and friends, I may be in a position to supply at least some of the answers.

At the beginning, it is well to recognize that hard and fast advantages do not automatically follow the transfer of a plant from city to small town. Whether such relocation is desirable for you, and where, depends on what you make, the number of workers and the kind of skills you need, the sources of your raw materials and the location of your market. My own commentary, of course, focuses on New Hampshire. Other areas and other States may well prove more desirable for your firm. In any event all relevant facts about any contemplated community should be pondered before choosing it.

In the majority of instances the factor that motivates a move is the outgrowing of existing plant and layout. This was undoubtedly the biggest single reason with us here at Macallen, as it was with a number of other New Hampshire recent arrivals such as Gates, Inc. of Antrim (makers of chests and boxes for percision tools), Sanders Associates of Nashua (electronics), Hudson of Franklin (overhead doors), and Armstrong & Botsford, of Bath (machine parts). It is also a reason why little relocating is done except in periods of general prosperity when volume is expanding and labor and desirable space are in limited supply. A concern will put up with bad plant conditions for years, through force of habit. It usually moves only when it must.

Broadly speaking, desirable plant space in great cities and heavily industrialized areas is not easily found. City ordinances and zoning codes restrict most manufacturing to industrial slums out of which all but the least skilled and lowest paid labor has migrated, thus posing, among others, growing problems of public transportation and private parking. Bars and taverns,, always cheerfully willing to cash pay checks, surrounded us in our former Boston locale, contributing their share to Monday morning tardiness and absenteeism. Land, for building, is scarce, sometimes prohibitively priced, and heavily taxed.

REAL ESTATE IS CHEAP

In towns and villages well out of such metropolitan zones, however, not only is real estate cheap and construction costs a little less, but where vacant plant space already exists it can often be bought or leased at a fraction of the cost of urban facilities. This is especially true where a factory can be shared by a number of smaller tenants who can jointly use its main powerplant, elevators, loading ramps, sidings, warehouses, and other features.

Almost all these firms who have come up to New Hampshire and southern Maine in the last few years report some tax savings. Indeed, taxes appear to be the second most important reason for moving. Fred Chamberlin, of Hudson, for instance, reports material savings. In our own case the tax on property is about one-third of what we paid before the move—a saving of one-fifth in State taxes, by no means inconsiderable. Tax laws of other States, along with local assessments and rates, should be examined before deciding where to relocate.

A third reason for moving that I've heard frequently mentioned is traffic congestion and the fact that it's darn near impossible these days to get adequate parking space near plants in metropolitan districts. This was a big reason for the move of the Insuline Corporation of America from Long Island to Manchester, N. H.

But let me warn you that though there's a lot of gold in "them thar hills, way out yonder," there's a lot of tailings, too. Take the training of new labor. Country people learn pretty fast and up here in Yankeeland they're traditionally versatile—but even so, the training period is apt to stretch out longer than you think. If your experience runs parallel to ours it's unlikely you'll be worrying much about excess profits, or any profits, the first year or two. On the other hand, once this is over, the slightly lower wage scales of smaller communities, plus the increased efficiency and loyalty of small-town workers, compensate for this initial cost.

You'll find insurance rates higher, on the average, unless your new building is sprinklered and you're more than apt to end with a larger inventory tie-up. Local dealers don't carry much stock of spare parts, office supplies, and other such items on which you've been accustomed to prompt delivery.

If you're a large consumer your utilities rate will be about the same. If you're small or only fair-to-middlin' it's apt to be higher, as are oil prices, too, the further you get from a basing point. Or you may have to use bottled gas, which is more expensive, though pipe lines are spreading fast. Also, you're apt to have more power failures than in the city, due to overhead lines.

On the other hand, if your plant can use river or lake water, you will have little trouble finding all you want at a marked saving. Freight rates have no relevancy to the problem of city versus country but rather to markets and raw materials.

What of the workers? What are their gains or losses in this matter of town and country?

Well, there's no universal yardstick. What's one family's Arcadia is another family's Siberia. But it's my observation that our own employees enjoy a higher standard of living now than before. Take housing. Nearly 10 percent of our folks made the transfer up here from the greater Boston area. As the truckers who moved them put it: "Seems as if we moved everybody into a better place than we took them out of." In terms of cost, space, light and general surroundings, rural community housing is apt to be better.

WORKERS AS FARMERS

On the score of food, prices run considerably lower for locally raised staples. Most of our people have gardens and a lot of them keep chickens or a cow. Quite a number, with the help of their families, even go in for small-scale farming. Rural communities are often in or near hunting and fishing country and this adds spice and variety to the larder. In this respect, our location at Newmarket is an especially happy one.

Our plant is located on a meandering little river called the Lamprey. A lot of our people have homes along its banks, almost within a stone's throw of their work. There's pretty good fishing in the Lamprey, and in fall and spring it's popular with migrating Teal and Mallard. You may have glanced at the picture that shows our mill and the wide pond below our dam where the river broadens before merging with Great Bay and the Atlantic. Here the tides ebb and flow and here a lot of our folks keep skiffs and small craft, as you can see, for clamming and lobstering and salt-water fishing. The State Game Commission keeps adjacent fields and coverts well stocked with pheasant, and in a dry year the deer can be as much of a nuisance to our gardeners as they are a joy, in season, to our hunters. In fact there are almost as many hunting licenses among our force as there are driver's licenses.

This brings up an interesting aspect of the situation. As I believe I mentioned earlier the Yankee employee, hereabout, is a rather versatile and self-reliant character. For several generations the Portsmouth Navy yard sort of set the pace of employment and wages around the area. When the yard wanted carpenters, most everyone showed up as a carpenter. When it was hiring plumbers and steamfitters, the local talent just left their tool chests at home and appeared with a Stilson wrench and a lead pot.

I've already mentioned that nearly everyone has a garden or a farm of sorts, and the number of nimrods and Waltons runs about 12 to the baker's dozen. The point of all this is that if your business is subject to wide seasonal or cyclical fluctuations, laid-off workers suffer far less hardship and return with far less resentment than city dwellers. A week or two off in spring or late summer can be very useful in sowing or harvesting. Chicken houses and barns always need roofing and houses, painting. A few days with a power saw can turn hurricane windfalls into a winter's supply of firewood.

TREATING BUCK FEVER

It took us a year or two to learn, but we make sure that some of our official holidays, when we close the plant, fall within the hunting season. We might just as well; they'd be taken unofficially anyway. The personnel manager calls this virulent and contagious malady, which results in a marked increase in out sick reports for a few weeks each fall, buck fever.

Our friends Armstrong & Botsford are a good example of what I mean. They moved upstate to the little village of Bath, N. H., from Stamford, Conn. They make machine parts, chiefly for dirt moving and road equipment. Their main reason, like many others, was cheap and suitable space. They found it in an abandoned church with a concrete basement and reinforced hardwood floor that would support heavy machinery. They've rebuilt what were the balcony and choir loft into general offices. The two principals brought only a foreman with them when they moved up. The rest of their handful of employees, all machinists, they hired in the area—including one machinist, struggling along as a farmer, who had served an apprenticeship under his father, a master

mechanic with a prominent firm in Glasgow, Scotland.

A couple of years after they established themselves in Bath, the recession of 1953 hit them with cancellations. They explained the situation to their small force who, knowing that the two owners had plans for certain eventual alterations to the premises, volunteered to work on these property improvements until more orders came in. A couple turned out to be excellent carpenters and 2 or 3, stonemasons. Another, who had a tractor, brought it along. As a result, floors and partitions were constructed, ground leveled and drained and a 4-foot retaining wall raised along one side of the property. When things picked up, they all went back to their machines. It's hard to imagine this happening in any large city.

THE GOOD LIFE

School conditions vary widely. Our New Hampshire schools rate well above the Nation's average but in many towns they're below it. In general, smalltown instruction runs fair to good and overcrowding is definitely less.

On the score of medical care, emergency and specialized clinical facilities are not usually available, as in cities. General hospital care, however, is almost always within reach, as are good general doctors, and fees run below urban charges.

Only in the area of entertainment and cultural life does the city offer marked advantages. Theaters, art galleries, lectures, good music, and music instruction are lacking in the country unless you're fortunate enough to be located in or near a university or college town as we are. While TV is bridging the general entertainment gap, there is no doubt that very talented children desiring to pursue the arts are handicapped in their development. Average kids find a healthy, truly American cultural and moral environment in the country. Chores at home and the nearness to woods, fields, seashore, streams, and ponds, all keep growing youngsters occupied and happy.

FRIENDLY FOLKS

In conclusion, there's one thing which all of us who have moved up here from the city, managers and workers alike, have noticed and commented on. It might be termed friendliness or neighborliness and, just as taxes and plant investment, it has a tangible value. On the individual side I'll just cite one incident which is typical of what I mean.

One of our folks, a mother of several children, cut her hand badly and was rushed to the hospital. Everyone in the plant knew about it and by the time the first shift went off at 3 o'clock that afternoon an informal ways and means committee had been organized. Volunteers took the children into their own homes. When the mother returned a week or so later, badly shaken, her right hand bandaged, relays of neighbors cooked, cleaned, baby-sat, and generally ran the house. In the city her close friends might live blocks or miles away, and her apartment-house neighbors might never even have heard about her accident.

These small-town and country folks take a real interest in their jobs and they value them. This slows down turnover and boosts productivity. It extends to the community, too. Officials and local organizations are glad to have you and show it in their cooperation, in many ways, for you bring in desirable income that is considered a community asset. Every hundred employees represents hundreds of thousands of dollars more personal income per year to the community. They also add proportionately to local bank deposits, hundreds of thousands more in retail sales, and actually add over 200 more folks who will vote, swell the tax rolls, support churches, charities, and clubs—in short, strengthen the country community.

How a Boy Sat With a President 66 Years Ago

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. MINSHALL. Mr. Speaker, on this past Memorial Day there appeared on the front page of the Cleveland Press an extremely interesting account of Memorial Day—1890.

This is the personal story of Mr. James H. Griswold of Cleveland, Ohio, a neighbor and friend of mine for many years, an outstanding member of the Ohio bar, and the father of Erwin N. Griswold, Dean of the Harvard Law School.

It is my privilege to call this article to your attention.

MEMORIAL DAY—1890: HOW A BOY SAT WITH A PRESIDENT 66 YEARS AGO

(Sixty-six years ago a farm boy from Ashtabula County came to Cleveland to view the Memorial Day parade and witness the dedication of the monument to the memory of President Garfield. It is about this visit that James Griswold, veteran of 54 years in the legal field, writes on this Decoration Day. Griswold is one of the honored citizens of Greater Cleveland. He is 83 and visits his law office in the National City Bank Building daily. This is Griswold's story in his own words.)

(By James H. Griswold)

I was born on a small farm in Ashtabula County and attended district schools where teachers were frequently paid $25 a month and often "boarded around."

When I reached the age of 16 my parents decided that I should go to New Lyme Institute, an academy 10 miles away.

The principal was Jacob Tuckerman, who also taught many of the subjects. He was my greatest teacher and incidentally was the grandfather of Florence E. Allen, a classmate of mine at the institute and now judge of the United States Court of Appeals.

Professor Tuckerman conducted chapel exercises for the whole school, consisting of about 180 pupils.

He also kept the students informed on many current subjects, and in April and May of 1890 he mentioned that on May 30, Decoration Day, in Cleveland, about 80 miles away, the great monument to the memory of President James A. Garfield was to be dedicated.

Many older people in Ashtabula County had known General Garfield personally as their Congressman, and all, including the academy students, had come to know much of his greatness.

So when Professor Tuckerman suggested that it would be a great event in the life of any student who could find it possible to attend the dedication, I immediately began to figure how it could be done.

I did not dare to write home (remember there were no telephones) for fear my parents, who were sacrificing to send me to the academy, would think the expense too great.

In my boyish thinking I remembered that I had an uncle and aunt (my mother's oldest brother and his wife) living in a suburb of Cleveland. With that in mind I decided to make the trip, the only expense now being the railway fare.

I got permission to go from Professor Tuckerman, and without notifying either my parents or my uncle and aunt, I took the train from New Lyme on Thursday morning, May 29, 1890, for Ashtabula, where I changed to the old Lake Shore Railway for Cleveland, and arrived at the home of my uncle before supper time.

They were surprised but glad to see me. I told them why I had come to Cleveland; they were surprised, as their son somewhat older than I had made no preparations to attend the great celebration.

The next day I left the house rather early, although the procession was not due to start from Public Square until noon.

I thought I might possibly get a sight of President Benjamin Harrison, for I had never seen a President before. I had heard that the parade was to be very large but I had not the faintest idea of its size.

I was all alone. I did not know a single person in Cleveland besides my uncle's family, and I did not see a single person that I knew from the time I left my uncle's home in the morning until I returned exhausted at night.

The parade was entirely beyond me, but I was bound to get everything I could from it. Every State in the Union sent a representative. More than 5,000 men from the Grand Army of the Republic, local and State militia, and civic organizations took part and marched from the square to Lake View Cemetery, about 5 miles out Euclid Avenue.

There were bands it seemed from every city one could think of. I was told 30 or 40 in all. Perhaps the group that attracted the most attention was the veterans of the 42d Regiment of Ohio Volunteer Infantry, Garfield's old command, consisting of over 100.

The procession was so long that it took nearly 2 hours to pass a given point. I managed to start with the head of the parade, for I did not want to miss a thing.

When I left my uncle's home I had supposed I would take a streetcar from the square to the cemetery, but I soon found out that all the streetcars had been taken off Euclid Avenue just before the parade started.

So I walked, and often ran, keeping up with the head of the parade all the way to the cemetery and then up the long rise to the location of the monument. And now came my greatest disappointment.

STUMPED BY STAND

A wooden stand had been erected close to the monument, about 20 feet in the air, which would seat possibly 150. In order to see all the great personages and hear the speeches, one just had to be up on this platform.

To get to this very reserved section, one had to have a ticket.

What was I to do? Had I come 80 miles and at large expense, for me, only to stand at the foot of the speaker's platform with thousands of others and hear and see very little?

Greatly distressed, I began to circulate around the monument and particularly about the speaker's stand. On one side, where the notables came on to the platform, I discovered that boards had been nailed to the studding, leaving openings of an inch or two between them.

I saw no policeman or guard on duty, so I proceeded to put my fingers and toes through the openings and quickly climbed to the top, where the notables were beginning to assemble.

No one paid any attention to me and I took a chair. Almost immediately there came on to the platform ex-President Rutherford B. Hayes with President Benjamin Harris at his side.

As the personages were introduced from time to time, I learned that I was seeing and hearing not only President Harrison, but Vice President Morton, Postmaster General John Wanamaker, Secretary of Agriculture

Jeremiah Rusk, with his long whiskers, Governor Campbell, of Ohio, United States Chief Justice Melville W. Fuller, and William McKinley.

There were many others, some of local fame, but when President Hayes introduced Gen. William Tecumseh Sherman, the applause from everywhere was terrific.

REMEMBERS PRAYER

The great orator of the day was ex-Gov. Jacob D. Cox, of Ohio. I do not remember a word that he said, but I do remember the prayer at the beginning, offered by Bishop William A. Leonard, of the Cleveland Diocese of the Episcopal Church.

Quite likely this was because my father was a loyal Episcopalian and it was at least one thing that I could with good grace report to him when I should next get home, and explain why I had made this trip on my own.

I do not remember a word of any of the speeches, but I was tremendously impressed in seeing and hearing this great array of distinguished personages.

One thing I do remember vividly after these 65 years. Just before President Hayes was apparently ready to dismiss the memorable gathering there came great shouts for "McKinley," "Bill McKinley."

McKinley responded with great dignity and solemnity, in the same earnest manner everyone remembers who heard him thereafter until his final address in Buffalo in 1901.

And so with simple formalities, there ended the dedication ceremonies of the Garfield Monument.

I know of no person still alive, besides myself—although of course there may be 1 or 2—who was privileged to be present on this momentous occasion.

The splendid memorial still stands, refurbished and visited by large and enthusiastic numbers from all over the world every year.

Unidentified Flying Objects

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. HÉBERT. Mr. Speaker, the following letter speaks for itself and in my opinion, if accurate, poses both a question and a problem in which we should all be most interested:

LOEW'S WASHINGTON THEATRES,
Washington, D. C., June 7, 1956.

Hon. F. EDWARD HÉBERT,
House of Representatives, United States Capitol, Washington, D. C.

DEAR MR. CONGRESSMAN: Due to the great deal of response from the public via phone calls as a result of our showing of Unidentified Flying Objects at Loew's Columbia Theatre, I respectfully request that the following statement be inserted in the CONGRESSIONAL RECORD in order that it be brought to the attention of all Members of Congress.

Fourteen solid unidentified flying objects were seen over our Nation's Capital in July 1952. They showed up on radar screens at the Washington National Airport and Andrews Field while radar crews and military intelligence aides watched. Everyone, official and unofficial, was quite excited about these visitors. Tension ultimately was eased by the explanation that heat inversion caused this strange phenomenon.

A documentary motion picture produced by Clarence Greene explains now that this was incorrect, and was injected into the incident to get an already overheated National Capital back to normal.

Even though the Air Force sent up jet interceptors in pursuit resulting in visual as well as radar sightings the correct information was kept from the White House and the truth suppressed in the newspapers.

Military officers and Government officials had a hand in making this motion picture. It brings out the one indisputable fact that flying saucers are here. The incident as shown in the movie is overwhelmingly. With these questions still to be answered, "Why wasn't the White House correctly informed and why weren't the people of Washington given the full information on the presence of the unidentified flying objects?"

Kindest regards,
Cordially,

JACK FOXE.

Texas Paper Hits Giveaway

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. GROSS. Mr. Speaker, I am glad to insert in the RECORD an editorial from the Houston Chronicle of Tuesday, June 5, suggesting that it is time the voters demanded a drastic slash in foreign aid funds.

The editorial follows:

The foreign-aid program has reached such a point of absurdity that even recipients of the lush American dollars are suggesting that the United States politicians quit making fools of themselves by throwing out the billions in direct giveaways.

Despite the fact that top officials of such recipient nations as Yugoslavia and France have publicly scorned the American giveaway program, the Eisenhower administration is still pressing to try to get its $4,900,000,000 foreign aid bill through Congress. Instead of reducing foreign aid, the administration is trying to increase it.

The administration is upset because the House Foreign Affairs Committe cut $1 billion in military assistance and $109 million in economic aid. It is using all its influence to get the House to restore these cuts when the bill comes up Wednesday.

Chairman RICHARDS, Democrat, South Carolina, of the House Foreign Affairs Committee pointed out that the administration already has an unexpended balance of $5,200,000,000 in military aid and $1,800,000,000 in economic aid. The administration wants to pile $4,900,000,000 of the American taxpayers' dollars on top of that.

Ample evidence has been shown that the foreign-aid funds are so loosely handled that Congress and no one else in the Government, unless it's the bureaucrats who squander it, have any real accounting for the expenditure of the funds.

The public should demand a drastic reduction in foreign aid. No aid of any kind should be given to neutrals, like India. No aid should be given to countries which are reducing their own military forces or show a lack of interest in allied defense measures, like Britain and France. In fact, no aid should be given except where the United States is going to get direct benefits from it, as it did in securing naval and air bases in Spain. This aid would be in terms of millions, instead of billions.

Russia is now appealing to Latin America for collaboration in trade, pointing out that the United States offers only aid of an economic and military character.

Like the Truman administration before it, the Eisenhower administration is a captive of the internationalists, who want to continue to squeeze the American taxpayers for every possible dollar, so the money can be thrown away abroad. The same design suits the purpose of the American Socialists, who want to level the wealth in this country to pave the way for socialism.

Members of Congress just don't seem to have the courage to buck the internationalists and halt the asinine waste of billions of dollars which is threatening the solvency of this Nation.

If the voters in November will throw out some of the bleeding-heart advocates of foreign aid, the other Members of Congress may get teh idea and stiffen their backs a little.

Trade With Japan

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Fulton Lewis on Tuesday evening, June 5, 1956:

Last night, ladies and gentlemen, I called your attention to a standard line of propaganda that is being put out by groups in behalf of the so-called GATT program—the General Agreement on Tariffs and Trade—under which the jobs of thousands of American workers in scores of American industries are being exported to Japan and other low-priced labor areas of the world.

Reciprocal trade agreements reduce the tariffs on foreign goods coming into the United States in return for the foreign countries reducing their tariffs against our goods. "If we want customers for our exports, we must be customers for imports. Other nations must sell their goods, to earn dollars to pay for our goods." And so forth.

All of which sounds very reasonable and very convincing, and it has taken in a great many people. And it's definitely true that considerable benefit, all around, is to be derived by increased trade between nations.

The question at issue is not whether there should be a program of mutual tariff reductions between us and foreign countries, but a question of degree, and the little matter of whether we're getting a fair break in these trades.

In the first particular, there is certainly no objection to Japanese goods—textiles and tableware and jewelry and the other specialties they produce—coming into the American market on a fair competitive basis, in reasonable quantities. Only the worst sort of high-tariff extremist would argue about that.

The point here is that these intense little men who make up the American GATT teams, who sit in secrecy in far-away Geneva, Switzerland, with life and death power to make these tariff reductions and give away these American markets are so extreme and violent in their surgery. As you go down the list of items in the GATT treaty which was negotiated at Geneva with Japan last summer, and which went into effect last September 15, you find item after item that represents an important segment of American industry and, therefore, an important

segment of American jobs for our own families here at home, in which the tariff has not been reduced 10 percent, or 15 percent, or even 25 percent, but 50 percent. And there are some cases in which this is the second GATT reduction, over the last few years. The point is, why is it necessary to make the reductions so extreme as to put out of business whole industries here in our own country.

The other point is about this reciprocity business, and what we get in the way of Japanese tariff reductions on our goods, in return for our reductions on Japanese goods. Because that's the theory behind this wonderful program, and that's the basis for any mutual good that is going to come from it. And that's what you, the public, have been led to believe is happening. That's what the State Department, and the League of Women Voters and the other ultraliberal groups behind this program claim, and who's to know how to get hold of these GATT agreements, which mount up into the thousands of pages, and pore through those pages and digest and analyze what's in there?

Except that that's what I have done—personally, not through staff or any third person—over a matter of many days—and a tedious job it was, let me say—and what those studies show is almost unbelievable. It is one of the most gigantic hoaxes that has ever been perpetrated on you, the public, and I'm morally certain that Mr. Eisenhower doesn't know what these little men in Geneva have been doing, and that he has never studied this GATT agreement with Japan, for instance, and that neither has Secretary of State Dulles, because they could not possibly condone what has been done, if they had studied it.

Maybe the summary—yes. I doubt that, but maybe.

What you get there, however, is a lot of this glamorous language, such as this:

"For the United States, this marks a notable achievement in the President's foreign economic program, and a fulfillment of arrangements taken last year, when the 1-year extension of the Trade Agreements Act was sought and obtained.

"Japanese participation in the general agreement will help United States interests in a variety of ways. Expansion of Japan's foreign trade, which participation in GATT will promote, is essential if Japan is to have a sound, self-sustaining economy, capable of providing adequate living standards for the Japanese people. By offering Japan expanded trade opportunities, participation in GATT also will give the Japanese people a concrete basis for continuing their alinement with the free world, thus lessening the danger of enforced Japanese dependence on Communist-dominated areas of the mainland of Asia."

Now, listen to this reciprocal-tariff-reduction business, and, remember, this is from the State Department's own analysis of the GATT agreement with Japan:

"All United States duty reductions combined covered imports from Japan valued in 1953 at $81 million while duty bindings or duty-free bindings were offered on a trade of $53 million. That is a total of $134 million.

"In exchange for the concessions granted by the United States, assurances were obtained from Japan as to future tariff treatment on products of which United States exports in 1953 were valued at 397 million (Japanese statistics), or more than half of total United States exports to Japan."

Now that sounds like a fine deal, doesn't it? Japan grants concessions to us on $397 million worth of business, and we grant concessions to Japan on $134 million worth of business.

But that's just the outside package, because there's quite a catch in that word concession, and there's quite a catch in the amount of Japan's reductions.

Under the trick terminology of these GATT agreements, the word "concession" is a very broad word. To you, and any normal individual, it means a reduction in the tariff rate. Not so under this agreement.

There's a little gimmick whereby if Japan has a 10-percent tariff on such and such, and they promise, in this GATT agreement, not to increase that tariff during the life of the agreement, that is rated as a concession on the part of Japan. They don't reduce their tariffs at all, but they get credit for a concession.

And I've undertaken to analyze for you this entire GATT agreement with Japan, and to tabulate the concessions on both sides, and to find out, in each case, how many of the concessions were actual tariff reductions, and how many of them were these phony bindings as they call them, and you will find the figures very enlightening.

On our side of the picture, we granted Japan a total of 238 of thees so-called concessions. Of that 238, 212 were actual tariff reductions, and as I have already reported to you, they were very drastic reductions, as is being demonstrated by the sudden flood of Japanese goods, pouring into our markets.

Now, what did our GATT team get in return on this reciprocity deal? Out of a total of 288 so-called concessions which Japan made to us, exactly 95 of them were real tariff reductions, and the others were not reductions at all. The rates remain the same. The concessions consist of Japan promising not to raise the rates in the future, and in some cases even that promise is qualified and has escape clauses.

Let me repeat those figures to you. The total number of items on which we made concessions to Japan was 238, out of which 212 were legitimate, drastic tariff reductions. The total number of items on which Japan made concessions to us was 288, out of which only 95 were legitimate.

Now, as if that's not scandalous enough, even the tariff reductions which were real reductions on Japan's part, have a further phony angle to them, because most of them are on items which Japan herself does not produce, and thus the tariff is purely a tax-revenue measure, and the alteration of the tariff rate doesn't affect us for better or worse.

For example, tallow, which Japan has to import from the outside and buys at world prices on the world market. Lubricating oil, which is in the same category. Four-motored airplanes—and this report says that our business with Japan in 4-motored airplanes in 1953, the measurement year, was $3 million. That is one 4-motored airplane, so in return for the wreckage of our domestic industries in one line after another, Japan reduces her tariff against our 4-motored airplanes from 15 to 10 percent, so we can improve our exports of 4-motored airplanes to Japan.

Medicines which Japan does not produce, particularly antibiotics. Condensed milk and skimmed milk, which she does not produce and which she is importing from us, at cutrate prices, for her own school-lunch program. And soybeans, on which she voluntarily removed all tariffs because she needs them so desperately. She gets credit for that reduction, too, as a concession, and the same situation prevails in the case of corn for feedstuffs.

That is the reciprocal trade agreement—the GATT agreement with Japan—which is going to be of such monumental mutual benefit to us both, by way of increasing our sales in Japanese markets, in return for Japan increasing her sales in our markets.

A cut from 15 to 10 percent on 4-motored airplanes.

Letter to President Eisenhower From the Ukrainian Congress Committee of America, Inc.

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a copy of a recent letter sent to President Eisenhower by the Ukrainian Congress Committee of America, Inc., the American Committee for the Independence of Armenia, and others.

This organization states that ther exists a pressing need to enlighten some circles in our Government on the anti-Communist attitude and struggles for independence of nations enslaved in the Soviet Union, and I think that there can be no question about that fact.

I am sure that the President and the State Department will give every possible attention to the problems of liberation, because beyond a doubt these are the problems that will have to be settled before lasting peace can be established.

There can be no lasting peace so long as millions of honest, God-fearing, religious-minded, democratically oriented peoples are enslaved behind the Iron Curtain. There can be no lasting peace so long as corrupt colonial systems continue to hold men, whatever their race, in bondage and deny them their God-given rights. Red imperialism is just as morally unjustified as white colonialism.

These are facts which fully must be obvious to the leaders of the free world. If they are considered with reference to the principles of freedom, it should help to crystalize and clarify not only our objectives but the measures we should adopt in order to reach them.

The letter follows:

The Honorable DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

Mr. President: The following organizations of American citizens submit for your studied consideration a few remarks relative to the joint declaration issued with Prime Minister Eden in Washington on February 1, 1956: American Committee for the Independence of Armenia, American Council for Independent Georgia, Azerbaijani Union in the United States of America, Byeloruthenian Congress Committee of America, Cossack American National Alliance, Idel-Ural Association, North Caucasian Association, Turkestanian Association, Ukrainian Congress Committee of America.

The organizations listed above are mindful of the threat to American security posed by Communist aggression and subversion centered in Moscow, and at the same time have at heart the fate of their former homelands presently enslaved within the Soviet Union.

We wish to note with satisfaction and appreciation certain points contained in the joint declaration. Among the points which we wholeheartedly endorse are:

Point 1 of the declaration upholding "the basic right of peoples to governments of their own choice";

Point 2 reaffirming the principles of the Atlantic Charter, the U. N. Charter, the Potomac Charter and the Pacific Charter which proclaim a dedication "to the goal of self-government and independence of all countries whose people desire and are capable of sustaining an independent existence"; and

Point 3 which refers to economic independence and which offers assistance to struggling people "not to dilute, but to enrich and secure their freedom."

We wish to state here, however, that we are reluctantly compelled to take exception to some aspects of inadequacy and incompleteness of the joint declaration, notably to such inadequacy and ambiguity contained in point 4.

Whereas the opening paragraph of point 4 states, among others, that: "Millions of people of different blood, religions and traditions have been forcibly incorporated within the Soviet Union, and many millions more have in fact although not always in form, been absorbed into the Soviet Communist block," the next paragraph proceeds to restrict this bold statement merely to "10 independent nations" in the following words: "In Europe alone, some 100 million people, in what were once 10 independent nations, are compelled, against their will, to work for the glorification and aggrandizement of the Soviet Communist State."

The last-quoted paragraph appears to be inconsistent not only with the one preceding it, and not only with the factual political conditions of Eastern Europe, but even with their interpretation recently expressed by the political leaders of the United States. For example, our own Secretary of State, the Honorable John Foster Dulles, stated last October that: "The Union of Soviet Socialist Republics is itself a multinational state consisting of 16 so-called Republics, several of which were once independent nations" and that "we do not believe that nations and peoples who want to be independent should be forced into unwelcome dominance by others, merely to produce monolithic power. We do not believe that such artificial unity will last or that it will produce genuine sincerity."

In similar vein, the eminent chairman of the Senate Foreign Relations Committee, the Honorable WALTER F. GEORGE, pointed out on the occasion of the 38th anniversary of Ukrainian Independence on January 22, 1956, "It is my hope that the time may soon come when the peoples of formerly independent states, such as the Ukraine and the Baltic States, will have the opportunity freely to choose their own governments and thereby to give full expression to their national aspirations."

Point 4 of the joint declaration, which contains a qualification and restriction of the European area of aggrandizement of the Soviet Communist state merely to 10 nations, has all the appearances of an attempt at continuation of the thoroughly and sadly discredited concepts of the policy of containment and coexistence, concepts readily subscribed to by the ruling group of the Kremlin itself.

We also wish to refer to the findings resulting from voluminous testimony and thorough studies made by the Select House Committee on Communist Aggression, known as the Kersten committee, in 1954, which collated and published irrefutable proof of the fact that "the pattern of Communist aggression and seizure of nations engaged in by the Kremlin * * * began to develop as early as 1918 [and] was in most important respects identical with that used by the Kremlin to seize and occupy the Baltic States, Poland, Hungary, Rumania, and other nations during and following World War II."

As conclusive evidence of the fact that the nations constituting the present U. S. S. R. are unwilling partners constrained to remain within a Soviet Empire, it is sufficient to recall that their incorporation into the Soviet Union was the result of armed conquest, and that their former independence was real and subsisting. Thus, the pre-Soviet Independent Republic of Armenia was formally recognized by Secretary of State Bainbridge Colby on April 23, 1920; Ukraine and Byeloruthenia have continued to exert a centrifugal pressure upon the Soviet Union which led to their admission as original and equal members of the United Nations in 1945; and these three nations, as well as Georgia, Azerbaijan, Cossackia, Idel-Ural, North Caucasia, and Turkestan existed as sovereign states for periods ranging from 2 to 10 years and were duly recognized as equal members of the comity of nations by a preponderant number of sovereign states of various parts of the globe.

The interests of the 10 independent nations mentioned in point 4 of the joint declaration, as indeed the interests of the entire free world, coincide with the interests of the nations constituting the so-called Union Republics of the Soviet Union, and we perceive an urgent need for the political leaders of the free world to recognize that these nations are all allies of the free world in the just cause of liberation.

Only after their liberation shall become an accomplished fact will there be a new era of trust, peace, friendship, and prosperity for the entire world.

Respectfully submitted.

American Committee for the Independence of Armenia, American Council for Independent Georgia, Azerbaijani Union in the United States of America, Byeloruthenian Congress Committee of America, Cossack American National Alliance, Idel-Ural Association, North Caucasian Association, Turkestanian Association, Ukrainian Congress Committee of America.

NEW YORK, N. Y., *February 15, 1956.*

Congregation Shaare Hatikvah and Its Rabbi Emeritus, Dr. Siegmund Hanover

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. ZELENKO. Mr. Speaker, it is my pleasure to bring to the attention of the House of Representatives the great contribution toward humanity, religion, and Americanism made by the Congregation Shaare Hatikvah and its rabbi emeritus, Dr. Siegmund Hanover.

Dr. Siegmund Hanover, rabbi emeritus of the Congregation Shaare Hatikvah, 4290 Broadway, New York City, is celebrating his golden jubilee as a rabbi. He was born in Wandsbeck, a suburb of Hamburg, Germany, where his father was the officiating rabbi. The deep religious spirit of his environment followed him throughout his whole life. He studied at the Rabbiner Seminar of the University of Berlin, an institution of world renown at that time. An outstanding student, he was chosen to become the assistant to the officiating rabbi, Dr. Rosenthal, of the Jewish congregation of Cologne, Germany. More than any other city on the Continent, Cologne was the center of the spiritual Jewish youth movements in this era. His office was interrupted when World War I broke out and he was serving as a chaplain in the German Army.

Soon after the war and his return to Cologne, he was installed as rabbi of the county and city of Wuerzburg, a well-know city in northern Bavaria. Unfortunately, the Nazi put an abrupt end to his career in Germany and after a short stay in England, he came to the United States where he became a citizen in due time.

Shortly after his arrival in New York City, he was called upon by the Congregation Shaare Hatikvah—Gates of Hope—which was founded by a small group of refugees, to be its spiritual leader. Under his guidance, the congregation developed into one of the largest and leading traditional immigrant congregations. Its members held a testimonial dinner in the honor of their very esteemed rabbi on May 27, 1956, at the Hotel New Yorker, New York City. At the specific request of Dr. Hanover, the proceeds of the dinner will go toward the building fund of the congregation. The construction of a new Jewish center and synagogue is already underway at West 179th Street near the George Washington Bridge. The new building will be dedicated as a monument to those who have perished during the persecutions of our time.

Press Urges Elimination of Postal Deficit

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. CEDERBERG. Mr. Speaker, when the press across the country, in one editorial after another, calls for reduction or elimination of our postal deficit and when the press calls our present postal-rate system out of step with the times, I believe it pretty well reflects the general feeling of the country on the Postmaster General's recommendation for slightly increased rates.

I have before me editorials bearing such headings as "Users Should Pay," "Out of Step," "Commonsense Plan," "Eliminate the PO Deficit," and "PO Should Be Self-Sustaining."

These editorial comments are so pertinent to this legislation, I submit them for your consideration.

[From the Ogden (Utah) Standard-Examiner of April 20, 1956]

FOR HIGHER POSTAL FEES

Secretary of the Treasury Humphrey is urging Congress to adopt the administration's program for postal rate increases so the postal service will more nearly meet the costs of operation.

It is said that an election year is a poor time to expect passage of a bill to increase the cost of postage, but we wonder if those who fear to vote for an increase are properly informed. It seems to us that the people are in a mood to help the post office meet its deficit.

At a time when inflation fears are prompting measures to slow down the economy, Uncle Sam should cease giving subsidies to some of the larger users of the mails.

The idea that a postal rate increase would slow down business is on the silly side. Humphrey has the answer to that argument. It is that a $400-million increase in postal rates is not likely to have any effect at all upon a $400-billion-a-year economy.

If a boom period is a good time for a balanced national budget it is also a good time for a balanced postal budget.

[From the Ontario (Oreg.) Argus Observer of April 16, 1956]

PO SHOULD BE SELF-SUSTAINING

The House of Representatives Post Office Committee has been holding hearings for 3 weeks on a proposal by Postmaster General Summerfield for rate increases sufficient to erase a deficit that has averaged $450 million a year for the past 10 years.

Proposed is an increase of 1 cent an ounce on first-class and air mail and a boost of about 30 percent in rates on second- and third-class mail, principally newspapers, magazines, and direct-by-mail advertising. We've noted no proposal for departments and Members of Congress should be approved, and the department which contributes much to the deficit. Many millions of dollars worth of free service is rendered annually by the Department.

In our opinion, Summerfield's proposal should be approved and the Department put on a balanced budget. It is a vast business enterprise which ought to pay its own way. Most of the newspapers appear prepared now to accept the rate increase proposed for them, and several publishers so testified at the hearing. Letter rates are still 3 cents, the depression rate, and only 50 percent above the rate of half a century ago, when a workingman got 10 to 15 cents an hour and most living-cost items were in proportion.

The only argument we know against eliminating the postal deficit is that this is an election year, and it doesn't sound convincing.

[From the Seattle Daily Journal of Commerce of May 1, 1956]

USERS SHOULD PAY

Much discussion is current regarding changes in rates and policies of the Post Office Department. The pros and cons are being heard, but among the claims and counterclaims it might be well to consider the proposals made by the Hoover Commission as to one of the Department's services—parcel post.

The Commission simply recommends that all costs—direct or indirect—be taken into consideration in fixing parcel-post rates. The idea was to make sure that parcel post is supported by those who use it—not by taxpayers through subsidies. The Commission would put the service on a businesslike basis.

The Hoover Commission is not alone in urging parcel-post reform. A policy declaration by the Chamber of Commerce of the United States states: "Charges for parcel post should be sufficient to cover all costs incurred by the Government in handling the service. These costs should be determined under sound commercial accounting practice." It is further recommended that charges for land parcel post be periodically studied and fixed by the Interstate Commerce Commission, and those for air parcel post by the Civil Aeronautics Board. These are reasonable proposals. Thorough surveys show that, over period of time, parcel post has often been responsible for large deficits that the general taxpayer must meet under present conditions—the taxpayer who seldom uses parcel post. This should not be allowed to happen in the future.

[From the La Grange (Ga.) News of May 8, 1956]

POSTMAN'S RING SHOULD BE HEARD

Certainly the News would at this time be hypocritical if the fight for increased postal rates went unnoticed editorially. The post-office deficit is increasing annually, and since World War II has reached the phenominal multi-billion-dollar stage. Government support of this Department is—anyway you look at it—subsidy to those firms which do a high volume of business with the mail service.

The national trend toward Federal Government giveaways has been effectively deterred by those persons who have any notion of genuine economy. Whatever the advantages of farm supports, postal supports, and other Federal subsidies, they are overshadowed by the big disadvantage, to wit: a leaning toward socialism.

The present administration has taken up the gauntlet most emphatically. A balanced budget is hardly feasible until the shirttails are tucked in and not tugged on for millions by farmers, post offices, and others operating in red.

President Eisenhower now backs the long-time pleas of Postmaster General Summerfield. Currently, Summerfield is seeking a $406 million annual increase that would bring his Department within sight of black ink.

The taxpayer, logically enough, should not be burdened with the operating expenses of others. Those who use the mail service most should pay most. This reasoning follows through with roadbuilding, farming, or any other phase of United States business and industry.

Summerfield wants first class (letter) mail and airmail increased 1 cent, second class (magazine and newspaper) mail raised 30 percent over 2 years, and third class (advertising circular) mail raised 30 percent in 1 year.

Big clip in mail hikes would be in the first-class category. The Postmaster General hurries to show, though, that 75 percent of the $295 million would be paid by business houses.

Comparative figures pulled out by Summerfield, who has spent many exasperating hours trying to get congressional action, shows that while postal costs have soared 107 percent since 1932, third-class rates have risen only 38 percent, and second-class rates a net of about 3 percent in that period.

The News believes it as unfair and unhealthy for the Nation's economy to require taxpayers to finance part of the mailing cost of magazines and newspapers as it is to continue supporting any other industry.

The big pulp and slick magazines which consistently rave out about Government socialistic practices are the same ones who turn right around and lobby in Washington to prevent rate increases which would force them to bear at least a portion of their taxpayers subsidy.

Politicians have learned to tiptoe around in the Capital during a big election year. Hence, unless enough sensible Members of Congress step to the forefront, there will be little chance for action on this long-neglected measure.

[From the Boise (Idaho) Evening Statesman of April 19, 1956]

OUT OF STEP

As has been the case with most busnesses, the Post Office Department has experienced a tremendous upsurge in public demand for services during the last 20 years.

But unlike most businesses the Post Office Department has not been able to adjust its charges to the increased load of work it is handling. In this respect it differs even from other public services such as education which have financed their expanding operations through whopping tax increases.

The population of the country has increased about 27 percent in the last 20 years and the use of the mails has increased more than 150 percent in the same period. Nevertheless there hasn't been a single post-office building put up with Government money since 1938. Some are being built under lease-purchase arrangements, but for the most part the physical properties of the Department are in a woeful state of obsolescence and disrepair.

Most of the existing buildings were built as public monuments in the first place and not as business offices. They aren't suited for the installation of modern office equipment and most of them are keyed to rail operations rather than the truck or plane deliveries that came along later.

The Department's difficulties in keeping its physical plant abreast of the times are financial, of course. Its deficits are chronic and Congress for political reasons has refused to increase postal rates sizably. This administration has whittled the postal deficit somewhat, but the Department still is losing a million dollars a day. Congressional concern with the subject is centered mostly on the wage demands of the postal workers rather than the Department's building needs.

In the circumstances a post-office building crisis is shaping up. The Post Office Department probably is the only large scale enterprise of either public or private character in the country that hasn't spent a dime of its own money on construction in nearly 20 years.

[From the Miami Beach (Fla.) Sun of April 29, 1956]

COMMONSENSE PLAN

For years there has been a misconception that the United States Post Office system is operated with cheap postage.

It may be true that the mailing rates are low, but the mailing rates have been far from sufficient to defray the operating expenses of the mail service.

There is a proposal in Congress to raise the rates. First-class mail would jump from 3 cents to 4; airmail would go from 6 cents to 7. Second-class matter would jump 15 percent, and third class (often referred to as "junk") 29 percent.

The present rates result in an enormous deficit which has to be made up from the general treasury. That means the income-tax payers, besides paying their own postage, must bear a heavy cost of the postal deficit.

The Sun favors the commonsense plan of raising the postal rates so that the users of the mail will come more nearly paying their own postage.

[From the Savannah Morning News of May 6, 1956]

ELIMINATE POST OFFICE DEFICIT

If the United States Post Office Department is to continue to afford efficient mail service something must be done to terminate its annual $500 million a year deficit, and that is why Congress should respond at its next session to the fight President Eisenhower and Postmaster Arthur E. Summerfield have decided to renew for higher postal rates.

This Nation is the richest in the entire world, yet it is the only Nation in the world, with the possible exception of Argentina, that does not run its post office service on a reasonably break-even basis. It seems ironic that this rich and powerful country cannot conduct its postal service on a profitable basis, but an analysis of postal service and

charges explains why the continuing deficits occur.

The service rendered by the American postal service is the finest in the world, but that service is on a much higher plane than the charges made. Postage rates are virtually the same as they were in 1932. Any business in the world would go broke if it continued for any time to pay 1956 costs for the things it buys and charge 1932 prices for the things it sells. The Post Office is no exception to this rule, but public disinterest and congressional opposition have prevented action to remedy the situation.

The taxpayer has an obligation to himself to insist that this deficit situation be corrected. By utilizing cheap postal rates now we are only building up greater tax burdens for ourselves and future generations. The Post Office deficit becomes part of the national debt and this phase of the debt since 1946 has amounted to more than $100 million a year.

Proposed rate changes would go a long way toward eliminating this deficit. It is proposed that first-class mail charges be changed from 3 to 4 cents. The extra penny of postage would not be an added burden to the individual because 80 percent of this mail comes from business. Small increases are asked for second-class mail and a 30 percent increase will be asked for third-class mail. These increases and a few minor others would produce more than $400 million annually. Congress should act favorably on this matter and get this burden off the American taxpayers.

[From the New York World-Telegram and Sun of May 11, 1956]

REASON, NOT POLITICS

Efforts by the Eisenhower administration and many in Congress to make the Post Office Department pay its own way have made progress. But the cause is hampered by both apathy and an impression in the minds of some Democrats that it is a purely "Republican" idea.

That is far from the truth.

Increases in postage rates to make the service self-supporting have been advocated by James Farley—the best known Democrat ever to be Postmaster General—and Jesse Donaldson, who held that position under President Truman.

Postmaster General Summerfield is a Republican, to be sure, and his campaign to get his Department out of the red has been vigorous.

But taxes are paid by everyone. And everyone, regardless of his party preference or affiliation, has a stake in this effort to make the mail service pay its way by charging what it costs to operate it.

[From the Knoxville News-Sentinel of May 3, 1956]

BUSINESS SPEAKS

Business establishments are the principal users of the mail service. And the Chamber of Commerce of the United States is composed of representatives of all kinds of American business.

So it is significant that the chamber at its annual meeting, just concluded in Washington, resolved that the Post Office Department should be a "nonprofit but self-supporting" agency, and that postal revenues should be adjusted to bring that about.

When the people who use the mails the most—and who will have to pay most of the cost of any increase in postage rates—express their willingness to bear the burden, it should alert Congress to face up to the situation.

Postage rate inicreases are long overdue. And as long as the postal service runs in the red, the taxpayers as a whole will continue to pay part of the postage bill of those who use the mails heavily.

Salesmanship or Sense?

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mrs. GREEN of Oregon. Mr. Speaker, many of us have watched with concern the increasing tendency of this administration to rely on salesmanship as a substitute for talking sense to the American people. There may be some domestic partisan advantage to obscuring the state of our foreign relations under the rosy phrases of salesmanship, but this is no service to our country. We have had recently a conspicuous example of this unfortunate technique of salesmanship by the President himself. Because they express so well the dangers and the harm done by such partisan excesses, under unanimous consent, I insert in the RECORD two recent thoughtful commentaries on this subject:

[From the Washington Post of June 4, 1956]

LEADERSHIP ON ORDER

President Eisenhower got quite a horselaugh from some Democrats with his assertion that American prestige abroad has never been higher since World War II. There was reason for the scoffing. Mr. Eisenhower's own personal prestige is tremendous—in other countries scarcely less than in the United States. But this prestige has not rubbed off on Secretary Dulles or on American foreign policy generally. Leaders in the Allied Nations, not to mention the uncommitted countries of Asia and Africa, make no bones of their discomfiture over the effects of American braggadocio, over the foreign-policy vacillations liberally mixed with domestic politics, over the reliance on military solutions and on purchased friendship.

Much of this discrepancy is attributable to the curious detachment and the lack of steady leadership on the part of the President himself. Perhaps the main trouble with the Eisenhower leadership is that it takes so long to get cranked up. When the President asserts himself, speaking his own thoughts from the heart—particularly in the quest for peace—he finds a ready audience, and there is no one more effective. But when he hesitates, when he listens to the counsels of timidity clothed in Madison Avenue fortitude, he allows others to do his speaking for him. The effect often is to contradict the very policies in which Mr. Eisenhower believes—and it is scarcely enough for him to wonder why they don't do something about it.

There are several immediate case in point. Senate Democrats have made it plain that if the President expects to get the foreign-aid bill through Congress without substantial cuts, he will have to intervene personally. The congressional warning has long been on the wall. There are many misgivings about the meaning and techniques of American aid; there is questioning about the military emphasis in Asia and about whether loans and removal of trade restrictions would not be more effective in many instances than grants. United Nations Secretary General Hammarskjold has advocated the internationalizing of economic aid through the U. N.—a policy recommended by several studies and indorsed at least in part by Ambassador Lodge. Let the administration shows little sign of any comprehensive effort to digest these criticisms. The new private advisory counsel selected by the President to help sell American ideas abroad will have to have more than platitudes to grapple with if it is to be anything but an exercise in luncheon-club diplomacy.

Or take the matter of foreign trade. In many respects an equitable, enlightened trade policy would be the most effective kind of help this country could give the free world. The authorization for American participation in the Organization for Trade Cooperation, however, is still languishing in the House, and the administration has done relatively little to advance this practical token of its own objectives. It will take more than a polite expression of interest to put OTC across.

Finally, there is the reelection campaign of Senator WILEY in Wisconsin. No one has gone down the line for the Eisenhower foreign policies more than Senator WILEY. A friendly word from the President would have meant a great deal in the Wisconsin Republican convention which denied Mr. WILEY its endorsement. Yet it was not forthcoming, and the administration now faces a real danger that Mr. WILEY may be ousted by a McCarthy-supported challenger. Why?

These are a few of the reasons, beyond the verbal sand traps of Mr. Dulles, why American prestige abroad does not correspond with the glowing picture painted by the President. Mr. Eisenhower himself holds the key to improvement.

[From Edward P. Morgan and the News of June 1, 1956]

According to Webster's, the word prestige means "the power to command admiration; hence eclat; renown; ascendancy derived from general admiration or esteem; commanding position in men's minds."

In case you are experiencing a trace of vertigo, a slight dizzy spell, it could be due to the fact that it has just been made official that the country is viewing the world from that exalted height. "The prestige of the United States since the last world war," President Eisenhower said yesterday, "has never been as high as it is this day."

Even after discounting the fact that it was made in the exuberant atmosphere of a political rally, the Citizens for Eisenhower "convention," that remains a colossal statement because it comes from the man in whom the country seems most passionately eager to believe and be reassured by. There are those cynics who will argue that the statement was timed to quiet the mounting criticism by Democrats of the administration's foreign policy. Be that as it may, the question is will it react on the population like a benzedrine tablet or a sleeping pill? Will it stimulate us to a fresh awareness of the world's complications in the newly-found confidence that our prestige will help us win through? Or will it lull us into more complacency despite the fact the President said that word had no place in his vocabulary?

Of course, the President could have discouraged the use of the word by the rest of us if he had just had time to enumerate some of the things on which we're going to have to bring the massive prestige he ascribes to us fully to bear to make them budge. But somehow, in a political rally, as any politician of either party can tell you, the virtues of the partisans and the sins of the opposition fill so much of the program that there is little or no space for anything else.

So it might be well to list as a kind of addenda some of the outstanding items we still must grapple with from our "commanding position in men's minds":

There is the question of the weakening of the western alliance. Not a day goes by but what brings news of disturbing developments. West Germany is neither rearmed nor reunited with East Germany. French divisions instead of beefing up NATO are fighting natives in North Africa. Britain, Greece, and Turkey stare daggers at each

other over Cyprus, and the American position (if not the American prestige) in the slashing quarrel is uncertain. While our honor and esteem may not be at stake, nevertheless we are asked to get our American NATO troops out of Iceland.

United States prestige in Saudi Arabia would seem to be measured almost exclusively by monetary returns on oil to the royal treasury, and even that measure seems to fluctuate at the whim of the royal court. It may well be that our prestige and the support we have lent United Nations' peace efforts have steadied for the nonce the precarious situation in the Middle East but who at the moment wants to take a reading on our renown, on our power to command admiration in Cairo or Jerusalem or Damascus?

Do the peoples of Africa and Asia smile up at us on our pinnacle of eclat as they face their massive struggles? Can we convince Ceylon, New Delhi, and Singaporé that our prestige is benign and not benighted? Are we going to be able to cement our ties with Japan by spurning her textiles and telling her she must not exploit trade with the Communist bloc either?

It isn't that the administration caused the situations from which these questions arise. It's that the situations are inescapably there. It's not that the administration doesn't recognize that they're there. It's that it seems to want the public to worry about the fact that they're there.

It's nice to hear that our prestige is at the highest point in a decade but one has to wonder whether it's not too good to be true.

VFW Loyalty to America Program

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. KEATING. Mr. Speaker, Loyalty Day celebrations were held recently in numerous communities across the country. Observance of this occasion, dedicated to the theme that "loyalty means liberty," was spearheaded by members of the Veterans of Foreign Wars, who worked hard and successfully to promote consecration of this day to the ideals and heritage of America.

Loyalty Day is but one aspect of the vast and worthy program of loyalty to America that the VFW has undertaken. In the coming months we will be hearing much from them in their campaign to get out the vote. Their slogan this year, "We fought for your right to vote; please us it" is extremely appropriate and deserves wide circulation.

The VFW is to be commended for its fine efforts to promote the appreciation and understanding of our American heritage. I urge them to keep up the good work.

Under leave to extend my remarks, I include an article on this subject by Louis G. Feldman, chairman of the VFW Loyalty Day program, which appeared in the June issue of the VFW magazine:

PATRIOTS ON PARADE

(By Louis G. Feldmann)

Pending receipt of detailed reports from 48 States, it is impossible at this early date to quote specific figures on the total number of Loyalty Day program sponsored by the Veterans of Foreign Wars and its Ladies Auxiliary during the weekend prior to May 1. But the fact remains that the VFW National Loyalty Day Committee this year received advance requests for program material from the greatest number of posts and auxiliaries in the history of this Loyalty Day project.

The tremendous expansion of the VFW Loyalty Day program is most gratifying. The records of each passing year disclose that an increasing number of posts and auxiliaries are finding ways to make their respective communities increasingly conscious of the importance of a patriotic observance that constitutes an eloquent counterattraction to the traditional celebration of May 1 by Communists throughout the world.

From coast to coast this year, thousands of VFW Posts and Auxiliaries sparked demonstrations in appreciation of the American concept of human liberty. Parades, flag presentations, patriotic programs, radio and television performances, and numerous other events were dedicated to the theme "Loyalty Means Liberty" in communities large and small. In the metropolitan areas, the VFW was joined with enthusitsm by societies composed of foreign born citizens who were delighted with the opporunity to publicly proclaim their loyalty to America by taking part in VFW Loyalty Day demonstrations.

Much of the success of our 1956 efforts must be credited to the accomplishments of the department Loyalty Day chairmen in nearly all of the 48 States. As a result of their labors, we again received Loyalty Day proclamations from nearly all governors. They are clearly instrumental in persuading a greater number of posts and auxiliaries, in their respective States, to stage appropriate programs dedicated to the Loyalty Day theme.

We must not rest upon our laurels. We must look forward to the day when the observance of Loyalty Day shall become so widespread that the public will demand legal designation of this day as an official holiday, thus permitting the great majority of our 160 million citizens to participate personally. With the continued support of our organization, I predict the day is not far off when the true significance of Loyalty Day will be officially recognized on a permanent basis.

The proclamation of endorsement that was issued by President Eisenhower in 1955 gives us reason to hope that one day in the future the Congress will set aside May 1 of each year for the purpose of dramatizing the importance of citizenship loyalty.

As a patriotic organization, we must continue to lead the way in a continuous campaign dedicated to the promotion of loyalty to the American flag. The opportunities are endless. For example, during the next few months VFW members must do their part to help remind the American people that it is the privilege, as well as the duty, of every good citizen to register and vote.

The slogan, "vote as you please, but vote" has become very familiar on the American scene in recent years. This year the VFW will introduce a new slogan, one that is particularly appropriate for an organization such as ours when we say, "We fought for your right to vote. Please use it."

Plans are being formulated to popularize this appeal through every available channel. Effectively illustrated, this message will be featured on window posters that will be made available to all posts for distribution on the community level.

The right to vote is one of the basic freedoms that have been at stake in every war in which this county has been engaged. The people of Soviet Russia, and the satellite countries, go to the polls on occasions, but not to enjoy the privilege of voting for the candidates of their choice. They see only one list of candidates, a group of handpicked political puppets named by the Red dictators. They vote for these, or else. "Else" can mean exile to Siberia or to a labor camp.

Millions of Americans have earned the right to tell their neighbors "We fought for your right to vote. Please use it." No group of citizens is better qualified than the members of the Veterans of Foreign Wars to stress this dramatic appeal.

I hope every VFW post will adopt an active campaign in support of a drive to persuade an increasing number of Americans to take part in the general elections this year. We must help make our people conscious of their duty to be concerned with the type of men who are elected to office in their communities, counties, and States, as well as those who represent them in the United States Congress.

The character and quality of those whom we elect to public office will always be determined by the concern which we, as individual voters, display in our right to vote for the candidates of our choice.

This is one phase of the American way of life that the Communist countries are afraid to adopt. It is the people's weapon against tyranny. In America, the right of the ballot is our mightiest weapon in the fight against ignorance, poverty, corruption, and those evils that would pave the way for the destruction of our liberties.

The Meaning of Decoration Day

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include at this point in the RECORD, an extremely inspiring Memorial Day address by Grace B. Doering before the Knights of Pythias, Palacky Lodge No. 317, at Highland Park Chapel, Cleveland, Ohio.

The address follows:

THE MEANING OF DECORATION DAY

(By Grace B. Doering)

Memorial Day is one of the most significant and beautiful occasions of the year. We pay tribute to those who gave their lives, as dear to them as ours to us, for a patriotic cause. We do honor, at this season when nature is joyful with life, to the memory of those we love.

The formal observance of Memorial Day, or Decoration Day, as it was popularly called for many years, dates from 1868. The graves of the soldiers killed in the Civil War had been decorated with flowers before that year, especially in the South.

It was the women of those war years who initiated this expression of sentiment. For example, it was the women of Columbus, Miss., who laid flowers on the graves of both Union and Confederate dead in 1863, 5 years before a day was set apart to revere them. The New York Tribune saw fit to print a paragraph on it.

In September 1867, 2 years later, a touching little poem by F. M. Finch first appeared in the Atlantic Monthly, commemorating the noble action of these women for strewing their flowers impartially.

William Holmes McGuffey, one of America's first and foremost educators, incorporated it in his Fifth Reader. Some of you may remember it. The third, fourth, and last stanzas read:

"From the silence of sorrowful hours,
The desolate mourners go,
Lovingly laden with flowers,
Alike for the friend and the foe;
Under the sod and the dew,
Waiting the judgment day;
Under the roses, the Blue;
Under the lillies, the Gray.

"So with an equal splendor,
The morning sun rays fall,
With a touch impartially tender,
On the blossoms blooming for all;
Under the sod and the dew,
Waiting the judgment day;
Broidered with gold, the Blue;
Mellowed with gold, the Gray.

"No more shall the war cry sever,
Or the winding rivers be red;
They banish our anger forever,
When they laurel the graves of our dead;
Under the sod and the dew,
Waiting the judgment day;
Love and tears, for the Blue;
Tears and love, for the Gray."

Again a woman took the lead. On April 26, 1865, Mrs. Sue Vaughn, a descendant of John Adams, the second President, directed some women to the cemetery in Vicksburg and decorated the soldiers' graves there.

And in May of the same year some women in Winchester, Va., founded the Stonewall Jackson Memorial Association. On June 6, 1865, they went to the Confederate cemetery in Winchester, said to be the first cemetery laid out especially for the soldier dead of the South, and decorated the graves with flowers.

Early in May 1868 Adj. Gen. N. P. Chipman of the Grand Army of the Republic, the organization of Union veterans, suggested to Gen. John A. Logan, the commander in chief, that arrangements be made for the organization to decorate the graves of the Union soldiers on a uniform date throughout the country.

General Logan approved the plan and designated the 30th day of May 1868, "for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country during the late rebellion." Special exercises were held in the National Cemetery at Arlington, Va., across the Potomac River from Washington, constituting the first formal and official observance of the day.

And who was the orator of the occasion? Our own Gen. James A. Garfield, born on S. O. M. Center Road in Orange, Ohio, and who later lived in Mentor, Ohio, then a Member of the House of Representatives and later President of the United States. Here in our own city we point with pride to the impressive Garfield Monument erected in his memory.

The following is one of the significant passages from his address that day. The profundity of his thoughts are of moment event today. He said:

"Eight years ago this was the most unwarlike Nation on earth. For nearly 50 years no spot in any of these States had been the scene of battle. * * * The faith of our people in the stability and permanence of their institutions was like their faith in the eternal course of nature. Peace, liberty and personal security were blessings as common and universal as sunshine and showers and fruitful seasons; and all sprang from a single source, the old American principle that all owe due submission and obedience to the lawfully expressed will of the majority. This is not one of the doctrines of our political system—it is the system itself. It is our political firmament, in which all other truths are set, as stars in heaven. It is the encasing air, the breath of the Nation's life."

For many years the celebration in the North was devoted to an oratorical glorification of the victory of the northern armies. But as the years passed, the hearts of men were mellowed and the note of triumph died out from Memorial Day oratory. The feeling was well expressed by Thomas Bailey Aldrich when he wrote:

"The earlier sorrow has faded out of the hour, leaving a softened solemnity. It quickly ceased to be a local commemoration. While the sequestered country churchyard and burial places near our great northern cities were being hung with May garlands, the thought could not but come to us that there were graves lying southward above which bent a grief as tender and sacred as our own. Invisibly we dropped unseen flowers upon these mounds."

The day established to honor the memory of those who died in the Civil War has come to be observed in memory of the dead of the succeeding wars. The Spanish War veterans and the veterans of two world wars and of the Korean conflict now participate in the exercises.

The last of the survivors of the boys in Blue was hospitalized at the age of 108 in April of this year. There are three survivors of the southern army.

The State of Ohio made May 30 a legal holiday in 1881. Today ours is a Nation with a fine combination of energy and ingenuity. But while we are a mighty people busied with great enterprises, we do not forget—cannot forget—the brave, both men and women, who purchased peace with their unfaltering valor and blood. Often they were the flower of American youth.

May 21 was Armed Forces Day. We heard of our aim to devise a long-range missile capable of spanning the ocean. Our leaders are pointing to the great strides of Soviet air-power. At the same time they are planning a meeting at the summit level to end this cold war of tension and race in armaments.

The mayors, convening in New York City this past week, after discussing foreign policy and international affairs, considered gravely the aspects of Civil Defense. They were aware that among them sat a mayor from Formosa, whose town is just 10 minutes away from the enemy.

As we place laurels on the graves of our heroes, remembering that wherever they died—in Korea, France, Italy, or executed by subversive forces—they gave their all that, in the words of our immortal Lincoln, "government of the people, by the people, for the people shall not perish from the earth," is it too much to hope that sacrifices of men everywhere, whether in one country or another; whether in the U. S. A. or U. S. S. R.—United States of America or Union of Socialist Soviet Republics—may have been made to bring about that ultimate goal, the entering into that important union, the truly united people of the world? That as in death, so in life, we may all be tolerant of each other; that whether a man be of one race or another, of one creed or another, or be of one color or another, we allow him his sentimental conviction. Brotherhood is not such a wild dream.

If you availed yourself last evening of the invitation of Case Institute of Technology to peer through its world-famous telescope, then you are still overwhelmed with the magnitude of this fascinating universe, where worms and stars live together.

We do not know, but some persons believe and hope that our loved ones stand about us unseen and unheard as we join to honor their memories. The naked human eye is not made to disclose the presence of the myriad forms that exist about us, and the human ear is not attuned to note the solemn symphonies which the bard Shakespeare called the music of the spheres.

Did it ever occur to you that Shakespeare prophesied the coming of radio? In one of his last plays, the Tempest, his spirit-character whom he called Ariel, and who enchantingly filled the air with song and music, boasted that he could put a girdle round the earth in 40 minutes. Today we turn a dial. We tune in. The magic of it all.

But whether we tune in with the departed or not, certainly their memories present a challenge to each of us—to be worthy of their handclasp, the touch of which we long to feel just once more; to be worthy of their dreams and expectations for us; and to be worthy of their great love; to contribute to the understanding and appreciation of the cultural history they left us.

In this respect, we who are Americans of Czech descent are particularly richly endowed.. Whether our forebears be interred on this side or the other side of the ocean, in this hour may we pay heartfelt tribute to those who gave us that valuable creative heritage, of which we may be justly proud.

There is another poem in McGuffey's Fifth Reader, entitled "What I Live For," presumably written by the author of the famed readers. Incidentally, 3 years ago the McGuffey Societies throughout the Nation dedicated a McGuffey museum at Miami University in Oxford, Ohio, where the renowned teacher did much of his writing, sometime before the turn of the century. Here is his thought:

"I live for those who love me,
Whose hearts are kind and true;
For the heaven that smiles above me,
And awaits my spirit, too;
For all human ties that bind me,
For the task my God assigned me,
For the bright hopes left behind me,
And the good that I can do.

"I live to learn their story,
Who suffered for my sake;
To emulate their glory,
And follow in their wake;
Bards, patriots, martyrs, sages,
The noble of all ages,
Whose deeds crown history's pages,
And time's great volume make.

"I live to hail that season,
By gifted minds foretold,
When man shall live by reason,
And not alone by gold;
When man to man united,
And every wrong thing righted,
The whole world shall be lighted,
As Eden was of old.

"I live for those who love me,
For those who know me true;
For the heaven that smiles above me,
And awaits my spirit, too;
For the cause that needs assistance,
For the wrongs that need resistance,
For the future in the distance,
And the good that I can do."

This afternoon we pay especial honor to those dear members of Palacky Lodge No. 317, Knights of Pythias, and to the Palacky Ladies of the Temple who were among us but last year. May they rest on this lodge's great heart, entombed in this lodge's great love.

And, in conclusion, may peace, liberty, equal rights and justice be the heritage of the descendants of all who have gone before us everywhere.

Ike Will—Will Not Campaign

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. MULTER. Mr. Speaker, the following very interesting item appeared in the April 9, 1956, issue of the New Republic magazine:

IKE WILL CAMPAIGN

We are saving up a list of statements by Eisenhower that he isn't going out to campaign this fall out of respect for his high

office—because we expect that he is going out. Maybe we are dead wrong but we don't think this election is yet in the bag for anybody and we suspect the strain will just get too much for Ike and that he will give up some of those proposed back-porch TV speeches for trips out to see the voters. He has changed his mind before. He wasn't going to campaign actively in 1952—and he did; he was against active campaigning again in 1954—and did. He was against making communism an issue in 1954—and commended NIXON for his speeches doing just that. Ike loves to win, and he is persuadable. He thought he wasn't going to run this year but powerful men around him said he would, and he is. In the tariff fight last year Ike thought he would make no concessions, but did; he thought he would hold on to the Dixon-Yates contract—he didn't. Flexibility is a fine thing, and the President has it. We expect to see him out on the hustings.—T. R. B.

Stalin Overtrumped by Tito in Duping West

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

STALIN OVERTRUMPED BY TITO IN DUPING WEST

(By Edgar Ansel Mowrer)

Recently I pointed out that although communism—as President Eisenhower said—has been a gigantic failure as a social system, Communist regimes have been gigantically successful as power centers.

To that I would add that leading Communists have been gigantically successful as double-talking despots.

Outstanding among such totally unlamented Communists are, of course, the late Joseph Stalin Djugasvili and Dictator Marshal Josip Broz Tito.

For a former czarist police spy on Russian Communists—as Isaac Don Levine has pretty convincingly demonstrated Stalin to have been—to have become Fuehrer of all the Russians and the Pope of Red fascism, to have added almost a third of mankind to Communist conquests, to have headed the state that—with Western assistance—defeated Hitler Germany, to have fooled his wartime allies into giving him "help without strings," and finally, when his policy of conquest had ceased to pay off, to have buncombed them unto giving the U. S. S. R. a breathing spell of "peaceful coexistence"—these are remarkable triumphs.

But in one respect Stalin was overtrumped by Tito.

For here is a Communist tyrant who has been kept alive and in power by the very country whose system and policies it is his purpose to overturn. I refer of course to the United States.

DUPED AMERICANS TWICE

Tito also achieved the miracle of duping his American backers not once but twice. The first time was when, after being armed by Britain and the United States, he fled from the island of Vis in the Adriatic to the advancing Russian armies and with their help eliminated democracy, freedom, and Western influence from Yugoslavia. Just to show how little he valued his Western helpers (without whose arms he could never have got anywhere) he later ordered his fighters to shoot down unarmed United States planes that had accidentally strayed a few miles over his precious territory.

That would normally have put a man on the FBI's most wanted list. But not Tito.

A few years later, when Tito's independence got him kicked out of Mother Russia's Communist family, who should jump to the rescue but the same Americans. Not mind you, in order to make Tito drop communism in Yugoslavia or get out. No, in order to let him become the prize piece in the new school of neutral countries that manage to milk Uncle Sam while opposing his policies.

Economically and in human terms, communism in Yugoslavia is as much a failure as everywhere else. Tito made of his country, a steady prewar exporter of food, such a famine area that—it is common knowledge—without United States assistance the hungry Yugoslavs would have risen and eliminated Tito. Yet one must admire his independence. While eating our bread, he steadily refused to promise anything except that if attacked by Russia he would defend his country, something Yugoslavs have never failed to do. He did close the Greek frontier to Greek Communists whom he was afraid to welcome lest they turn out to be Moscow's agents against him. But he never agreed to defend either Greece or Turkey, his alleged allies.

THE DRIFT BACK

And since Stalin's heirs Bulganin and Khrushchev started making friendly noises a year ago, Tito has not only increased his opposition to American policies but he has drifted slowly back into intimacy with the U. S. S. R.

What policies, what intimacy?

Well, Tito backs Red China, opposed our winning in Korea, wants us to give up the Chinese offshore islands, sides with Nasser of Egypt in the Mediterranean, wants the French out of Algeria, opposes any rearmament of West Germany, and wants the U. S. S. R. brought right back into one big happy family of nations under the slogan of "peaceful coexistence." This should show his line.

As for his intimacy with the Kremlin crowd, well, this week he is off to Moscow seeking new possibilities of successful Socialist development in the world and strengthening friendship with the U. S. S. R. The first phrase means, in Communist jargon, persuading non-Communist socialists in places like France and Italy to join with Communists in those popular fronts where, as experience shows, they first become neutral against the United States and are then cannibalized by Communist associates.

The amazing thing, of course, is not that Tito should desire any such thing, but that despite his desires he is recognized by a large section of the American State Department and by Cy Sulzberger of the New York Times as a helpful element whose example should be encouraged in other Communist countries.

Tito literally lives by systematically biting the hand that feeds him. Here indeed is a gigantic success.

Jordan Attacks on Israel Continue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. MULTER. Mr. Speaker, the following item from the Israel Digest of May 18, 1956, indicates how little value the Arabs put upon their own promises:

MAC TWICE CONDEMNS JORDAN FOR FIVE MORE BORDER ATTACKS

The Israel-Jordan Mixed Armistice Commission this week twice condemned Jordan for breaches of the armistice agreement. At its 255th emergency session held on May 19, the Commission found that on May 15, a group of armed Jordanians who had previously crossed the demarcation line into Israel planted a mine on the side of the Hadera-Afula main road and set up an ambush. They detonated the mine when a motorcycle with two riders stopped close by. One of the riders was wounded. The Jordanians then opened automatic fire and threw a hand grenade at the two Israelis, who managed to escape. The Commission viewed this attack with grave concern. This was the latest in a series of similar acts of aggression which have taken place during the year against Israel lines of communication.

At an earlier meeting, the Commission found Jordanians responsible for the incident during the night of May 9–10, when infiltrators opened fire on a civilian car, traveling along the main road connecting Ramat-Hakovesh with Kfar Saba. In this case also, armed Jordanians who had previously crossed the demarcation line into Israel territory, set up an ambush at the side of the thoroughfare. The Commission called Jordanian authorities to put an immediate end to such and similar violations of the General Armistice Agreement.

During the past 10-day period, the following violations of Israel's borders were reported:

On May 17, an 81-mm. mortar shell was fired into Israel territory from a Syrian post southeast of Ein Gev and almost immediately afterwards, a number of machine-gun bursts came from the same spot. Israel forces did not return the fire.

On May 18, infiltrators opened fire on guards at Amazia in the Lachish area. No one was injured in the ensuing skirmish. The investigation which followed, revealed that tracks led to the Jordanian border. It was also discovered that infiltrators had dismantled six pipes. Irrigation pipes and sprinklers were stolen from Beit Govrin on the same day. Footprints of six men wearing rubber-soled shoes led from the scene of the robbery to the Jordanian border.

On May 21, Lebanese infiltrators opened fire on an Israel border patrol, wounding Constable Moshe Guterman. Safad policemen, United Nations observers, and the Israel delegate to the Mixed Armistice Commission followed the tracks of three men to the border from which they led directly to the village of Kfar Yaroun, 1.5 kilometers inside Lebanon territory.

On May 22, Jordanians opened fire on an Israel police patrol near the British military cemetery on Mount Scopus. There were no casualties.

On May 23, armed Jordanians opened fire on an Israel police patrol near the Hadassah Hospital on Mount Scopus. In the exchange of shots which followed, one Israel policeman was wounded.

National Whirligig

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following article from the Bradford (Pa.) Era of May 24, 1956:

NATIONAL WHIRLIGIG

(By Ray Tucker)

WASHINGTON.—Capitol Hill skepticism toward perennial outpouring of American cash and resources to foreign nations has been strengthened by the latest official and complete compilation of the staggering cost of our save-the-world adventure.

It reveals that the United States has advanced $134 billion from the start of World War I through June 30, 1955. If Congress grants President Eisenhower's pending request for $4.9 billion for fiscal 1957, the total will be almost $140 billion, or half of the huge public debt of $280 billion.

If there is agreement to continue the program in accord with the White House proposal at the present rate, the sum will approach the fantastic figure of $200 billion within a decade.

In addition to these public grants, private American investments in 15 countries, mostly Western Europe and South America, amount to $25.2 billion.

NO EXPECTATION OF REPAYMENT

There is, of course, no expectation that this money will be repaid, although $11 billion of postwar assistance is listed on the Treasury books as "credits." However, keeping this figure as an asset appears to be a futile bit of bookkeeping, inasmuch as many of these nations still owe us $17.3 billion of World War I indebtedness.

Here is a full and official itemization of the cost of our overseas generosity:

World War I, $17,297,981,019; World War II Lend Lease, $42,020,779,261; postwar to June 30, 1955, $51,339,142,000; proposed for 1957 fiscal year $4,000,000,000; United States advance to world monetary fund, $2,750,000,000; United States advance to international bank, $635 million; overseas military installations, $20 billion. Total $138,942,902,280, plus United States private investments, $25,264,000,000, equals grand total, $164,206,902,280.

HAS NOT BOUGHT FRIENDS

A geographical breakdown of the distribution of this vast treasure supplies another reason for congressional headshaking. It suggests that this "Niagara of dollars," to use Indonesian Prime Minister Sukarno's critical characterization, has not bought us strong or dependable friends.

Although about $65 billion went to Western Europe, NATO is still only a paper organization and shield. The principal beneficiaries resent our resistance to Russia's new blandishments, insisting on closer diplomatic and commercial relations with Moscow and the satellites. All recognize Red China.

Asia and southeast Asia received $10.1 billion since World War II. But India, Burma, and Afghanistan are more friendly to the Soviet than to us. Indochina is still a battleground between democratic and Communist forces. Sukarno, of Indonesia, openly spurns our money if it is designed to buy his country's friendship. If that is our purpose, he says, we are wasting it.

ASSAILED

The Near East, including Egypt, Jordan, and Israel, took down $4.3 billion. And yet, both parties to the Arab-Israeli dispute assail us. The Arabs purchase arms from the Communists and cozy up to Moscow and Peiping in brazen hostility toward us. Never was American prestige at lower ebb in this area.

Our parsimony toward our good neighbors—Canada and South America—contrasts dramatically with our gifts to unstable allies, actual enemies, and wavering neutrals. Canada is on the books for a mere $6 million in credits. Only a billion dollars in postwar aid has been forwarded to the Latin American Republics.

To make the world picture gloomier, Russia is estimated to have promises in barter form less than $10 billion, and that only within recent months. And yet, many diplomatic experts believe that the Kremlin is winning the cold war.

Licensing of Foreign Physicians

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following address by Dr. Dominick F. Maurillo, a regent of the State of New York and the chairman of the Committee on Licenses:

LICENSING OF FOREIGN PHYSICIANS

(Address by Dominick F. Maurillo, A. B., M. D., L. L. D., regent of the State of New York and chairman of the committee on licenses)

It is a privilege and an honor to address this very large group of professional people for three reasons. I believe that I am the first regent of New York State to be invited to talk to your members. I am, and have been a member of the New York State Medical Society for 29 years and third, I am sincerely interested in medical educational problems. My fellow regents have asked me to convey to you their best wishes and to tell you that they have an earnest desire to help and protect the medical doctors of New York State, as well as the doctors of other States, and all the foreign doctors who are qualified and wish to practice in New York.

Licensing of foreign doctors has reached the stage of great importance in our larger States. It has aroused the interest of many different groups of people. Some are for, and some are against the admission of these physicians to the practice of medicine. Today, the problem is very critical because of the shortage of doctors throughout the United States. There are now about 5,500 unlicensed foreign doctors working either as interns or residents in hospitals in the United States. About 30 percent of these doctors are in New York State hospitals. These foreign doctors are either invited to this country, or they are sent here as exchange visitors to study American medicine for one or more years, or they come here to stay under the quota system. It has been shown that most of these doctors remain in the United States and that less than 10 percent return to their native land.

Today there is a need for more than 14,000 interns because of the tremendous hospital building in the last 8 years, and because many residencies have been established in our larger hospitals. Last year our medical colleges graduated less than 7,000 doctors. All of these doctors are serving their internship, but this still leaves a shortage of 7,000 interns. With the supply so small and the need so great, is there any wonder that hospitals are desirious of employing foreign doctors even though their medical education is unapproved by the State authorities? In fact, some hospital administrators or their representatives travel to Europe and Asiatic countries to invite doctors for the purpose of interning in their hospitals. These foreign doctors work on an equal basis with graduates of our medical colleges, and they carry out the same duties and have the same responsibilities. Because of this equal status, some administrators and doctors, who have worked with these foreign physicians and who have formed a favorable opinion as to their abilities, protest vehemently against the procedure of licensing foreign doctors. They cannot understand why some States deny these physicians the right to take medical licensing examinations.

New York State has been and is the leader in the admission of foreign doctors to its medical licensure examination. In the 5 years before World War II (1937 to 1941), 5,065 out of a total of 7,527 foreign-trained physicians were admitted to examination in New York. This is more than 67 percent. From 1950 to 1954, New York State admitted 2,271 foreign doctors to its medical examination out of a total of 6,270 foreign trained physicians or more than 36 percent. The foreign doctors admitted before World War II came mostly from Germany, Poland, and Austria. Today they come from all over the world with the greater number from Europe, South America, and Asia.

New York State has the most experienced and best-trained professional educational department in the United States. It supervises an dadministers all the professions except law, with special emphasis on the professions dealing with healing arts. Screening and evaluation of medical education is done by Dr. Stiles D. Ezell, seceretary of the board of medical examiners, with a very capable and competent staff. They are under the direct supervision of our assistant commissioner for professional education, Robert C. Killough, Jr.

The procedure necessary for a foreign doctor to obtain a license to practice medicine in New York is very simple. An applicant writes to the Assistant Commissioner for Professional Education, to the Secretary of the Medical Board or to the State Education Department, Albany, N. Y., for information and application blanks. These will be delivered immediately. He must comply with the directions by submitting all the required data. His records are then thoroughly evaluated by the department. If his credentials meet our requirements, he is allowed to take the medical licensing examination. If his records fail to meet our requirements, they are then presented to the Regent's Licensing Committee under section 211 of the New York State Education law.

Before I continue with this paper, I will explain this very important section 211. It was passed as section 51 by the New York State Legislature in 1917 and was added to the then existing education laws. Many amendments have been added to this law since then. In 1947 section 51 was recoded as section 211 and it is so called today. The legislators had real vision and understanding when they passed this law and improved it year after year with many amendments. Because of section 211, many thousands of foreign doctors were, and are able to obtain a license to practice medicine and surgery in New York State. These doctors may qualify for endorsement in other States representing 80 percent of the population of the United States on the basis of their New York license, upon meeting the requirements for endorsement in such States. It should interest you to know that many decisions rendered by the courts in interpreting section 211 have favored and sustained the regents' actions thereunder.

I shall read you part of section 211. I quote, "Conformably to law, the regents may supervise the entrance regulations to, the licensing under, and the practicing of the profession of medicine and all other professions except law and members of any other profession which may hereafter come under the supervision of the board of regents.

"The regents may by rule or order accept evidence of preliminary and professional education and where practice as a prerequisite to licensure may receive evidence of such practice in whatever State or country the

same may have been obtained or engaged in, for licensing a candidate to practice any such profession in lieu of that prescribed by the laws provided it shall appear to the satisfaction of the regents that such candidate has substantially met the requirements of such laws.

"The regents shall have further power to endorse a license issued by a legally constituted board of examiners in any other State or country upon satisfactory evidence that the requirements for the issuance of such license were substantially the equivalent of the requirements in force in this State when such license was issued and that the applicant has been in the lawful and reputable practice of his profession for a period of not less than 5 years prior to his making applications for such endorsement. When the evidence presented is not satisfyingly sufficient to warrant the endorsement of such license the board of regents may require that the candidate for endorsement shall pass such subjects of the licensing examination specified by statute or regents' rule as should be required of the candidate to establish his worthiness to receive such endorsement."

This is in part section 211. Under their rules, the regents have broad discretionary powers to judge the fitness of foreign medical school graduates for licensure in New York State. Any physician can request a hearing of his case before the regents' committee on licenses. This committee is a standing committee of three members appointed by the chancellor of the board of regents. If there is a medical doctor on the board he is always appointed to the committee and generally as at present, the doctor is appointed chairman. Its purpose is to help and advise him and recommend what is needed to meet our requirements. The committee is presented with all the records of the applicant. These records include elementary, high school, college and medical college education, plus postgraduate work in hospitals, plus the years in practice if any and also letters of recommendations. The license committee reviews the record of each applicant and then makes a recommendation to the full board of regents which consists of thirteen members. The entire board makes the decision and action is final. Regents' decisions can only be reversed by the courts.

If an applicant has been denied admission to examination by the regents, he may request another hearing before the license committee. It will be granted if he can present new evidence of his qualifications, or if he has passed additional medical educational courses, or if he has served more internship or residencies, since the denial of his previous application.

The regent's policy is to protect the health of the people of New York State by admitting only competent doctors to the licensing examinations. If any doctor meets our requirements, you can be sure, that the regents will see to it, that he or she, will be allowed to practice medicine and surgery in New York State.

The regents have often been asked how they obtain their information about medical education in foreign countries so as to be able to judge the cases that are presented before them. Before World War II, we obtained a great deal of valuable information from the American Medical Association. We also received information from many of our doctors who continued their post-guaduate education in European medical centers. From 1920 to 1939 New York State had a working agreement with some of the European countries as to licensure.

The regents received reports that medical education was deteriorating in quality in Germay, Italy, Austria and Hungary after Hitler and other dictators came into power. Prior to World War II, during the war, and for some years thereafter, medical education was at its lowest ebb in some countries of Europe and certain parts of Asia Minor and Asia. Large numbers of the medical faculties were drafted into the armed services and essential industries. Many medical colleges were destroyed in the war countries. Medical education could not be taught under such impossible conditions. It was very difficult for the regents to obtain accurate information about the quality and extent of medical education taught in those countries. We received some information that diplomas of medicine could be easily obtained.

Because of these many reports, some very conflicting in their analysis, the regents' committee on license had a very difficult job on its hands to review and judge hundreds of cases presented before them from 1945 to 1951. A very large number of foreign graduates were denied admission to examination. It was the opinion of the committee during those years that they recommend denial and be safe in their judgment rather than to admit an incompetent doctor to practice medicine. Can you imagine the great deal of criticism received by the regents as a result of these denied decisions? I should like to state for the record that some of this criticism was absolutely correct.

In 1947, 1948, 1949 about 300 veterans of World War II, who could not gain admission in the United States medical colleges, traveled to Switzerland, Italy, France, and Holland for their medical education. Most of these students lived in New York State. Since the regents were denying applicants from these countries, the veterans and their families were worried about their status after their graduation from foreign medical colleges. Happily for them, the regents have the power under the law section 210, to evaluate, appraise, and register medical education in any State or foreign country.

In January of 1950 the board of regents received an invitation from the Ministers of Education of Italy and Switzerland, to send a regents' committee to evaluate and approve their medical education. Our chancellor appointed a committee of three for that purpose, making me its chairman. In 1951 another invitation was received from the French Minister of Education, to evaluate medical education at the University of Paris. I was chairman of that committee. As a result of the committee's work, the regents approved the medical education of 11 medical colleges in Italy, 5 in Switzerland, and the University of Paris (Sorbonne) Medical College.

In order to obtain more knowledge of medical education in Europe, I visited in 1952, Holland, England, and Sweden to study their system of medical education. In 1953, I attended the World's Conference on Medical Education in London and obtained from the deans of medical colleges in the countries in which the license committee was interested, a great deal of information about their respective system of education. During the same year I visited and studied medical education in the principal German universities. In 1954 I studied medical education in Greece, Turkey, and Lebanon and in the same year was invited by the Minister of Education of Israel, to appraise the medical education in Jerusalem. In my talks with the deans and professors of these European medical colleges, I learned interesting facts about medical education behind the Iron Curtain. Because of the increasing number of applications received by the licensing committee of doctors from Central American countries, I decided in 1955 to evaluate medical education in Mexico, Cuba, and Venezuela. In 6 years, I studied medical education in 38 universities of Europe, Asia Minor, and Central America.

The regents had to solve the big problem of what action to take on physicians who come from unapproved medical colleges and who were working as internes or residents in our approved hospitals. In 1951, with the help of Dr. Boggs, the former dean of New York University Post-Graduate Medical College, our license committee approved a course which we called comprehensive medicine. It consists of 1 year of intensive review of medicine involving the entire curriculum of a medical college. It is practically all didactic work in the basic sciences. The clinical courses involve thorough bedside teaching and examinations. It is a very good review of a 4-year medical curriculum. The following year New York Polyclinic Post Graduate College was also approved for this course because New York University could not handle the large number of candidates required by the Regents to take additional supplementary study.

Since April 1951 the regents have recommended that most foreign doctors, with an unapproved medical education, must complete (a) 1 year comprehensive course of formal study, (b) a 1-year AMA approved rotating internship, and (c) a 1-year approved internship or residency in either surgery, medicine, obstetrics and gynecology, or pediatrics, in order to take the New York State medical license examination. New York is the only State which prescribes these conditions and most of the foreign doctors are very pleased with these requirements. They now have a better chance of passing our license examination and more important they feel confident of practicing good medicine in any community of the State. Reports have come to the regents proving these facts.

It is estimated that only 25,000 doctors out of 32,000 licensed and registered doctors in New York State, are practicising medicine. More than one-fifth of the practicing doctors, or, to be more accurate, 5,061 are foreign trained doctors. I would say that more than a third of the doctors doing general practice, have been educated in foreign countries. Practically all of them are prospering and are a credit to the community in which they live and practice.

On a nationwide basis, this is what has happened durng the last 5 years: 799 foreign doctors were admitted to examination in 1950; 1,066 in 1951; 1,463 in 1953; 1,642 in 1954 and I am sure that not less than 2,000 were admitted in 1955 and probably 2,500 will be admitted in 1956. The figure for 1956 is likely to be more than one-third of what our medical colleges will graduate this year. To put it differently, this number of doctors will exceed the product of 20 of our largest medical schools. We can expect this number of foreign doctors to increase each year unless something is done to increase the number of doctors graduating from American medical colleges.

In 1955 Seymour B. Foreman of our research department reported to the Board of Regents some very interesting facts and future prediction in the medical field for New York State. He stated that next to the District of Columbia, New York State has a larger number of physicians for its population than any other State for the year 1954. Its 32,000 registered physicians provide a ratio of 450 people to 1 doctor, but since only about 25,000 physicians are in active practice, the ratio is 625 to 1. However, the distribution of physicans varies widely from 280 to 1 in New York county to a ratio of 1,500 to 1 in Lewis County. Foreman stated that New York would need 4,475 more physicians to bring down to the State average those counties that are above the State average. It would also require about 296 additional physicians to bring the average to the national average of 900 to 1, those counties having a ratio above the national. This problem of distribution needs further study.

His report continued with the fact that in 1945–46, 5,826 doctors were graduated in the United States and that in 1953–54 after 9 years, only 6,861 doctors were graduated.

This is an increase of 1,035 doctors while the population of the United States increased by more than 18 million people. He stated that in 1953–54 there were 3,555 enrolled medical students in New York medical colleges and 819 graduated as physicians. He predicts that in 1960, (all things being equal) 4,100 students are expected to be enrolled with 940 graduating; in 1965, 5,300 students with 1,220 graduating; in 1970, 6,220 students are expected to enroll with 1,445 graduating. Now this next prediction should be of great interest to the deans of the medical colleges. He estimates and predicts, that, with the great increase in college enrollment expected for the years from 1956 to 1970, 3,200 capable, above the average students will not be admitted to New York medical colleges. If calculated on a nationwide basis, more than 25,000 "B" or better students will be kept out of medical colleges in the United States by 1970. Even today, there are more than 2 students available for every 1 accepted in the United States and more than a 3½ to 1 ratio for New York State.

I quoted the above facts and figures in order to explain why more than 2,000 students are forced to study medicine outside the United States, of whom just less than half are from New York State. The students attending the Italian, Swiss and University of Paris medical colleges must have a college degree (B. S.) with a "B" or better average in order to be admitted. They must take a 5-year course for their medical degree and then, if they desire to take the New York State medical examination, they must first complete a 1-year AMA approved rotating internship. The regents committee which evaluated and approved medical education in these countries, suggested the above qualifications with the authorities of the respective medical colleges and these rules are strictly enforced. Let me emphatically state that these students receive good medical training. The deans of the medical colleges are very well satisfied with the work of the American students. In fact they are in the upper half of their class scholastically. I am certain they will make good doctors. Today some of these graduates are making their appearances in our New York hospitals. My colleagues report that Americans educated abroad are holding their own with graduates of our medical colleges. I am very proud of being the chairman of the regents' committee which has made possible such education for so large numbers of American students.

I have three concluding statements:

1. It is evident that the present policy of limiting the number of students for admission to our medical colleges is responsible for:

(a) The very great increase in foreign doctors in the United States.

(b) The 2,000 or more American students studying in foreign countries.

(c) The growing shortage of general practitioners.

(d) The discouragement of many potential medical students to study medicine.

2. The United States Congress should pass a law creating a commission of experienced persons in this field to study fully this problem and make a substantial grant of the necessary funds available to the commission. Such study should be comprehensive, realistic, unhampered, and unbiased and cover all phases of medical education.

3. The regents of New York State have satisfactorily solved the problem of licensing foreign doctors under the powers granted them in the education law of the State of New York.

Newspaper Editorial Writers Call for Higher Postal Rates

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. CEDERBERG. Mr. Speaker, as a member of the House Committee on Post Office and Civil Service I have been watching with interest the editorial reaction of the press of the country to our committee's recommendation for higher postal rates.

I believe my colleagues will be interested in what some of the editors are saying and I have selected a few editorials for your consideration. They follow:

The Burlington (Wash.) Journal, in an editorial appearing March 29, 1956, said:

POSTAL RATES THEN AND NOW

Remember the 5-cent loaf of bread—the 5-cent streetcar fare, and the 5-cent cigar?

Those were the days when first-class mail was in tune with the rest of our national economy and the patron paid the Department 3 cents for this mailing privilege.

In those days, some 25 years in the past, it cost 2 cents to deliver first-class mail and the rate was fair. Today the cost is more than 3 cents, resulting in a definite and appalling loss to the Department.

In handling second-class mail in 1954 (before our recent wage increases) the Post Office Department actually lost $232 million. You and ourselves as taxpayers of the great Republic, had to dig down into our jeans and help some of the large magazines and newspapers pay their large distribution costs—because they do not pay a realistic postage rate. One national weekly magazine pays 2.2 cents postage a copy and it actually costs nearly 6 cents to handle and deliver this periodical.

A well known monthly publication (pocket size) pays Uncle Sam six-tenths of a cent a copy for mailing. The actual delivery cost of this magazine is 4.8 cents a copy—with the good old apathetic taxpayer footing the difference of 4.2 cents a copy.

Third-class mail presents practically the same picture. In 1954 we taxpayers subsidized these mail users to the tune of $147 million—and you had to like it.

Frankly—we do not relish paying postage (in the form of constantly increasing taxes) for others.

Occasionally we hear the comment that the Post Office has never been self-supporting. This is a false conclusion—initially the Department was a moneymaker—and continued to be for many years. Even in a 151-year period, from 1789 to 1940, the postal deficit averaged less than $10 million a year. This is a far cry from the postal loss today of more than $1 million every working day.

Postmaster General Arthur E. Summerfield, for the second straight year, is asking Congress for a reasonable increase in postal rates to help sop up the tremendous deficit under which the Post Office Department is now operating. He asks, and rightfully so, that the Post Office Department be put on a self-sustaining basis, as are the postal services of every other major nation in the world.

He asks to have first-class mail postage raised from 3 cents to 4 cents (Canada pays 5 cents); airmail from 6 cents to 7 cents; three anual increases of 15 percent each on second-class mail; and other increases are recommended including a 30 percent mark-up on third-class mail.

The Fayetteville Observer, published in Fayetteville, N. C., said on April 24, 1956:

POSTAL DEFICIT: WHO'S GOING TO PAY IT?

Should the United States Post Office Department be operated like a business or like a giveaway program?

The people who operate it, which is to say the postmasters, believe it should be operated like a business, that it should charge at least as much for the services it renders as it costs to render those services.

The National Association of Postmasters of the United States is on record as favoring an increase in the postage rates to enable the Post Office Department to operate on its income instead of running up a deficit which has averaged $460 million (almost half a billion dollars) a year since the close of World War II.

Since that time the prices of almost every other commodity in the United States—including labor—have advanced, but the prices which Congress permits the Post Office Department to charge the public for its service have been unchanged, despite the fact that Congress has voted raises to the men and women who are employed by the postal service.

Of course, there is another side to the proposition, and that side is that whether the people pay for postal service at the stamp window or through their income taxes to balance the budget, it is still the public that pays.

Under the deficit system of supporting the Post Office Department it makes no difference whether you write 1 letter a month or 1 letter a day you pay for the support of the $460 million annual postal deficit in your taxes.

You pay for a substantial portion of the postal cost not in proportion to your use of the mails but in proportion to your income.

Without arguing whether it is right or wrong, the annual huge post-office deficits simply mean that individuals and firms which use the mail less are helping pay part of the expenses of individuals and firms which use the mails more.

The National Association of Postmasters would correct this by increasing postal rates to the point where the income of the Post Office Department would approximate the expense of the Post Office Department.

It would increase the per-ounce cost of first-class letters from 3 cents to 4 cents, domestic air mail from 6 cents to 7 cents, second-class mail by 15 percent, piece rates on circulars, merchandise, books, catalogs, and other miscellaneous matter by about 50 percent, and bulk rates on these classifications by about 2 cents a pound. Book rates in the fourth-class category would be increased 2 cents a pound on the first pound.

These increases would cost a good many firms and individuals more in postage payments than they would save in income-tax payments to make up the annual postal deficit. Others they would cost less.

But the major argument of the postmasters is that if the Post Office Department could attain receipts approximating expenses it could progressively improve the postal services to the people without having to go before Congress every year with its hat in its hand like a beggar pleading for a pittance.

They argue that the Post Office Department would be able to build more and better post-office buildings, extend delivery service, speed up deliveries, and make more frequent deliveries of the United States mail.

In the meantime the operation of the Post Office Department on a deficit basis is costing the taxpayers approximately $100 million a year in interest alone on that portion of the national debt which has been piled up by the postal service since 1946.

The Louisville (Ky.) Times said, February 1, 1956:

WHY SUBSIDIZE JUNK MAIL?

Once upon a time, getting a piece of mail was a matter of some moment. Even if what you received was only a reminder that last month's dentist bill was due, at least it was meant for you, not some ananymous "householder" or "occupant." Now, it seems to us that half the mail we get at home consists of advertising sent out at cheap third-class rates, not to us personally but to our address.

Well, throwing it away isn't much trouble. But delivering it is giving the Post Office Department a lot of trouble—and it is costing the taxpayers some money. Postmaster Scholtz says this so-called "junk mail" is "taxing us beyond our capacity." In Washington, Assistant Postmaster General Abrams told a House subcommittee that the volume of advertising being sent at third-class rates is reaching its 1954 peak, and agreed that the rate should be increased.

That 1954 peak was hit after Postmaster General Summerfield the year before permitted advertising to be sent at third-class rates without any address or name. That created such a problem that Summerfield was forced a little more than a year later to cancel the order. But it still could be mailed if an address was provided.

The postal department almost invariably operates under a deficit. Some of this, perhaps, is unavoidable, but not all of it, and President Eisenhower again has asked for an increase in postal rates to bring in another $350 million. Details have not been given, but it is expected that the request will be similar to last year's, which included a 28 percent increase for third-class mail.

There is no reason why advertisers should not use the mails. But there is no reason, either, why taxpayers should subsidize them. We hope Congress raises the third-class rate to the point at which it would pay for itself. We might still get junk mail, but at least we wouldn't be paying part of the cost of its delivery.

The Columbus (Ohio) Citizen said on March 25, 1956:

THE POSTMARK ON YOUR LETTER IS RED

In 1932, many magazines were a nickel. So was a phone call. For a dime you could get a loaf of bread. And for 50 cents a haircut.

All these costs have zoomed since then. That 5-cent magazine is 15 cents, or more. Other things have gone up similarly.

But you can still mail a letter for 3 cents.

And the increase in rates for carrying magazines and newspapers through the mails is about 3 percent.

Meanwhile, the cost of running the Post Office Department has leaped 107 percent. Most of that is in wage raises for employees.

In the last 10 years, the postal service has run up a deficit of $4.6 billion. The taxpayers have had to make up the difference.

Postmaster General Summerfield has been pleading with Congress to raise postal rates. Most people think this is reasonable. As postal users, they would be paying rates somewhere near what it costs to handle their mail.

But as taxpayers they would be relieved of continually helping to make up deficits—whether they use the mails or not.

That $4.6 billion the post office lost in the last 10 years is part of the national debt. The debt draws interest. Everyday every taxpayer draws any income, a percentage of that income goes to pay interest on this debt.

The taxpayers of this country are paying, over and over, for the postage on letters, newspapers, magazines, and direct mail advertising long since read and thrown in the ashcan.

They will go on paying for this forgotten mail until Congress hikes the postal rates enough to let the Post Office Department come out even.

What's wrong with paying for mail service as we use it?

Why pass on to our children the cost of carrying our mail?

The Daily Standard, of Celina, Ohio, March 25, 1956, said:

UNCLE SAM SHOULDN'T PAY FOR SENDING JUNK

We have never shared the concern of many people with the Post Office deficit. We have felt that communication between people is something that should be as free as the air and that it didn't hurt the Government to pick up part of the bill to make this possible.

And, we realize that picking up the tab is sort of a subsidy to newspapers—which are carried by a very low rate by Uncle Sam, making possible widespread rural subscription lists, which small papers like the Standard dearly love.

But we have just changed our mind. Because we were shorthanded here last week, we let our mail pile up on our desk—fishing out only those letters that we thought might have news of interest to the readers.

At the end of the week, we piled all of these unopened letters into a box to take them home to open. They filled a large box and weighed in at 25 pounds—25 pounds of unsolicited and unwanted mail.

It was, to us, a dramatic demonstration of how mailing privileges are being abused. If a small newspaper like ours receives 25 pounds a week of junk mail, then Uncle Sam must be carrying at less than cost millions of pounds of such mail.

A hike in the postal rates would not have much effect in reducing the amount of this unwanted mail. But at least those who persist in loading the mails with this kind of junk would be required to pay their own way instead of the taxpayers.

The Evansville (Ind.) Press said on March 15, 1956:

POSTAL COSTS ROSE TOO

Few articles, if any, cost as little today as in the depression year of 1932.

But it costs the same to mail a letter, practically the same to mail a newspaper or magazine, and not much more to mail advertising circulars and other such material.

That, in a nutshell, is the reason the Post Office Department is running up such a huge deficit each year—which means the taxpayers as a whole are paying a big share of the postage bills of heavy users of the mails.

It costs the postal system much more to handle mail than it did in 1932, of course, because labor and overhead have gone up.

Postmaster General Summerfield has just given a Congressional committee another detailed description of his department's financial situation, and a forceful argument why Congress should authorize higher postage rates.

He recommends a 1-cent increase in letter rates and appropriate increases for other classes of mail.

These, he says, would eliminate $407 million of the $470 million Post Office Department deficit estimated for the next fiscal year.

This would be a long step toward making ends meet—a logical goal for the agency and the only one fair to the taxpayers.

The Capital Journal, published in Salem, Oreg., said on April 9, 1956:

POST OFFICE SHOULD BE SELF-SUSTAINING

The House of Representatives Post Office Committee has been holding hearings for 3 weeks on a proposal by Postmaster General Summerfield for rate increases sufficient to erase a deficit that has averaged $450 million a year for the past 10 years.

Proposed is an increase of 1 cent an ounce on first-class and air mail and a boost of about 30 percent in rates on second- and third-class mail, principally newspapers, magazines, and direct-by-mail advertising. We've noted no proposal for a reduction in free mail by Government departments and Members of Congress, which contributes much to the deficit. Many millions of dollars worth of free service is rendered annually by the Department.

In our opinion Summerfield's proposals should be approved and the Department put on a balanced budget. It is a vast business enterprise which ought to pay its own way. Most of the newspapers appear prepared now to accept the rate increase proposed for them and several publishers so testified at the hearing. Letter rates are still 3 cents, the depression rate and only 50 percent above the rate of half a century ago when a working man got 10 to 15 cents an hour and most living cost items were in proportion.

The only argument we know against eliminating the postal deficit is that this is an election year and it doesn't sound convincing.

The San Francisco News said on April 26, 1956:

EVERYBODY PAYS

Congressmen are fooling no one but themselves if they think the public doesn't know there is no such thing as "free" or "bargain" mail service, so far as the taxpayers are concerned. When a business firm pays less than it costs the Government to carry its mail, the public pays the difference, in taxes. And this has been going on too long already.

Graduation Address by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, at the United States Naval Academy

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. LANKFORD. Mr. Speaker, it was my privilege on June 1 to attend the graduation exercises for the 116th class to graduate from the United States Naval Academy in my hometown of Annapolis, Md.

As a further testimony to our good will and our desire to get along with the other free countries of the world, there were graduated with the class 2 citizens of the Republic of the Philippines and 1 of the Republic of Peru. One of the citizens of the Republic of the Philippines, former Midshipmen Vincante J. Brillantes, graduated with honors and made an outstanding record by standing No. 1 in his class in mathematics. He is to be warmly congratulated.

The graduating class was addressed by Adm. A. W. Radford, United States Navy, Chairman of the Joint Chiefs of Staff.

Admiral Radford's remarks on this occasion were inspiring and it is my feeling that they should be made available for all to read. Therefore, under leave to extend my remarks, I take pleasure in including the graduation address by Admiral Radford at the United States Naval Academy:

GUIDELINES FOR READINESS

Forty years ago, on the 2d day of June 1916, I was one of 178 midshipmen present here waiting for our diplomas.

Forty years from now, in June of 1996, it may be that one of you in this graduating class of 681 midshipmen will have the honor which is mine today. That individual will then appreciate the problem which has faced me since I accepted with great pleasure the invitation to be your graduation speaker.

In a nutshell, the problem is this: How in approximately 15 minutes' time should I cover the worthwhile experiences of a service career so as to interest you young men just starting? What brief guidance would be helpful in these times of tension? What point can I make which will be remembered by you from now on?

In 1913, 1914, 1915, and 1916, I listened to graduation addresses here in this same building, just as you in this class have done. At the time of my last two, there was a war in Europe which came to be known as the First World War. It was also called the war to end war. The United States entered this conflict less than a year after my class left Annapolis.

In restrospect, the class of 1916 has been fortunate enough to witness, and to some extent participate in, an interesting and important bit of modern history. Our service careers span the years of World War I, a Second World War, and more recently the Korean war; and they continue today in a period of great international tension—a period marked by great determination on the part of the United States and its free allies that there be a secure peace in the world.

Today we have a peace—an uneasy peace to be sure, and one marked by an armistice in Korea where nearly a million armed men, including many of your own brothers-in-arms, must be alert to counter aggression in a matter of minutes.

Indeed, the past 40 years have proved challenging, interesting, and so completely worthwhile.

So, too, will your future be challenging and interesting. Undoubtedly, you will witness and take part in great events. Now, the part you play and the contribution you make will be somewhat designed by fate, but largely designed by you as an individual. The key, I think, will be your individual and collective readiness to cope with the responsibilities thrust upon you in later years.

The moral is obvious. Be ready and fit for anything that you might be called upon to do. And keep ready and fit.

At my graduation, we had not 1, but 2 speakers—President Woodrow Wilson and Secretary of the Navy Josephus Daniels.

President Wilson advised us not to forget duty for a moment. He said, "there might come a time when * * * the history of the world might be changed" by what we did or did not do.

Secretary Daniels challenged the members of my class to make progress. He urged us to "keep an open mind, investigate new methods, and not slavishly follow any old theories or practices." At the same time, however, he admonished us to keep bright those long-term traditions "that spell character, courage, and chivalry."

That advice given to the class of 1916 by those two distinguished men has stood well the test of time. It has been proven sound, and today I pass it along to you.

The key words I emphasize are "tradition" and "progress."

At first glance, you may think these words are incompatible. But I can tell you they are not. They go together, and each complements the other. For the readiness of a man is gaged, in part at least, by his flexible and timely adjustments to the new and novel, without sacrifice of principle or abandonment of standards.

Principles and standards are vital to the Armed Forces. Never forget that you are servants of a free country. Wherever you are stationed, you will be representatives and ambassadors of our free principles. Above all else you must maintain our concepts of leadership, of courage, of military competence, and of devotion to duty and to country.

I would suggest, therefore, that you recognize right now that you have a duty which involves not only readiness to die for your country, but also readiness to live day by day for its betterment. I suggest that you resolve always to be worthy of the high traditions which have been impressed upon you here.

Then if your resolution is translated into thought and deed, I feel confident that your careers will add luster to the stars that shine in our country's flag.

In the final reckoning what will count most will not be the lofty stature attained by a few, but will be the sum total of all your earnest service—the sum total of all your efforts to live up in every circumstance to your code of duty.

But while urging you to preserve the noble traditions of the service, I do not imply for a moment that you should make a fetish of tradition. You need never feel that you would be untrue to the classes who sailed before you, if you sail courses different from ours.

Pride in tradition can become a hindrance if weighted or clogged with complacency and oversatisfaction with past achievements. We can never let ourselves rest upon ours oars.

This leads to the second key word: "Progress." No one can deny the need for progress. There is always a place for change. It is an inescapable law of life.

But I think the art of progress and the magnitude of change have never been so great as right now. This is no slow and plodding evolution in weaponry and tactics. This is a rapid evolution—a time when developments in the striking power of weapons, and corresponding changes in tactics, are jumping forward by leaps and bounds.

I feel certain that the 40 years which separate your class and mine sounds like a very long time. The changes, however, which I have seen in weapons, in the world situation, and in the thinking of men, make it seem that it might as easily be 40 decades.

Fortunately, your education has given you knowledge of the past. It has given you an insight into economics, government, and history; and it has helped you to understand the cultural, scientific, and spiritual aspects of this great civilization of ours. I would say you have been give a flying start.

But it is only a start.

One incontrovertible fact impressed on my mind by this Academy was the fact that I knew very little—that the man who thinks he "knows it all" has ceased to learn. Actually, the service is no haven for one who has quit learning. Study, especially the study of peoples and nations, is a continuous part of the job of military leadership.

So it must be with you. Whether in new weapons or social sciences, your search for knowledge and improvement is a lifetime pursuit.

In your early years, you will not be dealing with global strategy or policy. But in your early years, you will be dealing with the men and the weapons at the action end of our policies; and these years probably will be among the happiest in your service.

It is during these early years that you will be preparing yourselves for the time when you will assume greater responsibilities. You will be preparing yourselves for the time when your decisions will help determine whether or not this Nation's military forces stay abreast of the incredible advances in science and the international situation.

None of this is easy. There is a certain orthodoxy and set pattern in all professions. Imaginative thinking and new learning do not always make a man popular. But imaginative thinking and new learning are essential parts of this imaginative age. I think you will soon realize that progress provides a climate for strength, and stagnation is an invitation to weakness.

Now, despite the fact that your profession is war, your first mission is the prevention of war, and to no greater objective could you dedicate your lives.

Your Government has given you a rare opportunity. You are entering a profession that is unusually vigorous, progressive, and interesting; one that is engaged in vitally important missions, and one that places uncommon emphasis on youth and offers unlimited opportunity to all its members.

Remember always that you are part of the Armed Forces team—Army, Navy, Air Force, and Marine Corps. That team—the United States Armed Forces team—must think as a team, work as a team, and when necessary fight as a team.

Accordingly, cherish your pride in your own chosen arm of service, but acquire a complete understanding of the character and contribution of the other arms. Have in mind the thought that some day if you are successful, you may be called upon to lead and coordinate joint operations.

Now I have just a few words for each of the groups represented here today.

First, to the parents, relatives, and sweethearts: This is a happy and proud moment for each of you. Rightfully so. I congratulate you for the role you have played, both in sending and in keeping your young man here. I feel confident I can count on you to share with him his lifetime career, and to support him in it. I want you to know that I, too, will follow his career with great personal interest.

Second, to the staff and faculty: The inspirational and educational importance of this Naval Academy in its service to the Nation has never been greater. With our sister academies, the older one at West Point and the newer one recently established by the Air Force, you are molding men upon whom the future safety of our country depends. Make certain that your counsel is wise and that your cultivation of the youthful mind is sound.

To the Midshipmen who remain behind: Your graduation day is coming. It seems a long way off now but later when you look back on it, it will have come and gone all too fast. Make the most of your time remaining at the Academy. You chose well in making a military career your profession. Never has the challenge of service been so noble, and never has the need for patriotism been so great.

And finally to the graduates, all of you; those who go into the Navy, the Marine Corps, and the Air Force: Let readiness be your watchword; and let tradition, progress, and teamwork be your guidelines. If you carry away from these 4 years nothing else, let it be this one word: "readiness."

Congratulations and good luck to each of you.

From Naval Research to Fleet Weapons

EXTENSION OF REMARKS
OF

HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. BURNSIDE. Mr. Speaker, I was privileged to attend the Armed Forces Day ceremonies held at the city of Huntington, W. Va., on May 19, 1956. Rear Adm. Rawson Bennett, Chief of Naval Research, was the principal speaker of the occasion. His excellent luncheon address admirably points up the Navy's modern research program and its contribution to our national defense.

The address follows:

I want to mention some of the Navy's new weapons, their background, and their importance. In rapid succession we have announced the nuclear-powered submarines, shown off our guided missile cruisers and their deadly armament, our supersonic fighters and a high-speed jet seaplane. In addition to their combat importance, these developments have paid the Navy an extra dividend. We have gained added recognition by the public that the Navy is imaginative, powerful, and important. Much of this new recognition has blossomed during the past year, not because naval progress has been a sudden thing, but because many years of planning, research, and hard work resulted in dramatic new weapons that captured the imagination of press and public. The Navy's new arsenal of weapons are their own telling argument before a public that likes to judge the facts for itself.

It is not surprising that the Navy has created a considerable stir during the past year. Look at some of the new weapons in our arsenal:

Man's first harnessing of the atom for propulsion, a nuclear-powered submarine that can cruise underwater at high speed indefinitely, that has shattered dozens of records and opened up a whole array of new naval tactics. Seven sister ships are on the way.

A new concept in submarine hull design, the *Albacore*, which opens a new chapter in submerged speed and maneuverability.

The *Forrestal* class carriers, rugged, highly mobile floating airbases are joining the fleet at 1-year intervals. Designed for jet age operations, they add to America's ability to project her striking power to virtually any corner of the globe.

We have flown the P6M Sea Master, the first large jet-powered seaplane. It has speed, range and needs no concrete runways. It can add a new kind of punch to the Navy's striking power.

We have the A4D Skyhawk, probably the world's smallest attack plane. Fast and maneuverable, it holds the world's record for the 500 kilometer closed course, and can operate from carrier decks with an atomic bomb load.

We have the F8U Crusader, a high supersonic speed fighter. The F8U is the world's fastest naval aircraft. Designed for speed and maneuverability at high altitude, it is one of today's truly outstanding fighters.

The guided missile is the epitome of modern warfare, and the warfare of the future. The Navy has guided missiles—not future dreams, but actual hardware in use by the fleet.

A guided missile cruiser is in the fleet, another one will shortly follow. Two guided missile submarines are in the fleet.

These have been unusually dramatic developments. They have pointed, in a way that everyone can understand, to a fleet transition. It is in transition from steam to nuclear power, from guns to missiles, from gunpower to nuclear weapons, and from subsonic to supersonic flight.

Now let me point out that the naval weapons announcements of the last year or two represent neither a culmination nor a point of departure. They are a part of a continuing process that has taken us over many past barriers and will lead us to even more exhilirating thresholds.

This process is firmly rooted in a desire for advancement on the part of the Navy. The Navy intends to fight with the best weapons of the day—today, 10 years from now, 50 or 100 years from now. We have an organization that can keep the Navy in the forefront of world technology. As Chief of Naval Research, I am proud to point out that the new weapons I have been referring to had their origin in the Navy's research and development organization. The Office of Naval Research, the material bureaus and our many laboratories have sought out the new ideas and shaped the developments that are transforming the Navy. Our work continues, and at an accelerated pace. Therefore, the future should see a steady progression of the kind of dramatic announcements of the last few years, informing the public that the Navy is keeping abreast of these fast-moving times.

Really radical advances stem largely from basic research. Basic research is the foundation for the rest of our work. It is research not fettered by production demands. Its products are new ideas and new knowledge. Unless we keep injecting new knowledge into our work, we can only go on doing essentially the same things over and over again in slightly different ways. Basic research eliminates much guesswork. It eliminates much trial and error. It gives us ability to understand the things we work with.

The Navy program in basic science can be divided into two major categories. The first includes fields that will help solve the problems that face naval operations 10, 20 or 30 years from now.

Here we hunt for the extremes in natural phenomena. We know that very high energy is important. In the past, developments in high energy have changed powerplants and explosives. Much work is now being done in high-energy nuclear physics. I am not referring to the H-bomb or the uranimum-plutonium fission products. I mean the study of the basic behavior of matter using accelerators that generate charges as high as several billion electron volts.

We are looking for very low-energy data. This is the basis for handling information. An example is your radio. A lot of power is put out by the transmitter, but the intelligence is just a small amount of energy superimposed on all that power. We have a program in microwave spectroscopy that gives us information as to how atoms vibrate and rotate in a molecule. It should have important implications for future communications systems, commercial as well as military.

We are looking for very high temperatures. The efficiency of every powerplant depends on the highest possible operating temperature. Naval research includes astronomy and astrophysics partly because the sun and the stars are our high temperature laboratories. Physical reactions taking place on the sun reach temperatures many times higher than any we can produce here on earth. The initial scientific concept for the hydrogen bomb came from studies of what happens on the sun when hydrogen atoms are subjected to enormous pressures and temperatures. From studying the behavior of the periphery of the sun, scientists obtained some information on the mechanism of the starting of the magnetron, a high-power vacuum tube that is our principal source of power for radar.

We are looking for very low temperatures. That is the means by which we can get smaller and smaller bits of information under extreme conditions. The science of cryogenics, which is low-temperature physics, is based on the fact that molecular reactions are slowed down with a decrease in temperature. By studying materials at extremely low temperatures—as close to absolute zero as we can get—we can glimpse slow-motion views of the behavior of matter. Not only that, but matter acts differently at very low temperatures. It doesn't always obey the same natural laws that govern matter at normal temperatures.

These are some examples of basic research that will pay off in the future.

The second broad category of basic research concerns fields that we think will improve existing operations of the Navy. It deals with the Navy as we know it today. One example includes solid state physics and chemistry. They are the foundation for metallurgy and for other areas important for electronics and structural materials. Any gain in understanding of the solid state of matter has almost immediate benefits to the Navy through application to the engineering fields. They are being exploited in sonar transducers, transistors and ferroelectric and dielectric amplifiers.

Nearly every demand for a better surface ship, submarine, aircraft and guided missile, or the equipments that go into them, means a requirement for improved materials. We need steady improvement in structural materials, fuels, lubricants, and corrosion-resistant coatings.

Classical physics is another basic research area that gets heavy Navy support. New ideas in hydrodynamics are being translated into hydrofoil boats and new submarine shapes, like the *Albacore*. Aerodynamic research includes such new and difficult areas as the aerodynamics of rarefied gases. This helps tell the missile designer the best shape for a vehicle to make speeds of Mach 3 or 4 through the upper atmosphere, where air is very thin.

The Navy needs to know all about the medium in which it operates—the sea and the air above the sea. Naval research supports the oceanographer, so we can learn more about the ocean currents, how to predict sea states, how to predict surf conditions for amphibious operations. It supports new scientific approaches to meterology, in search of an accurate method for long-range weather forecasting. It explores the upper atmosphere with balloons and rockets, to bring back data on cosmic rays, air density, and high-altitude weather conditions.

The Navy's basic research program extends to nearly all of the physical sciences, and includes medical and biological research. I have mentioned only some of the areas that get heavy emphasis. This program is the Navy's insurance that it will be ready for whatever the future may bring, technologically. It assures us that the knowledge we use up in development is being replaced, to pave the way for future development.

Since this is an audience of engineers, I would like very much to launch into some lengthy discussions of the Navy's development programs. We cover virtually every engineering field, and we have a lot of tough and interesting problems. They range from the new metallurgy of nuclear reactor engineering to the electronics problems posed by guiding a satellite into an orbit 200 miles above the earth, and tracking it after it gets there.

Since there isn't time to do justice to even one phase of the program, I'll be content with a single story. In connection with guided missile development, we have been exploring several unusual types of engines, such as the valve engine and the valveless pulse jet.

The valveless pulse jet engine shows how an unexpended dividend can come from

development, as well as from research. The pulse jet is a very simple engine. The Germans used it to power the V–1 buzz bomb. Its main trouble was a set of reed valves that tended to burn out in the middle of a flight. Some of you who were in London or in the low countries during 1944 may have watched a V–1 suddenly sputter out and go into a dive, a long way from its target. The reed valves had burned out. After the war, the pulse jet seemed to have a lot of potential, if a valveless type could be developed. Some work has been done on this, with the result that we are no longer so optimistic about the valveless pulse jet as an aircraft engine. But we are not discouraged—we have discovered that it makes a terrific post-hole digger.

I doubt that every farmer will rush out to buy one. Nevertheless, the application is not as outlandish as it sounds. The valveless pulse jet is a very simple device, and it can be rigged into a practical portable unit for digging holes in frozen ground. The principle is that the hot exhaust gases come out at very high velocity, melt the ground and shake the dirt loose at the same time. It should be extremely useful in Arctic and Antarctic operations for setting anchor posts and explosive charges.

Now, let's translate some of this research and development work into terms of naval weapons, and see if we can rough in an outline of future naval progress. Within the limits of military security, it is possible to point to certain general areas and glimpse the direction in which we are headed.

We want to learn more about extreme high temperatures and conversion of chemical energy into thrust, so we can develop better jet engines and rocket motors. This is part of our planned research, toward specific goals. At the same time, we may discover that there is a method better than chemical energy, even better than nuclear energy, for getting the thrust we need to make an aircraft go. Some serious astronautical theorists have suggested the possibility of using radiant energy, radiated from the sun and stars, to power aircraft beyond the earth's atmosphere. This would be an example of the unexpected bonus, the new turn of events, that can come from basic scientific research.

For naval aviation, our general goals are to fly higher and faster, but with increased emphasis on hovering and vertical take-off. At altitudes significantly higher than those in our immediate future we will step beyond the realm of the air-breathing engine, into the domain of the rocket. The Skyrocket II research aircraft has been a laboratory for exploring the use of rocket engines as the main propulsion unit for a manned interceptor.

The emphasis on speed and altitude is taking our pilots into regions completely hostile to human life. Much of our research aims to give us a knowledge of these regions, and of what must be done to ensure safety and efficiency of the human pilots who will fly there. One of our newest concepts stems in part from the requirements of high-altitude escape from a disabled aircraft. This is the capsule cockpit announced last month. It will be a great step forward in aviation safety, but will yield a large return in economy and efficiency. Essentially, it would place the aircraft brains—pilot, instruments, controls and electronic gear—in a jettisonable capsule, separate from the muscle—engine, airframe, hydraulic gear and other heavy items. It would improve training, simplify construction and contribute to safety in storage of nuclear-powered aircraft. The capsule cockpit is now in the development stage.

The Navy is pressing its development of nuclear power for aircraft. We are making progress. Problems that looked hopeless a year ago now appear capable of solution. As the possibilities inherent in nuclear powered flight are explored, we find that once the hardware is available the chief limitation will be human endurance. For nuclear flight, as well as for our other advanced aircraft, studies are constantly being made to design the plane for the man, emphasizing safety and exploring the limitations in speed, G's, altitude, exposure (to heat, cold and radiation) and time, that will ultimately determine just where man must give way to a completely automatic method of transportation in both war implements and peaceful pursuits.

The search for low speeds has produced some new concepts in powered flight. Low speed flight is especially important to the Navy. Low speed means short landing and takeoff space. It means hovering, so important to antisubmarine patrolling and airborne troop landing and resupply. Helicopters have been one solution, but they have an inherent limitation on top speed.

The most promising avenue thus far seems to be the ducted fan principle. This was first demonstrated to us with the Hiller one-man flying platform. We are supporting some promising work with the wingless aircraft called the aerodyne.

On the sea, we can look forward to a completely nuclear powered Navy. By the early 1960's, all major combatant vessels authorized for construction are likely to be propelled by nuclear power. The ultimate objective is a nuclear powered task force that can stay at sea indefinitely without refueling. Progress in reactor design has been rapid, and the success of the *Nautilus* has given us a firm foundation for a more rapid transition to nuclear power.

Beneath the sea, the most promising new development is the "wedding" of the nuclear powerplant with the *Albacore* type hull. This will give the Navy an undersea weapon that combines unlimited range with unprecedented speed and maneuverability.

The addition of hydrofoil-supported landing craft to our amphibious strength is another promise for the future. The added speed going into the beach will be one aspect of the entire effort to add greater speed and surprise to the amphibious operation by air and by sea.

A major addition to naval armament will come from the joint Army-Navy program to develop an intermediate range ballistic missile. The program is well underway. The Navy has been assigned responsibility for development of the IRBM ship-launched weapon system. By joining with the Army we conserve scarce scientific manpower. We conserve money and materials.

These are some of the things we can look forward to as the Navy continues its transition. Each new development will add to naval mobility, to its flexibility and to its staying power.

First Arab Health Center

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MULTER. Mr. Speaker, the following item from the Israel Digest of May 18, 1956, sharply contrasts the actions of the Israelis with those of the Arabs:

FIRST ARAB HEALTH CENTER OPENS

TIRA.—A health center, the first in an Arab village, was formally inaugurated this week. The Tira center will serve the Little Triangle and provide medical assistance to the 15,000 residents of the 6 villages in the Triangle.

A staff of 20, headed by Dr. Youssef Saig, including 5 nurses, 1 male nurse, a midwife, and a sanitary inspector, all of them Arabs, will service the center.

The Minister of Health, Mr. Israel Barzilai, reported that the ministry will soon establish an Arab section to supervise health work in Arab-populated parts of the country. He said that the percentage of Arab women giving birth in hospitals rose to 22 percent last year from less than 5 percent in 1949–50.

The Retired Schoolteacher and Social Security

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mrs. SULLIVAN. Mr. Speaker, now that the Senate is preparing to debate H. R. 7225, the bill which we passed in the House last year to expand and improve the social-security program, I would like to call to the attention of the Congress a situation which I feel requires some very serious study.

This is the plight of the retired schoolteacher who retired before the pension system he or she belongs to was covered in under the social-security program. I mention the schoolteacher in that connection, but of course the situation is one which also affects all retired persons whose retirement plans came under social security at some date after the time these people went on pensions.

The social-security systems is far from perfect and certainly does not permit beneficiaries to live in any semblance of luxury. The income limitation, it seems to me, is much too low—assuming it can be justified at all. On the other hand, those who are on social security have been able to look to occasional increases in their pensions through congressional action. In other words when we increase the benefits generally, we usually try to increase the monthly payments to those who are already receiving benefits.

PENSIONS AND SAVINGS SHRANK IN PURCHASING POWER

But the schoolteachers and the other public servants whose retirement plans came under social security after these people had begun collecting pensions apparently have nowhere to turn for an increase in their original pensions. Many of these retirement plans were originally statewide plans or municipal plans. During the years that the now-retired public employees contributed to these plans out of their pay each month, the benefits they looked forward to might have appeared fairly adequate for retirement purposes. But a schoolteacher who retired, say, 10 years ago, when the cost of living was so very much lower than it is today, cannot possibly live on her pension. I just do not see how it can be done. The same holds true for the teacher who retired 5 years ago.

This situation was called to my attention by some retired teachers in St. Louis who pointed out to me that the savings which they may have accumulated over the years to supplement their retirement income just don't go as far or buy as much now as the same money would have done at the time it was saved. What may have looked like an adequate nest-egg and adequate retirement income are not adequate today.

The teacher who is now retiring under social security—that is, among those teachers whose retirement plans have been covered in under the social security system—can look forward in most cases to a much higher beginning pension and to the prospect of periodic increases in that pension as Congress takes note in the social security laws of the increases in the cost of living from year to year. But the teached who retired some years ago before her retirement plan came under social security has, in most cases, no prospect of an increase in retirement income.

I raise this question not to propose some easy solution, because I do not have one. I raise it instead because I think if enough of us are thinking about it, perhaps the appropriate committees of the Congress and the Social Security Administration can suggest a practical solution.

LETTER TO SECRETARY FOLSOM

I took this matter up early this year with the Secretary of Health, Education, and Welfare, the Honorable Marion B. Folsom. I wrote him as follows:

JANUARY 12, 1956.

Hon. MARION B. FOLSOM,
Secretary, Department of Health, Education, and Welfare, Washington, D. C.

DEAR MR. SECRETARY: A constituent of mine raises a very interesting question concerning the possibility of extending social-security coverage to retired schoolteachers. Of course, all retired persons who retired before their type of work was included in social-security coverage feel now that they would like to be covered, and that is understandable.

But the question I would like to have your social-security people consider is what can be done for the retired schoolteacher in case the teachers now covered by the same retirement plan should vote to have their plan come in under social security. Would there be any adjustment in benefits for those already retired under those circumstances? What thinking has been devoted to that kind of problem?

The woman who wrote to me pointed to the fact that those under social security who are retired have received several increases in benefits by legislation following their retirement whereas, as she points out, the retirement funds for teachers do not allow for increasing benefits once a person is retired.

I am directing this inquiry to you rather than to the Social Security Administration in case you would care to add any comments of your own, from a policy standpoint, to the technical information which the social-security people might provide in answer to my inquiry.

With best wishes, I am,

Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, 3d District, Missouri.

You will note, Mr. Speaker, that I asked not only for an explanation of the situation as it affects these retired persons but what could be done about it. Particularly I asked what thinking has been devoted to this kind of problem.

I am afraid that not very much thinking has been devoted to it. The Secretary, in his reply, explains the situation and says that it is up to the appropriate State or local governmental unit which originally administered the teachers' retirement fund to figure out a way to supplement the inadequate pensions now being received, compared to the higher benefits which might be paid under social security.

Mr. Folsom states that he has given a great deal of thought to the problem of retired persons who are not covered by social security but that so far no practical solution has suggested itself for extending social security to those who have not contributed to the program during their working years.

SCHOOLTEACHERS CONTRIBUTED TO OWN FUND

I think the schoolteachers are in a slightly different category in that for all of their working years they did contribute—regularly, each month—to a retirement fund which is now combined with social security. It is not as if they never participated in a retirement fund and now ask for something for nothing. Their mistake, if you could call it that, was in being born just a few years too early—had their retirement been delayed a few years, they would now be under the social-security program. As we all know, teachers often have no choice on when they retire.

I repeat, Mr. Speaker, that this problem is not restricted just to schoolteachers. It touches all of those groups of public servants whose pension systems have recently come under social security, but who retired before the changeover took place. I repeat, also, that I raise the question here because I am anxious to have all Members of Congress made aware of the problem in the hopes that among us all we can devise a practical solution.

I include as part of my remarks Secretary Folsom's letter to me on this subject in reply to my inquiry, as follows:

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, March 13, 1956.

Hon. LEONOR K. SULLIVAN,
House of Representatives,
Washington, D. C.

DEAR MRS. SULLIVAN: This is in reply to your letter of January 12, 1956, in reference to a question raised by one of your constituents regarding the possibility of extending social-security coverage to retired schoolteachers. We regret the delay in replying.

As you know, employees who are protected under a State or local retirement system can be covered under the Federal old-age and survivors insurance system if a referendum is held among the active members of the system and a majority of those eligible to vote in the referendum vote in favor of coming under old-age and survivors insurance. When a retirement system group is brought under old-age and survivors insurance, coverage is extended only to those who are still working at the time the group is covered and those hired subsequently. Since benefits under the program can be paid only to persons who have worked for a specified length of time in covered jobs, persons who had already retired before their group was covered could not receive benefits under old-age and survivors insurance on the basis of their employment for the State or local government.

The decision as to whether any adjustment will be made in the benefits of individuals who have already retired if the members of a State or local government retirement system are brought under old-age and survivors insurance rests with the appropriate State or local officials. The provisions of the Social Security Act which make old-age and survivors insurance coverage available to retirement-system members do, however, contain a statement that it is the policy of the Congress that the total retirement protection of the members and beneficiaries of a retirement system shall not be impaired by reason of the members' coverage under old-age and survivors insurance.

Your constituent mentions that retirement funds for teachers do not allow for increasing benefits once a person is retired. Generally speaking, the method of financing such retirement systems does not allow for increasing benefits of retired persons unless the State or local government concerned makes a special appropriation for that purpose. Under old-age and survivors insurance, as wage levels rise there is a reduction in the cost of the program, expressed as a percentage of payroll, because the increase in contribution income is relatively larger than the increase in benefit costs. In this kind of situation it is sometimes possible for the Congress to provide for a general adjustment of old-age and survivors insurance benefit amounts without increasing the contribution rate. I have given a great deal of thought to the problem of retired persons who have not been able to qualify for old-age and survivors insurance benefits. On occasion, proposals have been made to pay a basic old-age insurance benefit to all persons over age 65 regardless of whether they have worked in employment or self-employment covered by the law. In making any improvements in the old-age and survivors insurance system, however, it is essential to preserve its basic principles, the most important of which are that it is a contributory program financed by the worker, his employer, and the self-employed during years of active work, and that the benefits received are related in part to the individual's earnings. The old-age and survivors insurance program owes much of its wide national acceptance to these sound principles. Therefore, neither this Department nor the Congress has favored proposals for paying benefits to individuals who do not meet the work requirements of the program.

Thank you for your interest in social security. I hope that this information will be helpful in replying to your constituent.

Sincerely yours,

M. B. FOLSOM, *Secretary.*

Italy Displays Her Good Sense

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. RODINO. Mr. Speaker, the following editorial appeared in the May 31 issue of New Jersey's Nutley Sun. It points out the very significant changes that have been taking place in the political complexion in Italy. This should be encouraging to the Western World and particularly to the United States. I am confident that the people of Italy will

continue their onward march against the foe of democracy—communism:

ITALY DISPLAYS HER GOOD SENSE

In the first test of strength anywhere in the world since the purge of the Stalin myth, the Communists suffered a staggering defeat in the Italian municipal elections this week. The Italian election results reflected both the democratic determination of the Italian electorate to remain a free and independent people, linked politically and militarily to the West, and the discomfort of many old-line Communists who had been adorators of Stalin and who now, since the Kremlin's flip-flop, were uncertain of its meaning and stayed away from the polls.

Italy's electoral preference went to Premier Segni's center majority, led by the Christian Democrats, and the losses were suffered by both extremes. The Italian Communist Party continues to be the largest outside the Iron Curtain but it has lost both strength and prestige.

It is our interpretation of this vote that on a town level the hand of the moderate Christian Democrats will be strengthened as the guiding influence of the centrist coalition which also includes the Liberals, Republicans and right-wing Socialists. In many places, the left-wing Socialists gained at the expense of their allies, the Communists. As a result, we need look for no drastic change in national and international policies.

That Last Mile on September 22, 1776, When All of Lower Manhattan Was in Flames

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include extraneous material by Mr. Gridley Adams, director general of the United States Flag Foundation and an ardent admirer of an outstanding American hero, Nathan Hale. The article follows:

Recently an artist, drawing a map of old Manhattan and upon it depicting the sites of historical events, was somewhat perplexed as to where to note either the place of capture or execution of Nathan Hale.

He said the libraries gave little more than general information concerning these two locations. As my great-great-grandfather both roomed and graduated in the class of 1773 at Yale College with Nathan Hale, it would be quite natural there should be in the possession of my family some facts concerning the life and habits of him whose courageous sacrifices mark him as America's outstanding hero, bar none.

Hale had on his neck a dark mole and this, he once told my grandfather one day they were boating in New Haven Harbor and when a storm broke upon them and threatened to swamp the boat, was a sign that he was not to drown—that some day he would be hung.

And up in my old Connecticut homestead there used to stand the rocking chair both grandfather and Hale shared together as a part of their room furniture. If that chair could but speak, think of the conversations it could recount.

Being early fed on, and still the most absorbing of all my reading, American History (my "Nutmeg" ancestors having started (Iroquois War of 1637) to build up this land over which the eagle screams, but now so often unheard), whenever I visited grandfather's house in Cromwell, I used to climb up into that rocker, sit, and listen to what my grandfather and Hale were talking about during those perilous years of the 17770's. And if you want a thrill that sends a shiver up your spine, hold in your hand, as once it was my great privilege to do, Hale's sword.

Much of the information I have covering Nathan Hale's setting out as a spy and his subsequent capture, is taken from the words of his faithful attendant at camp, Asher Wright, who died at the age of 90 and is buried near the graves of the Hale family in Hale's home, Coventry, Conn.

It is said that Wright never mentioned Hale's name with tearless eyes, so great was his devotion and love for his friend.

From this almost direct testimony it is known that Hale left General Washington's headquarters on Harlem Heights, and, attended by Stephen Hempstead, that they traveled as far as Norwalk before they felt far enough away to attempt to cross the Sound.

As Norwalk they engaged the armed sloop *Huntington* under Captain Pond, set sail and landed on Long Island midway between Eaton and Lloyd's Neck, an elevated tract of land remarkable for its extensive and picturesque, but then, lonely scenery, on the east side of Huntington Harbor. This point was known as the Cedars.

Here Jesse Flint, mentioned above, had a farm, while nearby lived a Loyalist familiarly known as Mother Chich, but whose real name was Rachel Chichester, and whose home was a rendezvous for the Tories of the neighborhood.

Hale got safely by this spot without being seen and finally reached the home of William Johnson, where he put up for the night, and after the next morning's breakfast the stranger departed.

How Hale traveled from this point to lower Long Island noting every activity of the British on the way to and from, and making exact drawings of the works of the enemy, together with descriptions in Latin, has never been traced, but at this time the British line had landed 2 miles above the city at Kip's Nay. General Howe occupied the town; General Clinton was stationed higher up, between the 7th and 8th milestone.

Hale had arranged for a boat to meet him as near as possible to the spot where he landed, and so after securing the fullest information he sought, he made his way back to Huntington.

Feeling still safe in his disguise as a Dutch schoolmaster, and while awaiting the appearance of the ship which was to take him back to Norwalk, he boldly entered Widow Chichester's tavern.

Not long after he had entered into conversation with the men gathered there one of them with a familiar face left the room. Later on Widow Chichester announced that a strange boat was seen approaching.

At this several of the loyalists made haste to get away. Hale, supposing it was the ship he expected to come for him, went down to the beach only to find it to be a British armed vessel, the *Halifax*, under Captain Quarme, lying around the point of Lloyd's Neck, out of view of The Cedars.

Among the party on board Hale noted the very man who had so suddenly left the tavern room, and whom he now recognized as an unworthy relative turned Tory.

Being captured Hale was immediately brought back to General Howe's headquarters in New York City, it being the day (Saturday, September 21, 1776) of the big fire.

General Howe's headquarters were then at Mount Pleasant, the home of James Beekman, Esq. (about three and a quarter miles from the present City Hall Park), near Turtle Bay on the East River at 51st Street and 1st Avenue. (It was in this very house that Andre, the night before he went up the Hudson River, occupied a room near the head of the stairs.

The provost, then in use as a jail (and undoubtedly Hale's place of confinement) was for offenders most notorious, therefore the safest place to keep a prisoner.

This provost stood on the eastern boundary of City Hall Park. On the upper side was what is now Chambers Street, but then called Barrack Street because of the range of barracks there.

Later it was the site of the almshouse. Here between Broadway and Centre Street was an old burying ground which long served both as a place of execution and as a last resting place for the prison dead.

The provost marshal, William Cunningham, was a man than whom none more infamous for cruelty ever graced the portals of any prison upon earth.

Tunic Bogart, mentioned as one of the Long Island farmers impressed into the British service, witnessed Hale's execution, that Sunday morning, September 22, 1776.

Eight years afterward (1784) Bogart being asked to witness another execution replied: "No. I have seen one man hung, a spy, and that's enough for me. I have never been able to efface that scene of horror from my mind—it rises up in my imagination always. That old 'devil catcher' Cunningham was so brutal and hung him up as a butcher would a calf."

Now as to America's recognition (?) of its youthful martyr's sacrifices, this country—these very United States of ours—which, when in her agonies stretched out her shattered, imploring hands for a service from which every other man in Washington's Army shrunk, yet it found "one soul from the russet shades of old Connecticut" heroic enough to take the cross of destiny upon his shoulders, and for his country's sake to do, to dare, to die—this America of ours has never raised to his memory and deeds a single shaft upon which might be carved its gratitude.

Connecticut, Hale's native State, built upon a rock in the harbor at New Haven a brick fort known as Fort Hale, but it has passed out of existence, out of the memory of living man.

Congress, though eight times memorialized for aid reported through select committees in favor of an appropriation but finally refused to grant even one dollar.

And yet that same Congress has seen fit to expend thousands of dollars for this and that commemorative purpose; has erected monuments to Montgomery, Mercer, Nash, De Kalb, Gerry Brown; has employed the sculptor's art on busts of Jay, Ellsworth, Marshall; has voted medals of gold and swords to Jackson, Scott, Ripley, Harrison, Decatur, Hull, Perry, McDonough; granted to Williams, Paulding, and Van Wart, the captors of the British spy, Major Andre, each a farm, an annuity of $200 for life, besides a silver medal; and similarly awarded many other lesser heroes for their exploits of one kind or another. But the Congress of the United States has utterly failed to take the slightest official recognition of America's one outstanding hero of them all—Nathan Hale.

Just when 493 homes in lower Manhattan—from Whitehall Slip to Barclay Street—were going up in flames, perhaps nature's God's revengeful way of matching that tragedy at Collect Pond by hoping to include the whole British high brass in its holocaust embrace—at that very hour a brave spirit was going up—but not consumed—to his Maker to report his mission in trying to save his country so that freemen might live in a land of liberty and peace.

And up there he is enshrined in a splendor which no earthly sculptor has ever yet carved in marble to commemorate a hero's deeds. But, today, by his country "unwept, un-

honored, and unsung," his Government, during the last 177 years, has failed to reward this patriot's deeds with even a citation. "O, tempus! O, mores!"

For in Hale was the greatest of all America's patriots; one whose sublime words in that hour of death—in that "last mile"—transcends all heights of oratory; one who, radiant with resignation and in a spirit so exalted by Christian readiness to meet his fate, spoke as the last immortal testament of his soul to the troubled world he was leaving those 14 words which history will ever enshrine and every temple of liberty emblazen on its entablature:

"I only regret that I have but one life to lose for my country."

After so many failures to get any recognition in the way of financial recognition from any Congress the people of Hale's own home village, Coventry, Conn., started to raise money by giving festivals.

Then the Connecticut Legislature was appealed to, and in 1845 it granted the sum of $1,000, and the following year added $250 more, so that it then became possible to erect the stone monument now standing in the graveyard in Coventry and almost in sight of Hale's birthplace.

This homestead is maintained as a Hale Memorial by the gifts of a late private citizen of New Haven, George Seymour.

In it may still be seen the very room where he first began to teach school, his old desk, the benches upon which sat the pupils, and on the wall back of the door the remains of the painted blackboard.

The night before Hale made his supreme sacrifice he wrote farewell letters to his Coventry (Conn.) family and his sweetheart. And during these last hours he asked for a Bible.

This was denied him and all of his letters destroyed, so there remains as his final message, as he stood under the gallows, only those immortalized words.

"Butcher" Cunningham was so stung by the heroism Hale displayed in those last few moments of his life, that he shouted: "String him up!"

It was a British officer, Capt. John Montressor, chief of the Royal Engineers, an eye-and-ear witness of Hale's execution, who was so moved by the calmness, gentle dignity and sublimity displayed by this youthful American patriot, that he could not refrain from reporting it to Capt. William Hull of Washington's Army with the glorious result that they have echoed and resounded down the corridors of time, and are forever engraved upon the hearts of all truly patriotic Americans as long as lives the spirit of American independence and liberty.

England had her Andre, America her Hale, but mark the difference between the ambitions of these two soldiers, each a martyr—Andre for power, Hale for liberty.

Andre dreaded the gibbet and implored Washington that he might die a soldier's death, that by a bullet. Said he to Colonel Scammel: "I pray you to bear me witness that I meet my fate as a brave man," thus measuring himself in the eyes of mankind. No such apprehension tortured Hale; those last words of his measured himself in the eyes of his Maker. Andre was thinking of his own reputation; Hale thought only of his country's glory. Andre of heroism; Hale of benefaction, of the future of his country which straightway seemed to forget him.

England sent an embassy across the ocean to solicit the remains of her Andre, that such might (as later they were) rest in that sepulcher where she garners the relics of her mighty and renowned—"splendid in their ashes and pompous in the grave amid the pomp of kings," Westminster Abbey. Hale, the patriot, who volunteered to defend the liberties of free men, and keenly alive to the sensibilities and affections of home, of family, of his fellowman, lies in ground more hallowed than any manmade sepulcher—the soil of the America he fought to save.

"The powers of language fail;
Love, grief and pity break the mournful tale.
Not Socrates, nor noble Russell died,
Or gentle Sidney, Britain's boast and pride,
Or generous Moore, approached life's final goal
With more composed, more firm and staple soul.
The flesh sunk down, to mix with common clay—
Hale's soul ascended to the realms of day."

Failure of Our Foreign Policy in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 23, 1956

Mr. MULTER. Mr. Speaker, pursuant to permission granted to me on May 9, I inserted in the CONGRESSIONAL RECORD my complete testimony as presented by me before the Foreign Affairs Committee on May 8, 1956. In view of the fact that other Members who directed inquiries to me at that time had not had an opportunity to correct the testimony, on May 14 I asked and received permission to strike the entire item from the RECORD.

I now direct our colleagues' attention to the complete and corrected testimony, as follows:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Mr. Chairman and members, I appreciate the opportunity of coming before you again and voicing my opinions for whatever aid they may be to you in connection with the pending bill.

While I appreciate the worldwide importance of the provisions of the bill, and that it does cover many areas of the world, I would like to address myself primarily to the bill as it affects the Middle East, or the Near East, as it is often referred to.

May I by way of preliminary indicate to the committee that I appreciate that in viewing the testimony of any witness you have the right to ask yourself, what is his background and does he have any prejudice or bias in connection with the subject on which he speaks.

When anyone of the Jewish faith addresses himself to the Middle East, you have a right to take that into account. I want to assure the committee at the outset that my first and primary interest is the same as that of every member of this committee, that is, world peace and the security of our own country.

I hope that in assessing the value of my testimony, you will have in mind not only my religious background but also that I was among the first to look with favor upon restoration or resumption of diplomatic relations with Spain. I think that I can justifiably say that my personal report to President Truman late in 1949, after a visit to Spain, together with the information brought back from there by other members, had at least some bearing upon what I think everybody admits today is a desirable result of resuming diplomatic relations with Spain.

I was among the early advocates of help to Turkey, which, as you know, is a 98-percent Moslem country. Despite the fact that it is quite unpopular among many of my constituents, I have taken the position that the interests of our country require if not a full-fledged ambassador or minister at least a special representative at Vatican City.

With those preliminaries, let me address myself to the Middle East situation.

Chairman RICHARDS. May I add that I can testify to the correctness of the gentleman's statement on those matters.

Mr. MULTER. Thank you, Mr. Chairman. I trust that the members of this committee will not think that I usurped or impinged upon their authority when during the last recess I made a trip into various countries, and more particularly into the Middle East, where I visited in Lebanon, Egypt, Turkey, and Israel.

I think that we can all agree that the overall problem is the establishment of peace in that area and that anything short of full-fledged peace is obviously a threat to our own security and to world peace.

I think we also agree that the subsidiary problems are the resettlement of the refugees, the lessening of the existing tensions and an agreement about the boundaries.

I think with a period of 8 years of experience behind us now there must be a complete revision of our policy in that area with much more firmness than has heretofore been shown in our treatment of the peoples throughout that area, or more accurately, our treating with the leaders of the governments there.

The tensions have gotten worse and more bitter. We have had no real negotiations which would lead to peace.

You may recall that as early as 1948, before there was a State of Israel, I said that the only way we will have peace in that area is if we go in there and help all the peoples of that area, the Arabs who are living there as well as the Jews, to help them rehabilitate themselves and to improve their economic conditions there.

That directly relates to the refugee problem. We are told time after time that there are 900,000 refugees outside of Israel who must be rehabilitated and must be resettled.

The Arab position has been they will not talk peace until all of those Arabs are returned to the State of Israel. That means never. I think it should be perfectly obvious to anybody and everybody familiar with the situation that you couldn't possibly resettle those 900,000 Arabs in the little State of Israel even if you were going to take all of the State of Israel and give it to them.

Before they left there 90 percent of them were living in poverty. The average annual income was from $15 to $30 per year. Thirty dollars per year was high income for 90 percent of the Arabs living in that area.

To take them and send them back there would be utter folly—how are they going to live? Obviously these people must be resettled in places where you can give them a piece of land or an opportunity to earn themselves a livelihood that doesn't even begin to approach our standards, but which will at least improve their prior standards, or give them an opportunity to live if not decently as we know it, at least better than they had lived when they were unable to eke out a living for themselves and their families.

Today in these refugee camps they are being supported mainly by the bounty of the United Nations and this country, which supports or gives to that fund most of the money that is being used for that purpose.

Why haven't they been resettled? They haven't been resettled because the Arab leaders have refused to permit them to be resettled.

In that connection, our policy must be changed, and I think it must be a condition

of further aid going to that area, that something must be done about that situation.

We have talked and talked to the Arab leaders, and we have run up against a stone wall. They will not move in that direction. I think it is high time that our Department of State changes its policy in that regard and make it known in no uncertain terms that this problem must be solved, that we will no longer continue to permit the Arab leaders to use this as a political problem and to keep those refugees stirred up emotionally against resettlement.

I might say that I have been in that area three times—I was there in 1948, 1949, and again in 1955. After each of my visits there I have been visited at home, unsolicited, by Arabs, Moslem Arabs, and Christian Arabs, indicating that much of the story we get out of there about the unwillingness of the Arabs to be resettled is the talk not of the Arab refugees themselves, but of the leaders of the Arabs.

If we can let those leaders know in no uncertain terms that this problem must be solved, you can begin to move those Arabs out, not en masse but family by family and resettle them. We will then get rid of this emotional problem that has kept that area stirred up all through the years.

You will find back in December 1947 and January and February of 1948 I was urging things such as, as I called it at that time, a Middle East TVA. I had in mind things like the Aswan dam that they are talking about on the Nile. I had in mind things like the Jordan Valley project that Ambassador Eric Johnston has done so much to bring almost to the point of closing.

Secretary Dulles told the Senate committee in February that all of the details had been worked out except the political agreement. In other words, every last item had been agreed upon, between Syria, Jordan, and Israel, as to how it would be financed, what would be done there, where the power would go, where the water would go, the division of water between Syria and Jordan and Israel. The only thing that stops the project from going ahead is political agreement or assent politically by Syria and Jordan. Both are pressured by the Arab League not to agree politically.

Israel has indicated her willingness to go ahead. She is ready to execute the formal documents. The Arabs refuse. Israel has several times indicated that she would go ahead without the Syrian and Jordanian consent. Of course, each time she has been persuaded that that is not the thing to do.

I say the time has come when our Government must say, and this is probably the place for it to be said, in this bill, or in the report on this bill. Lay down the policy that if the Arabs will not go along with those projects, Israel will be permitted to do it herself, that there will be no aid to that extent to Syria or Jordan as such, but as long as Israel will make the commitment, the firm commitment, that the power and the water generated there will go in agreed portions or ratios into Syria and Jordan, when they are ready for it, that Israel may go ahead and do the job and we will help her do it.

I think if we took that firm attitude the Arabs would have no choice in the matter but to say, "Let's go ahead."

I was told, as your study mission was told, as evidenced by their report that was submitted to you under date of March 14, 1956—I met with some of the members of that study mission while we were in that area—that a lot of the tension there was caused by the Baghdad Pact.

The surprising thing is that we were told by Arab officials our American diplomats tell them that the United States did not bring about the Baghdad Pact. Why they should have been told that, I don't know. But it only irritated the situation rather than help assuage their feelings.

There is no doubt but the fact is and Secretary Dulles has taken credit for and has claimed it was his idea. He says he started some 3 years ago to set up this Baghdad Pact as a northern tier or frontier as a defense measure against possible invasion of that area by Soviet Russia.

I sat down in this building, in the old Supreme Court room, with Gen. Bedell Smith, who was then Under Secretary of State, and with Ambassador Byroade, who was then our Assistant Secretary of State in charge of the Middle East, when we were talking about this plan 3 years ago.

I said to them, I think there were several of the members of this committee present, I said to those two gentlemen, that you are wasting your time and your energy and money in that kind of venture, because if Russia decides to move in there, all of the money that you are now spending for military aid and economic aid, if it was all used there for military aid, you are not going to stop Russia from moving into that area, when she decides to move.

I didn't anticipate that Russia was going to jump over the northern tier once it was set up. She has done that and moved in. Communist arms have been going into the Arab States for years. Something now must be done to strengthen that whole area. We are not going to strengthen it by sending arms into Egypt in competition with Russian arms. I don't know how much of the facts on that question have been stated to you——

Mr. VORYS. You don't mean into Egypt.

Mr. MULTER. Into Egypt.

Mr. VORYS. By sending arms into Egypt in competition with Russia—I thought you meant into Israel.

Mr. MULTER. Into Egypt, in competition, because the record is clear that for some time Egypt has—it goes back, I think, to 1952, when Egypt first sought arms from the United States.

She has gotten small quantities through the years from the United States. But when she sought large quantities of arms, she was asked to sign the usual agreement, that she would not be an aggressor, not use any of these arms as an aggressor against any nation. She refused to do that. Then, as you recall, in the summer of last year the Secretary of State pretended to be very much surprised with the fact that a deal had been consummated between Czechoslovakia and Egypt for the sale of jets and large armaments. Ambassador Byroade told me in Cairo in November 1955 that he had known of the Egyptian negotiations with the Communists for arms for more than a year before the deal was announced.

I think it should have alerted our State Department to the fact that any country that is looking for arms and will not sign an agreement that those arms will not be used as an aggressor or for aggression, doesn't mean well, but intends to be an aggressor.

Let's analyze that a little further. I understand Secretary of State Dulles said to the Senate committee in February of this year, when he was there, that he didn't know what arms had been sent into Egypt by Czechoslovakia.

When I was there, last year, it was known in Turkey, it was known in Israel and it was no secret to Egypt. I am now talking about November 1955 when she had already received at least 40 jets and 6 submarines. She has today, I believe, 18 battle cruisers. When will these battle cruisers and these submarines be used, and against whom will they be used? We are told the only fleet in that area is the United States 6th Fleet. Russia has no fleet there, and Russia is not going to supply Egypt with any of these submarines if they are to be used against Russia. Against whom will the submarines be used? Against Israel? Israel has no navy.

What about this "preventive war" talk we hear? I say to you in all earnestness it has been stirred up in large part by representatives of our State Department, this talk about a "preventive war" by Israel against her neighbors. Let's analyze it.

The little country of Lebanon to the north of Israel is smaller in geographic size and has a population of about a million people, which is just about half of the number of people in the State of Israel.

They say that Israel can muster an army of 250,000 men. Lebanon, when I was there in November 1955, could muster a total police force and army of 5,000 men. If Israel had any intentions to move on her neighbors, I think everyone must concede that Israel could move in on Lebanon and take it over overnight if she had any desires to wage aggressive war against her neighbors. She has not done it and has no intention of doing it. Of all her borders the Lebanese borders have been the most peaceful.

Most of the border incidents coming from the Lebanese side of the border can be traced to infiltrations from Syria and Egypt.

Persons who have had the same advantage as I had of having been in that area as late as 1949, returning again in 1955, are impressed by the fact that Lebanon is making comparatively the same progress as Israel. Her people are prospering, their standards are improving, and they want nothing but to be left alone. Cross the borders into the other Arab countries and you find that they are practically in the same degraded and degrading conditions as existed all through the years up to 1949. There has been little or no improvement in their methods, their means, their standards, or their opportunities to earn a livelihood.

I was interested to find out where this talk about a "preventive war" by Israel comes from. I noticed that Secretary of State Dulles indicated in his testimony before the Senate committee that he believed that there was such talk in Israel of a preventive war against her neighbors.

I found in our Embassies in Lebanon, in Egypt, and in our Embassy in Israel, the talk came from our American officials, that Israel might indulge in a preventive war.

I know that Ambassador Lawson in Israel had no such idea. On the other hand, I know Mr. White in that Embassy made it known to anybody who would listen to him that it was his idea that there will be a preventive war by Israel, and to bolster his position wherever possible he would put you in touch with that minority, that small group in Israel who have been yelling all through the years for such a war and for enlargement of the state of Israel.

That definitely is a very small group in Israel. The large majority of the people, and all the responsible officials in government in Israel, will say that they know that if they were to start any kind of war upon any of her neighbors, they would immediately turn world opinion against them, that they would be cut off from all assistance of any kind from this country and from our allies, and that while they might win the first battle, they would have to lose such a war.

In our Embassy in Lebanon, the same talk was going on. In Egypt I confronted our ambassador, Ambassador Byroade, with the same matter and I asked his pointblank: "Do you think there is a single Arab leader who believes that Israel will wage a preventive war?" and Mr. Byroade said, "They don't believe it, but I, Hank Byroade, believe it."

It is that kind of preachment going on by our American officials there that is keeping this pot stirred up.

Unless our State Department is going to do something about it, to stop it, we are going

to have more and more trouble in that area instead of less and less.

You will probably recall that Mr. Dulles has been taxed many times with the situation in that area, and has been asked to give his reasons as to why something can't be done about it, particularly with the situation in Saudi Arabia, where they refused to permit American Jews to serve as part of our Armed Forces. There is nothing wrong with the provision in any of these agreements that anyone objectionable to a local government should not be permitted to remain in that country.

That has been the way of governments ever since we have had civilized governments. Today, in the United States, if our Government finds a diplomat here from a foreign country who is objectionable, we send him home. We never find anybody objectionable because of his religious beliefs. When the attempt is made to relate Judaism or the Jewish religion to Zionism, then you get this very fine difference that is drawn by the Arabs and by the Moslems, which even our Secretary of State, however, does not try to draw.

They will tell you, the Arabs, the Moslems, that the Jews are our cousins. They say: "We are all Semites. We have all been persecuted together and we want to live peacefully together. But," says the Moslem, "while I do not oppose the Jew, I am opposed to the Zionists, and the Zionist is the fellow who wants a Jewish state."

That cannot be an excuse to our State Department for saying that any American Jew in the armed services of our country may therefore be deemed objectionable to Saudi Arabia or to any of these other countries.

Whether you go to Lebanon or go to Turkey or go to Egypt, you will find that there are Jews living there, and living there peacefully with their neighbors. True, they make no attempt to espouse the Zionist cause in the Arab countries, or the cause of an independent State of Israel. But all this destroys the substance of the charge that the basic difference in that area is a religious difference.

These people can live together and will live together, and will trade together, and prosper together, if given the opportunity.

I think it is up to the Congress to write the directives into a bill such as this, so that our State Department representatives will do the right thing. They talk about trying to establish peace in this area and couple it with talk about the fact that the boundaries must be agreed upon first.

I say to you gentlemen that if our State Department said to the Arab States: "We will not stand for aggression from either side. We will not permit aggression by Israel against her neighbors. We will not permit aggression by the Arab States against Israel," this problem can be settled. It cannot be settled by saying: "We will guarantee your borders if, as, and when you will agree upon the changes," because that may never come. Unless and until we take the firm position that these boundaries will be changed only by agreement or by arbitration (and there is a method of arbitration) we cannot impress upon both sides the imperative need for them to sit down and agree upon a change of boundaries.

But we must first say, "You are not going to fight about these borders and boundaries." Then if they won't sit down and agree upon it, there is a way of making them go to the World Court and submit the matter there.

Mr. CHIPERFIELD. Haven't we said that?

Mr. MULTER. No, sir, we have not. Mr Dulles has repeated time and time again that we will guarantee these borders and boundaries if, as, and when they agree upon them.

Mr. CHIPERFIELD. The State Department made a statement about aggression, and offered their services, the United Nations, and so forth, to work this thing out, didn't they?

Mr. MULTER. They have not taken the firm position I advocate. There have been intercessions, but there has been no firm statement of that policy by our State Department to this day.

Israel asked for a mutual security pact, and in asking for it she suggested for each of the Arab States the same security pact that she asked for. This, too, is a method of smoking out the evil intent of a potential aggressor. Such a nation not only will not ask for, but will reject such a pact.

The State Department has not seen fit to give or even negotiate with the state of Israel about such a security pact.

Chairman RICHARDS. Where would you place the line? There is a dispute about the line.

Mr. MULTER. You say to all sides: The lines remain precisely where they are until you sit down around the peace table and agree upon a change, and, if you can't agree, then either you are going to appoint arbitrators, and, if you don't appoint arbitrators, you go to the World Court and let the Court decide. When the Court makes the decision, it will be binding upon all sides.

This is an international dispute. It is a proper subject to come before the World Court. It is high time that we as leaders of the world will say that we will stand for no fighting about things of this kind which can be settled either by agreement or by a Court decision.

In my opinion, we must take that kind of firm position, and, if we did, we could very quickly settle these problems in that area. If we don't take that firm position, then we are bound to have trouble there. These people will continue to snipe at each other, and it doesn't matter who is responsible for the first sniping. A shot from one side brings forth two from the other side. It doesn't matter whether it comes from Israel or the other side. As long as you have these people stirred up, they will be sniping at each other. The only way to handle it is for us to take this firm position. I do hope that this committee will, as a part of this bill, say that we want to give aid, economic aid, to all of this area but peace, true peace, is the price they must pay.

You have heard many times from our Secretary of State that he hopes this issue of the Middle East will not be made a political issue in this year's election campaign, because it will stir up the Arabs into again voicing the opinion that in this country we depend on Jewsh votes and therefore we are more favorably disposed toward Israel than we are to the Arabs.

I was surprised to learn when I met with the Arabs throughout this area, that not one had ever been told that the Jews in this country are a minority, that in the Senate with 96 Members we have only 2 who are Jews, that of the 435 Members of the House the maximum we have ever had is 11.

As I pointed out to them, in the membership of the study mission that was there representing this very committee, not one depended on a Jewish vote in his home district to get himself elected; that this was not a Jewish problem, nor a Christian problem, nor a Moslem problem, that this is a problem of doing the right thing, the humane thing, and making people behave and not fight with one another.

When you talk to some of our Arab friends over there, you find the unfortunate part of it is that our American diplomats have never once taken the trouble to tell these Arab officials that this is not a Jewish problem at home.

They talk here at home about making it a political issue, but they never tell the Arabs it is not a political issue, that neither party needs Jewish votes to elect our President, or our House or our Senate.

The shame of it is that our State Department has not taken the forceful unequivocal, position and said to these people, "You are wrong. This is not a political problem at home."

The same thing goes for the way that they handle some of these other problems there. You travel through the Middle East and you are told by some of the Arabs that we should stop the Jews raising funds here in the United States and sending them to Israel. They don't understand that charity drives are conducted here without the aid or interference of Government.

Not once has an American diplomat said to the Arab leaders that the Jews have said time and time again in the United States that they will go out and raise as much money to rehabilitate the Arab areas as they raise for Israel, if only there can be peace there; that if the Arabs will sign a treaty, Americans of all faiths will do the same for the Arabs as they are doing for the Jews there.

No one knows better than we people here at home, Jew and Christian alike, that you can't have prosperity in one little corner surrounded by poverty, without creating antagonisms in the poorer areas. You have to build up the whole area and give them all an opportunity to live.

Mr. VORYS. Along the line you just mention, on August 26, 1955, in an important statement by Secretary Dulles, he said, with reference to the plight of the 900,000 refugees:

"Compensation is due from Israel to the refugees. However, it may be that Israel cannot unaided now make adequate compensation. If so, there might be an international loan to enable Israel to pay the compensation which is due and which would enable many of the refugees to find for themselves a better way of life.

"President Eisenhower would recommend substantial participation by the United States in such a loan for such a purpose."

What do you think of that statement?

Mr. MULTER. That is directly in line with what I have in mind. The Israelis would like to have that. Every right-thinking person would like to see that done, and the only reason it isn't done is because the Arab leaders sit back and say, "We won't let you resettle these refugees anywhere except in Israel."

Mr. VORYS. That is not my understanding.

Mr. MULTER. I would like to suggest that if you would give me, Mr. Chairman, an executive session meeting I will bring to you Arab-Moslems who will tell you that when you go into these refugee camps you will be permitted to meet only with the leaders. They will tell you how terrible the situation is, how the people in the camps will not be resettled except in their homeland. These witnesses, I can bring to you, will tell you that is not so, that the Arab refugees are willing to be resettled, that they want to be resettled. There have been negotiations time and time again between some of them——

Chairman RICHARDS. I would like to say, Mr. MULTER, that we started a little late. Mr. MULTER told us beforehand that he had a meeting with the Banking and Currency Committee, and he has received a notice that they are ready for him.

Mr. MULTER. I will take just a few minutes more. I would like to answer any questions that the members care to address to me either this morning or at any other time you will invite me back.

Mr. VORYS. As you know, the United Nations resolution said it was the duty of Israel either to compensate or repatriate the Arab refugees. Both of those alternatives are open to Israel.

As far as I know, there has never been any offer by Israel to repatriate——

Mr. MULTER. The 900,000—you are right. As I indicated before it would be an impos-

sible task to try to repatriate them in Israel. They have taken Arabs back into Israel. There have been some 100,000 families that have been reunited within Israel, people who had been outside Israel and permitted to return.

Israel has always indicated her willingness to compensate the Arabs for their property that was left behind. She has unblocked the funds within Israel that were left behind by the Arabs. They have made available that to them.

I was about to say, as I got this message, that I can bring to you Arabs, Christians, and Moslems who left Israel, who negotiated with the State of Israel for compensation, and when the Governments of Syria and Jordan where they were living found out that the negotiations were being consummated, stepped in and threatened their families with annihilation if they dared to go through with the agreements or to accept any of the money offered by Israel.

There isn't any doubt that people who are entitled to the money, if they are left alone, will be fairly compensated and will get the compensation that they are willing to accept, if the leaders of their home governments would let them take it.

I am prepared to bring to you, Mr. Chairman, persons whose names must be protected because their families are still over there and who would be annihilated if it was known they are testifying here. I will bring you Arabs who will testify under oath that what I say to you is the fact.

Mr. VORYS. The home government of the Israeli-Arab is Israel. We all joined in the desire of the Jews to go back to their homeland. The homeland of these Arab refugees is not some other country; it is Israel.

Mr. MULTER. How many of these 900,000 fled from Israel?

Mr. VORYS. I don't know. A lot of them have been born in exile.

Mr. MULTER. Many of them were born in the refugee camps. You will find that in the Arab refugee camps outside of Israel, among the 900,000, you will find thousands and thousands of them who were poor nomads roaming the Arab lands, eking out a living from the countryside, who moved into these camps because there they are supported by the U. N. and the contributions of the United States to the U. N., instead of continuing to roam.

I don't care how they got there. They are human beings who should be rehabilitated. They are human beings who should be given an opportunity to earn a livelihood. Something has to be done for them. But it is impossible to take the 900,000, whether they were ever in Israel or not, and move them into Israel, certainly not until there are firm peace treaties entered into between these Arab countries and the State of Israel.

If the peace treaties were consummated, then you might be in a strong position to say, "Those who came out of Israel have a right to return to their homeland."

But as long as they are at war—as late as January 16, Mr. Nasser said, "From the Atlantic to the Persian Gulf there is but one Arab nation which no one will succeed in dividing again. After World War II part of the Arab heart was snatched from the Arab body"—meaning the State of Israel. "Today Arabs from the Atlantic to the Persian Gulf will cooperate in restoring that part," restoring Israel to the Arab lands.

As long as that condition exists, as long as the Arab leaders join with Mr. Nasser, as they are doing in saying that, surely no one believes that bringing those 900,000 Arabs or any substantial part of them into Israel is going to make for peace.

Chairman RICHARDS. Mrs. KELLY.

Mrs. KELLY. Mr. Chairman, I would like to compliment my colleague from Brooklyn, Hon. ABRAHAM MULTER, for his testimony and appraisal of the Middle East situation.

Is there any question in your mind, Mr. MULTER, that if we could get the representatives of all the countries in the Middle East to a peace conference that Israel wouldn't be willing to settle every controversial issue, including the return of a token number of refugees, repayment for their land and return of their bank accounts, trade, boundaries, and so forth.

Mr. MULTER. Mrs. KELLY, there isn't a doubt in the world that the Israeli Government and their officials will sit down at the peace table and talk about all these problems and try to arrive at a solution of them.

But let's be practical about it. As of today, the Arabs will not sit down with the Isarelis face to face. But that doesn't mean that you can't commence these negotiations.

As a matter of fact, word was sent home at my instance to the Secretary of State. I know it was received here. I know it was received in our Embassy in Israel. I know it was received in our Embassy in Egypt, that the Arab leaders were ready to sit down and talk, not face to face with Israel, but with American representatives, with United States representatives about the settlement of all of these problems, if the United States will take the initiative and say, "We insist that you sit down and talk about these things."

You could keep the Arabs on one side of the barrier, the Israelis on the other. The United States representative could talk first to one group and then to the other group, and finally consummate an agreement and bring them together to sign it.

It was going to be done, and word was sent back that it would be done, not on the basis of the 1947 partition resolution but on the basis of the 1949 resolution. There is a difference, because now the Arabs say they want to roll everything back to the 1947 boundaries.

The 1949 truce agreements recognized the boundaries set up at that time as armistice boundaries, subject to revision. That word came back, was received here in Washington, was received throughout the Middle East, with the exception of our Embassy in Turkey.

Within 5 days thereafter, Prime Minister Eden of Britain issued the statement that he would be the arbitrator between Israel and the Arabs on the basis of the 1947 partition resolution.

It was an attempt by Mr. Eden to reestablish British prestige in that area. Whether or not he knew that by talking about the 1947 resolution he would blow up the possibility of these negotiations, I don't know, and I won't make that charge against him.

The Arabs sent word that they would talk about the 1949 borders. He wanted to talk on the basis of the 1947, and the whole think blew up.

Mr. CHIPERFIELD. Mr. Chairman, I was going to ask this: I can't understand how there would be any considerable portion of people of Israel that would advocate a preventive war, because if they fight a preventive war they are going to have to fight the very war that they are going to try to avoid.

It is a good deal like a man committing suicide because he is afraid to die. That would be the case if you fight a preventive war; no one would win.

There is one question that you didn't comment on, and perhaps you didn't do so because you didn't desire to raise that issue; if you do not, do not answer my question.

Do you advocate the United States sending arms to Israel?

Mr. MULTER. Yes, I do, sir. I disagree with Mr. Dulles that to send arms at this time into Israel would be creating an arms race. The arms race is on.

Mr. CHIPERFIELD. Do you think it would be provocative of war?

Mr. MULTER. No; it would not be. I think it would be preventive of war. I think it is much better to do that than send in 1,800 marines from the 6th Fleet. As Prime Minister Ben-Gurion said, "Don't send your boys over here; send us arms so we can fight your battle." As long as Israel is strong——

Mr. CHIPERFIELD. I heard Churchill made that statement.

Chairman RICHARDS. And Roosevelt, too.

Mr. MULTER. I am against an arms race. The State of Israel is against an arms race. I think every sensible person is against an arms race. But I think you must keep these parties on an even balance. If they know that to fight one another will be to annihilate one another, they won't fight.

Mr. CHIPERFIELD. We have the status of the forces in all of these countries. We can't make it public, but we do have that information

Mr. BURLESON. As our able colleague always does, he makes a splendid case, but he starts with present-day conditions. I think many people do, in justifying a great many things related to this issue.

Humaneness is exactly the reason that Israel was created in the first place. But there were some conditions in the Balfour Declaration which are usually forgotten or conveniently ignored.

There is no legitimate reason for anyone to think or to believe that Israel is going to be driven into the sea or to say that it is not a nation and that it is not going to endure from now on. Certainly I have no such concept that Israel will not endure.

Of course, it will. Nevertheless, going back to the historical facts under the Balfour Declaration, the British finally decided after the great influx of illegal entries into Israel to advocate a trusteeship. We went along with that policy and were discussing it when Israel declared herself a nation and then we immediately recognized her as such. In the declaration were safeguards for the Arab majority. The great majority were Arabs in the country at that time. There were only 50,000 Jews, but hundreds of thousands of Arabs. It was agreed that their right should be protected.

It was also agreed that no people of the Jewish faith would be bound by the Zionist concepts to the State of Israel outside of the State of Israel.

That leads me to say this to the gentleman, when he speaks of Israel as related to Zionism: Would you contend, Mr. MULTER, that there is a distinction between Israel as a nation and Israel as a creature of international Zionism? Do you attempt to set one apart from the other?

Mr. MULTER. I think you will concede that Israel, like our country, guarantees freedom of religion. I think you will agree that Israel, like our country, guarantees every one of its citizens the right to vote and to hold office.

There are Arab-Moslems and Arab-Christians in the Israeli Parliament. The point I tried to make is that while most Jews are Zionists, not every Zionist is a Jew. There are many Christians who are Zionists. Zionism is the political concept of a Jewish state. Every Jew is not a Zionist.

You probably know that we have in this country a so-called American Council of Judaism. They have been bombarding the Congress with literature for some time. Actually, they represent less than 2 percent of the Jews of this country. But they were against the establishment of a State of Israel.

Mr. BURLESON. If you will allow me to interrupt, they have vehemently denied that they are opposed to the State of Israel. They definitely deny being either pro-Israel or anti-Israel.

Mr. MULTER. They may take the position now that they are in favor of the State of Israel. They were not in favor of it originally. They were bitterly opposed to its coming into being.

After it did, they accepted the fact, but in accepting the fact they do everything they

can to dissuade Christians and Jews from sending money to Israel or aiding it in any way. They are doing what they can to help destroy Israel.

They take the position that we must lean over backward in favor of the Arabs and against the State of Israel, which I say is not good policy. It is not American policy.

I don't say that we should be anti-Arab. My argument all through the years is that we must be just as pro-Arab as pro-Israel. You have to be fair and impartial to both of them.

Mr. BURLESON. Is not impartiality the announced policy of the State Department today?

Mr. MULTER. It may be the announced policy, but they are not doing anything to effectuate that policy. They are doing much that is contrary to that policy.

Mr. BURLESON. In connection with funds collected in the United States, let me ask the gentleman, do you agree that contributions to the United Jewish Appeal for the State of Israel should be a deductible item on the tax account of the American taxpayer as a philanthropic contribution?

Mr. MULTER. To the same extent that they are deductible for the support of the American University at Beirut, to the same extent as they are deductible to help people who are in distress anywhere in the world, to the same extent as they are to the Red Cross, and the like.

Mr. BURLESON. Do you know of any other instances or any precedent where any contribution by United States citizens to any political entity of a foreign government is deductible for income tax——

Mr. MULTER. These funds are not made available to a political entity.

Mr. BURLESON. But I disagree with the gentleman—I do not make a challenge that could not be refuted. Frankly, I don't know, but my information is that the funds collected by the United Jewish Appeal for the State of Israel goes into a common fund and can be used for any purpose the Israeli Government may desire.

Mr. MULTER. Mr. BURLESON, I most respectfully, but just as strongly disagree with you. The evidence is overwhelming that not a penny of that money goes into the coffers of the State of Israel. Not a penny of that money is disbursed by the State of Israel. Every dollar of that money is used—that which goes into the State of Israel; not all United Jewish Appeal money goes to the State of Israel—that which does go in is used for philanthropic purposes, rehabilitating people, making available to them the means for agriculture, to learn to farm, to learn skills for industry, for hospitals, and the like.

There isn't a dollar of that money that is administered by or paid to the State of Israel.

Mr. BURLESON. Our State Department people were very definite in 1954 in saying that those funds collected went into a common fund in the State of Israel, and the expenditures were not traceable, that they would not give us any assurance that tanks, planes, guns, public housing, health, or anything else were not purchased with them; that it was administered by the Israeli Government.

Mr. MULTER. Mr. BURLESON, were they referring to the United Jewish Appeal funds or to Israel bonds?

Mr. BURLESON. They lumped them all together.

Mr. MULTER. You can't lump them together, because the United Jewish Appeal money is not money that is used by the Government or administered by the Government, while the Israel bonds is a bond issue of the State of Israel and the proceeds go to the State of Israel.

Mr. VORYS. And you pay tax on them?

Mr. MULTER. Yes, you pay the tax on the income.

Mr. VORYS. And you can't deduct it?

Mr. MULTER. There is no deduction for the purchase of bonds or the income therefrom.

Mr. VORYS. I found that out recently at home.

Mr. BURLESON. I know that is true of the bonds.

Mr. MULTER. I assure you, Mr. BURLESON, if any such proof were available, our Treausry Department, the Internal Revenue Service would immediately revoke the tax exemption that is accorded to those gifts.

Mr. BURLESON. They first decided it was not deductible, and then later on they decided it was under an appeals court decision.

Mr. MULTER. I am not familiar with any litigation involving the matter.

I do know very definitely, I have been active in those matters for a long time, on a high level, and I know there isn't a dollar of United Jewish Appeal money that goes to the Israeli Government.

Mr. BURLESON. I hope the gentleman understands I was inquiring. I also hope he is correct and would welcome substantial proof of the correctness of his position.

Mr. MULTER. For more than 50 years the Jewish National Fund, an American organization, has been raising funds here and buying land in Israel, which is then leased on long-term leases, to anyone, to any Jew in Israel who wants to occupy the land. That has been going on for 54 years, to be exact.

Chairman RICHARDS. What is your recommendation about this legislation? You do not want us to include any money for help to any Arab State unless they do what?

Mr. MULTER. Unless they will in good faith enter into peace negotiations, either directly or through the United Nations or an agreed intermediary.

I am not so foolish as to think that you can force these Arabs to sit down face to face with the Israelis. But certainly good faith negotiations should be entered into without delay through an appropriate intermediary.

The United Nations would, of course, be the best intermediary. There are antagonisms there, too. Possibly they could agree upon some other intermediary, who could bring them to the peace table where they could sign the peace agreement.

It is not going to be an easy task. And it will not be accomplished overnight or in a day or week. Certainly we ought to say very firmly, "This is the time to do it."

Chairman RICHARDS. That you have to do certain things or else?

Mr. MULTER. Yes.

Chairman RICHARDS. If they don't do what we say——

Mr. MULTER. We will know where we stand. We will know whether or not we ought to send in any training tanks to Saudi Arabia at a time when there are reserve tank battalions in this country which haven't been able to get a single tank for training purposes.

Chairman RICHARDS. They agreed in writing to provide those tanks, did they not?

Mr. MULTER. They made the agreement to purchase the tanks in September 1955, and payment was made in November 1955. You and I sitting there would certainly have said, "Well, now, this is not the time to make that kind of delivery."

Mr. JUDD. Was not the basic agreement made in 1951 that they could buy weapons and training tanks, and so on, in this country?

Mr. MULTER. Yes.

Mr. ZABLOCKI. Mr. MULTER, is your suggestion only to this one area or is it your intention that we include such a provision for every area where there is a dispute? For example, do you propose the United States withhold any aid to Greece or Turkey, or Britain, until the Cyprus issue is settled, withhold aid to Pakistan and India until the Kashmir problem is resolved? Further, how about the other areas where there are conflicts?

Mr. MULTER. I say, once you find that the parties' refuse to sit down and negotiate in good faith——

Mr. ZABLOCKI. Who would adjudicate the situation as to whether the parties are sitting down in good faith?

Mr. MULTER. Don't you think that the question answers itself, when 8 years have gone by and the parties have not yet sat down and consummated an agreement? Isn't that long enough to determine that they are not trying in good faith to arrive at an agreement?

Mr. ZABLOCKI. No, because there is not a settlement over 8 years does not necessarily indicate bad faith on the part of Israel and the Arab States.

Mr. MULTER. That might be the necessary thing. It might be necessary to say to both sides, "You are both intransigent. Neither will talk. We can help neither one of you from here in."

It might be necessary to come to that position. I don't think it will be. But it may be.

I would like to stay on, but if it is agreeable, I will come back at any time you suggest. I must get to my committee, which is in executive session.

Chairman RICHARDS. Thank you, Mr. MULTER.

Texas 4–H Club Boy Delivers Prize Winning Speech on Soil Conservation

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. ROGERS of Texas. Mr. Speaker, among the many assets possessed by the great State of Texas our greatest, and the one in which we take the most pride, is our youth. The young men and women of Texas are second to none in their love of country, their forward-looking approach to life, and their ability to analyze, with mature judgment, the pressing problems of our day. Especially capable are the boys and girls on our farms who, through participation in the fine work being done by the 4–H Clubs, are helping to build today the better world we hope for tomorrow.

Under leave to extend my remarks, I am very happy to include a speech written by Jim Teegerstrom, of Shamrock, Tex., in the 18th District which I have the honor to represent in the Congress. A student at Shamrock High School, Jim gave the speech in the district 4–H Club public-speaking contest, winning first place honors. Later this month he will compete in the State contest.

This young man, in his speech, goes to the heart of one of the basic problems in our country, the waste of our rich and life-giving soil. All of us can profit from the thoughts expressed by the young farmer from Texas.

The speech follows:

4–H CLUB BOY WRITES PRIZE WINNING SPEECH

(By Jim Teegerstrom)

Beautiful, for spacious skies, for amber waves of grain. For purple mountains ma-

jesties above the fruited plain, America God shed His grace on thee.

What a heritage we Americans have.

America, the greatest Nation in the world today. When the Pilgrim Fathers landed on that bleak, cold day to lay the foundation of a new nation, the sight that greeted them was a wilderness but a wilderness of virgin lands—with its untapped natural resources.

Yes; our heritage is great.

Our forefathers laid the foundation for the growth of a great nation because they had vision—a vision for the tomorrow. As a result, we have this heritage of freedom and plenty, and the greatest heritage of all is the God-given heritage, of our soil. For from our soil has come the food and fibers to feed and clothe our Nation and others. This, our soil, is our greatest resource; our greatest investment. The most bountiful of all gifts. However, this heritage has been and is misused.

When our grandfathers departed from this earth the land was already on its way to depletion. The reason for this terrible condition of the soil was their lack of knowledge of soil control. These men were constantly tilling virgin lands and coming on, so the idea of soil conservation or even the consideration of the soil's condition was unknown. Human existence was the primary thought. Consequently these soil conditions developed further. Thus we see from the beginning, our soil has been rapidly losing its productivity. Very few noticed or cared because there was plenty of new land to the West.

When the frontier land was gone, our farmers learned that it was time to combat soil losses. For they realized that our soil is a strong method of defense for this nation of ours. As they saw, so must we see the needs and conditions of our soil. In this crucial period we certainly need to keep our defenses up. Only can we do this properly if we protect our heritage, the soil. The judgment day has come to the agricultural men of America. It is your job and mine to combat soil depletion.

Erosion is one of the greatest of all hazards to our current standard of living. Approximately three-fourths of the entire acreage in the United States has been damaged by some form of erosion. We, the citizens of America, are now faced with the startling fact that erosion is costing our Nation nearly $400 million annually in soil depreciation and reduced yields.

The Providence Gully is just a slight glimpse of what is now taking place in losses through water erosion. This terrible gully originated from a drip at the eaves of a barn. It has grown so much that it has engulfed that whole farm which gave it its birth, and is eating more and more essential farmland every day and will continue to do so.

A region in Alabama has been so destroyed by erosion that it accounted for almost 500,000 acres.

The mighty Mississippi River alone deposits more than 400 million tons of soil into the Gulf of Mexico annually. To take care of this vast amount of waste it would require a train of freight cars long enough to circle the globe at the Equator 37 times.

There are also regions in our own State that were once prosperous communities, but are now wastelands. In one given area 32,000 acres were in cultivation, now less than 5,000 are profitably tilled. In the same area, once 1,650 people gained their livelihood from this soil. Today the number has decreased to only 435 inhabitants.

The topsoil was once 8 to 12 inches deep; now where topsoil can be found it measures 4 to 8 inches in depth. Gullied slopes, thin soils, poor crops, weak cattle, undernourished children and abandoned homes and farms tell an unpleasant story. This is truly an example of many like areas in the United States today. The people of America led by the Department of Agriculture have taken certain measures to stop these terrible wastes.

Such organizations as 4–H Clubs are designed to educate agricultural youth in actually helping put these improvements into practice, the Soil Conservation Service is actually helping put these improvements into practice.

The Department of Agriculture and the youth organizations of America are helping. But they cannot be expected to do it alone. It is your job, my job, as well as the merchant, the baker, and the engineers' job. They all know that when a soil wears thin, civilization weakens and when it will not produce, a culture is lost.

America must awaken to its soil condition before it is too late. We must keep the lamp of knowledge burning across every tillable acre, and every turf of grass, until the devastation of erosion is halted and brought under control. There we find the answer to the problem: To bring damaging erosion under control.

The industrious, the farsighted, the truly patriotic people will stem the tide of erosion. They are the ones who will not complain about the inconvenience of the contour row, nor the extra cost of building terraces. They will rotate and cultivate the crops with methods that keep the soil in place and cause it to store the proper amount of moisture. They will plant crops in strips in such a way that it will rob moving rain of the soil it carries. These are the people who will keep America great. I trust that you and I, my friends, are among that group.

It has been said that the pen is mightier than the sword, and that 10 firery words can move a thousand people, but I believe that to conquer the soil problems it will take more than words. It will take the wholehearted actions of the citizens of the United States. It is our patriotic responsibility.

Today we are the heirs of America's heritage and it is our responsibility now, with courage born of vision, to "pledge our lives, our fortunes, and our sacred honor to defend, preserve, and enrich its blessings, for future generations. Where there is no vision the people perish."

"America. God shed His grace on thee,
And crown thy good with brotherhood,
From sea to shining sea."

A Ruinous Tax

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the June 2 issue of the New York Journal-American entitled "A Ruinous Tax":

A RUINOUS TAX

With a balanced budget and a Treasury surplus in sight when fiscal year 1956 ends on June 30, tax relief will again occupy many minds in Congress.

The administration is opposed to tax reduction now. Secretary of the Treasury Humphrey believes surplus funds should be applied to reducing the monstrous national debt, which, of course, would pay off in future years by diminishing the gigantic cost of the debt in the form of interest charges.

There are, however, tax fields in which lower rates would actually result in larger tax revenues. Income taxes, both personal and corporate, are in this class.

Even more constructive would be reforms in excise taxation. In fact, excise taxes should in some cases be abandoned entirely—notably so, the Federal tax on motion picture theater admittances.

This tax pays the Government $80 million a year. But it has caused a dwindling patronage that threatens the existence of motion picture theaters worth $1,457,800,000.

The country has 19,200 movie theaters. Of these, 10,900 are in financial straits: 5,200 are operating at a loss, and 5,700 are approaching that depressed status. Figures show that the 10 percent Federal tax is a contributing cause of the current distress.

Movie houses have competition in television and radio. Yet they continue to be the principal amusement source for millions of people, young and old, and almost the only source for millions of families in the lower income groups.

Taxing the recreation of these families out of existence and, in so doing, destroying a large taxpaying industry, along with thousands of jobs, can be called anything but sound economics or good government.

Jefferson-Jackson Day Speech

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. JENNINGS. Mr. Speaker, the gentleman from Texas [Mr. WRIGHT] recently addressed a series of Jefferson-Jackson Day dinners in my district. His remarks were enthusiastically received, and I believe he expressed the fundamental Democratic philosophy as well as it has been expressed anywhere in recent times.

In fact, I have received numerous requests from those who were privileged to hear him for copies of his speech. Under leave to extend my remarks, I am including a copy of the address he made on one of these occasions:

JEFFERSON-JACKSON DAY SPEECH
(By Congressman JIM WRIGHT)

There are several reasons why I am happy to be here to share this occasion with you this evening.

First of all, I am grateful to you for this opportunity to know your beautiful corner of the universe here in southwestern Virginia. I have a particular pleasure in being here, because I've been wanting to meet the folks who sent PAT JENNINGS to Congress. A fine indication of his leadership and of the esteem in which he is regarded by his colleagues was seen in his recent election to head the 84th Club, composed of the first term members. You are to be sincerely congratulated upon your extremely able representation.

Furthermore, I'm enjoying this occasion because you have made me feel at home. Meeting some of you earlier and looking into your faces now I can almost imagine that I am talking with folks from my own native plains country. Basically, I think we are pretty much the same—Virginians and Texans—and I think fundamentally we want the same things. We don't ask for any special privileges or selfish political favors from

our Government. But we want a chance. We want the right to hold our heads high in a free land. We want to feel that our Government is interested in keeping a strong, healthy economy with jobs enough to go around. We know that prosperity and depression both have always begun at the grass roots, and we want to think that the man who tills the soil is not completely forgotten by his Government in Washington.

I expect one of the reasons I feel so much at home among you folks is because you're Democrats. Now, I'm not trying to tell you that the Democratic Party can do no wrong. That wouldn't be honest. We have made mistakes, and you know it.

Nor do I believe that the standard equipment for all Republicans includes a set of horns and a forked tail. I am one of those who has admired the President of the United States as a man of honest intentions, and I think I know how to place the national welfare above purely partisan interests.

But I do view with considerable alarm the apparent design of many Republican Party leaders to turn the clock back to the days of the Smoot-Hawley tariffs, high interest rates, and 12 million unemployed—back to the days of a national policy which ignored the needs of the average people who make up the country.

PARTY OF THE AVERAGE AMERICAN

And I do believe that the party of Jefferson and Jackson and Wilson and Roosevelt and Truman is the safest custodian of the national welfare because it is the party of the average American. These men are the everlasting symbols of a government responsible to its humblest citizens. Without exception, they have stood for the rights of the many as opposed to the privilege of a few—for the public good as opposed to the private greed.

They knew that the majority sometimes made mistakes. But they counted these mistakes less dangerous by far than the inevitable and vicious mistakes which have always resulted from the rule of a small and tight coalition of privileged men. They believed deeply and passionately that the natural instincts of the common, decent, ordinary human being always and unfailingly prove themselves in the long run to be the highest wisdom and the most reliable judgment available in determining the national interest.

In short, they trusted the people. And the people trusted them.

There have always been some—and they are with us today—who inherently distrust the judgment of the ordinary people. Many of the cultured and learned men of Revolutionary times—Alexander Hamilton among them—regarded this novel idea of a government by the people as something of a "noble experiment" but felt that sooner or later some way must be devised for keeping the actual reins of government in the hands of the privileged and prosperous few.

JEFFERSON BELIEVED IN PEOPLE

But Thomas Jefferson, blessed with almost prophetic vision, saw that such a minority control by the aristocracy would decay and become rotten, exposing this infant Nation to the same corrupt and licentious rule that had driven our forebears from the Old World. So he worked for the extension of suffrage and for a government which heeded the popular will.

He thought that the average man was worthy of freedom and capable of passing on the policies by which the Nation was to be guided. And in Jefferson's day this was a radical thought. The established press of his time, almost without exception, was arrayed in a bitter fight against him. They called him an impractical dreamer, a radical reformer, and worse.

Those who would arrogate to themselves the exclusive right to make all the decisions for the people even had the colossal affrontery to accuse Jefferson and his followers of treason, and to imprison some of his supporters under the Alien and Sedition Acts of 1798. And Thomas Jefferson was driven to resign from the Vice Presidency.

Yet Jefferson won his fight—as all such fights are finally won—against minority control. It was he who, more than any other, authored and fashioned and shaped on this continent the infant form which men called democracy, and then breathed into its sails the breath of motion.

JACKSON'S STRUGGLE SIMILAR

Time passed. Men were not eternally vigilant, and once more the control of national affairs was maneuvered into the hands of a group of citizens small in number. It was the time of the great westward expansion. With the legions of the ordinary people scattered all the way from the eastern farms and mills across the broad valleys to the land which lay upon the fertile banks of the Mississippi, a handful of influence peddlers had succeeded in turning the smile of government favor from the average people to a little network of citizens on the eastern seaboard who engaged in merchant shipping and who owned the Bank of the United States.

It was then that a man as democratic as the wide-open spaces and as down to earth as the boots he wore rode to the front bearing the people's cause. Andrew Jackson took up the fight for these forgotten millions of the ordinary people, the hard-bitten pioneers of the West and South and the inarticulate poor of the great cities. For this he, like Jefferson, was reviled as a radical, and anarchist, and a destroyer of confidence. Like Jefferson, he had to contend with the highly organized opposition of the press and the great financial interests of the country—well-entrenched, wealthy, clever, and powerful.

Also like Jefferson, he won his fight, because he was fighting on the side of the people, and their instincts did not fail him. He kept faith with them. And they kept faith with him.

It has never been an easy struggle to carry the flag of the inarticulate and disorganized many against the vocal and highly organized few.

WILSON BROUGHT REFORMS

We know of the great struggle and the great strides under Woodrow Wilson. We know of the fierce enmity he generated when he turned the clear, clean spotlight of public inspection upon those who assumed the responsibility of investing the people's money. We know of the bitter antagonism he aroused when he enunciated the proposition that those who have benefited most from the blessing of our free Nation should share most in the cost of our Government's operation, when he had the audacity to suggest that the exploitation of children in our mines and pits and smelters should be ended, that women should be permitted the right to vote, and that the code of decency dictated there should be a minimum wage below which nobody should be required to work.

We know of the angry personal vindictiveness of those who, representing the privileged few, committed the most irresponsible act in the history of our Nation when, out of personal spite, they killed his dream of a League of Nations and thus made World War II as inevitable as tomorrow's sunrise and broke his heart and sent that great-hearted Virginia Democrat to a premature grave.

And once more the forces of the few gained control. The people were lulled into lethargy by the mad spiral of the stock market until it came crashing down about our feet in 1929. For those who sat in the seats of government had not bothered to realize that no prosperity can last which does not have its base spread among the average people.

REASON FOR THE DEPRESSION

In retrospect, it is easy to see the reason for that imminent collapse. In the dizzy decade which preceded it, the Nation's production gained 56 percent. But wages and individual income gained only 24 percent, and because of rising prices, real buying power gained hardly at all. Can anyone doubt the reason for that terrible event? People simply were not able to buy those things which were produced for their consumption. Hence, the capitulation of the entire economic structure.

I remember a day—a cold and windy March day in 1933. A man rose from a wheelchair and stood with the aid of a cane and looked into the heart of a nation. What he saw there was a picture of stagnation—stagnation and fear. Twelve million men walked the streets looking for work. Countless homes were foreclosing. Farm gates stood ajar on rusty hinges. Children looked to their parents with expectant eyes and hungry cavities in their empty little stomachs. One-third of the Nation was "ill-fed, ill-clothed, and ill-housed."

But then he spoke. And into each place where men and women had gathered breathlessly beside a radio, there came a new confidence and a new hope. Here, again, was a man in the White House who remembered them. And the Nation regained its balance as it tottered there on the brink of the abyss of doom. For a steady hand was at the helm, clear eyes watched the waters. And the only thing to fear was fear itself.

ROOSEVELT AND RECOVERY

The national income in that previous year of 1932 had been only $39 billion. But soon the factories began to hum again. The channels of commerce began to open. The banks were safe. There was optimism in the air, and the Nation was whistling a tune called Happy Days Are Here Again.

For 20 years, under the leadership of Roosevelt and Truman, the welfare of the average American was held paramount by his Government. In no 20 years of our history had there been so much solid progress. The national income rose from $39 billion to approximately $300 billion. People had confidence. There was a productive and remunerative job for everyone capable of working. The "bitter enders" adorned their faces with wry masks of gloom and dourly wailed that the dollar would buy only half as much. But every independent statistical study revealed that the average American had four times as many dollars, and so we were clearly twice as well off.

Yet one of the strangest facts of history is man's propensity for experimentation. The crisis met, we are apt to relax our vigilance and wonder if another course might not do just as well.

In 1952, the Republicans, chafing under 20 years of repudiation, brought out a national hero to head their ticket. He didn't exactly please the traditional kingmakers of the Republican high command, but they had to have a winner. Many of them were convinced, besides, that it made little difference who sat in the White House so long as their particular philosophy permeated the Cabinet and the upper echelons of policymaking. And so they nominated the well-known and well-honored general and rode behind the banners of his national appeal.

The Democrats really had very little chance in 1952, because we were opposed by a nationally advertised product. Even so, the average people demonstrated that they had not entirely forgotten. Even with the tremendous popular personal appeal of General Eisenhower at the head of their ticket, Republicans controlled the House by only a meager handful of votes and the Senate by less than that.

Then 2 years later, the people once again demonstrated that they prefer Democrats

to Republicans. The full significance of that election has not been greatly publicized. In popular votes, the Democratic Party won the 1954 congressional elections by the biggest margin accorded to either party in an off-year election since 1934. And in every succeeding election, the Democratic majority throughout the Nation has been increased.

The Democrats have not been blindly partisan. We have not been guided by either hate or spite. Again and again during the last Congress and during the first session of the present one, on the truly crucial issues, it was the Democrats who bailed out the President's program and saved his broader national objectives from defeat at the hands of his own party. On issue after issue, the Democrats supplied Dwight Eisenhower with more support than did Republicans in the Congress.

DEMOCRATS BACK BIPARTISAN GOALS

Last year, it was clearly evident that the reciprocal trade legislation which is the cornerstone of his foreign policy would have been utterly emasculated if it had been left to the Republicans alone.

Last year, according to the Congressional Quarterly, a majority of the Democrats in the Senate had stood with the President on 31 of the 33 major issues on which votes had been recorded. In the House, the picture was much the same.

As good Americans should, we completely submerged partisanship to adopt the Formosa Resolution by an unprecedented peacetime majority. It was a Democratic majority which enacted the reserve training bill, considered a major pillar of the administration's military program. It was a Democratic majority which, at Presidential request, adopted the Career Incentives Act aimed at making military service more attractive to America's young men.

In the Senate, it was Democratic majority leader LYNDON JOHNSON who forced a vote on a Republican-sponsored resolution which would have tied the President's hands on the eve of the Geneva Conference and, by defeating it soundly, empowered the President and strengthened his hand by a tremendous vote of confidence. Only four Senators stood against the President that day. Not 1 of the 4 was a Democrat.

So we have tried to help him, even when his lieutenants have shown the shameful poor sportsmanship and bad taste to refer to the Democratic Party—the party of Jefferson and Jackson and Wilson and Roosevelt—as the party of treason.

POINTS OF DISAGREEMENT

But we cannot, in good conscience or in good faith with our people, aid his or any other administration when it subordinates the public good to the private greed.

We cannot remain silent and submissive while the gross national product, all the goods and services produced in our Nation, decline $12 billions from the year before, as it did in 1954 in spite of a 3 million growth in population.

We cannot share responsibility for the mere sake of bipartisanship when the specter of unemployment begins to stalk our land again, when the total number of unemployed men and women doubled during 1954, when farm income drops 26 percent as it did in 1955, and when the national administration seems more interested in trying to think up arguments to explain these facts away than in trying to think up ways to correct them.

We found it hard last year to take with good grace the shrill cries of demagoguery and fiscal irresponsibility because we wanted to share with the average American the benefit of a modest tax reduction, when the Republican Congress just the year before had handed out three times as costly a bill of special benefits to the large corporations and higher income taxpayers and dividend earners.

Let me give you one homely illustration of that Republican tax bill of 1954. John and Bill report the same amount of income. John earned his by the sweat of his back or the work of his brow. Bill earned his from the ownership of stocks and investments—clipping coupons. Yet John must pay in taxes one-third again more than Bill pays. Every time Bill (the coupon clipper) pays $75, John (the wageearner) shells out $100. And if you can make any rhyme or reason out of that, there's probably a job waiting for you in the Treasury Department, because Secretary Humphrey has been looking for somebody to try to explain that to the American people.

I've never witnessed a more complete disregard for consistency than that manifest by the Republican leadership in its frenzied fight to kill the Democratic tax proposals.

In 1954, in face of a bigger deficit forecast, they rammed through the $7.5 billion tax reduction for their special friends, and thought it was fine. Last year they called the proposed $2 billion tax reduction to relieve the embattled average American the height of folly and fiscal irresponsibility.

THE DEMOCRATIC PHILOSOPHY

Let me give you the Democratic philosophy.

First of all, we believe in our system—a free, healthy, capitalistic economy. In such a system we believe that private employment in sound business is preferable to public-works employment.

Yet we know that our Nation cannot increase private employment except as it increases the production of American business.

Obviously, production can enjoy no continuing increase except as consumption increases—except as people are able to buy the things that business turns out for sale.

And what better way could we find to increase the consumption of goods on the part of the American public than by permitting the average American to retain more of the purchasing power he has earned?

Buying power is the oil that lubricates the machinery of prosperity.

This has been called the percolate up theory, that national prosperity has to begin on a broad base with the average people—that when they have money they buy more things; thus, they increase demand, and more things are produced; when more things are produced, more people are employed; and when more people are gainfully employed there is a better market for the farmers' goods and the retailers' wares, and everybody benefits.

This philosophy has one thing to recommend it, and that is that it works.

THE REPUBLICAN THEORY

Now, let's contrast this with the Republican philosophy. The trickle down theory, it is called. They believe that if we can just shower enough prosperity upon the people at the top of the economic ladder some of it is bound to filter down to all the rest of us.

The only thing wrong with this theory is that it doesn't work. It didn't work in 1929, and it didn't work in 1953 or 1954. It won't work in 1956.

During the past 2 years the corporations of the country increased their income. Yet the Nation's production fell off, and the number of unemployed increased.

Last year corporate profits were up 26 percent, but the take-home pay for the average American was up only 3 percent, and rising prices had wiped this out completely. Rent is up 11 percent, utility rates are up 6 percent, medical costs are up 9 percent. Dividends are up, but family debt skyrocketed to an all-time high in 1955. The prosperity has not trickled down. It is being siphoned away.

And this is the effect of one after another of the proposals of the present Republican administration—the hard-money policy which siphoned off literally hundreds of millions of buying power in excessive interest rates; the Clay commission's highway proposals which would have had us pay out 55 cents in interest over the next 30 years for every dollar's worth of highway we built; the proposal to increase the borrowing of money for school construction; the gesture to help the Nation's health by subsidizing health-insurance companies; the plan the require first-class mail users to bear the burden of an additional subsidy for junk-mail advertisers; and many other similar schemes.

Yet while they talked of a hundred billion dollars for superhighways, they were proposing that we do away with the Federal field activities of the Soil Conservation Service which has returned the American taxpayer a greater dividend on the pennies he has invested in it than has any other activity of our Government.

While natural disasters, such as drought and flood, were taking heavy tolls, the administration was contriving to increase the interest rate for disaster loans.

While the number of small-business failures rose by 21 percent in the year 1955, the Small Business Administration was increasing its interest rates and refusing to process loan applications. Since 1953, some 300,000 individuals have inquired in an effort to secure small-business loans from this agency. Of this entire number, only about 7,000 have ever been favorably acted upon.

This is a rather typical instance of an agency, created under the law to perform a certain task, but now managed by people who are completely out of sympathy with the purpose of the law. It is duplicated in case after case.

Unwilling to suggest publicly that a popular and beneficial program be abolished, the present administration has simply appointed to head the program people who do not believe in it. This process has been called repeal by appointment.

In these and a hundred other ways, the lumbering elephant of the Republican Party has shown not only that it never forgets, but also that it never learns.

Eternal vigilance is, and has ever been, the price of liberty. As a great American, SAM RAYBURN, once said, "Freedom is like an insurance policy; its premiums have to be kept up to date."

As we have seen throughout our Nation's history, it has never been an easy matter to maintain a Government responsible to the needs and responsive to the will of the average people.

We have broken bread together tonight at a Democratic fund-raising dinner. It isn't a $100-a-plate dinner, or even a $25-a-plate dinner. It's a $5-a-plate dinner.

In certain sections of the country, the other party frequently raises the bulk of its funds at $5,000 a clip.

And that is one of its troubles. Let anyone ask himself honestly if donations of that magnitude are made with no expectation of selfish return.

We have the satisfaction of knowing that we belong to a political organization which elicits its main support from people just like ourselves. But I'd rather have a party fund made up from 50,000 people at $5 apiece than from 50 people at $5,000 apiece.

Our way is harder, admittedly. But it is also more satisfying. It is the way set forth by Jefferson 150 and more years ago. It is the people's way. And, with your help, perhaps it will again be our national way in 1956.

Dr. Elliott P. Joslin on His 87th Birthday Anniversary

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, in this world of recent times, when so much substance and effort has been expended in the cause of destruction of mankind, it seems very fitting and proper that all of us here in Congress, and that the people throughout the Nation, and in a very large measure, throughout the world, should pause for a few moments to do honor to a very great man whose entire lifetime has been devoted to benefiting and helping mankind.

On Wednesday, June 6, Dr. Elliott P. Joslin, of Boston, Mass., celebrated his 87th birthday. An eminent scientist, a very distinguished doctor of medicine, his tremendous efforts and contributions to the health of mankind all over the world began in Victorian days over 60 years ago. Through the duration of the 20th century, his great achievements for human beings have made it possible for many to live and enjoy life who might otherwise not have been able to do so.

Many of his great achievements have taken place in the research and treatment of diabetes. In this field of medicine his knowledge and judgment and contributions are recognized throughout the world. His eminent authority is recognized not only because of his accomplishments in the field of medicine, but also because of the use of his knowledge in the consideration of the whole man. Kindly, thoughtful, genuine, and always completely interested, Dr. Joslin, in all of his study and research and treatment, never has forgotten that mankind is made up of human beings with nerves, and a mind, and a spirit. Always he is cognizant of the fact he is dealing with life made in the image of God.

During these many years of service to his fellowmen, the eminent leadership of Dr. Joslin has been internationally recognized, not just for his specialty in the research and treatment of diabetes and the interrelationship of the whole man in the treatment of his ills, but also for his eminent qualities as a gentleman and a leader among men during this, his time on earth.

More intimately, Dr. Joslin is revered and loved by the countless patients who have passed through his great clinic in Boston bearing his name—the Joslin Clinic—and the countless people whose lives he has touched in his long, notable service throughout more than three score of years.

Not only is he an eminent man of medicine, but Dr. Joslin is a distinguished teacher and a great scientist. As a professor in the Harvard Medical School, many distinguished doctors today recall with reverence and appreciation their great teacher when they were students in the Harvard Medical School. His teaching and lectures have taken place in many of the great medical centers of the world. In the great profession of medicine, Dr. Joslin's place is secure.

In this age of materialism and conflict of values, the high accomplishments of so distinguished a man and specialist are indeed above praise. Admired, respected, and revered not only by everyone in his profession, but also by men and women everywhere, Dr. Joslin indeed has reached the pinnacle of greatness. In the history of his great and noble profession, and in the history of his country, his name will rank with Osler, Trudeau, Kelly, Welch, Halstead, Ehrlich, Cushing, and others who have done so much to permit men and women throughout the world to live normal, happy lives.

During this long life of service, Dr. Joslin has been blessed with the love, cooperation, encouragement, and understanding of a wonderful lady, his wife, Mrs. Joslin. It is my wish, and my hope, just as it is for countless individuals everywhere, that Dr. Joslin and Mrs. Joslin will be blessed with many more years, to do all that they love so well, which is to give health to the ill, strength to the physically weak, courage to the depressed, and happiness to mankind. Because he lives so do countless others.

On his 87th anniversary, I know he has received congratulations and best wishes from people all over the world. It is an honor for me to extend to him my congratulations and I know the congratulations of the entire Congress and Government of the United States of America.

Memorial Day Address of Hon. Chester E. Merrow, of New Hampshire

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the Memorial Day address which I delivered in Rochester, N. H., on May 30, 1956:

Ladies and gentlemen, I was glad to receive an invitation from my good friend Dick Cooper to speak here in Rochester at these Memorial Day exercises. I have been here on several occasions and it is always a pleasure to participate in Memorial Day ceremonies in your city.

SIGNIFICANCE OF MEMORIAL DAY

Today is one of the most significant days of the year. It is Memorial Day and we have gathered here to pay tribute to our honored dead who have made the supreme sacrifice that this Republic may live and to honor those still among us who have borne the strife of battle for the glory of our country. By appropriate ceremonies which are being held in every portion of this great free land, we commemorate the valor and the sacrifice of the veterans of all our wars, from the Revolution to the conflict in Korea.

Although Memorial Day came into existence folowing the Civil War, it is fitting and proper that we remember all those who have died for the United States of America from the earliest days of this great Nation to the present hour. We think, today, of those who have fought and bled and died that the people of this Nation may be free. In retrospect our minds turn to the Civil War, the Spanish-American War, the First World War, the Second World War, Korea, and all the other wars in which our country has been engaged. We know that because of these struggles and the great, decisive victories which were achieved, we live in the finest Nation on earth and in the world's greatest citadel of democracy the world has ever known.

IN COMMEMORATION

At this season of the year, we commemorate the valiant deeds of our fallen heroes by placing American flags above their graves, by heaping beautiful floral tributes on their last resting places, by Memorial Day parades, by statements and speeches apropos to this occasion, and by appropriate ceremonies, religious services and affairs such as these in which we are participating. How feeble our attempts to do them honor when what they did and what they have accomplished speaks far more eloquently than anything which may be said on this Memorial Day in 1956.

A DAY OF DEDICATION

Not only is this a day of doing honor and paying tribute—not only is this a day when we recall with ever-deepening pride the many valorous acts performed by so many patriotic Americans on the battlefields throughout the world. Actually this is a day of dedication. We dedicate our minds, our hearts, and our lives to the cause for which so much has been sacrificed.

A day of tribute and a day of dedication. This is the abiding and eternal theme of Memorial Day ceremonies. As Abraham Lincoln said: "It is for us the living rather, to be dedicated here to the unfinished work which they who fought here have thus so far nobly advanced." These words are eminently applicable at this hour. What is the work our honored dead of all wars have thus so far nobly advanced. It is the work of preserving the American heritage of freedom. It is the work of building a constantly better democratic society. It is, today in the middle of the 20th century, the work of world leadership among the nations of the free world. It is the work of continuing with unabated and unrelenting vigor the struggle against the diabolic forces of Communist tyranny until freedom is known to all men around the globe.

CHARACTERISTICS OF THE PRESENT WORLD

We live in a world of illimitable power and in a world which is sharply divided between the free and the enslaved. On May 21 the United States Air Force dropped a hydrogen bomb over a desolate area in the Pacific. The explosion which followed dwarfed all previous man-made explosions. It was by far the most stupendous release of energy that man has ever made. Forty miles from the explosion the luminosity exceeded 500 suns. The power of this bomb was from 15 to 20 megatons—a megaton being the equivalent of a million tons of TNT.

Tremendous power is within our hands and in my opinion, with this power we are in a position to give leadership in a world gravely dangerous. This power has terrifyingly augmented our responsibility.

This is a divided world. The tyranny of communism seeks to annihilate freedom of speech, freedom of press, freedom of religion and the opportunity of the individual to develop according to his innate ability. The issue confronting us was well stated in what is now known as the famous Declaration of Washington issued on February 1 by the Prime Minister of Great Britain, Anthony Eden and President Eisenhower. They stated: "We are conscious that in this year

1956 there still rages the age old struggle between those who believe that man has his origin and destiny in God and those who treat man as if he were destined merely to serve a state machine." We propose to win this struggle. We must and we are determined to win this struggle.

RESOLVE TO KEEP THE FAITH

The United States is the indisputable leader of the free world in this universal struggle to ensure the continuation and the spread of freedom. In this world of power and Communist tyranny, we must ever be on the alert and constantly rededicate ourselves to the cause for which our honored heroes of all wars sacrificed so much — many of whom have given the "last full measure of devotion." We must not be misled by the blandishments of communism and by the new tactics of the Soviet Union—by their soft words and by their fabrications. Their fundamental principle is the same. They seek to destroy the free world. I am glad that the House of Representatives on May 10 passed a military apropriation bill amounting to $33,635,066,000 by an overwhelming vote of 377 to 0. This certainly is one resounding answer to the Communist endeavor to subjugate the world. It is telling evidence that we are not going to be deceived by their change of tactics which are designed to accomplish their nefarious goals.

On this Memorial Day in 1956 we recognize that our heritage of freedom and democracy so dearly bought by blood and sacrifice is in danger if we do not remain constantly alert, vigilant and adequately prepared for any emergency. We are fully aware that we face one of the gravest and most sinister challenges to human liberty that free men have ever experienced. We can best do honor and pay tribute to those who have fought in the wars of our country by being firmly resolved that we will rise to the occasion of world leadership, that we will employ our strength and our influence in exercising this leadership in the military field, the economic field, through the United Nations and its associated agencies and that we will give leadership spiritually—steadfastly determined that we will keep the faith with those who have maintained the republic on many a bloody battlefield throughout our history. This is a day of consecrated dedication—a day in which we evaluate the current struggle—a day in which we will endeavor to envision the future—and a day of firm resolution to be successful in the endeavor to maintain and add to our heritage of freedom.

Much has been accomplished but there is much to be achieved. As we contemplate our objectives we know full well that in their realization the accomplishments of the future will be something of which all Americans can be proud. Ours is a civilization based on religious faith. Secretary of State John Foster Dulles in a speech to the 4-H Club in Chicago on November 29, 1954, said: "The reality of the matter is that the United States, by every standard of measure, is the world's greatest power not only materially but spiritually. We have national policies which are clear and sound. They fit a civilization based on religious faith."

We say to our honored dead and to those who have fought that this Nation may live: Our faith in the ideas and the ideals for which you sacrificed so much is a living, vital force as we seek to solve the problems that confront us. We believe today as you believe, in the achievement of a better way of life for men, women, and children wherever they may live. We accept the challenge on this Memorial Day in 1956. We will preserve our heritage against the ruthless and unconscionable tyranny of Communism and with zealousness we will seize the opportunity to give leadership in building a better world. We say to all those whom we are honoring today, we derive inspiration from what you have done and we hasten to exercise our leadership in the many phases of world affairs by rededicating ourselves to the ideas and the ideals which have made this Republic what it is—the ideas and the ideals which are the core of democracy and for which you have fought unflinchingly with no thought of self. We pledge our determination to carry on the work which you "have thus far so nobly advanced" and we pledge to you that in the years which are given to us, we will continue to strive as you have striven to bring into existence the realization of the very thing for which you have prayed and we are praying: "Thy kingdom come, Thy will be done on earth as it is in heaven."

One of the Least of These

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRICE. Mr. Speaker, on June 3, 1956, in Collinsville, Ill., Sister Katie Day was held to honor the Good Samaritan of the Coal Fields. The Good Samaritan is Mrs. Catherine DeRorre, of DuQuoin, Ill., wife of an immigrant and daughter of immigrant parents.

"Sister Katie" is a legend in the lives of Illinois miners and their wives. For more than 40 years she served the cause of the miners and other working people. Her home was always a haven for the afflicted.

The miners, I believe, are a special breed of men. In every nation of the western world, even in the nations behind the Iron Curtain, miners have been in the forefront of every struggle for social justice. The men have not maintained their spirit without the help and encouragement of women of equal spirit and of grace. The grace and gentleness are as important as the courage.

I join the hundreds of friends who paid tribute to Sister Katie who has given so unselfishly of her time and energies in her encouragement and consolation to the afflicted.

Under leave to extend my remarks, I include herewith an editorial which appeared in the June 4, 1956, issue of the St. Louis Post-Dispatch:

ONE OF THE LEAST OF THESE

Those were black nights in the southern Illinois coalfields a quarter century ago and litle sun shone in the daytime. The men who dug the coal and the women who sustained them saw a better chance for themselves and their families in the new union, the Progressive Mine Workers of America. But the struggle to establish that better chance touched off a warfare that flared from coal town to coal town for several years.

Yet the struggle went on and there were those who would take nothing short of victory. One of them was Catherine De Rorre, of Du Quoin, wife of an immigrant, daughter of immigrant parents. Her home was alway a haven and her kitchen somehow reproduced the miracle of feeding hungry men and women and children times without number. No wonder they called her the Good Samaritan of the coalfields.

Sunday was Sister Katie Day and families came from as far away as Colorado and Wisconsin to honor Mrs. De Rorre in Collinsville. They gave her flowers and gifts and spread a picnic lunch for her. They read her messages from Norman Thomas, Paul H. Douglas, Roger Baldwin, Melvin Price, and Tom Tippett; from a University of Chicago professor, a former governor, from labor leaders, from others in the mine towns with Italian, French, German, Scotch, and English names. The small gray-haired woman wondered why and wiped away tears and said she was "only a common housewife."

But Mayor Frank Zeidler, who made the trip from Milwaukee just to pay his tribute, knew why. "Sister Katie," as he said, is a symbol of the pioneer woman of the industrial age. She represents the little people who produce heroes and heroines in the humble ways of life. She is "one of the least of these, my brethren," who along with inventors and builders and statesmen, bring the changes that make a kinder, fairer world.

Address of Irving Stackpole

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. O'NEILL. Mr. Speaker, annually the Union Square Post, No. 377, of the American Legion, in time-honored custom, holds memorial exercises to pay tribute to our war dead.

On the evening of that day, they have a unique ceremony at which time they honor a resident of Somerville who has done the most for the youth of that city. Selection is made from the ranks of the average citizens of the community, and this year the post selected James L. Colbert, a devoted husband and father.

Mr. Colbert is not a man of great wealth or exalted position, but is typical of many of our citizens throughout this country who contribute their leisure hours to the service of their communities, and particularly to the young.

Among the many prominent citizens who attended the affair to pay tribute to Mr. Colbert were Congressman TORBERT H. MACDONALD; the Massachusetts State commander of the American Legion, Gabriel T. Olga; Senator James J. Corbett; and the mayor of Somerville, William J. Donovan. The principal speaker was the former Massachusetts State commander of the Veterans of Foreign Wars, Irving Stackpole. It is a privilege and a pleasure for me to at this time insert in the CONGRESSIONAL RECORD the remarks of Commander Stackpole:

Mr. Chairman, Father O'Sullivan, Mr. Colbert, Congressman O'Neill, Congressman Macdonald, Senator Furbush, Department Commander Olga, Commander Walker, Post commanders, auxiliary presidents, distinguished guests, Gold Star Mothers, we are told that Decoration Day had its inception back in the year 1866. Since a Virginian, named Cassanda O'Moncure had been decorating the graves of the men who had died during the Civil War. She decorated all graves regardless of the side upon which the men had fought.

Later we all know that Gen. John A. Logan, as Congressman O'NEILL said while commander of the Grand Army of the Republic, decreed May 30th as Decoration Day, this day to be set apart and devoted to the memory of the heroic dead. Today, the number of graves to be decorated have multiplied—we are told that 650,000 is a fair approximation of the number who have been felled on the battlefields in actual combat. Added to this host, are those men in the service who have died from the scars of battle. We all know that the freedoms we enjoy as Americans has been purchased by this price. Yet in 1956—and while the whole of veterandom joins in a vast nationwide tribute to our warriors—there are forces outside of America numbering 800 million—who would overthrow this Government, destroy its traditions and make useless the sacrifice of this vast silent army of heroes who died for the very thing that they would destroy. The dignity of man, veterans and citizens alike have a challenge today.

It is a healthy sign in America when, as tonight, the veterans of America recognize the need and urge the continuance of civic consciousness. Tonight an average citizen who is responsive to his obligations as an American is honored. Tireless in his work, unselfish and devoted, never too busy when called, always willing to do more than his share, this typical citizen, James L. Colbert, serves as example of what should be the actions of every American.

A father, devoted to his family, yet he is inspired to the service of his neighbors and their children. He stands out today in Somerville as a shining example of what every man in the community should be in relation to community obligations.

It is fitting and proper that a veterans' organization, devoted as it is to God and country, pay a tribute to him on this occasion.

It is fitting because on Memorial Day we like to think that we have the tradition and heritage granted to us to carry in America, purchased by the death of young men, to whom is paid homage today.

A veterans' organization feel, as a group, that, having seen service in our country, we have a closer obligation to serve it, to preserve the heritage purchased by such expense.

We feel that one of the prime objectives is to have every American with a pride in country and a healthy regard for Christian goodness—love of neighbor.

In James Colbert we find in our city a man who has done everything that every citizen should do. He had dedicated himself to carry out the real purpose of America—dignity of man and inspiration of youth in American ideals. His qualities are outstanding in this community and exemplify everything everyone else is too busy to do.

Look about us—800 millions all concentrating on the destruction of America as the strongest of free nations. But look closer—here we see the need of the James L. Colbert. From within in every walk of life thousands of traitors, more thousands of "dupes" and tools of that form of godlessness. Educators, clergy in every walk of life. This is a startling condition to show why James Colberts are necessary in America.

A petition was filed with the United States Supreme Court that had 359 signers—15 were out and out Communists, dozens were notorious fellow travelers and then the balance on investigation, 100 were clergymen—28 percent; 89 were educators. Do we need men like our guest of honor? December of last year at Christmas a petition was filed with the President to grant amnesty to all of the Communist leaders who had been convicted under the Smith Act. Twenty-seven of the 46 signers were clergymen, more than half of them.

We know there is no excuse for anyone, in particular clergymen and educators, for being dupes, nor is there any excuse for any American citizen for being a dupe of communism.

It is easy to see why tonight a typical American has been sought out in Somerville for encouragement. We need more Jim Colberts. America today is sick by inactivity, yes, and the inactivity is shown in many phases in our community life. We are too busy to vote. We are too busy to go to church. We are too busy for our children, too busy to teach and help the youth to respect law and order, love of home and flamily. How fortunate we veterans are to have community service programs, to help fill in what should be taught and was taught on bended knee by a devoted mother. America, founded by God-fearing men, inspired by almost divine wisdom, has neglected the fundamentals, such occasions as this and so aptly held on Decoration Day only serve to emphasize this need of back to home and teaching of youth of everywhere the respect of home-constituted authority and Christian goodness.

Veterans are proud to salute James L. Colbert for his part as a true American, and one who at personal sacrifice gives his energy to the end that boys and girls of Somerville will be better Americans as a result of his leadership.

I am sure that tonight, the host heroic dead, their fathers and mothers, all pay tribute to James L. Colbert, for he is doing the work that will preserve America. For these United States will survive only if we can inspire a devotion to the goodness of mankind in the youth of America—if we can by guidance and inspiration help mould the characters of youth in a love for God and country which will in turn be reflected by acts of respect for constituted authority and Christian virtues.

The veterans of United States are indebted to the James L. Colberts of America for they have the foresight and the inspiration of service to their communities and are respected for it.

Tonight on this day of decoration, a day of homage to men who have given their all to their Nation in its defense—we salute you, James L. Colbert, as one who is on 364 days of the year paying a substantial tribute of homage to the same ideals, a citizen—outstanding by service to your city, an average man with about average ideals—an inspiration to the youth of the city but more than that—a shining example of what every man in the community should be—one who believes in America and can and will do something about it. Yes, James L. Colbert, you have done something about it and we all join in your praise and hope that your inspiration will lead others to share your work to the end that America will be secure through its youth and justify the challenge handed to us by the thousands who died to preserve its freedoms from assaults both from within and without.

The Late William T. Granahan

SPEECH

OF

HON. EARL CHUDOFF

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1956

Mr. CHUDOFF. Mr. Speaker, it was with a feeling of great sorrow that I learned of the death of my very dear friend and colleague, BILL GRANAHAN, on Friday morning, May 25.

Not only have I lost a good friend but the people of the district that he represented, the State of Pennsylvania, and the United States Congress have lost a very able, sincere, hard-working, and conscientious Member. It was a pleasure to have him as a friend, and I will always treasure happy memories of him.

I join with my colleagues in paying tribute to BILL GRANAHAN and extend deepest sympathy to Mrs. Granahan.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

How About Foreign Aid

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. ALGER. Mr. Speaker, foreign aid—Mutual Security Act—has totaled approximately $55 billion since World War II; $38 billion in economic help and technical assistance; $17 billion in military aid. This is $330 per person or about $250 million for Dallas County's share. Just the interest on the foreign aid part of our national debt equals $10 per person every year in this country. Add to this our civilian and military payrolls in foreign countries, plus the huge equipment transfers at war's end. Now we are asked for an additional $4.9 billion foreign aid this year.

Congress always approves foreign aid, but with increasing doubt. The foreign-aid program keeps growing since we are told that "backward countries may be saved from communism" and aid is a military necessity in winning the cold war. Examples of waste, questionable economic practices, and glaring human errors are numerous. We know that some countries which have received aid are not less anti-American, and that Communist influence in others is as strong as ever. We wonder if, since our dollar gifts do not win friends, will Russia's "gifts" win friends for them? We know that $6.5 billion to $9 billion is still unexpended from earlier congressional appropriations and is yet to be spent. We also know that aid given to Britain—$10.5 billion—was partially used to reduce their taxes, that Denmark reduced her national debt. Mainly, the ever-present thought is to combate communism with our gifts.

The Communist appeal is obviously not to impoverished areas or "empty stomachs" alone. For example, France—$10 billion aid to date—grows more communistic, with one quarter the total vote now Communist. Communism seems to appeal to those oppressed individuals who through a sense of futility, frustration or isolation seek asylum in a movement which will give them the answers and tell them what to do. If so, the outlay of United States money will not win people away from communism.

The Communist aid technique is a constant sales effort through propaganda to, one, discredit the United States with claims of Western imperialism—even as Russia is the world's most imperialistic nation; and two, to stress Russia's desire for peace and world brotherhood of socialist nations who through socialism will raise the world's living standards to undreamed of heights. This political propaganda is behind all offers of "aid" so that even military aid is clothed in the guise of peaceful, brotherly economic help.

United States freely gives, while Russia sells. We reason that "economic collapse is the prelude to communist expansion," and wholeheartedly offer help. Example, United States gift of wheat to India in 1951 saved India from Russia. Since 1949 we have given $500 million to India and 750,000 tons of steel free. Russia offers to sell 1 million tons and is praised even as we are criticized. Is this winning friends?

Burma and Indonesia will not accept United States aid but appreciate Russia's offer to sell machinery and technical aid for rice. So Russia gains prestige by selling; we lose by giving. Could it be people dislike handouts? Can we gain by permitting countries to pit the West against the East to get more aid from either or both? Another comparison shows the intangible nature of United States aid, such as funds for technical assistance, salaries and help in agriculture, additional public health, sanitation, and others. Russia, however, deals in tangible with propaganda value—street pavement, storage depots, silos, pipelines; again United States loses. In short, the United States has lacked over the years a consistent philosophy or "sales pitch" representing our true greatness and generosity as against Russia's false claims of brotherhood and peace.

Our errors, now recognized, have included instances where we have subsidized allies who then ship goods to Russia—machine tools, and so forth—defeating our own policy of not shipping to Russia. Our aid builds foreign productive capacity and these businesses then take our markets. The deficit financing of our aid weakens our own economy. Too quickly have projects been undertaken without proper planning, to our later sorrow. Here are some specific examples, according to the audit report to Congress by the Comptroller General: In Iran the water drainage plant for sanitation was built but lost effectiveness because water still flowed through open gutters instead of pipes. The Fars Cement Plant was built, only to find a lack of raw material—limestone—needed to operate the plant. A cotton mill was built but available electric power was insufficient to run it. The Kerman Sugar Refinery site was selected but was subject to flooding, without accessible roads, and a supply of water. The rural community development project No. 64 involving schools, sanitation, water, irrigation, and farm tools was found too advanced for the long-term breaking down of the federal system of land tenure, precluding rapid or large-scale accomplishment—personnel was lacking and training programs far too slow.

The report on Pakistan calls attention to the "lagging program" where the 1952 and 1953 United States funds have not yet been used.

Afghanistan provides possibly the best example of all, namely the Helman Valley irrigation project. The Afghanistan Government secured $40 million from the United States Export-Import Bank which willingly advanced the money. The plant was built by an American firm which did a fine job. When finished—it was found there were no engineers capable of operating the project, no trained personnel. The natives did not know how to use the water to till their soil. They flooded their lands and then became nomads in disappointment. The Afghanistan Government did not get the revenues anticipated, and the yearly cost of $8 million was one-third of the government's entire budget, with not enough money in sight except the credit which Russia offered. So the Afghanistan Government was unhappy and blamed the Bank, the construction company, and the United States Government. None of the four agencies that participated had the final responsibility. The Afghanistan Government overestimated its ability and was encouraged by us. The construction company was responsible only for construction; the Export-Import Bank evaluated only the loan itself; the United States Embassy and a small staff found the project outside its realm. The United States had gotten deeply involved and had to go on. The net outcome—unhappiness all the way around. Lessons to be learned include: the need for prior study and evaluation, not haste, in government planning; that nations, peoples and customs differ, and must be handled differently, not all being ready for the economic development we anticipate or offer to them; United States prestige is always at stake and suffers; that United States has much to learn about helping others.

Other conclusions and questions that come to mind are these: Dollars alone or programs for underdeveloped countries do not make friends but can often alienate. Money alone does not assure our success against communism. The so-called military and economic help become confused and mistaken one for the other because United States policy has not been consistent. Competitive aid with Russia and other nations can only defeat itself without a consistent motivating philosophy displayed. With $6.5 to $9 billion on hand, why allocate more at this time? Since foreign aid, like foreign policy, should be flexible, is the

commitment of expenditure for dams and other lengthy projects a flexible program? Most obviously the United States has not been a "good salesman" of our policy. Finally, the subject of foreign aid is so complex and the cost so great that great care and study is necessary on the part of us all. Certainly a Congressman must think long and hard—and may include a prayer or two—before casting a vote to appropriate more money and to extend aid over longer terms in the face of our previous experiences. Now let us weigh the facts, and soberly, without political distortion, chart the practical course of United States enlightened self-interest.

The Prodigal's Return

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from today's edition of the Washington Post and Times Herald by George Sokolsky entitled "The Prodigal's Return":

THE PRODIGAL'S RETURN
(By George Sokolsky)

Tito is really a product of the errors of the West. It was the betrayal of Mikhailovich by the United States and Great Britain that gave Tito his strength and authority.

Perhaps in the year 1956, the name, Mikhailovich, is forgotten but he organized the resistance to nazism and to Hitler in all the Yugoslavian countries; he organized on a democratic basis; he was opposed to the brutality of communism as he was to the brutality of the Nazi.

Opposing Mikhailovich was Josip Broz Tito, Communist, member of the Third International and until 1948, completely dominated by the Kremlin whose agent he was. After Mikhailovich had served the Allied cause, he was abandoned by them and Yugoslavia became part of the Soviet world with Tito as dictator.

Russia had no troops in Yugoslavia and therefore Tito was freer than some of the other satellite dictators. Years before when Earl Browder had proposed "American exceptionalism" to the Third International, it was Tito who most violently opposed the Browder concept of communistic nationalism, but Tito adopted this doctrine as his own and for it, in June 1948, he was expelled from the Third International which at that time went by the name of Cominform.

In a letter dated March 27, 1948, the Communist Party of Soviet Russia wrote to the Communist Party of Yugoslavia:

"We readily admit that every Communist Party, among them the Yugoslav, has the right to criticize the CPSU, even as the CPSU has the right to criticize any other Communist Party. But Marxism demands that criticism be aboveboard and not underhand and slanderous, thus depriving those criticized of the opportunity to reply to the criticism. However, the criticism by the Yugoslav officials is neither open nor honest; it is both underhand and dishonest and of a hypocritical nature.

Tito replied on April 13: "Among many Soviet people there exists the mistaken idea that the sympathy of the broad masses in Yugoslavia toward the U. S. S. R. came of itself, on the basis of some traditions which go back to the time of Tsarist Russia. This is not so. Love for the U. S. S. R. did not come of itself. It was stubbornly inculcated into the masses of the party and the people in general by the present leaders of the new Yugoslavia, including, in the first rank, those so seriously accused in the letter."

It was in this same letter that Tito wrote: "We cannot allow the Soviet intelligence service to spread its net in our country. We have our state security and our intelligence service for the struggle against various foreign capitalist elements and class enemies within the country, and if the Soviet intelligence agents need information or assistance in this direction they can obtain it whenever they want to; on our part, this has been done until now."

Considerable correspondence passed between the two countries and some of it was quite vituperative. But the essential error was to permit the betrayal of Mikhailovich by the United States and Great Britain and to build up Tito into a great international figure. Thus, our policy has again proved to have been without understanding and imagination.

Imports of Japanese Textiles

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. DORN of South Carolina. Mr. Speaker, when the tariff on cheaply made Japanese textile goods was lowered, many people said this would not affect our great textile industry. They argued that the American textile industry had superior management, more machinery and technical know-how. Some of us were aware and predicted at the time that this lowering of the tariff would affect the American textile industry not only because of the 12 cents and 13 cents an hour paid Japanese labor, but also because the Japanese industry was modern, well managed, and had the latest machinery.

Our textile industry has been seriously hurt already by this ridiculous policy and it will feel the effects more in the future unless remedial action is immediately taken by either raising the tariff on Japanese textile imports or establishing quotas. Again, I say, Mr. Speaker, that it is wrong for our policymakers to insist that we import Japanese textile goods when we produce more of these goods than the rest of the world combined. The logical place for Japan to dispose of its textile surplus is in those countries where they are ill clothed and have no textile industry.

The following articles about the disastrous effect of Japanese goods on the American textile industry appeared in the Washington Evening Star, the Greenville (S. C.) News, and the Anderson (S. C.) Independent:

[From the Washington Evening Star]
TWO TEXTILE MILLS CLOSE, JAPANESE IMPORTS BLAMED

NEW YORK, June 7.—Consolidated Textile Co. announced today it is shutting down 2 plants—1 in New England and 1 in the South—because of Japanese competition.

Lester Martin, president of Consolidated, said the Windsor Print Works, of North Adams, Mass., a subsidiary, would halt operations by the end of the week. It has been processing flannel shirting.

Mr. Martin said Consolidated is also closing a 500-loom print cloth mill in Martinsville, Va. "We are starting to run it out now," he added.

The textile executive was bitter in his denunciation of low-cost Japanese fabrics. "Japanese goods are cancer and they will kill the entire textile industry," he declared. "They should be kept out of the United States market entirely."

Several weeks ago, he said, Consolidated shut down another subsidiary, the Luther Manufacturing Co. of Fall River, Mass.—also blaming Japanese competition.

[From the Greenville (S. C.) News]
MAINE SENATOR WARNS IKE ON TEXTILE IMPORT POLICY
(By Essell Thomas)

WASHINGTON, June 5.—Senator FREDERICK G. PAYNE, Republican, of Maine, today warned President Eisenhower that the administration's refusal to protect the American textile industry from foreign textile imports may defeat its national trade policy.

PAYNE issued the warning in a letter to the President urging prompt action by flexible import quotas.

The Republican Senator hinted that he himself may refuse to back the administration's trade policies unless a solution is found in the immediate future.

PAYNE recommended a flexible quota on textile imports on a temporary basis, scaling it high enough to allow exporters to share in the American market but low enough to halt the present trend toward a complete absorption of some segments of the domestic market.

PAYNE also suggested that American mills be permitted to buy surplus cotton at the same price it is available to the foreign competitor under the new export program. He also said the United States should aid Japan find markets for its textiles in undeveloped countries.

The New England Senator charged that insufficient consideration has been given to the importance of the domestic textile industry and to the effect which lowering tariffs on textile imports has had and is continuing to have.

He said present policies are creating conditions which could lead to the collapse of any domestic industry.

"It would appear that the domestic textile industry is carrying double burden: it is at one and the same time expected to decrease its share in expanding domestic markets; and is expected to carry high costs of raw materials to support a segment of the domestic agricultural industry," he said.

"For my part, it will be extremely difficult to continue to support our present policy if it continues to spell distress to the domestic textile industry," he concluded.

[From the Anderson (S. C.) Independent]
REPORT IS SHOCKING
(By Lou Schneider)

The entire American textile industry is shocked by the report of the United States Tariff Commission. It said imports "are not offering serious competition to most segments of the domestic textile industry" and that Japanese textile makers don't have an "across-the-board competitive advantage over the United States."

This Government agency, usually sympathetic toward tariff barriers to protect American industry, say textile men, appears to have gone out of its way to find statistics

to uphold the Japanese attitude that President Eisenhower's foreign trade policy will protect them.

The argument that Japan hasn't an across-the-board competitive advantage, or that the so-called high volume of imports is only a small percentage of the total consumption, don't hold true. The textile dispute is based on the big damage done in fixed sectors of the industry. Import of Japanese ginghams totaled only 3 percent of the United States gingham market in 1954 but zoomed sharply to a 40 percent last year, and is still running at a high percentage.

Despite the Tariff Commission findings and the Japanese voluntary quotas, the American industry will continue to demand higher tariffs or import quotas. All textile labor unions are behind this protective move. It will be a stiff fight. The White House, Department of State, and Department of Commerce stand firmly against any cut of imports from Japan.

Under the protection of the administration, Japan's trade will go on shipping into American markets. Thus Japan wins a diplomatic victory. But it will not win the favor of United States labor. This attitude will eventually reach consumer levels. In other words, this is the time for Japan to correct its long-term sales program if it hopes to maintain a position in United States markets.

Wesley A. D'Ewart Deserves Senate Confirmation

EXTENSION OF REMARKS

OF

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. FJARE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial appearing in the Washington Post on Friday, June 8, 1956. The editorial argues that my good friend and fellow Montanan, Wesley A. D'Ewart, is entitled to a fair hearing on his confirmation as an Assistant Secretary of the Department of the Interior.

The editorial follows:

A HEARING ON MR. D'EWART

We hold no particular brief for the confirmation as Assistant Secretary of the Interior of former Representative Wesley D'Ewart, some of whose views have aroused conservationists. But we do think that Mr. D'Ewart is entitled to a Senate vote for or against his confirmation. His appointment has been pending since the first of the year, and he has occupied the post on an interim basis since last October—without any congressional action. Chairman Murray of the Senate Interior Committee announced last week that a hearing would be held on June 19. There were subsequent reports that Senator MURRAY had agreed to the hearing in exchange for an administration move to permit a go-ahead on the $100 million Yellowtail Dam in Montana. Now Senator MURRAY has vigorously denied these reports but curiously has vacated the proposed hearing.

It may be that the views of Mr. D'Ewart, who was appointed under Secretary McKay, will not square with those of the new Secretary Seaton. It may well be also that there is substantial ground for objection to Mr. D'Ewart's handling of public land matters, including the plan to set up a new separate Bureau of Fisheries. But it ought to be the due of any American to hear the charges against him in public. Elementary courtesy, it seems to us, calls for a fair hearing on Mr. D'Ewart's confirmation without any qualification, real or implied, by way of a horse trade.

Mutual Security Act of 1956

SPEECH

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. BENTLEY. Mr. Chairman, I rise in support of the amendment. I also wish to commend the gentlewoman from New York for offering this amendment.

I wonder if the members of the committee have been reading the news reports out of Moscow in the last few days. Apparently someone has brought to the attention of Marshal Tito the fact that attempts may be made here to eliminate all of our aid as far as he is concerned. He has been quoted in the press as saying that it is not important, that "our friendship with the United States will remain regardless of these attempts." I suppose you might say regardless of whether he is going to get any aid or not.

I notice also he expresses the desire to visit Washington in the next few months. I am wondering if that is also going to be in the cards.

Seriously, I saw on the ticker just outside a while ago that in Moscow he has signed a trade protocol with the Soviet Union, another example of how closely he is alining himself with the Kremlin at this particular time.

In discussing this matter of aid to Yugoslavia, Mr. Chairman, I think it sort of almost completes the circle that our foreign-aid program has taken in the last few years. When the Marshall plan was originally conceived the Soviet satellites, including Yugoslavia, were all invited to participate. They turned it down. Then we decided we were going to give aid only to our actual allies and our potential allies. Now we are aiding the underdeveloped areas, including the neutralist states, including pro-Soviet states. Continued aid to Yugoslavia under present conditions would be aiding frankly open enemies. I wonder if the next step after aiding Yugoslavia is going to be an offer of aid to the Soviet Union itself, thereby, as I say, completing the circle.

With regard to Tito, I would like to make a few personal comments. I remember Marshal Tito from firsthand experience. I first saw him back in December of 1947, about 6 months before he broke with the Cominform. At that time, and that was only a year, I believe the committee will recall, after he had shot down two American planes, he was hand in glove with members of the Kremlin. The break came 6 months later in June of 1948. I believe the break was genuine. I happened to be living in eastern Europe at that time. On that basis I supported aid to Tito for a number of years. I even spoke before groups which were avowedly anti-Tito. But all that policy has changed with the death of Stalin.

Today I am firmly convinced that Marshal Tito is back as strongly in the Soviet camp as he was prior to June 1948, and will remain there regardless of what we do or do not do.

I would also call your attention to one more thing, and that is also, I believe, on the ticker today. Certain prominent Yugoslav emigree leaders testifying before the Internal Security Subcommittee of the other body this morning stated, as I recall the news ticker, that American aid to Tito had been a disaster to their country, that it had created consternation behind the Iron Curtain on the part of people who could not understand our policy of building up the Communist dictatorship, that it had created consternation among the people we are trying to help, the people of Poland, Hungary, Bulgaria, and Rumania, to say nothing of the people of Yugoslavia, itself. They said it was a disaster as far as the entire list of Communist-enslaved peoples were concerned. They sincerely and earnestly hoped that this aid would be terminated and terminated immediately.

They also said one more thing, which I want very strongly to call to the attention of the committee, particularly the Members on my right, and that is they stated categorically that all of the assistance that had gone to Egypt in the past several months in the way of military aid, aid which has so deeply concerned many Members of this House, had been shipped from Czechoslovakia to Egypt via Yugoslavia.

So you can see what kind of friend Marshal Tito is, not only to us but to our allies, such as Israel and those other countries who are trying to remain free.

Mr. Chairman, I sincerely hope that this amendment is adopted.

The CHAIRMAN. The time of the gentleman from Michigan [Mr. BENTLEY] has expired.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

(By unanimous consent, Mr. BENTLEY was granted 1 additional minute.)

Mr. BENTLEY. I yield to the gentleman from Iowa.

Mr. GROSS. If this money is left in for Yugoslavia and Yugoslavia refuses to take it, do you suppose it would be forced upon them?

Mr. BENTLEY. I am sure the attempts of the administration to force Tito to accept it will be very great.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield.

Mr. FULTON. You should have heard what Tito said. He recited a little couplet:

Those to us who aid do send
See no further than the end of their nose.

Mr. BENTLEY. That is a good idea of Tito's opinion of us. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Home of Medical Library Called a National Disgrace

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. McVEY. Mr. Speaker, I have recently introduced H. R. 11445, providing for the establishing of a National Library of Medicine in the city of Chicago. Under leave to extend my remarks, I should like to include an article which appeared recently in the Chicago Daily News, under the authorship of William McGaffin, which discusses in a most informative manner this particular subject. In this article, Mr. McGaffin portrays in a most effective way the great need that has existed for many years for a good medical library.

The great city of Chicago is really the center of medical knowledge in the Middle West. It has many advantages that should be considered in connection with the selection of a location for a new National Library of Medicine. The reading of this article is recommended to all who may have even the least interest in this particular subject. The article from the Chicago Daily News follows:

HOME OF MEDICAL LIBRARY CALLED A NATIONAL DISGRACE—CHICAGOANS HOPE TO GET UNITED STATES TO LOCATE NEW BUILDING HERE

WASHINGTON.—The world's largest medical library is housed in a 69-year-old building here that is a national disgrace.

A bill now pending before Congress would authorize a new building for the Armed Forces Medical Library, or National Medical Library as it will be renamed.

Chicagoans hope the new library will be located in Chicago.

A new building was needed 38 years ago when talk about one first started. Congress twice has passed appropriations. Various factors, however, always have got in the way so that the project never has been carried through.

Now the situation is approaching desperation. I can testify to this from first-hand observation. I have just taken an inside tour of the grimy red-brick building at Seventh and Independence.

I went into restricted areas never seen by the general public.

Under the personal escort of Lt. Col. Frank B. Rogers, the Library Director, I walked from the basement to the fourth floor attic.

Here are some of the disquieting things I saw:

Space is at such a premium that stacks have been set up in the old coal bins in the basement.

A steam pipe running overhead exposes the books to extreme changes of temperature. A water pump broke down the other day and sprayed them.

Old-fashioned skylight windows, put in in the days before electricity, leak when it rains and canvas tarps are kept handy to throw over the books.

A constant fire hazard that is inevitable in a building with only one staircase and with exposed electrical wiring.

Already a priceless collection of the world's medical literature dating back to 1094, the library is growing at a rapid rate.

It receives about 10,000 medical periodicals and adds 25,000 volumes a year.

The total collection to date comes to 961,631 items—counting books, theses, pamphlets, microfilms, portraits, and pictures.

It is so large that part of it has had to be kept in a separate library in Cleveland 400 miles away.

Even with improvisations of this nature, space is fast running out. In 2 years' time the stacks here will have reached their maximum capacity.

After that, the books will have to be piled on the floors and windowsills, and moved into grossly inadequate temporary buildings across the street.

Your respect for the dedicated personnel of the library grows when you see the efficient job they are managing to do despite extremely difficult conditions.

The books in this remarkable storehouse of knowledge do not grow dusty from disuse. For, as Senator HILL, of Alabama, Democrat, puts it, "This medical library is a living, vibrantly functioning institution, serving members of the health professions daily and in a myriad of ways."

It is, as its director, Colonel Rogers observes, by and large, a mail order library.

The biggest volume of its loans are microfilm and photostat reproductions of material in the library. More than 100,000 such requests are mailed out each year.

In addition, more than 30,000 actual volumes are loaned yearly, largely in the Washington area.

Here are some of the special services the library performs:

It publishes a monthly Current List of Medical Literature. More than 100,000 articles collected from all over the world are indexed in this each year.

It publishes lengthy bibliographies, is at present working on one about the chemotherapy of cancer which will be the biggest on the subject ever production.

Senator HILL, who with Senator JOHN KENNEDY, Republican, of Masachusetts, is sponsoring the bill for a new building sums up the library in these words:

"It is difficult to exaggerate the important influence this library has had on the advances in the medical sciences throughout the world.

"It is impossible to gage its value in dollars."

Cultural and Citizenship Activities of the Bay Ridge High School

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. RAY. Mr. Speaker, Miss Elizabeth T. Fitzpatrick, principal of the Bay Ridge High School, recently told me of certain cultural and citizenship activities carried on at that school which impressed me very much. I asked her to write a short report about them and I am glad to be able to place her letter in the CONGRESSIONAL RECORD today.

Both the school faculty and the parent-teachers association, who are responsible for planning and carrying out the programs, are to be congratulated upon their important service to the community and the country.

The Bay Ridge High School is in the 15th Congressional District which it is my good fortune to represent and I am very proud of its accomplishments:

BAY RIDGE HIGH SCHOOL,
Brooklyn, N. Y.

DEAR CONGRESSMAN RAY: A very informative and interesting Polish heritage program was presented by the Polish Heritage Council at the Bay Ridge High School on Thursday, May 3, 1956. The affair was in commemoration of the anniversary of Poland's May 3, 1791 constitution. One thousand persons attended this affair which was held in the Bay Ridge High School auditorium. The principal speakers were the distinguished historian, Prof. Oscar Halecki, of Fordham University, and Mr. Ignatius Morawski, editor of the Polish Morning World. Mr. William A. Kostecki was chairman of the meeting and the honorary chairmen were City Magistrate Ludwig Golwa and Principal Elizabeth T. Fitzpatrick, who also spoke. The invocation was given by the Reverend Arthur Demski of Our Lady of Czenstockowa Church.

The Polish heritage program that we presented that evening is part of the general policy of the Bay Ridge High School in reaching out into the community in order to bring to the school the cultural contributions that make for a solid American community. The basic philosophy that underlies our program can be epitomized in the statement that America is not a mere "melting pot" but a mosaic materpiece composed of the rich cultural and the fine moral contributions brought to us by all races, colors, and creeds.

We have similar groups of interested citizens of Irish, Norwegian, Italian, and Greek ancestry who cooperate with the faculty and students of the Bay Ridge High School in inculcating this great lesson.

A corollary of our basic doctrine is the firm belief that a constructive approach to the youth problems of a great cosmopolitan city is to emphasize to each and every young person that the land of his parents has brought many worthwhile gifts in the construction of this coutnry. This, we believe, tends to make the young people better citizens and stronger Americans. We feel that too many young people because of the humble origin of their parents and neighbors, tend to look upon, not only their ancestral lands, but their own families with disrespect. We feel this is an unfortunate situation since it is manifest that the family is the cornerstone of every solid civilization. By acquainting our young people with the deep rooted cultures that constitute our American background, we arouse in them the realization that each individual and each group that came to our country brought worthy contributions in appreciation of the benefits they received from our bountiful nation. In honoring the land of their forebears, we are adhering to the commandment, "honor thy father and mother" by creating in them a desire to be worthy children and better citizens of the United States of America.

With kind personal regards, I am,
Very truly yours,
ELIZABETH T. FITZPATRICK,
Principal.

Tito Top Red in Mediterranean

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the June 7 edition of the Evening Star by Constantine Brown entitled "Tito Top Red in Mediterranean":

TITO TOP RED IN MEDITERRANEAN—YUGOSLAV DICTATOR SEEN DUE TO HEAD NEW DANUBIAN-BALKAN SETUP

(By Constantine Brown)

One of the main none-too-secret diplomatic weapons of the U. S. S. R. is Marshal Tito, who this week made his triumphant entry into Moscow.

According to diplomatic observers in the Soviet capital, the renewal of "permanent ties" between the Soviet duumvirate and the Yugoslav dictator will have important chain reactions which will be noticeable only as time goes on. Among these, it is believed, will be the creation of a new Danubian-Balkan confederation with Marshal Tito as its leader. This has been the Yugoslav dictator's dream for many years and was one of the reasons he stubbed his toe with Joseph Stalin. When he began to press this idea "Uncle Joe" decided to cut him down to a boy's size. Fortunately for Tito, Uncle Sam was around the corner and rushed to his rescue.

Now Marshal Tito's ambition to be top man in a confederation comprising nearly 100 million peoples is close to realization, if the prognostication of Western diplomatic observers in Moscow proves accurate. There is no question that Yugoslav is the foremost military power in the Balkans. Its personnel always has been excellent. Thanks to the military assistance that country has received from the United States over a period of 8 years, its equipment is as up to date as that of any other Western military force.

Marshal Tito's prestige, which was somewhat doubtful while he was chained to Stalin's chariot, has been enhanced by America's and Britain's courtship and wooing. The warm receptions he enjoyed in Egypt, India, and Burma were far less impressive than his state visit to London and this year to Paris, when the French Government spent nearly $2 million, mostly for security measures. The former MVD man, whom the other Balkan leaders looked on as their equal in the days when Yugoslavia was just another Soviet satellite, now has gained a position of unmatched preeminence in that section of Europe.

The idea of a Danubian-Balkan confederation within the Soviet orbit is not particularly new in the minds of the men in the Kremlin. It was one of the motives which prompted them to give Austria her full sovereignty in the hope that the little Danubian Republic eventually might be forced by economic necessities to join Moscow's satellites. And if Greece showed interest in joining this Red coalition, so much the better.

Marshal Tito is, of course, now recognized by Moscow as the only man who can put such a deal through. His close contact with the Greeks, his strong stand in favor of Cyprus, his prestige among the Balkan gauleiters, and his thunderous voice in world affairs make him the ideal choice to lead such a confederation for the greater glory of the Communist goals. Moreover, Marshal Tito's closeness to the Arab leaders and particularly to Prime Minister Nasser gives him a strong position in the eastern Mediterranean.

Diplomatic observers also have noted that the Italian Communist chieftain, Palmiro Togliatti, visited him in Belgrade just before Marshal Tito's departure for Moscow. According to what has transpired from Communist quarters in Rome, Togliatti's mission was to bring about a closer coordination between the Italian Communist Party and its Yugoslav brothers.

Thus the ultimate result of the present conferences between the Belgrade and the Kremlin leaders is expected to be that Marshal Tito will become the dominant figure not only in the Balkans but also in the strategically vital eastern Mediterranean.

When this country, with Britain's cooperation, rushed to the assistance of the man Stalin had so rudely discarded, the main argument was that if we did not take immediate steps to bolster him up, the West's position not only in the Adriatic but also in the Mediterranean, east of Malta, might become endangered. The maintenance of that strategic position was worth any amount of billions, it was then said.

Now it looks as though the sand castle built by us and Britain on a foundation of upward of $1 billion might collapse, merely because the Bulganin and Khrushchev team has decided to accept the Yugoslav dictator as its equal in the great Communist fraternity. Those in Washington who still insist that military and economic assistance to Yugoslavia should be continued no longer argue military necessities. They talk about political and diplomatic strategy and say that after having gained Marshal Tito's friendship through our unselfish support, it would be fatal to annoy him.

We are now moving toward some kind of coexistence, they say, and the wind of friendship from the Kremlin is blowing away the cold war clouds. The possibility that this warm wind might turn into a tornado is recognized mainly by the responsible military men and the relatively few diehards who want deeds and not words.

Tito's Choice

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the June 5 edition of the Detroit Times entitled "Tito's Choice":

The important news is what is happening in Russia. The several aspects of the situation are really parts of the whole, and we shall treat them that way.

A Communist "traitor" beyond the pale in 1948, Yugoslavia's Tito is now lapping up ice cream and exchanging toasts of everlasting friendship with Communist Party Boss Khrushchev in Moscow.

There is an ironic applicability of the lines of Poet Robert Browning in the middle of the last century: "How sad and bad and mad it was (in 1948)—but then, how sweet it was (in 1956)."

Among the points to remember in thinking about Tito's return to the Kremlin's embrace is that he has always been a Communist. Since the 1948 break until now, he has clearly been playing in both ways from the middle; turning to the West (meaning chiefly the United States) for military and economic aid, and still remaining a Communist.

It appears to us he can no longer play it this way, although undoubtedly he will try. Since 1948 this Nation has poured $1 billion into Yugoslavia and there are $15 million more earmarked for this year.

Now Tito has made his choice. He has elected to return to the Kremlin. So it seems to us this country's course is imperative and logical. It is cut off the projected $15 million and put it to far better uses—in such things as roads, health, slum clearance in this country, or if a giveaway seems necessary, to the two democratic members of the Balkan Pact, Greece and Turkey.

We are not saying this in a mood of angry retaliation. We are saying it in calm appraisal. If Tito decides to join up again with Russia, that is his choice. But he can no longer expect the West to treat him and his country, as let us say, quasi friends.

And that brings us to the Molotov motif, meaning the downgrading of old Iron Pants from foreign minister to a member of the Presidium (the ruling cabal). Molotov has been slugged but he is still on his feet.

It is quite likely Molotov's demotion was timed with Tito's arrival, since it was Molotov on the orders of Stalin who called Tito a traitor to communism.

But it goes deeper than that. Molotov, as William Randolph Hearst, Jr., pointed out in his Editor's Report Sunday, has been on his way out for a long time.

He had to be. Molotov is a remnant of the Stalin regime, so he was dispensable, and he was dispensed. On the efforts of the present dictatorship to renounce Stalin the latest of interest in the secret text of what Khrushchev had to say about Stalin during the Communist Party Congress in February. Khrushchev was much tougher than expurgated reports indicated.

He called Stalin a coward, a brutal, capricious egomaniac, and a mass murderer.

These very words about Stalin have been printed a number of times in the Hearst newspapers. The interesting thing is that the truth now has been acknowledged by the present Russian leaders, and the purpose, of course, is to persuade the world that the Soviet objective has changed.

It has not. It is still to conquer the world, and let us keep remembering that. We'll give odds around here that Stalin's remains will be removed from the Kremlin tomb ere long.

Mutual Security Act of 1956

SPEECH
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JACKSON. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I rise in support of the amendment offered by the distinguished gentleman from Connecticut [Mr. DODD]. It is my very sincere hope that the arguments that have been advanced with respect to the necessity for this additional and relatively small amount to the Republic of Guatemala will receive the approval of the House, and thus the pending amendment will be passed. We should bear in mind that Guatemala represents the one nation in the world today which, having come under the domination of international communism, successfully threw off the yoke and returned to the ways of freedom and of democratic processes.

Guatemala needs the small amount that is here suggested. In many quarters it has been charged that having assisted Guatemala to resist the aggression, we turned our national back on them and with the successful termination of hostilities our interest in the welfare of the people of that country lapsed. Certainly I do know—and I might say paren-

thetically that I know that small and beautiful republic and its people well—that the people of Guatemala are an industrious and friendly people. They are determined and courageous, and I believe them to be a people who will use this additional amount of money wisely and well if provided by the Congress.

The economy of Guatemala during the period of the Communist regime there was good, largely because of the price of coffee. Unfortunately, since that time the basic single-crop economy has suffered to a substantial degree by reason of a depression in the world market price of coffee. I am confident that Guatemala will make progress under the administration of President Armas. I am certain that it will in due course become a leader in the Latin American world. The eyes of all the republics of Latin America are today on the Republic of Guatemala as they are also upon the United States. What happens in Guatemala will in large part condition the thinking of millions of Latin Americans in all of the republics to the south of us.

It seems to me that in our own national self-interest as well as in the interest of the inhabitants of Guatemala, who are in large part anti-Communist, that we will act favorably on the pending amendment. It is to be hoped that the House will undertake to consider favorably the amendment offered by the distinguished gentleman from Connecticut [Mr. DODD].

Mr. MORANO. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I am happy to yield to my friend from Connecticut.

Mr. MORANO. Mr. Chairman, I want to compliment the gentleman for the statement he has made and also to thank him for the support he gave me when I offered an amendment in committee which, with his help, carried, to aid Guatemala to the extent of $5 million additional.

Mr. JACKSON. Mr. Chairman, I was very happy to assist the gentleman in committee, and as those of you who heard me previously speak this morning know, I have not attempted to increase any other item since.

Mr. DONDERO. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I yield to the distinguished gentleman from Michigan.

Mr. DONDERO. Mr. Chairman, I want to associate myself with the gentleman from California and also with the gentleman from Connecticut [Mr. DODD] in favor of the amendment. I have had the privilege of visiting Guatemala. I know something of the conditions there left by the Communists when they were kicked out.

Mr. JACKSON. I thank the gentleman.

Mr. JOHNSON of California. Mr. Chairman, will the gentleman yield?

Mr. JACKSON. I yield to my colleague from California.

Mr. JOHNSON of California. Mr. Chairman, it seems to me that the arguments that the gentleman from California has made and that the author of the amendment has made are so convincing that the amendment ought to pass unanimously. I have made several visits to Guatemala and I hope that little country will survive and become a good, strong, free country again.

Mr. JACKSON. Mr. Chairman, I thank the gentleman. Let me say this, that we have in Guatemala a substantial ally in the Western Hemisphere. We have an ally which has proven itself, which has given a demonstration of the dedication of its substantial leadership to the principles of human freedom. Certainly the amount that is here requested is not great as we consider sums today, in relation to other provisions of this bill. I sincerely urge a vote in support of the amendment.

Laying at Rest Some More False Arab Propaganda

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. MULTER. Mr. Speaker, the following article by Don Peretz from the January 1956 issue of Jewish Social Studies is important reading to those who wish to better understand Arab-Israeli relations:

ARAB BLOCKED BANK ACCOUNTS IN ISRAEL[1]

(By Don Peretz)

The United Nations Conciliation Commission for Palestine (CCP) was set up in 1949 for the purpose of establishing peace between Israel and the Arab nations. One of its major efforts and accomplishments was the release of about 6,000 Arab refugee accounts in Israeli banks, with a total value of approximately £P4,000,000. These accounts were blocked in 1948 by an order issued by Israeli's Government which provided for the freezing of absentee property. Although the issue of the blocked accounts of Arab refugees is an integral part of the question of the absentee property of the Arab refugees and is closely linked to the problem of compensation for such property, it has been treated by the CCP as a separate problem, particularly after this agency began to shift its activities from political to functional areas. Since the failure of the Paris Conference in 1951,[2] the CCP has concentrated nearly all of its efforts on compensation and blocked accounts. However, the only tangible result of its work is the Israel Government's agreement to release the frozen Arab accounts. For this reason, this act assumes significance far beyond Israel's contribution to a settlement of one of the Palestine problems.

Both Israel and the United Nations underscored the importance of the release of the accounts. Israelis repeatedly emphasized that the first and only direct contact through the CCP between their Government and the Arab States had taken place on the occasion of the negotiations on this question. The CCP felt that agreement on blocked accounts was a step toward peace and used it as a touchstone of the two antagonists' attitudes toward a conclusive settlement.

Parleys leading to the first release of blocked accounts late in 1953 extended over a 4-year period because of a complex of technical and political factors. There were problems of transfer, procedure, and responsibility. Israel's tenuous foreign-exchange position and the Iraqi Government's decision to freeze Jewish property further complicated the matter. Misunderstandings caused a constant recurrence of difficulties. Political implications of the issue of blocked accounts generated internal commotion within Israel and the Arab States. In the latter the question threw open the whole issue of recognition of Israel and once again emphasized the violent psychological reactions to any step which might involve official acknowledgment of the new State's de facto existence.

It was claimed that release of the accounts would help to improve the living conditions of the Arab refugee. However, its significance in relation to the overall social and economic situation of the approximately 850,000 refugees is illustrated by the following figures: (1) The total number of the frozen accounts was approximately 6,500, of which 450 belonged to Jews who were in Arab countries at the time of the issuance of the freezing order. (2) The total value of the accounts was around £P4 million, of which approximately £P500,000 were unfrozen outside the U. N. scheme. (3) More than half of the accounts were less than £P100. Only 1,200 accounts were over £P500. The distribution of the Arab accounts was as follows:[3]

	Up to £P49	£P50 to £P99	£P100 to £P149	£P150 to £P199
Number	2,800	523	435	275
	£P200–£P249	£P250–£P499	£P500–£P999	£P1,000 and over
Number	300	300	520	680

EARLY NEGOTIATIONS: THE GENEVA AGREEMENT AND THE PARIS PROPOSALS

Israel's custodian of absentee property froze the accounts of the Arab refugees in December 1948 by virtue of the authority granted in the emergency regulations concerning abandoned property.[4] The accounts remained under his jurisdiction until the first releases in 1953. The Arab States brought the subject of blocked accounts to the attention of the U. N. at Beirut in March 1949.[5] Among the duties assigned to the CCP's technical committee on refugees was an examination of such problems.[6]

Shortly after the CCP began its field operations, it requested Israel to allow the Arab refugees access to all or part of their blocked accounts. The commission's general committee was charged with studying immediate possibilities of action in answer to an Arab request for measures to protect the rights of Arab Palestinians. In June 1949, Israel agreed to discuss a reciprocal agreement with the Arab States in which there would be a mutual release, in equal proportions, of Arab accounts frozen in Israel banks and of Jewish accounts frozen in the Arab countries. After the Arab States accepted the arrangement, a mixed committee of experts under a neutral chairman was established to study and recommend means of releasing the funds. The committee consisted of 1 Israeli, an Egyptian representing 4 Arab States (Egypt, Jordan, Syria, and Lebanon) and the CCP's principal secretary who acted as chairman. This constituted the first and only direct official contact between Israel and the Arab States in the long history of otherwise unsuccessful attempts to bring together the two sides in negotiations for a final peace settlement.

The committee initially restricted its activities to examining a procedure for unfreezing the accounts. It reached an agreement on the principle of mutual release. However, unfreezing on this basis could not be effected because only Syria had taken

Footnotes at end of speech.

Footnotes at end of speech.

steps to block accounts of Israel's residents and the total sum involved—only a few hundred pounds—was too small to make possible any significant reciprocal action.

Consequently, the mixed committee adopted a new procedure at a meeting in Geneva on February 15, 1950. They agreed that, pending a final settlement, every refugee who had a bank balance in Israel could receive an advance on his account up to £P100. The funds would be advanced in local currency by institutions or by the Arab governments to refugees living in their territory, and would be guaranteed by an amount in Palestine pounds which the Government of Israel would deposit to the account of the institution or government concerned. The deposit would be administered by a trustee, in accordance with Israel's conditions. It would be released to the institution or government which had made the advance as soon as a final settlement was reached. The CCP also recommended that the Bank for International Settlement be appointed as trustee for the operation. However, the bank would not accept this arrangement because of its political implications. Instead, it was planned to conclude seperate agreements with a trustee chosen for each country concerned.[7]

At the Fifth General Assembly in 1950, Foreign Minister Sharett emphasized the political importance of the negotiations and of the February agreement. He stated that it was significant that the "sole occasion when Arab Governments had agreed to meet with Israel in joint session under the chairmanship of the Commission, the meeting had resulted in agreement."[8]

Although the CCP also commended the agreement as an indication of Israel's sincerity, banking difficulties prevented an early release of funds. The difficulties limited negotiations to the matter of accounts of refugees in Jordan. There it had been found possible to release advances from sterling sources, with the understanding that they would subsequently be repaid from the accounts when they were unfrozen.[9]

During 1950, the CCP continued in vain its unsuccessful attempts to overcome the technical obstacles blocking the release,[10] while Israel's custodian of absentee property claimed that steps were being taken to unfreeze the bank deposits of a few Arab refugees who had legally returned to the country.[11] Efforts to obtain release were seriously retarded in March 1951 when Iraq adopted a law freezing property—including bank accounts—of Jews emigrating to Israel. The Israeli press and Kneset opposed any compromise on the release of Arab accounts at that time.[12] A protest sent by Foreign Minister Sharett to the United Nations, the United States, and the United Kingdom, made the point that Iraq's move would affect Israel's position on compensation and release of blocked accounts.[13]

One of the five comprehensive proposals submitted by the CCP at the Paris Conference in 1951 called for the mutual release of blocked accounts by Israel, Egypt, Jordan, Lebanon, and Syria, with consequent payment in pounds sterling.[14] However, the Commission acknowledged that nearly 3 years of negotiations on the issue "were not productive" and that efforts to agree on a formula for even a partial release had been unsuccessful.[15] Because by this time the ownership, identity of owners, and amount of each account had been established, the members of the CCP thought that the matter could be easily settled. To cite: "In this regard there are no questions for negotiation and under these conditions payment to the individual owners of the accounts can be readily effected." The Commission reemphasized that agreement on this issue "would contribute to the well-being of the refugees and would be a step in the development of peaceful relations."[16]

Israel's representatives took up the Commission's point that negotiations on the issue had produced the only direct contact with the Arab delegations. They complained, however, that the technical obstacles were not the only difficulties that blocked the settlement of the issue and charged that the agreement reached in February "could not be put into practice owing to lack of cooperation by the Arab governments in implementing it." The Israelis also emphasized that any settlement would be conditional upon the freeing of Jewish deposits blocked by Iraq.[17]

The Egyptian delegate answered that the Arabs did not oppose the proposal, particularly as they had accepted it in principle at Lausanne. "The only desire of my delegation is that the formalities of unfreezing should be undertaken as soon as possible, for the freeing of the assets * * * would be of considerable assistance."[18]

THE FIRST INSTALLMENT

The question lay dormant until the end of 1951 shortly after the Sixth General Assembly. Early in 1952 the Commission reconvened in New York to discuss problems of compensation and blocked accounts. It was decided to reopen the issue by resuming negotiations with Israel to ascertain its position and to consider what further steps should be taken to secure the release. On the basis of Israel's reaffirmation of its offer at the Paris Conference further steps were to be initiated to proceed with the release plan.

In May 1952 the CCP authorized Ambassador Ely Palmer, the United States representative on the Commission, to undertake on its behalf a demarche with Ambassador Eban urging that his Government unconditionally release the blocked accounts. It was believed that some 20,000 to 30,000 Arab refugees might eventually be affected by the action, and that "opinion toward Israel in the Arab States would be perceptibly affected by an act of goodwill in this matter."[19]

Israel appreciated the CCP's desire to improve its relations with the Arabs, but pointed out again that bank accounts of many Jews from Arab countries, especially Iraq, were still held by the Arab governments and banks. "It would be reasonable to expect that the interests of these refugees from Arab countries should be treated with no less concern than those of Arab refugees from Israel." Nevertheless Israel did agree to discuss measures for gradually releasing accounts held by Arab refugees in Israel "subject to the overall foreign exchange position of the country."[20]

In the Commission's view, Israel's answer expressed a desire to make a practical contribution toward the alleviation of the lot of Arab refugees and the advance of peaceful relations between Israel and the Arab countries. The CCP's Chairman expressed his satisfaction with the response which he considered "an important step toward the settlement of * * * differences * * *." Israel's action was in accord with the General Assembly position that the governments concerned had primary responsibility for settling outstanding differences in line with resolutions of the United Nations.

As negotiations proceeded, it became clear that there had been a misunderstanding between Israel and the Commission. The latter believed that Israel had agreed to release to their legitimate owners all blocked accounts, regardless of the amounts involved. It understood that the agreement was to be unconditional regarding both release of Israeli accounts blocked in the Arab countries and the final settlement of other issues. The act was to be unilateral. The only restrictive factor was to be availability of foreign exchange.[21] On the other hand, on July 17, 1952, Israel merely renewed its offer made 2 years earlier at Lausanne to release only amounts up to £P100 from each bank account. The total was expected to be about £P500,000. While the offer was not linked with a request to the CCP to arrange for release of Jewish accounts frozen in Iraq, the Israeli authorities stated that "it is hoped that action to that end will be taken."[22] That was a condition in Ambassador Eban's original offer to free the Arab accounts. After several months of negotiations with the United States, Israel's delegation to the United Nations was persuaded to remove it. Only then did the CCP and Israel's friends in the United Nations recognize the offer as a genuine concession.

The concession was unpopular in Israel. Davar, the Histadrut (General Federation of Labor) daily,[23] felt that the offer should logically lead the Government to seek a more sympathetic attitude from the United Nations. "Israel's gesture is directed at the Arab States, which have done nothing toward a solution of the refugee problem," it commented. Its editors hoped that the Arabs would consider Israel's readiness to release the deposits and to help resettle the refugees in their present abodes as proof of the possibility of peacefully resolving other problems. The General-Zionist Ha-Boker,[24] commented that the Government made its concession to release Arab accounts on the very day when five Israeli watchmen were murdered by Arabs in the Negeb. It pointed out that nothing has been heard yet from the part of the Arab governments about the release of Jewish deposits which they had frozen arbitrarily.

Following the agreement on the principle of unfreezing the accounts, the CCP and the Israel delegations met to discuss technical arrangements. Matters of method, amount and time of release were yet to be determined and agreed upon.[25] The CCP believed that arrangements should be made between Israel and the banks concerned. It favored a normal banking operation in which Israeli banks would receive a government order to unfreeze all accounts. It proposed the transfer of funds to correspondent banks accessible to the legitimate owners, in stages according to the value of the accounts. The CCP offered to lend its good offices and to provide expert assistance, whenever necessary. "Such a procedure is consistent with the initiative and responsibility assumed by Israel," it declared.

Israel was prepared to implement the transfer by entrusting the banking operations to an institution which would act as the agent for all banks in Israel holding deposits, and for the banks which would be authorized to accept applications from depositors in the Arab countries. It indicated its willingness to enter discussions with Barclay's Bank, Ltd. (Dominion, Colonial and Overseas) and to use the good offices of the United Nations delegate from the United Kingdom to facilitate negotiations.

The CCP believed that as the transfer was to be by stages, an equitable system of payments to the account holders should be worked out. It, therefore, urged Israel to indicate at an early date the amount it was prepared to release at the first stage. The Commission suggested a system of priorities to give the greatest possible number of refugees their assets in the first installment and to provide sufficiently large amounts to individual holders at each stage to effectively alleviate their economic distress, with priority to small accounts.

However, Israel's delegation informed the CCP that in view of their country's international currency position the first installment would consist of only £P1 million,

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

which would be transferred at the rate of exchange of one pound Sterling for one Israel pound.[30] It agreed to give preference to small account holders. The release would be made in monthly amounts of £P50 from all blocked accounts up to £P500. Since more than half the accounts were less than £P100, the majority would be released in the first 2 months of the scheme. At the end of the first stage of the unfreezing operation all but 1,200 Arab refugees who held accounts of £P500 or more would have received all their blocked funds.

The Commission expressed the hope that securities and valuables in safe deposit boxes belonging to Arab refugees would also be transferred without delay. The operation would not require an allocation of foreign currency and could be considered a normal banking activity between Israel and the banks involved, with the assistance of the CCP. The Israel delegation promised that following agreement by Israel, the banks, and the depositors on the procedure for opening the boxes, its government would be ready to transfer the contents of the boxes, in accordance with the laws of Israel, and with the greatest measure of fairness.[31]

Conversations between Israel and Barclay's bank officials began on October 20, 1952, after the CCP had been informed by the United Kingdom that the bank was prepared to undertake the operation. It was proposed that the Ottoman Bank should also participate at a later stage. During all these parleys, an economic expert provided by the Secretary General of the United Nations was present.[32]

The talks were concluded early in November, and a general agreement on an outline of the release scheme was reached. A central control office was to be established at the Jerusalem (Israel) branch of Barclay's Bank. Barclay's was to prepare standardized application forms, setting out particulars to be given by every applicant to enable the banks to verify and identify the validity of each claim. All claims were to be sent to the depository banks for verification, after which they were to be approved by the Israel Custodian of Absentee Property, who would return them to the banks. The latter would make the transfer in pounds sterling or the equivalent of other acceptable currency to the appropriate bank on behalf of the claimant.[33]

Late in February the application forms were ready for distribution to Arab refugees through the local offices of UNRWA and the branches of Barclay's and the Ottoman banks in Egypt, Jordan, Syria, Lebanon, Iraq, Cyprus, and Israel, and through the Banque de Syrie et du Liban in Syria and Lebanon. Actual distribution was to begin on March 1, 1953. The Israel Government announced that it would continue to receive applications until May 31, 1953. Applications received after that date or on other than prescribed forms would not be considered. The forms, which were in Hebrew, Arabic, and English, required the applicant to state his current address, his address on November 29, 1947, and to give documentary proof of this information, as well as data concerning his account.[34]

POLITICAL REPERCUSSIONS OF THE RELEASE SCHEME

Israel's agreement to release refugee accounts came when the efforts of the CCP to carry out the other aspects of its mandate were at a particularly low ebb. The Commission had been employing all the procedures and devices at its disposal since 1949 with no tangible results. Finally, it began to doubt whether "any attempt on its part to undertake again one or another of these procedures would be fruitful." However, in evaluating the significance of its success in obtaining a release of blocked accounts, the Commission was encouraged to believe that further progress could be made in eliminating differences which separated the parties by "concentrating in a constructive way on individual issues and thus gradually reducing the area of disagreement." By successfully solving specific problems, the CCP hoped to eliminate many causes of friction and "generate sufficient good will to lead eventually to the undertaking of negotiations between the parties themselves." [35] Although the CCP was optimistic, the United States Department of State cautioned that Israel's concession was only the beginning of an arduous path to an Arab-Israel settlement.[36]

Israel's Foreign Minister Moshe Sharett emphasized that his government's concession was an experiment in arriving at arrangements with the Arabs. "It is clear," warned its spokesman, "that the absence of any positive reaction would not be received favorably." [37] Abba Eban, the chief of the Israel delegation at the U. N. Seventh General Assembly, emphasized that his country had responded to the United Nations' request despite heavy strain on its economy, especially at a time when the Arab Governments were doing everything possible to restrict Israel's economic capacity by economic boycott and blockade. Release of blocked accounts was causing a flow of currency to states that were jeopardizing Israel's own currency position. Surely, this move, he claimed, should demonstrate Israel's good will.[38]

The scheme was attacked by Israel's right wing press shortly after the distribution of application forms began. Herut, organ of the nationalist Herut (Freedom) Party, argued that this gesture would not change the Arabs' uncompromising position, but on the other hand, "it has caused Israel to forfeit a trump card in the effort to save frozen Jewish property in Arab countries. Commonsense would suggest that Arab assets should not have been released without reciprocal action regarding the assets of Jewish immigrants from Iraq." The paper believed it extraordinary that, at a time when Israel was in severe economic straits, when unemployment was growing, when new taxes were about to be levied, and when it could not even afford to buy jet planes, the government should permit itself to present a cool million pounds from funds and grants as a gift to the Arabs.[39] The General Zionist HaBoker compared the Arab refugees with the 4 million Sudeten Germans who were forcibly expelled from Czechoslovakia after World War II. It argued that the Sudetens did not claim compensation for their property nor did any foreign power justify such a claim. The Israel Government should have delayed compensation until the Arab Governments showed willingness to release frozen Jewish assets.[40]

On the Arab side, an attack was opened on the release scheme in Jordan early in March. Dr. 'Izzat Tanus, secretary general of the Palestine Refugee Committee, declared to the press that he questioned the legality of the application forms for release of blocked accounts.[41] He particularly objected to the application form,[42] which according to him, implied the recognition by the signatories of the legal existence of Israel, in contradiction to the Refugee Committee's policy of nonrecognition. Furthermore, he pointed out that the Israel Government deducted 10 percent of all refugee accounts for its compulsory national loan imposed on all bank accounts in Israel in June 1952.[43] Tanus felt that Israel had no moral or legal right to impose such a loan on the Arab refugees who were neither citizens of the Jewish State nor subject to its laws. He also objected to withdrawal of amounts of £P500 and over from all Arab blocked accounts by the Custodian of Absentee Property at the end of 1952. The Custodian took this action by virtue of the absentee property law of 1950 vesting in him all the absentees' properties and every right to them.[44] The Custodian's office denied that these withdrawn funds had been confiscated, and he promised that they would be returned to the absentee accounts. For the time they were being used as a loan to develop absentee property.[45]

Tanus' campaign induced Jordan's Council of Ministers to order branches of Barclay's and the Ottoman Bank and UNRWA offices to cease handling the Israeli application forms. The Jordan Government also requested holders of blocked accounts to stop submitting the forms "pending an investigation into the legal correctness, obvious confusion and mistakes included in the text." [46] It accused Israel of illegal confiscatory measure in levying the 10-percent loan and in removing accounts of £P500 and over.

Israel condemned the bad faith of the Arab governments. Its diplomats were instructed to call attention of diplomatic quarters to "the poor prospects for substantive steps likely to contribute to the relief of the Arab refugees' plight." According to the Israelis, "The Arabs proved once again that they intend to exploit the refugees' distress for propaganda purposes." Israeli official communications presented this point of view to the Western Powers that had influenced Israel to make the good-will gesture.[47]

In discussions with United States diplomats in Tel Aviv, Israel's authorities maintained that Jordan's sentiments were not in keeping with its declarations, for it had criticized Israel in the past for not releasing blocked accounts. Now when many refugees had the opportunity to receive their frozen funds, residents in Jordan were forbidden to take advantage of it. This could only mean that Jordan was opposed to solving the refugee problem and to clearing the way for peace.[48] Furthermore, Israel announced in the United Nations that it did not intend to compel anybody to accept the offer. "If a step intended to create good will was liable to cause friction, Israel could not consider it reasonable to allocate foreign currency, which she badly needed herself, for transfer to countries which consider this undesirable." [49]

The political storm stirred up by the new controversy was disconcerting to the CCP, whose members had so laboriously threaded their way through 4 years of delicate negotiations to attain this first tangible step in lessening Arab-Israel friction. To prevent a miscarriage of the whole operation, the CCP delegated John Reedman of the United Nations Secretariat to visit the various capitals concerned. The Commission also officially noted the Arab allegations concerning the compulsory loan and the removal of all deposits of more than £P500. It pointed out that Israel had informed the Commission that accounts under £P50 had not been subject to the 10 percent loan, and that the transfer of accounts over £P500 to the custodian "was for the technical purpose of facilitating the release of funds to account holders." The Commission also urged account holders to submit their applications, so that those in need could receive the first installment of the payments as rapidly as the technical work of verifying claims by the banks could be completed. The Commission assured the refugees that they would not "prejudice whatever other claims they may have, nor will this payment * * * in any way prejudice the claims of owners of accounts to the balance of their accounts." The CCP also requested the Governments of Egypt, Iraq, Jordan, Lebanon, Saudi Arabia, Syria and Yeman to facilitate prompt sub-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

mission of applications, wherever possible.[46]

Reedman spent nearly 2 months in an attempt to reconcile Israel and Jordan. In the course of his travels back and forth between Tel-Aviv and Amman, the Arabs suggested that the words "State of Israel" be deleted from the forms and replaced by "competent authorities." Israel rejected this proposal, considering it an affront to its authority and sovereignty.[47] The substance of the dispute did not involve mainly procedure or technical matters but rather stemmed from Jordan's resentment of Israel's existence.

Meanwhile, the flow of applications almost stopped and it seemed that the number of accounts eligible for release would be quite small on the deadline day of May 31. However, when agreement was finally reached on format of the applications and the approval of the Jordan Government was obtained, Israel extended the deadline until July 31, and later again to August 31, 1953.

The final compromise of June 3, that led to the end of Jordan's ban called for the attachment to the original application forms of a special slip of paper issued by the CCP in English and Arabic, with the explanation that the 10 percent transferred to the national loan and the sums of over £P500 to the custodian would be returned to the accounts. The slip included the explanation that no political strings were attached to the release and that the rights of the refugees to their entire accounts were in no way jeopardized by signing and submitting the applications.[48]

When the deadline for the first installment expired, a total of 3,216 applications had been received, of which 2,689 were approved by the Israeli authorities. They accounted for £P720,743 of the £P1 million which Israeli had agreed to unfreeze. According to U. N. sources, applications were not submitted for the total because of inadequate information and publicity, especially in Syria, where the officials of the Banque de Syrie et du Liban that handled the operation had not been properly briefed. The confusion during the operation's suspension also contributed to the shortage of claimants.

Israel's original agreement with the CCP in 1952 called for releasing all accounts, with the reservation that the release be effected in stages, subject to the availability of foreign currency to the Israel Government. Interested in the completion of this task, the Commission informed Israel on February 17, 1954, that it was convinced that the balance of approximately £P3 million should be released and that the problems of the availability of currency could be worked out with the banks through the good offices of the United Kingdom.[49]

TEST CASES BEFORE JORDAN AND BRITISH COURTS

Barclay's Bank was particularly eager to settle the issue because of claims made upon it through courts in Jordan. On May 23, 1954, Jordan's court of cassation ruled that Israel's blocking of accounts did not release the banks from their responsibility to the Arab depositors. In a test case, the Jordan court ordered Barclay's Bank to pay £P6,000 to Mme. Bahiya Barackatt, a refugee from Jaffa, who had sued the bank 2 years earlier when it had refused to pay her the sum blocked in its Israeli branch.[50] Barclay's lawyers had argued that the banks holding blocked accounts had been forced to close in 1947–48 because of prevailing conditions of insecurity; that in such a situation of force majeure, they could not be held accountable for the consequences; that payment was barred by Israeli currency controls over transfer of funds outside the state; and that the depositors must apply to the branch banks that held their accounts. However, the court rejected these arguments and held that the main office of the bank was required to pay deposits held in the branches. Of course, the true reason behind the court's ruling was Jordan's principle of nonrecognition of Israel.

In a similar case carried through the English courts to the House of Lords, the blocking of accounts by Israel was held to be binding on the banks. The Arab Bank sued Barclay's Bank in England, for the sum of £582,931—the balance in sterling—of the Arab Bank's account in Barclay's Jerusalem branch, at the end of the British mandate in Palestine. The action was brought to determine the legal result of the outbreak of Israel-Arab hostilities on the relations between the two banks. The Arab Bank argued that its contract on current accounts with Barclay's Bank was wholly frustrated and that in its place the respondents were obligated to pay the appellants the equivalent, as money had and received, on the ground that they would otherwise be unjustly enriched. This would constitute an obligation enforceable wherever Barclay's Bank could be found. The bank contended that the effect of hostilities was different, that the contract between the parties was merely suspended; that the indebtedness of Barclay's Bank was not destroyed, but was an accrued right and, therefore, outside the general rule regarding abrogation. The balance, therefore, remained in existence only subject to the Arab Bank's right to sue for it after the cessation of hostilities. The Arab Bank lost its final appeal in the British courts when the House of Lords handed down a decision in favor of Barclay's Bank on April 1, 1954.[51]

Despite the decision of the British court, the banks felt that their position in the Arab countries became endangered by the Jordanian court order. Consequently, Barclay's informed the CCP in May 1954 that it had offered a sterling loan to the Israel Government sufficient to repay all the remaining blocked Arab balances. This loan was to be accompanied by a much larger loan to the Israel Government, at that time hard pressed for foreign currency. The Commission informed Israel of its gratification that the means had been found to facilitate speedy liquidation of all outstanding accounts and expressed the hope that the matter would soon be concluded successfully. In reply, Israel informed the CCP that it was prepared to proceed with the scheme, despite its disappointment with the results of the release. To avoid further obstructive interference "and insure genuine relief to all those entitled to benefit from the scheme Israel felt that it was necessary to enter direct discussions with the Arab depositors concerning new release procedures."

However, the CCP took the position that the Israeli proposal "would represent a departure from the agreement between Israel and the Commission for a settlement, which had been unconditional except for the question of the availability of the necessary foreign currency." In the Commission's view, the introduction of new procedures and Israel's demand for direct negotiations with the depositors, "would introduce a step which was unnecessary and which would, in all probability, prove unfruitful * * * to make the proposed negotiations a condition to the ultimate payment of the remaining accounts might jeopardize the entire scheme."[52]

DIRECT NEGOTIATIONS WITH REFUGEE REPRESENTATIVES

Despite this warning, Israel decided to open negotiations with representatives of the refugees. In the summer of 1954 Israeli officials began direct parleys in Paris with representatives of the General Refugee Congress of Palestine, one of several unofficial Palestine Arab refugee organizations. However, when the negotiations became known, the Government of Jordan objected, arguing that they were being carried on by unauthorized individuals. The Jordanian Minister responsible for Arab affairs stated that the unauthorized negotiators "would be guilty of 'treason' for making contact with 'the enemy')."[53]

Israel called Jordan's reaction "most extraordinary." It pointed out that the absence of any direct contact with the depositors had made the first stage of the unfreezing operation "a most lengthy, laborious and imperfect process, with the result that less than $2 million of the $2.8 million allocated was actually paid out and that with great delay." To avoid such difficulties, Israel had entered direct negotiations with the General Refugee Congress and had invited it to submit proposals for the release scheme. The list of proposals was "purely of a technical banking nature," and Israel had accepted it. The role of the Congress was limited to assistance in processing the applications. Funds would be paid directly to the individual depositor. The conclusion of the issue, in the opinion of Israel's delegation, lent support to the Israeli argument that the questions at issue between Israel and the Arab states could be solved only by direct negotiations. Furthermore, Jordan's reaction proved that the Arab Governments "are evidently quite prepared to do injury to the interests of the refugees in order to feed the passion of hostility and hatred against Israel."[54]

In the meantime, the CCP learned that on November 16, 1954, Israel's Government announced over the radio procedures to be followed by holders of blocked accounts for securing payment. The Commission noted that there were important differences between the procedures announced on November 16 and those agreed upon with the Refugee Congress, particularly, Israel's grant to the Congress of exclusive handling of application forms and authorizations for payment on behalf of the refugees. The November 16 broadcast made no such provision.

Accordingly, on November 25 the CCP asked Israel for clarification. It was informed that the steps announced in the broadcast described the entire procedural agreement between Israel and the banks. The Commission therefore assumed that the latter agreement was acceptable to the banks and that it (and not the agreement with the Refugee Congress) described the procedure to be followed. The CCP felt that it could assist in any arrangements for carrying out the release without further difficulties. Despite the differences of opinion that arose between Israel and the CCP, the latter derived "satisfaction from the knowledge that those differences were ultimately resolved through the very process of conciliation which constitutes the Commission's principal task."[55] By the beginning of 1956 the release was proceeding with only minor technical difficulties. More than half the accounts had been released, and it was expected that the balance would be unfrozen without major difficulty.

CONCLUSIONS

Thus, to conclude successfully this small operation of releasing frozen Arab accounts, the CCP had to labor through 6 years of intricate negotiations. The difficulties encountered in achieving even this small advance are indicative of even greater obstacles to the solution of larger and more complicated issues.

On the one hand, Israel did not view the release of the Arab blocked accounts as an obligation. It tended to connect it with the whole Palestine problem. In view of the Arab refusal to negotiate directly a general peace settlement, Israel considered the

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

release as a concession. It did not view the accounts as a debt to the refugees, because the problem was taken out of the total context of all refugee and Palestine issues. After it had released the first installment, the Israel Government expected some quid pro quo from the Arab States before completing the release process.

The Arabs, on the contrary, did not regard the release as a concession, but rather as a final implementation of the refugees' natural rights. They regarded Israel's move as a tactic to withhold the remaining three-quarters of the funds. In Arab eyes, Israel's concession was not at all related to a general settlement of the Palestine problem. Because the United Nations did succeed in obtaining some small part of what was due the refugees, the Arabs saw no reason to regard this as a step toward peace, nor would they permit such a concession to be used to strengthen Israel's political position. The Arab attitude toward the application forms for release of blocked accounts was characteristic of their suspicion of Israel's motives. The forms reinforced the Arab fear that one of their purposes had been to secure de facto recognition of Israel's sovereignty and authority over Arab property, which they were not prepared to grant. In general, the Arabs tended to isolate such problems from the total context of the Palestine situation and to insist that they were in no way related to a peace settlement.

In view of these sharp differences, it would seem that the CCP greatly exaggerated the psychological importance of the release plan. Its belief that this measure would advance peaceful relations between Israel and the Arab countries seems unjustified. Nor does its estimate of the value of the accounts to be released as a practical contribution toward the alleviation of the lot of the Arab refugees appear to be grounded upon fact. The figures presented at the beginning of this article clearly underscore the relative insignificance of these funds as a contribution to bettering the refugees' living conditions.

Should We Give Away Our Textile Industry?

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. CRETELLA. Mr. Speaker, I wish to call to the attention of my colleagues some information supplied by the Northern Textile Association concerning the flood of Japanese textiles into the United States which reflect the difficulties as encountered by our own industry today.

The American textile industry will be financially unable to absorb any more competition from Japanese importations of goods manufactured at an astoundingly low cost as compared to those borne by American mills. Many of the textile factories which have been indiginous to New England consequently have been forced to either close down or relocate to areas in the South where wages are appreciably lower. In any case we shall be faced with a growing number of ghost towns in New England, most of whose citizens are dependent upon the sole textile industry.

I believe strongly that our tariff authorities take a closer look at this

situation which is endangering the welfare and security of so many of America's textile workers.

United States imports of cotton cloths and apparel from Japan have continued to increase at an alarming rate during the first quarter of 1956. Imports of cotton cloths, excluding velveteens, are now at the annual rate of 244 million square yards—which is an increese of almost 700 percent over total imports from Japan during 1953.

The imports of certain specific fabrics, predominantly those with high labor content, have increased in an even more drastic fashion during the past 3 years. Imports of cotton velveteens from Japan reached the staggering total of almost 6 million square yards during 1955—an increase of close to 2,000 percent over 1953. During the month of March alone, imports of Japanese ginghams totaled 16 million square yards—almost three times as much gingham as was imported during the entire year of 1954. The current annual rate of gingham importations based on first quarter shipments to the United States is 121 million square yards—an increase of 1,876 percent over 1954.

During the month of March, shipments of 500,000 yards of voiles and lawns marked the beginning of what may become an avalanche of importations of these fabrics—made by fine combed mills in the United States, many of which are located in New England.

In addition to cotton cloths, United States imports of finished sheets and pillowcases from Japan increased 791,000 units in 1953 to almost 12 million units during 1955—an increase of 1,382 percent.

Just as fantastic have been imports of cotton wearing apparel, the bulk of which are cotton blouses and shirts, which jumped from a combined total of $1,315,200 during both 1953 and 1954 to an annual rate of $44,055,600 during 1956—an increase of more than 3,000 percent.

Examples of why imports from Japan are increasing at these astonishing rates is found by comparing the prices of some domestic and Japanese cotton fabrics. Japanese ginghams are selling in New York, duty paid, at 33¼ cents per yard, while it costs American mills 37½ cents per yard to make the same fabric. Japanese broadcloth sells in New York, duty paid, at 26 cents per yard, which is 4 cents below the cost of production in many American mills.

The invasion of the cotton textile market is only the start of what can be expected from Japan in the near future. Equipped with modern machinery and average hourly earnings of approximately 15 cents, the Japanese textile industry will soon be ready to export synthetic textile fabrics, as well as woolens and worsteds, at prices so far below the cost of manufacturing these fabrics in domestic mills that American producers will be completely unable to compete.

Highlights of United States imports of cotton cloths and apparel from Japan, 1953–56

COTTON CLOTHS

	Square yards	Percent change from 1953
1953	30,666,000

Carelessness, Conservation, and Construction

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid and informative address that should be as widely read as possible, Carelessness, Conservation, and Construction, made on May 18, 1956, by Dr. John Fowler, immediate past president, American Academy of General Practice, at the annual meeting of the President's Committee on Employment of the Physically Handicapped, which took place in Washington, D. C., on the above date:

CARELESSNESS, CONSERVATION, AND CONSTRUCTION

It is my hope that this address will be viewed with the eye of a doubter and the mind of a skeptic. I hope it will be thoroughly analyzed and constructively criticized. At the outset, let me say that the general physician has a latent interest and a vital stake in the overall problem of rehabilitation. Also, he has a definite and inescapable responsibility. Since employment is a good therapeutic measure and rehabilitation precedes it, the two are insolubly linked together in our consideration. Following several months of study and research, reading literature of various organizations and departments, noting inconsistencies and weaknesses, observing indifference and woeful lack of information among those who should be informed, asking myself and others questions, many of which have not yet been answered, I can only conclude that much needs to be done on the ground level to develop well-organized and effective machinery to carry out the great purposes of this committee. However skillful the artisan, he cannot do his best work without the proper tools of this trade. However inept the workman, he can do better work with proper tools.

I shall briefly dispose of the first part of my subject, Carelessness. Carelessness is defined briefly as "wanting in care or interest; neglectful." I think this term can be applied to both the medical profession, individually and collectively, and other agencies on the top level, including rehabilitation organizations.

Insofar as the medical profession is concerned, most of the lack of care and interest has been due, I think, to the fact that this phase of the general physician's work has been, percentagewise, so minor a part, and the fact that the public at large, the patient himself, and the attending physician so long resignedly accepted the philosophy that, when means immediately at hand were exhausted for improvement of the patient's condition, the status at that point was accepted as the will of God. In many or most instances, the economic barrier was also present. This is still a factor on the treatment level.

With this state of mind, the majority of general physicians were not properly alerted to the fact that all about them facilities were being developed and improved (and available to them) for the continued and better care of these patients. Whether a more comprehensive and intensive effort to bring this to their attention would have been more effective without the rude awakening of individual responsibility, I do not know.

I do know that we, as general physicians, lost the initiative and, by default, lost our place of importance in this great field of medical endeavor. Yet, without the general physician, it will be difficult to reach more than 50 percent effectiveness. Narrow specialty level treatment has been emphasized to our exclusion as a body. It is my hope that this wanting in care or interest will soon be brought to an end, and we, in medicine, can retrieve for the medical profession, and particularly for the general physician, this phase of medicine which rightfully belongs to us.

If any doubt these assertions, that our part has been minor, I would refer them to page 10, paragraph 3, of the Bulletin, "A

Message to the Medical Professional on Vocational Rehabilitation of the Disabled," in which appears the statement, "Even now, only 3 percent of the State's clients are referred by physicians." If this be presently true than someone other than physicians has been remiss. Could it be possible that the proponents of these programs neglected to study the basic philosophies of the general physicians? Could it be possible that there was overlooked the natural reluctance, a product of fear, of the general physician to participate in a program sponsored by the Government?

There are those now who look suspiciously on any Government activity, however worthy, which has the appearance of working with or for a Government agency. I think I know the philosophy of the present administration and the earnest devotion of the personnel working in rehabilitation and employment of the handicapped. So well, indeed, that I need exact no statement from them that they are interested only in a free and unfettered medical professional who, aware of its obligations, will meet them, and a vital concern for the best welfare of the patient, and the individual who can be profitably employed. That we all have weaknesses, only the foolish would deny. That there are many improvements which can and should be made, the thoughtful and wise admit. On method, there is frequently divergence of opinion—but on one thing we must all agree. The manpower of the medical profession is not sufficient to engage in all the details of rehabilitation. Hence, the organizations all over the country developed for this purpose must be used by us to achieve our goals. There must be better understanding and more effective coordination. That the Government's concern is justified, we must admit. That its aid to private facilities by grants to States on a matching basis to support these facilities, we must accept as a good and necessary thing. So much for our "Wanting in care or interest."

On the level of both the President's Committee and most of the national organizations set up for rehabilitation, I think the indictment can be made that such an analysis of true fact was not made by them and effective steps taken at the ground level to incorporate and use them rather than concentrating all effort on the superstructure.

In organized medicine, I think the importance of the personnel of rehabilitation committees appointed by District and State medical societies was overloked and were made, in many instances, without due regard to the personal interest of the individuals so appointed in the subject of rehabilitation, or indeed whether or not they had any knowledge of the subject.

I have observed in many meetings of medical societies that, when rehabilitation committees were called upon to report, almost invariably there was the statement: "No report." I think that the membership of most of these committees, if asked the question, "What is actually being done by the members of the society for active and effective participation in rehabilitation programs?" the answer would be far from satisfactory. Or if they were asked "What is the list of all organized facilities for rehabilitation of all kinds that exist in your country?" the reply would be equally unsatisfactory. Nor is there proper knowledge of jobs in the community fitting the needs and capacities of the rehabilitated.

It has been brought to my attention through many sources, that the personnel of many of the local lay-rehabilitation groups have more interest and enthusiasm than good judgment, and that failure to enlist the cooperation of physicians is sometimes due to the fact that they arbitrarily make moves which alienate medical cooperation. These personnel misfits are, I believe, the exception rather than the rule, and I also hasten to add that there are thousands of physicians throughout the country who have realized their responsibility and have excelled in rehabilitation efforts.

There are many notable exceptions who have been constantly aware, as general practitioners, of their obligation to go farther than most in the field of rehabilitation, notably doctors Gradie Rowntree, of Kentucky, and James Perkins, of Denver, Colo., and others in every State. This is the bright spot in this picture. I believe that we can get almost all general physicians to do the same. But they must be better informed and educated specifically in this field.

In the organization of private facilities, some local units are often directed by overzealous individuals who, in their enthusiasm, sometimes go beyond reason, and attempt to do things which encroach on medical prerogative. This, in such areas, does antagonize practicing physicians. These are facts which must be admitted. It will be noted that these are all observations, not criticisms. I do not think anyone is to be criticized for slow progress in a field the full import of which has not been appreciated or fully understood. The general practitioner of medicine wishes, at this time, to reclaim its share in the field of medicine which he has so nearly lost by the carelessness of default.

We desire to engage to the limit in our share of rehabilitation. We desire to see every employable handicapped person back at work. This is good sense, good economy, and good therapeutics.

The laws of every State should be carefully scrutinized to see if compensation insurance to cover these handicapped would be prohibitive for the employer, and, if so, methods of supplementing this for the benefit of the handicapped employee. This beyond the funds now available. The employer is justified in refusing to agree to a program which might jeopardize his financial stability.

Since, after months of study and compilation of data from many diversified publications, pamphlets, and material put out by individual facilities, it is my firm conviction that, from these scattered sources, most general physicians will not acquire the concentration of information which is so necessary for their understanding of the overall problems of crippling, rehabilitation, and employment.

I recommend that immediate steps be taken to compile a textbook containing a summary of the conditions most likely to lead to crippling, possible methods of prevention of amelioration and definite information as to when active rehabilitation should be instituted and where such facilities may be found, and that such a textbook be made a part of the curriculum of all medical schools and be the basis for lectures and information given to medical groups all over the country as well as an effort made to place such a comprehensive textbook in the hands of every general physician and specialist who should have interest in rehabilitation, as a member of medical society committees.

Suggested subjects:

1. Amputees: While a large part of this is now being done by the Veterans' Administration, the future will see the most of it in civilian personnel.
2. Heart disease: As a crippling disease (rheumatic, etc.).
3. Blindness: Its prevention, its early treatment, corneal transplants, trauma, cataracts, corneal ulcers, etc.
4. Cerebral palsy: Its five divisions.
5. Multiple sclerosis.
6. Arthritis.
7. Cerebro-vascular accidents, all ages.
8. Muscular dystrophies.
9. Poliomyelitis.
10. Diabetes.
11. Epilepsy.
12. Paraplegia.
13. Hemiplegia.
14. Tuberculosis.

Every condition which may lead to crippling should be evaluated at the time of its earliest recognition and efforts begun at that time to conserve all possible function rather than wait until the final static condition of the patient requires active rehabilitation. This, I believe, will reduce materially, the active field of constructive rehabilitation.

Also, every member of a rehabilitation committee of any medical organization should be required to familiarize himself with its contents and be able to disseminate accurate information at all times.

It is the basic philosophy of the general physician that it is his responsibility to provide the best possible medical care to the American people at a moderate cost. Therefore, he is particularly concerned that his patient receive care at a cost which he can meet. It would seem that the more encouragement which can be made to develop rehabilitation facilities in connection with hospitals with which he has staff connections, the more effective would be the care given the patient. It would be an advantage, also, to have a wing for the inboarding of such patients who do not require full hospital care and thus reduce the cost markedly.

While we note with interest the prospective construction in New England of the area's first rehabilitation center under the provisions of the Hospital Survey and Construction Act (Hill-Burton program), it is noted that the construction cost is $800,000 for an institute building and will provide self-help accommodations for only 46 inpatients with separate facilities for both hospitalized and ambulatory adults and children.

While a facility of this sort is magnificent as a research center, it seems a staggering sum, per capita, in overhead investment, and falls far short of the needs for such a large area and, incidentally, the operation of such a center would be exclusively in the hands of narrow specialty groups.

The general physician is, I think, justly puzzled by the expenditure of such great sums of money for such small returns. Certainly he would find himself frustrated in attempting to get proper rehabilitation for his patient from widely scattered areas in this manner. In order to maintain interest he must have contact and at least a medium of control.

In our present-day social consciousness, there seems to me to be conflicting philosophies—on the one hand, we encourage rehabilitation and employment of the handicapped. This is good philosophy, good economic judgment, and excellent therapy both for the body and the mind. On the other hand, we encourage, and in some areas insist, retirement and cessation of employment at age 65 even when such idleness is conducive only to deterioration, economic loss, and need for therapy where none existed before. This is another problem in our humanitarian concept which causes us in general practice some concern. That is the fact that we are facing the increasing problem of the aged—those above 65 years of age who are in good health and have the capacity for years of gainful labor, yet in many instances, they are compelled to stop work and all too frequently deteriorate both mentally and physically. It seems to me that we should reconcile these conflicting philosophies and perhaps review the whole social structure in the light of all conditions and all facts.

The family doctor is vitally concerned with all these inconsistencies and is confused in viewing the parts and not the whole. He is trained to view the whole man, or a whole situation, and is concerned when one element contradicts the other. Particularly we should not on the one hand bend every effort to rehabilitate and employ, which is good,

and on the other hand allow perfectly capable and able men to be deprived of their employment because they have reached a certain age. Age is not necessarily chronological. A man at 65 may be more able and competent than a man of 45. Yet he is shunted aside to deteriorate and become one of the army of unemployed. We cannot condone this on the one hand and work feverishly for an opposite philosophy on the other.

It is time to harmonize these philosophies and speak out strongly against retirement at any given age. Let capability and competence be the sole guide. Otherwise, we compound our social, economic, and medical problems. I think we should make a far-reaching plan to analyze the probable disabilities with which we are so much concerned with the objective of anticipating and conserving as much as possible in the potential cripple rather than wait until attempts at rehabilitation is the only treatment at hand.

I think we should realize, too, that many of the physical problems and catastrophes which beset our population in middle life in ever-increasing numbers may have their genesis in past medical successes. Infant and childhood death rates have fallen. It is conceivable that many of these infants now living and growing to adulthood have in them a larger percentage of congenital defects which mitigate against longer life. Early degeneration could, therefore, be a possibility and the increased incidence of heart disease in younger people may be due to congenital constitutional deficiencies.

In summary, I would recommend as a first step in proper overall accomplishment in the field of rehabilitation that—

1. There be a thorough reevaluation of every rehabilitation committee in every unit of medical organization and that no man be reappointed or appointed to such committee unless he has a real interest in the subject and will engage to ascertain and disseminate to every member of his organization:

First, the importance of every member assuming his individual responsibility to his patient in the field of rehabilitation.

Second, be able to furnish him with a complete list of all facilities in his county and State which can be of assistance to him in rehabilitation to the highest degree in whatever field of disability or crippling comes to the attention of individual physicians.

Third, make stimulating reports at medical meetings. On the other hand, the various lay organizations should undertake to see that there is a reevaluation of its personnel in every facility and train all personnel who are not distinct assets to the organization, and also insist on proportionate representation of general physicians on medical advisory committees.

Fourth, a new textbook covering those disabling conditions requiring rehabilitation. This is essential.

Fifth, encouragement of rehabilitation facilities in smaller hospitals is desirable.

Sixth, actively interested committees on rehabilitation should replace indifferent committees in all units of medical organization.

Seventh, careful selection of working personnel in private rehabilitation facilities will be helpful in coordinating medical responsibility and lay effort.

Eighth, more planned editorials and articles in medical journals with particular attention to local society bulletins. Every physician should be stimulated to familiarize himself with all available types of employment for which the variously handicapped can be employed.

The general physician at long last recognized the importance of his role in the vast area of rehabilitation and accepts its responsibilities. It is my belief that most organized medical units will cooperate. We have assurance that all Government committees and agencies will cooperate. The large rehabilitation agencies such as the National Society for Crippled Children and Adults and the National Rehabilitation Association have indicated a willingness to work closely with us.

This is a hurculean task but can be accomplished. What the mind of man can conceive, the hand of man can eventually do. Fragmentary effort is not enough.

J. R. FOWLER, M. D.

BARRE, MASS.

Two Texile Mills Close—Japanese Imports Blamed

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. LANHAM. Mr. Speaker, with my own remarks I am including an Associated Press dispatch which appeared in the Evening Star in its issue of Thursday, June 7 entitled "Two Textile Mills Close—Japanese Imports Blamed," as follows:

NEW YORK, June 7.—Consolidated Textile Co. announced today it is shutting down 2 plants—1 in New England and 1 in the South—because of Japanese competition.

Lester Martin, president of Consolidated, said the Windsor Print Works of North Adams, Mass., a subsidiary, would halt operations by the end of the week. It has been processing flannel shirting.

Mr. Martin said Consolidated is also closing a 500-loom print-cloth mill in Martinsville, Va. "We are starting to run it out now," he added.

The textile executive was bitter in his denunciation of low-cost Japanese fabrics. "Japanese goods are cancer and they will kill the entire textile industry," he declared. "They should be kept out of the United States market entirely."

Several weeks ago, he said, Consolidated shut down another subsidiary, the Luther Manufacturing Co. of Fall River, Mass.—also blaming Japanese competition.

Mr. Speaker, here is further compelling evidence that the administration's disregard for the welfare of the textile industry is gradually destroying it. Of course, I realize that the GATT agreements are not the only cause for the troubles of the textile industry, but added to other factors the tariff cuts put into effect by GATT last September have proven, "the straw that will break the camel's back."

It is noteworthy that the State Department has recently announced other reciprocal trade agreements drastically cutting American tariffs. Fortunately for the textile industry the 15 percent cuts made under this latest agreement do not affect the textile industry because last year Senator GEORGE of Georgia got written into the reciprocal trade agreements bill a provision that prevented any further cuts than those then in process of consummation, but which had not been announced at the time of the adoption of Senator GEORGE's amendment.

The experience of the textile industry this year makes it crystal clear that the escape clause and peril point provisions in the Reciprocal Trade Agreements Act are not effective. They must be strengthened if the act is continued or not only the textile but other American industries will suffer as a result of the pressure of the huge industries such as steel and automobile for further tariff cuts. The voices of these huge industries are heeded by our Chief Executive and our Department of State while the voice of the textile industry is as of one crying in the wilderness.

For Our Own Safety

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 7, 1956:

FOR OUR OWN SAFETY

It must be hoped that the House as a whole, with the Senate following suit, will ignore its Foreign Affairs Committee's decision to slash $1.1 billion (nearly all of it for military uses) from the $4.9 billion requested by the administration for overseas aid in the coming fiscal year. The cut is much too drastic to be defensible. If Congress does not restore it, or at least a very large part of it, then Congress will be taking a gamble that our country can ill afford to take.

This has been made clear by President Eisenhower both at his news conference yesterday and at his earlier meeting with Democratic and Republican leaders of the House. Along with all his uniquely well-informed advisers, including the Secretary of State and the Joint Chiefs of Staff, he has warned that such a reduction in our mutual-security program would endanger our own national safety. No matter what its advocates say—and some of their statements may seem to be superficially persuasive—the simple fact is that a slash of these dimensions would have a lamentable effect, psychologically and otherwise, on our friends and allies abroad, including particularly the members of the North Atlantic Treaty Organization.

Let us not be naive about this matter. Let none of us be beguiled or bamboozled by those who say that the United States is just playing the role of "Santa Claus" or "Uncle Sap" when it extends economic and military assistance to nations overseas. Actually, as the President has indicated, this aid—even when it goes to neutralist countries like India and Yugoslavia—is not mere altruism for altruism's sake. It is a thing that helps us just as it helps the recipients. And that is why it rightly comes under the official heading of "mutual security." It is not a starry-eyed or one-sided program of soft-hearted or soft-headed handouts. It is a down-to-earth business proposition—a sort of cooperative insurance policy that makes it easier, more effective, and less costly for us, as well as for our allies, to cope with the still-formidable menace of Communist subversion and aggression.

As a matter of fact, as the President has emphasized, "we are going to spend many more billions" on our own separate defense unless we "support mutual security earnestly, sincerely, and with a clear realization that we are serving America's best interests in so doing." And he has gone on from there to add—with that moving eloquence that often characterizes his informal remarks to the press—that our foreign aid, which is as good for us as for others, is of incalculable peace-promoting value in an age when we must understand this: "As long as we are not shooting, we are not spending one-tenth as much as we would if we were shooting, and, remember, there is no destruction that we saw in World War II • • • that would even give a hint of what another war would bring."

So it is understandable that Mr. Eisenhower has hit hard against those who would be parsimonious in the field of war-deterring mutual defense and mutual security. In effect, appealing to the reason of all of us, he has left no room for doubt that niggardliness or false economizing in such a ivtal matter could gravely imperil the United States. Congress, in the circumstances, will be skating on thin ice and risking much too much if it fails to heed his warning.

The Coordination of Future Airspace Use Planning

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. HAYS of Arkansas. Mr. Speaker, our distinguished colleague the gentleman from Arkansas [Mr. HARRIS] recently made a significant address in the city of Boston, and, under leave to extend my remarks, I include the address, as follows:

SPEECH OF THE HONORABLE OREN HARRIS, ON TUESDAY, JUNE 5, 1956, AT A MEETING OF RADIO TECHNICAL COMMISSION FOR AERONAUTICS, BOSTON, MASS.

Mr. Chairman, His Excellency the Governor, distinguished guests, and other friends, I feel highly complimented in having an invitation to meet with you on this auspicious and important occasion. It is good to meet with you on such an interesting subject. I must confess, however, that even though our committee has been deeply involved with this subject matter, and we have sat through many sessions of hearings, public and executive, the technical phase of it is still somewhat baffling to me.

I am delighted to have this privilege of renewing pleasant association with my old friend and former colleague of the House, your Governor, Chris Herter. From reports we get, I am sure he is carrying on with the same force, enthusiasm, and ability as Governor of this great Commonwealth as he did in rendering such a fine service in the Congress of the United States.

Now I fully realize that my time at bat here this morning is in the nature of a pinch-hitter. My able colleague from California, CARL HINSHAW, who is one of your official technical advisors, and I might say who undoubtely is better informed on technical matters affecting aviation than any other Member of Congress, could not be with you for an obvious reason. Today so happens to be primary day in California. I think we have heard or seen something about that in the newspapers. Of course, CARL has no opposition for nomination in his own party, but they have the unusual procedure in California where he as a Republican is trying to get the Democratic nomination too. In view of his problem, I am glad to pinch-hit for him and hope that I can do justice with this discussion.

I have the distinct honor and privilege of serving as chairman of one of the most important committees of the Congress, in my judgment, the Subcommittee on Transportation and Communications of the Committee on Interstate and Foreign Commerce of the House of Representatives.

We have had an exceedingly busy schedule. It has covered many highly technical subjects. Some of our most important problems during this Congress have been in connection wtih matters affecting aviation. We have amended the Airport Construction Act, providing a definite program for the next 4 years.

We have permanently certificated local service airline carriers. We are considering other bills in the committee at this time which could have far-reaching implications in the field of aviation.

One of our most difficult problems during this Congress has been our investigation of the development of a common system of air navigation and traffic control. Developments over the past few years apparently caused the concept of a common system of short-range air-navigation aids for joint use by civil and military aviation to be jeopardized. The controversy, which threatened the common-system concept, came out in the open in February 1955. A new rho-theta short-range radio air-navigation system, known as TACAN, is definitely being considered and developed presumably to replace the present system commonly known as VOR/DME.

On this issue we had some most interesting hearings. We found that there were a lot of important people who held very definite convictions.

This situation developed, among other reasons, as a result of the jet age into which we are moving swiftly.

As an important aspect to this problem, we found, is the question of airspace. Thus the subject Coordination of Future Airspace Use Planning is most appropriate today.

I appreciate your suggesting that in view of this background that I discuss with you briefly the importance of coordination in airspace use planning.

I should like to say that congressional interest and responsibility in the field of aviation covers all aspects of airspace utilization. These recent events make it imperative that we give more attention and most careful consideration to this vast important subject. It is therefore, appropriate for some of the thinking on coordination of future planning and development be presented here today.

With a group as well informed as you, I am sure I don't need to dwell on the importance of coordination in working out the problem we face. But I thought I would point out some of the mistakes made in the past in the hope they can be avoided in the future. The fact that we are behind in getting required equipment installed would indicate that mistakes have been made.

And I want to stress the point that Congress cannot be overlooked, if the maximum speed is to be achieved in solving the serious problems already facing civil aviation.

Not only must the taxpayers be protected in avoiding duplication of effort, but all concerned—Government and industry—must face up to the fact that we just don't have enough scientists qualified to work on these problems. So we must make the maximum use of both money and brains.

We have come a long way since World War II in meeting the growing problems of air navigation and traffic control. But let me say right now that I think we would have had more progress and fewer problems if there had been more coordination and less competition.

There could have been better coordination among those working on these problems in the executive branch. But equally important, there could and should have been greater efforts to coordinate activities of the executive branch with Congress.

Often it is overlooked that Congress is the policymaking branch of the Government. True, sometimes part of the job of making detailed blueprints is delegated, and rightfully so, to boards and commissions, and in cooperation with Government agencies, but still the basic policymaking responsibility rests with Congress and policy decisions made by Congress can only be modified by Congress.

You might say that too often the coordinators have coordinated with everyone except Congress only to find that after all the taxpayers are going to pay the bill, and Congress must approve the payment. Any effort at coordination which overlooks the fact that the responsibility for making national policies in the public interest rests with Congress may run into trouble, especially when appropriations are needed.

It is important to keep that in mind. We are dealing here with vast sums of money. I am told that the air defense radar system now being installed will cost in the neighborhood of $3 billions. Then the Department of Commerce through the CAA has a program for new equipment that will cost $246 million.

Now, I don't want to imply that the Radio Technical Commission for Aeronautics needs a lecture on coordination—you have not been lax in this respect. You are not trying to make policy. You are the fellows who do the work. And a good job you have done, too. Without your help, the marvelous progress of the past decade would have been impossible.

As a result of the TACAN hearings held last session by my subcommittee, I have a speaking acquaintance with the SC-31 report which came out of RTCA. That was a magnificent job and has been followed by many splendid contributions in solving problems in the very difficult field covered by the report.

In passing, I might say that I like the idea of setting up a government-industry advisory group like RTCA to work on these problems. It is better than establishing a special Government bureau to do the job. Through RTCA, we have available the best brains in the country upon request, something that would not be possible even if we went to a lot of expense to set up or expand a Government agency. The Government can't always compete with industry in hiring brains and experience.

No doubt some of you have read the report of our committee on the TACAN investigation. That report makes a very positive declaration on the importance of coordination.

In the TACAN report, the committee said:

"The position taken in 1947 by this committee that there must be but one system of aids to air navigation and traffic control common to all users of airspace in the United States and not a multiplicity of systerms is reaffirmed. A multiplicity of systems would constitute both a hazard of large proportions and a burden upon the taxpayers. We insist that coordination among the Government agencies concerned be maintained to prevent overlapping and duplication of effort in the development of the common system concept."

To me, the TACAN controversy is a very interesting example of the difficulties you get into when coordination breaks down in a field as complex as the one we are considering here. I think a brief review of the history of the TACAN controversy will point

up the problem facing us in future planning.

Problems follow in the wake of progress. If someone hadn't come up with something he believed was an improvement over VOR-DME, there wouldn't have been a TACAN controversy. Discussion is necessary to solve problems but when discussions reach the stage of controversy we are likely to get more heat than light.

Be that as it may, the TACAN controversy did get out of hand, resulting in two congressional investigations and the threat of several more.

When I was elected to Congress back in 1940, the possibility of being called upon to preside at hearings on a subject as involved and technical as TACAN would have seemed to me fantastic. But I walked into it when I was assigned to the Committee on Interstate and Foreign Commerce, and eventually became chairman of this important subcommittee.

As you know, the Committee on Interstate and Foreign Commerce has broad, general jurisdiction in the field of transportation and communications. Both subjects are very interesting, as well as important. You could not have the present air transportation system without communications of a highly complex variety.

To me, transportation in itself is a highly interesting subject. When you get into the field of jet-age transportation, the normal interest is multiplied many fold.

I don't need to dwell upon the importance of transportation in maintaining our high standard of living and the country's great industrial activity. Transportation activity is a good indicator of business activity. We have long judged a country town's prosperity by the number of automobiles and trucks on the streets, by the number of railroads and good highways it has. Now we add airport facilities. Businessmen out looking for a new plant site are now passing up cities that do not have adequate airport facilities.

The rapid development of air commerce since World War II is ample evidence that air transportation fills a public need.

Then there is the all-important question of national defense. Without air power, it is admitted that our country would be in a desperate situation today.

Thus, no one questions the importance of a sound aviation program to the national defense and the national economy. Civil aviation and military air power go hand in hand. We have to have both. And they must work together. They must use the same airspace. In World War II, the military would have been severely handicapped without the invaluable aid of civil aviation. Civil aviation again proved its importance in moving men and materials long distances in a hurry when the Korean conflict broke out unexpectedly almost halfway around the world.

We, on the Committee on Interstate and Foreign Commerce, have spent a lot of time over the years on civil air policy. The committee put in many weeks of hard work drafting the Civil Aeronautics Act of 1938. That act sought to establish a sound air-transportation system to meet the Nation's present and future air commerce and air-mail needs, and to promote aviation in the interest of national defense.

We think that the vast air transportation system now serving every section of the country and maintaining our competitive position in international aviation is pretty good evidence that we have done a good job.

But the job has not been completed. It would be bad for all of us if we had finished the job. That would mean we had reached the limit of man's ingenuity and that the final ultimate air-traffic control system had been achieved. We know that is not true. We know we need better air-traffic control to handle jets and that we will get it. As air transportation expands, and big jet transports take to the air, we will have new problems, and people such as you will solve them.

In the old days before the Wright brothers, the air and airspace may have been free. When, day and night, we must protect the airspace above us against enemy attack, the air may still be free, but our airspace is not.

With jet fighters guarding the skies above us and a fleet of big transport planes flying nearly 20 billion passenger-miles a year, the airspace in many areas is getting crowded. We have to do what we can to keep these planes moving in safety and to provide for more and faster planes as the commercial jets come off the line.

It is well to remember that there are other users of our airspace besides planes. The Army must practice artillery firing. Radio and TV towers use valuable airspace. The TV tower problem is being considered by our subcommittee this session. The Air Coordinating Committee has been working on the problem and has put forward a compromise. I hope that it is the solution. If it is not, Congress may have to make some positive policy decisions in this area to protect the public interest.

And there are other users of airspace, too. This points up the big question which we may well ask: "Are we running out of airspace?" which, though rarely regarded as such, is actually one of our most valued natural resources.

Speaking plainly, we must face the sad fact that we are running out of airspace, and it is most interesting as to what is happening to it and how it is being used up. What was once thought to be unlimited in this resource, has now become a critical commodity for specialized training, testing areas and numerous other purposes. It is a diminishing commodity, being rapidly shrunk by modern-day aircraft.

It might seem somewhat farfetched to say that Congress should lay down the ground rules in a field as highly technical as air navigation and traffic control system planning. But a little history will indicate the necessity for this. The same brief history will indicate how the long and bitter TACAN controversy might have been avoided, or at least kept from getting out of hand.

Let me say at the outset that I am not one of those who believes Congress should plot and chart the course of the Nation's economy down to minute details. I am inclined to believe that we often have too much dictation from Washington. That is a field, however, in which we must of necessity act.

We all realize that in certain areas the States and local communities must look to Washington for guidance. The field of transportation is a good example. Without some Federal regulation of interstate transportation, you would have chaos. That is especially true of jet age air transportation. Today a plane can pass through the air space of several States in a few minutes.

In a situation like this, somewhere there must be ground rules. Somewhere the inevitable conflicts must be resolved. From the beginning of the Republic, Congress has had the responsibility of fostering and encouraging the development of communications and transportation facilities. At the end of World War II we encountered a situation in aviation demanding the attention of Congress.

Among the many problems of readjustment which faced the Nation following World War II was that of taking advantage of the strides made in aviation. The art of flying developed tremendously during the war. Larger and faster planes were built.

A great many young men learned to fly. Many thousands more learned the advantages of air transportation as passengers.

Following the war, air traffic on the airlines increased tremendously. For the first time military aircraft became important users of the Federal airways, sharing the air space with commercial aircraft.

Traffic control facilities were under heavy pressure. During bad weather, traffic was delayed or flights canceled, because of inadequate aid navigation and traffic control facilities. Canceled flights not only inconvenienced the public but cost the airlines a lot of money at a time when revenue was badly needed.

It was a dark picture. Traffic delays and cancellations made it hard to sell the public on air transportation.

The pessimists had their day. In 1947 the air transportation bubble burst. A series of fatal accidents occurred. There was an almost complete breakdown of traffic control under bad weather conditions. The over-expanded aviation industry faced economic collapse.

Then as now, we realized the importance of aviation to the country's defense and economic growth. Without airpower we were virtually helpless from a military standpoint. Without adequate air transportation the country could not keep pace, economically, in a world where international competition was being stepped up rapidly.

But what to do about it? That problem was tackled by the Committee on Interstate and Foreign Commerce of the House, which made a far-reaching investigation. Congressman HINSHAW, of California, as chairman of the Aviation Subcommittee, submitted a report which made detailed recommendations. It called for a common system of air navigation and traffic control for joint civil-military use.

As a result of these recommendations, the Radio Technical Commission for Aeronautics set to work on the problem. As you well know, a group of highly qualified experts, representing all segments of aviation, both civil and military, met in Washington. After long and concentrated effort, RTCA Special Committee 31 came up with the blueprint of a plan for a modern, comprehensive system of air navigation and traffic control for common use by civil and military aviation.

The Congressional Aviation Policy Board and the President's Air Policy Commission, representing the legislative and executive branches of the Government, endorsed the RTCA common-system concept.

We were on the right track. We were getting somewhere.

The Air Navigation Development Board, representing the Commerce and Defense Departments, was set up to develop the common system, using the RTCA blueprint. The CAA set to work installing VHF omnidirectional radio range (VOR), along with greatly improved communications equipment and then distance-measuring equipment (DME). Other items such as the instrument-landing system and ground-controlled approach were installed.

Schedule reliability of the airlines improved tremendously.

While this was going on, the Navy was attempting to solve a very real problem, that of providing a short-range navigation system for carrier-based aircraft. VOR/DME was not satisfactory. That, as you know, was the beginning of TACAN.

We were still working within the common-system concept. Then came the Korean conflict and the Russians also finally succeeded in exploding an atomic bomb. Lessons learned in Korea indicated that VOR, due to citing problems, not only was unsatisfactory for carrier-based aircraft, but was not suitable for tactical operations of the Air Force.

The military, faced with the threat that the continental United States could very easily become a battleground, proposed TACAN as the common-system short-range air-navigation system to replace VOR/DME.

The reaction was immediate. The military was criticized for developing a new system in secret. The Defense Department was challenged to reveal what they had in their little black box. Some went so far as to suggest that the common-system concept be abandoned and the military permitted to go its own way.

At that point, the Subcommittee on Transportation and Communications was forced to look into the matter. We had a heavy schedule of hearings previously arranged. But the subcommittee found time to hear both sides of the TACAN controversy. It was long and tedious and very technical but also very interesting. As we proceeded, it began to appear that somewhere along the way there could be at least a meeting of the minds. The Air-Coordinating Committee came up with a compromise, which the subcommittee and then the full committee endorsed with certain reservations. The principal reservation was that the common system concept remain valid and must not be compromised.

Now, I am convinced that had there been proper coordination in time on the part of the various groups involved, that a great deal of time could have been saved. But that is hindsight.

In view of the magnitude—and the cost—of the job ahead of us, we must work together. There must be continued and full coordination on the part of the various groups involved. And Congress must be kept informed. After all, appropriations must be made and Congress is not going to write any more blank checks in this field.

I am told that there are now over 75 committees, subcommittees, and special committees, working in this field. That is all right. In a field as technical and as complex as this, special problems have to be attacked by groups specially picked for the task. But that situation increases the importance of coordination and makes more difficult the problem of eliminating duplication.

For that reason, I feel that the appointment of Mr. Edward Curtis by the President to coordinate activities in planning in this field is a great step in the right direction.

Admitting that we have problems, I am sure that the industry, as represented by this group here, has the know-how to meet them. By continuing to work together, bearing in mind that we are all working to the same end, I know we will get the job done. We will get the jets into the air and keep them flying in defense of our country and in the interest of the national economy.

Thank you.

Admiral Stark Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent editorial which appeared in the Wilkes-Barre Times Leader Evening News calling attention to the groundbreaking exercises for a new science building at Wilkes College, Wilkes-Barre, to be named in honor of Adm. Harold Stark, a native of Wilkes-Barre, and former Chief of Naval Operations:

Wilkes-Barre was aware of the high esteem in which Adm. Harold Stark, a native son, has been held nationally and internationally through the years, but it was stimulating yesterday to have confirmation from the President of the United States, naval associates, and others at the groundbreaking exercises for the new science building at Wilkes College, to be named in his honor.

Admiral Stark, a former Chief of Naval Operations, was in command of the United States naval forces in the European theater during the Second World War when General Eisenhower was Supreme Allied Commander. So when the President, in a message to Dr. Eugene Farley, president of Wilkes, referred to Admiral Stark as "my good friend," it was not an idle compliment but a statement based on close wartime association.

It must be a source of no little satisfaction to Admiral Stark, now in retirement after 50 years of service to his country, to know that he is so highly regarded not only by those in high places, but by his fellow Wilkes-Barreans. There just isn't much more that life has to offer than to occupy such an enviable position as the twilight approaches.

Sound Business Principles for Federal Power

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SOUND BUSINESS PRINCIPLES FOR FEDERAL POWER

(Address by Hon. FRANK T. BOW at the annual meeting of the Edison Electric Institute, June 5, 1956, Atlantic City)

I am glad to have the opportunity to consider with you gentlemen of the Edison Electric Institute a matter to which I have recently devoted considerable study. I refer to the application of sound business principles to rates to be charged for public power, at least where sold pursuant to section 5 of the Flood Control Act of 1944.[1]

Specifically, I propose to show that it lies within the authority, and likewise is the duty, of the executive agencies, to establish Federal power rates in accordance with sound business principles; to point out that in this respect those agencies have been greatly remiss; and to examine what would be the effect of really applying sound business principles as prescribed.

In general, this matter of rates for public power has been viewed primarily from the standpoint of the consumer of the power and only to a minor extent from the standpoint of the sellers, being essentially those citizens who pay Federal taxes. In other words, the matter has been viewed from the standpoint of short-term advantage for relatively few instead of the long-term advantage of all of such citizenry.

This is largely because those who are beneficiaries of the existing discriminatory preference are so very vociferous. Rarely is a voice raised in behalf of the taxpayer. Because my State, Ohio, contributes so heavily in proportion, I am all the more inclined to analyze what is involved.

FLOOD CONTROL ACT OF 1944

Without taking the time to go into the genesis of the policy provisions, being those in section 5 of the Flood Control Act of 1944, I quote the vital first sentence thereof:

"Electric power and energy generated at reservoir projects under the control of the War Department and in the opinion of the Secretary of War not required in the operation of such projects shall be delivered to the Secretary of the Interior, who shall transmit and dispose of such power and energy in such manner as to encourage the most widespread use thereof at the lowest possible rate to consumers consistent with sound business principles, the rate schedules to become effective upon confirmation and approval by the Federal Power Commission."

This is the most specific and influential of the several fragmentary and too often inconsistent, statutory statements of Federal power policy. I dip into past history only to the extent of pointing out the interesting fact that the Tennessee Valley Authority policy announced August 25, 1933, included the premise that, in its marketing of power, the controlling consideration should be that of "making power available at the lowest rate consistent with sound financial policy."[2]

The importance of the language I have quoted, from the act of 1944, may be judged from the fact that so prominent and ardent a proponent of so-called public power as former Secretary of the Interior Harold L. Ickes used that language in his memorandum of January 3, 1946, promulgating what he stated to be "the primary objectives of the acts of Congress." Although, strictly speaking, no other act contains just such language, Secretary Ickes cited, not merely the Flood Control Act of 1944 but also, the Tennessee Valley Authority Act of 1933, the Bonneville Act of 1937 and the Fort Peck Act of 1938 as authorities for the principle that—

"Power shall be sold at the lowest possible rates consistent with sound business principles."

The criterion established by Congress in the act of 1944 for setting "the lowest possible rates" is neither the practice of charity, in the form of subsidies, nor discrimination between groups of citizens in respect to rates of charge for power, but rather sound business principles. The statute mentions nothing else.

Inasmuch as sound business principles are assumed to apply to the element of rates as set forth in section 5, it is reasonable that the same principles should be assumed to govern in the cases of all of the other elements excepting only where and to the extent that there is an express prescription that they shall not apply. Please understand, however, that what I have to say is regardless of whether the buyer, that is the consumer, of the Federal power is, or is not, in the preferred class prescribed in the same section 5 of the Flood Act of 1944.

Even if we were to consider that "sound business principles" shall control rates in the cases only of Army engineer reservoir projects, there would be involved all Federal power development in the East except those of TVA; practically all of those in the Southwest; and largely those in the Missouri Valley and the Columbia River Basin. In all, taking into account those in operation, under construction and authorized, they comprise almost two-thirds of all Federal hydroelectric power development.

Let us now examine the application of sound business principles to the elements entering into the fixing of rates for Federal power. I take them up in the following order:

Charges for the use of money.
Amortization of investment.
Allocation of cost.
Tax charges.
Allowances for overhead costs.
Actual project income as compared with preconstruction representations.

Footnotes at end of speech.

Footnotes at end of speech.

CHARGES FOR THE USE OF MONEY

Actually it is not a benevolent Uncle Sam or the Government that lends the money for the construction of Federal power projects. It is we taxpayers. The money advanced or invested in these projects comes in the main from the use of Federal income taxes, paid of course by corporations as well as individuals.

But we taxpayers are concerned also in the fact that, up to the present time, some of the funds in point have been procured by borrowings against our combined credit. Fortuantely the use of this credit is growing less and less. Indeed, inasmuch as the national budget is now being balanced, present advances for the construction of these power projects are practically all from the pockets of the taxpayers.

A fundamental—a sound—business principle observed by those individuals and those banks and other institutions lending money is that the charge for the use of money shall be at least as great as the cost to the lender. Anything less would lead to bankruptcy. Moreover, the charge must cover costs of all kinds of making the money available, including overheads. For instance, in the case of a savings bank, there are the costs of gathering the savings and accounting for them; also there must be an allowance on account of loans which have "gone sour."

What is the cost of money to the Federal Government, that is, to us taxpayers? Surely it is not merely the direct charge for interest on the respective bonds, certificates, or Treasury bills. The total cost must include that of the floating of the loans, including refunding where that is involved, and of all accounting.

Further, in the case of money raised by income taxation, there is the proportionate part of the cost of the tax collection system.

As to the cost of the use of money expressed in percent of the advances from the Treasury for construction: At no time has even the mere interest on the long-term Treasury borrowings averaged as low as 2 percent; yet the Department of the Interior has used that figure, though more recently 2½ percent. Apparently at present the Army engineers, the marketing agencies of the Department of the Interior and the Federal Power Commission, at the instance of the Bureau of the Budget, are using a 2½ percent rate.[3] Of course, short-term money is cheaper than the long-term money which is involved; yet at present even 90-day Treasury bills yield almost 3 percent. On long-term Federal borrowings, the interest rate exceeds 3 percent.

Estimates of the complete cost of Federal money runs from a minimum of 3½ percent to more than 4 percent.

AMORTIZATION OF INVESTMENT

First we may look at the period or number of years allowed for paying off the loan, that is, amortization of the investment. In section 5 of the act of 1944, the prescription is "a reasonable number of years." The period now used by the Army engineers a 50 years. For the Bureau of Reclamation, a minimum of 40 years is prescribed with a permissible 10-year allowance for getting underway; the minimum in actual practice becomes 50 years.

Increasingly there is pressure for the use of longer periods—60 years, 70 years, and in the cases of recent proposals, affecting power from Army engineer projects in the Southwest, marketed by Southwestern Power Administration, a 100-year period.

Here, too, the matter has been viewed from the standpoint of the borrowers or beneficiaries. However, in applying sound business principles, the matter would be looked at from the standpoint of the lender. If the borrower cannot afford to meet that minimum basis of amortization and particularly that period of amortization which is sound from the standpoint of the lender, the loan is not made. Safety of the loan is the prime consideration.

After all, 50 years is a long time. The past 50 years have witnessed the almost complete disappearance of the streetcar and the interurban trolley; the bankruptcy of many, if not most, railroads; and a tremendous shift of population from farm to city. Most pertinent perhaps is the fact that railroad securities issued 50 years ago have in many cases suffered severely from decrease in amount and value of railroad transportation and hence necessitous reorganization proceedings.

At present we are entering the age of nuclear power. It is my understanding that such power has potentialities of ultimately attaining a cost and hence market price so low as to undercut the overall costs of even hydroelectric power. In view of this prospect, the Power Authority of New York, in floating bonds for its St. Lawrence River power development, was forced to limit the maturity of its bonds to 40 years from the time of issuance.

Various bodies of experts, including the Engineers Joint Council and the pertinent second Hoover Commission task force, have recommended an amortization period of not more than 50 years. Surely, in the light of what is facing us by way of nuclear power, a 50-year period should not be exceeded.

Turning now to the method of amortization, there is no prescription in the act of 1944 or any other pertinent statute.

The present practice—initiated by the Federal agencies, not by Congress—is to use the sinking-fund method which results in equal annual payments for the sum of amortization and interest (on unamortized balances). The reasons are twofold: Convenience of the agencies and leniency to the beneficiaries, that is, the power consumers.

A basic assumption of the sinking-fund method is that the income from the power project will continue at the assumed annual rate throughout the entire period of amortization.

Under the sinking-fund method, the return of the investment into the Treasury, that is, to the taxpayers, begins at a minimum and, if all goes well, reaches its maximum in the last year of the period of payoff. In consequence, the lenders—the taxpayers—during their productive lifetime get the benefit of only a minor repayment of the loan. For instance, during the first half of a 50-year pay-out period, only about one-third is repaid.

But sound business principles require the reverse. Because of the uncertainty in respect of the future, particularly as regards nuclear power, Federal projects should "pay out" at a more rapid rate during the earlier years. In other words, the method of amortization should be one which results in a diminishing financial burden on the project as the years go on.

It seems to me that a sound business means of accomplishing this is that method of amortization which requires equal annual repayments of the Federal investment (not equal annual payments of the sum of amortization and interest on balances). Thus the annual interest requirement, and therefore the sum of amortization and interest, becomes less year by year.

This method results in a greater amount of amortization during the life of that generation of taxpayers which in effect has advanced the funds for constructing the project. It is to be remembered that, unlike the private investor or money lender, the Federal taxpayer is an involuntary investor. The former can, in general, get back the principal of his loan, or the unrepaid portion of it, by sale at any time in the open market. On the other hand, except as a Federal project during the taxpayer's lifetime makes repayment into the Treasury and thereby lowers taxes or has a corresponding effect on the national debt, the Federal taxpayer cannot recover the equivalent of any part of his contribution to the investment in the power project.

To the consumers of the power from the Federal project in turn, there would be the advantage of gradually decreasing rates for the power. Furthermore, this method of making equal annual payments in amortization of the investment, with consequent decrease in payments of interest year by year, results in a substantially smaller total payment of amortization and interest during the period of amortization than is the case under the method involving equal annual payments of amortization plus interest. In short, here is a method of amortization by which the investment in Federal power projects can accord with sound business principles.

ALLOCATION OF COST

In the cases of Federal multiple-purpose projects, it is necessary to make an allocation of cost against the power purpose or function. Here I step more gingerly than with regard to some of the other elements of power cost and rates. Clearly, however, there should be allocated to power no less than is reasonable. Costs which actually belong to power should not be allocated to functions presently treated as nonreimbursable, such as flood control and navigation.

Recently there has been much clamor as regards the effect of allocation of costs upon the power rates of the Southwestern Power Administration. It has been contended that power should be charged with only its incremental cost, namely, the difference in cost as between a project including the power function and a project not including the power function. A Senator, presumably without thinking the matter through, has suggested that power should not be charged with any part of the costs of the dams.

Needless to say, I am not and do not claim to be an expert in this field, but I do know that

1. A dam and reservoir solely for flood control cannot reasonably serve also for power development.

2. If power development is to be added, the dam and reservoir must be correspondingly enlarged beyond the needs for flood control; that is, there will be much greater cost.

3. Practically the only case where power development is not chargeable with a substantial part of the cost of the dam is where there is developed the waterpower resulting at a dam constructed solely for navigation and constructed to a height no greater than is absolutely essential for the navigation purpose.

Surely departure from these simple propositions cannot be in accord with sound business principles.

TAX CHARGES

The most serious problem involved in the establishment of rates for Federal power is that of the charge to be made on account of taxes.

Under present practice, Federal commercial enterprises, such as power development, and therefore the customers of those enterprises are permitted to be free of Federal taxes and generally to be free of State and local taxes. Practically the only exception in the latter respect is that TVA makes a contribution to the State and local governments in lieu of and as a partial offset to State and local taxes. In the case of Hoover Dam, the Boulder Canyon Adjustment Act of 1940 contemplates the possibility that State taxes may be imposed upon some aspect of the project; but it seems fair to say that the annual payments to the States of Arizona and Nevada, specified by statute, are not in

---

Footnotes at end of speech.

lieu of taxes, but were provided because of other considerations.

The equity of participation in the cost of local government and governmental services is recognized in the case of the District of Columbia, to which the Federal Government makes contributions which are the equivalent of payment of local taxes.

This practice has long been recognized with regard to national forests. Twenty-five percent of national forest receipts are distributed to the counties wherein forest lands are situated, for schools and roads. This year the counties will participate in forest receipts to the extent of about $25 million.

The exempting of Federal property and enterprises from taxes dates back as far as 1819 when the Supreme Court [4] held in effect that the sovereign, the Federal Government, could not be taxed without its consent. To be sure, in those days there was no Federal income tax and the Federal Government's acquisition of property outside the public domain had not reached modern proportions. Thus the practical or "sound business" aspect did not come to the fore.

At any rate, as regards Federal lands and structures, it must be recognized that taxation thereof by States or other forms of local government is subject to the consent of Congress. Nevertheless, the exemption of such Federal property from taxation has become burdensome beyond toleration. As an example, pertinent to our present subject, I need only point out that, contrary to the case of private development, Federal reservoir development means removing from local tax rolls the land to be overflowed and the improvements thereon.

It is no wonder that there is a growing movement to require the Federal Government, through local taxes on its property, to participate in supporting local governments and their services. Various bills to that effect are pending before Congress. Some would apply even to the public domain and establishments for national defense.

As to Federal commercial enterprises, for many years the postal service was practically the only one—and is still the outstanding one. Unlike Federal power enterprises, the postal service is expressly authorized by the Constitution; it serves all citizens; and it serves them without discrimination as between classes of citizens. Hence the fact that the postal service is tax exempt has been accepted as natural.

Incidentally, as a matter of sound business, there is earnest endeavor, not merely to make postal service completely self-supporting, but also to make the charges for the service equitable as between the several classes of users.

Next in order of quantitative importance are those with which we are here concerned—Federal power enterprises. I refer of course to the Federal commercial business of producing and supplying power to the public. Unlike the postal service, the Federal power business has no constitutional authority; it is far from serving all citizens; indeed, it actually serves only one segment of the population. About 30 percent of the electric power consumers of the country are served to some extent by Federal powerplants. In most cases the extent to which they are so served is indeterminable; in others it is solely federally produced power which they receive.

Let us turn now to the application of sound business principles in respect to taxation of Federal power enterprises. Outstanding is the principle that all beneficiaries of the services rendered by a given kind of business shall pay their proportionate parts of the cost—plus ordinarily some return or profit, but at least their proportionate part of the cost.

Footnotes at end of speech.

The Government of the United States is business, big business, not commercial, but the biggest of all American businesses. It renders governmental service to its citizenry—all of its citizens.

That governmental service is paid for out of taxes, nowadays mainly income taxes. All of the beneficiaries of governmental service should pay their full proportionate share of those taxes. Any departure from that principle is not merely discriminatory—it is unsound business.

As you know, at least as well as I, each power consumer served by private companies, in paying for his power, must on the average include some 14 percent on account of the Federal income tax which must be transmitted by all such companies to the Federal Treasury. In contrast, Federal enterprises, as we have already noted, are free from Federal income taxes. Thus some 10 percent or so of all of the power consumers of the country are served with solely Federal power and therefore, as power consumers, they contribute nothing at all toward the cost of the Federal Government. Something of the order of 20 percent more of the Nation's power consumers, as we have seen, are served partially with Federal power and therefore, as power consumers, do not pay their full proportionate part of the cost of Federal governmental service.

The amount of Federal tax which in this way is avoided must be made up by other Federal taxpayers, mainly by the customers of private power companies. In short, quite aside from the fact that there obviously is discrimination, here is a violation of a sound business principle.

Such violation would not be tolerated in the cases of services rendered by business concerns. For instance, insurance companies, when the rates for one class of risks do not meet the costs, either raise the rates or drop that class of risks. In fact, if sound business principle did not suffice, State insurance supervision would insist upon such action.

Similarly, in the cases of railroads: Up to the limits of what the traffic will bear, passenger rates must include their proportionate share of all costs, just like freight rates. Indeed at present railroads, interests having large amounts of freight to be hauled and the Interstate Commerce Commission—all are seeking to make sure that in this respect the pertinent sound business principle is observed.

In summary, the present practice in Federal power business, so far as concerns Federal taxes, is inconsistent with the prescribed criterion of sound business principles.

The same thing is true as to State and local taxes. In that respect, of course, any such lack of accord with sound business principles is more readily recognized. Thus in the cases of some counties, and all the more some townships, tax-free Federal reservoir projects, by reason of eliminating agriculturally productive or other lands from the local tax rolls, may impose an intolerable burden upon the local governments and those who continue to pay local taxes in order to maintian road and other services at their prior quality. I have already referred to the growing movement, including bills in Congress, requiring Federal projects, including those involving power, to pay directly or to pay the equivalent of State and other local taxes on property.

In contrast to our own practice, Great Britain, with its completely socialized British Electricity Authority and Area Boards, subjects all phases of its power property and operations to any and all taxation to which any other property or business is subject.

As concerns both Federal and local taxes, most of our Federal agencies have within the past year or two advanced in their thinking and practice to the point of requiring that, for purposes of economic evaluation and comparisons with at least non-Federal alternatives, the tax components of true cost be fully taken into account. We find this expressed in the April 1954 agreement of the Department of the Interior, the Army Engineers, and the Federal Power Commission on cost allocation; that Commission's December 1955 prescription for evaluating Federal power projects,[5] and the January 1956 report by the Presidential Advisory Committee (the Cabinet Committee) on Water Resources Policy.[6]

But that procedure does not go far enough. Consistency with sound business principles requires that the corresponding taxes, cost, and charges actually be included in the rates for Federal power and therefore be borne in fair proportion by the consumers of that power. This may require action by Congress.

ALLOWANCES FOR OVERHEAD COSTS

Although overheads are not a major element involved in ratemaking, it is as clear as it is simple that sound business principles require that the pertinent overhead costs of all kinds should be charged against Federal power projects and that the rates should be sufficient to cover those overheads. The principle needs to be applied to initial investment as well as to the annual costs of operation and maintenance.

The accounting for the initial investment should include all costs of bringing the given project into being, including the initial investigations, any explorations and all legal services within the constructing agency.

In the initial investment and likewise in the annual costs, there should be included all associated costs of district, division, and Washington offices. Then, there are the expenditures by other agencies, such as the Treasury, the General Accounting Office, the postal service, the Department of Justice for legal services, and the Civil Service Commission for administration of the Retirement Act. In too many cases some, or even all, of the foregoing are not charged against the project for rate-making purposes.

In any event, adequate allowances for the unforeseen, that is, allowances for mishaps and other contingencies, should be included. If provision for such overhead items in detail is deemed to be too cumbersome or expensive, then at least there should be some percentage allowance high enough to cover these overheads.

ACTUAL PROJECT INCOME AS COMPARED WITH PRECONSTRUCTION REPRESENTATIONS

No sound business would tolerate a condition whereunder preauthorization or preconstruction estimates, predictions, or representations are forgotten as soon as they have served their purpose of helping to bring the project into the stage of authorization or actually into being. Yet in the case of Federal projects, it is fair to say that, if not forgotten, at least such earlier estimates or representations are in general disregarded.

An outstanding example of what can and does result is the case of three projects (Wolf Creek, Dale Hollow, and Center Hill) on the Cumberland River, constructed by the Army Engineers and with the power marketed by the Department of the Interior through its Southeastern Power Administration. The Army engineer estimate of the average annual benefits from the power of these three multiple-purpose projects totaled $11,223,000,[7] whereas the power output was sold to Tennessee Valley Authority for $3,500,000, with subsequent increase to $3,950,000.[8] That is, we Federal taxpayers are annually receiving only about one-third of what the Army engineers estimated to be the average annual value of the output.

To be sure, a different agency, the Department of the Interior, does the marketing, whereas the Army engineers do the con-

Footnotes at end of speech.

structing—and often the promoting—of the project. But the Army engineers have no excuse for failing to recognize and point out that, up to the present, and whether it be their fault or that of Interior, the financial performance of Federal power projects which they have constructed is all too often woefully below the prediction and representation.

Can it be said to be in accord with sound business principles if the promise is not performed and departments which fail to cooperate are not forced to do so? In some cases, notably in the southwest, the actual cost of Federal power is greater than the market can afford. In those cases the projects have been badly conceived and probably should not have been constructed at all.

CONCLUSION AS TO RATES

Let us not be so concerned with the impropriety and inequity of it all that we forget the principles involved. The fact is, at least so far as concerns Federal power projects constructed by the Army Engineers with the possible exception of including full tax charges in rates, the remedy lies within the authority—indeed the duty—of those administering section 5 of the act of 1944.

It is as simple as this: The plain mandate of Congress, that rates for power shall be fixed according to "sound business principles," is being disregarded. In my view this statement applies to the Army Engineers, to the Department of the Interior and its power marketing agencies, and to the Federal Power Commission.

Army Veterinary Corps Complimented

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from a veterinary trade journal as well as remarks by Mr. A. A. Case, of Columbia, Mo., on the work done by the Army Veterinary Corps:

ARMY VETERINARY CORPS COMPLIMENTED

The widespread influence of Army veterinary officers' work in Europe is lauded in a release from the Office of the Surgeon General, Department of the Army, Washington, D. C.

Brig. Gen. Webster Anderson, Quartermaster General of the United States Army in Europe, commented briefly as follows about the Army Veterinary Corps food inspection service:

"Due to the efforts of the Army veterinary personnel on the continent, milk is delivered in paper cartons and shipped in nonreturnable cases—thus eliminating the danger in reuse."

Three years ago the general said it required 4 or 5 days to deliver milk from approved sources to our commissaries and 11-day-old milk was found in troop messes. We now have sources of wholesome milk near troop centers and delivery is made in 36 hours.

The Army milk program has been influential in France, Austria, Denmark, Belgium, and Germany, and in many areas improved dairy practices and better milk production is spreading among dairymen. Thus, the health of the free nations of Western Europe will improve permanently from quality milk standards of the United States Army Veterinary Corps.

General Anderson also thanked the Veterinary Corps for the help they gave in finding European sources of other food west of the iron curtain—in Yugoslavia, Finland, Norway, and Iceland, as well as the cheese factories in France and the sausage factories of Germany. He also credited veterinary inspection personnel with phenomenally low loss rates of foodstuffs in depots.

COMMENTS OF A. A. CASE

In addition to the milk sanitation and cleanup program, the Army Veterinary Corps (and Air Force Veterinary Corps) also:

Inspect and make sure meat and meat products meet the bid specifications, as well as wholesomeness. All the ARS does is inspect for wholesomeness.

Inspect and make sure poultry products are safe to eat, meet bid specifications, and are not diseased, or spoiled, in transit, or otherwise.

Inspect and make sure fish is fit to eat as well as up to grade for what is being paid for.

Inspect and make sure (part of Medical Corps) that camp and mess halls measure up to what they should.

As part of medical research, teams are responsible for many essential roles in both the Biological and Chemical Warfare Branches, as well as being very, very essential as part of the radiation medicine team, and this might prove to be by far the most important future need for veterinarians in the Army and Air Force.

Then veterinarians, logically, are the ones that do have the animal health problems with dogs and other animals in connection with the military services.

Also to be pointed out: Over 80 diseases are likely to be transported by or communicated to man from animals of various types.

There are other important things that any veterinary officer of the Army and Air Forces could point out.

New Ideas Needed for Foreign Aid

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including a column by Marquis Childs which appeared in the Washington Post and Times Herald for June 5, 1956:

NEW IDEAS NEEDED FOR FOREIGN AID

Overshadowing the controversy over foreign aid is an unanswered question: How can the United States exercise world leadership in a time when the emphasis is rapidly shifting from military to economic competition?

So long as there is no satisfactory answer to that question the issue of foreign aid will seem irrelevant and outdated.

The Senate may restore part of the billion dollars cut out by the House. But it will not seem to matter too much to anyone, and certainly not to the administration, which has been going through the motions, but scarcely more than that.

The answer can be found only through some hard thinking that takes into account that vast change in the world situation that has come about with the new Soviet look.

It is vital to move ahead into the new era. This can be done either in a giant stride calling for the utmost courage and candor. Or, if that is too much to ask, then it can be done by the piecemeal acceptance of new ideas and concepts.

The same palsy of indecision applies to the North Atlantic Alliance, which today straddles the Old World of military defense prepared against Soviet aggression and the New World of economic and ideological competition.

It was to try to bridge the gap that Secretary of State John Foster Dulles came up with the proposal to develop the political side of NATO.

The NATO council, meeting in Paris, responded by naming a committee of three foreign ministers, Lester Pearson of Canada, Gaetano Martino of Italy, and Halvard Lange of Norway, to discover ways and means for political and perhaps economic cooperation to give the alliance new and broader meaning. They are to report their findings to the council in December.

This week Pearson will come to Washington to talk with Dulles. He already is discovering, according to reports from Canada, that it is going to be hard to get agreement in the fields—politics, economics, and propaganda—in which he is convinced NATO must expand if it is to survive.

Yet he is a fortunate choice for this assignment, since again and again he has come up with ideas that look to a broad new concept of cooperation in the West.

He has served as a kind of broker between Western Europe and the United States, mitigating the impatience of the Europeans to move on to much wider cooperation and prodding Washington to move off of dead center.

In several recent speeches, Pearson has pointed the way to new channels of economic cooperation between the have and the have-not nations.

While he has urged much greater use of the United Nations as a means of distributing economic assistance on a fair and impartial basis, he has at the same time been aware that domestic political considerations stand in the way of channeling all such assistance through the U. N.

Not long ago he came up with a compromise proposal that deserves far more consideration than it has received. This was for the establishment in the U. N. of a clearing house to which each nation would submit its plans and policies in the field of international assistance.

There these plans and policies could be, in Pearson's words, "examined, made public, and coordinated" and "any suspicion that they were being used for political purposes could be challenged and exposed as true or false."

"This procedure," he went on to say, "would have the advantage of letting the world know what was being done and by whom. It would separate the propaganda chaff from the wheat. It would also expose the motives of any nation which refused to cooperate with the United Nations in this way."

Even those Members of Congress most adamant against turning American aid dollars over to the U. N. could scarcely object to such a plan. Administered by competent and objective international civil servants, it would put in proper perspective all the aid programs.

One complaint in this country has been that American aid programs of great scope and generosity are obscured by the cheap and easy gestures of Soviet Russia, a Johnny-come-lately in the field of foreign aid. An official U. N. appraisal would show the world on which side the balance lay.

These are constructive ideas of which the West stands urgently in need if we are to do more than merely react to Communist action.

Mr. SPEAKER, always I have been a supporter of our foreign-aid program and expect to continue to support the efforts of the administration to bolster the economics and raise the standard of living in the free countries of the world, especially those in Asia. However, until the administration comes up with a more imaginative and practical program of foreign aid than trying to match the promises of Soviet Russia to the nonsatellite nations, I am going to go slow on approving blank checks to Mr. Dulles for continuation of the same old unimaginative, unrealistic programs of foreign aid.

In this connection I am including also an editorial which appeared in the Christian Science Monitor in its issue of June 4, 1956, entitled "A World Development Policy."

This article refers to a study of a new foreign economic policy for the United States made by Profs. Max F. Millikan and W. W. Rostow at the request of Government officials. Certainly it is a thought-provoking article and it is my hope that those in charge of our foreign policy will come up with a dynamic, realistic, economic foreign policy and a new and more realistic program of foreign aid:

Foreign aid has come to the point where it needs a new name. More than a mere change of label, it needs fresh clarification of purpose and the development of a well-rounded, solidly based character. Like a youth that has met the challenge of high-school football games and the senior prom, it must now look forward to a career of planned usefulness.

Some such program for America's practical contribution to a sane and livable world is offered in the very provocative study of a new foreign economic policy for the United States made by Profs. Max F. Millikan and W. W. Rostow at the request of Government officials.

That paper, substantial excerpts of which were printed in the Christian Science Monitor of May 31, takes as one of its premises that "some increase in the per capita availability of material goods, while not enough by itself, is certainly a necessary condition * * * for the development of stable and peaceful societies and for the viability of democratic institutions."

It does not argue that all that has been done in the name of foreign aid has been good; it recognizes that some efforts have been wasteful, some actually harmful. It rejects the premises that economic gifts will automatically "bring us friends," strengthen military allies, sell private enterprise, or defeat communism. But it avers that "properly designed and administered, economic programs are one of the few levers available to us which have a serious chance of influencing in important ways political developments in the underdeveloped areas."

Those programs, the report recommends, should not be directed to particular countries but should be open to participation by countries which initiate sound projects and can give evidence that the assistance would result in actual increase of productivity, repaying at least part of the cost and starting the country on the road to supplying its own capital needs.

The aid would not carry with it any military or political strings, but it would be limited to undertakings which will benefit the population at large and which are approved by the electorate in some genuinely democratic manner.

On this basis the two experts from Massachusetts Institute of Technology estimate that the program would cost the United States only a little more than is currently being distributed.

Some of the realism of the study may be judged by this passage:

"Our influence can, of course, be no more than marginal. The political, social, and economic development of foreign areas is a task for the peoples of these areas themselves, and we cannot insure that they will do it well or badly.

"But two considerations suggest that it would be inexcusable for the United States not to exert to the utmost whatever marginal influence we have. In the first place we have a compelling national interest in promoting a world environment in which we ourselves can live freely, secure both from the menace of hostile States and the distraction of chaotic ones. In the second place, American society is at its best when we are wrestling with the positive problems of building a better world."

It may involve something of a reorientation in American politics to accept the proposition that the people of the United States have a long-continuing, even more or less permanent role in fostering abroad the kind of economic progress which has served them so well. The Millikan-Rostow study, however, should help materially to develop that concept.

Proposed Changes in Excise Tax Administrative Structure

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. COOPER. Mr. Speaker, the Committee on Ways and Means today resumed consideration of the report of the Subcommittee on Excise Tax Technical and Administrative Problems. As I have done in the past, I will insert in the RECORD a release which I issued as chairman of the Committee on Ways and Means with respect to the tentative action taken by the committee today:

CHAIRMAN JERE COOPER, OF THE COMMITTEE ON WAYS AND MEANS, ANNOUNCES TENTATIVE DECISIONS OF THE COMMITTEE ON THE RECOMMENDATIONS OF THE SUBCOMMITTEE ON EXCISE TAX TECHNICAL AND ADMINISTRATIVE PROBLEMS

The Honorable JERE COOPER, Democrat, of Tennessee, chairman of the Committee on Ways and Means, announces the tentative decisions reached today by the committee with respect to the recommendations contained in the report of the Subcommittee on Excise Tax Technical and Administrative Problems. Previous announcements with respect to earlier decisions of the committee were issued on May 10, 14, 16, 17, and June 6, 1956. These announcements are printed in the CONGRESSIONAL RECORD for May 10, 15, 16, 17, and June 6, 1956, and appear on pages A3818, A3918, A3965, A4020, and A4525, respectively.

Chairman COOPER stated that the committee had completed the consideration of the subcommittee's recommendations as set forth in the subcommittee report. The next action by the full committee on the subcommittee recommendations will occur with the consideration of specific proposed legislative language embodying the subcommittee recommendations as agreed to by the committee. This consideration will occur at such time as the proposed statutory language is drafted. A table of revenue estimates relating to the subcommittee's recommendations is printed in the subcommittee report beginning on page 13. A more detailed explanation of the recommendations appears in the subcommittee report beginning on page 16. The decisions reached by the committee today are as follows:

XI. TOBACCO AND ALCOHOLIC BEVERAGE TAXES

1. The full committee approved the subcommittee recommendation for the adoption of the proposed revision in the alcohol, tobacco, etc., taxes as presented by the Alcohol and Tobacco Tax Division of the Internal Revenue Service with the changes and modifications noted in numbered paragraph 2 below and as noted in the press release of June 6, 1956.

2. The committee approved a subcommittee recommendation that provisions be adopted which will permit distilled spirits of different ages to be commingled in an internal revenue bonded warehouse. Such distilled spirits, however, cannot be less than 4 years old. The date of original entry of the youngest spirits mingled in this manner is to be deemed the date of original entry of all the spirits in any package for purposes of determining the expiration of the 8-year bonded period. In approving this subcommittee recommendation, the committee adopted an amendment which would embody the provisions of H. R. 5367 with an amendment that would substitute a 20-year bonding period for the unlimited bonding period provided in the bill.

3. The committee deleted the subcommittee recommendation which stated that provision should be made in the case of the tobacco and alcoholic beverage taxes to shift from the stamp system for collecting these taxes to a semimonthly return system. This semimonthly return system should be provided for the period from August 1, 1957, to July 30, 1958, and should make provision for the reporting of collections for the first 15 days of each month on the 18th of the same month and for the reporting of collections for the period from the 15th to the end of the month on the 3d day of the following month. Beginning with August 1, 1958, and for subsequent years, a monthly return system should be adopted. Each month's collections would be reported on the 15th day of the following month under this recommendation.

The committee returned to the consideration of subcommittee recommendations that had previously been passed over and took the following action:

I. MANUFACTURERS' EXCISES

Recommendations 1 through 3 were previously approved by the committee.

4. Credits or refunds should be available with respect to the tax on gasoline destroyed as the result of a disaster (as so declared by the President) to the extent that the tax losses are not compensated by insurance or otherwise. The commitee in acting on this recommendation deleted the words "by fire or" from the original subcommittee recommendation so that the credits or refunds would be available only in the case of gasoline destroyed as the result of a disaster.

Recommendations 5, 6, and 7 were previously approved by the committee.

8. In the case of sales by manufacturers directly to retailers, the manufacturers' price on which the tax is computed should be based upon the price at which the manufacturer sells to wholesale distributors. This alternative to the actual price charged by the manufacturer would not be available where sales to the retailer are the normal method of distribution within the industry and would not be available where the manufacturer does not make a sufficient number of sales to independent wholesalers.

9. Present law provides that the base on which the manufacturers' tax is computed is to be constructed where a manufacturer makes a sale (otherwise than at arm's length) at less than the fair market price. In practice a sale to a selling subsidiary in such a case would be presumed to be not at arm's length. This administrative presumption should be codified.

10. The status of cooperative advertising in relation to a manufacturers' tax base should be clarified by a specific ruling of the Internal Revenue Service. The subcommittee has been informed that the Service will issue a ruling providing substantially as follows:

(a) The distinction between national and local advertising is abolished.

(b) Where a manufacturer's selling price to his customer contains an unsegregated advertising charge, it is a part of his tax base.

(c) In the case where a manufacturer makes a separate charge to his distributor for advertising and the proceeds are kept in a separate account earmarked for advertising, the separate advertising charge is not a part of the tax base. This separation can be evidenced by showing that the charge is either listed on the sales invoice or billed separately; the contributions from distributors are set aside as a fund to be used for advertising for the benefit of these contributors and the funds are so used, or the unexpended portion is held in trust or refunded to the contributor upon his withdrawal from the program.

(d) Where the manufacturer makes a contribution to the advertising account in the case of a separate fund, the amount of the manufacturer's contribution may not be deducted in computing the taxable sales price. However, the subsequent allowances against such contributions to distributors for expenditures by them or their dealers for advertising should be treated as readjustments of sales price.

IV. TRANSPORTATION TAXES

Recommendations 1 and 3, previously approved by the committee.

2. Present law imposes a tax equal to 4½ percent of the fare charged for the transportation of oil by pipeline, with an exemption for any movement through pipelines between the premises of a refinery, bulk plant, terminal, or a gasoline plant if the movement is not a continuation of taxable transportation. "Any movement through lines of pipe within the premises," in addition to including any movements interpreted by the Secretary or his delegate as being within the premises under existing law, should also include any movement which constitutes an integral part of the operation of a refinery, a bulk plant, a terminal, or a gasoline plant. In drafting proposed statutory language to carry out this recommendation, the staff was directed to include a mileage limitation prescribing the maximum distance that such transportation may cover without payment of tax.

In addition to the committee action described above, the committee also ordered favorably reported H. R. 11619, a bill to amend the Internal Revenue Code of 1954 and the Narcotic Drugs Import and Export Act to provide for a more effective control of narcotic drugs and marihuana.

The chairman announced that the committee was tentatively scheduled to meet in executive session at 10 a. m. on Tuesday, June 12, 1956, to begin consideration of proposals for the extension of the Renegotiation Act of 1951 as amended.

Just a Little Comment by a Little Publisher

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. SMITH of Kansas. Mr. Speaker, a great many people back home are inclined to believe the attempt of the arrogant labor bosses to control all business activity is just a myth. Perhaps some realize the dangers that can come to localities where the labor czars attempt to control everything that moves in commerce. Many a small-business man does not know of the impending danger, namely, someday a labor boss will drive up to his place of business and simply ask a question, "Does your help belong to the union?" Mr. Average Small-Business Man will say "No." The Cadillac-riding boss will say, "You will get no more deliveries until all your help belongs to the union."

You say this cannot happen in rural America. This is happening every day and the Teamsters A. F. of L. and CIO openly boast they will control all small-business establishments by this method.

Labor-management relations is not something that belongs exclusively to large cities and big industrial areas. They affect the small-rural newspaper owner. Here is what a small-newspaper editor recently wrote about how arrogant, domineering union methods affect his business. Here is his editorial:

JUST A LITTLE COMMENT

This year's political campaign in Kansas is likely to be governed pretty largely by the campaign for and against the right-to-work bill, which will again be a major issue before the State legislature.

There will be a lot of propaganda over the trite phrase calling this a "union busting" bill, which is not the truth in any sense of the word.

But it is a bill to try to stop some of the major unions in their aspirations to get a stranglehold on the entire economy.

No man is forced against his will to work for any industrial concern if he doesn't want to—except in Communist-dominated countries.

Why should any concern be forced to hire only certain men who may have had to sell their souls to some labor union bosses to be privileged to take a job?

There are thousands and thousands of men forced to join unions in order to get or hold jobs, after a union gets control, who do not condone the actions of the very unions to which they belong. Just because a man belongs to a union doesn't make a crook or gangster out of him—but too often a union gets control of a small group of men who have no consideration for the common good.

In many cases they make rules that handicap the employers from giving good service to their customers.

Just as a sample, there are business institutions, even in our small towns who cannot get quick shipments from wholesale houses because the unionized shipping department simply wants to show its power by taking 2 to 4 days to get an order out.

We have to take facts like this under consideration, every time we place an order. This office sent an order 2 weeks ago Monday for a small shipment of expensive paper that could be wrapped and sent out by mail by the front office of a Kansas City paper house and 2 days later we received the shipment. Then from the same house we ordered a heavier shipment that had to be sent out by freight, with one package of large sheets cut once for better handling, and it was 4 or 5 days before the shipment was even sent out of the warehouse to the freight depot.

We have complained many times to the various paper companies about this lousy type of service, but the only answer we can get is that they can't control the shipping departments.

The union rules seem to require that if a ream of paper has to be cut, it must stay on the hook at least until "tomorrow." Then another "tomorrow" seems to be required to pass by before it can be properly packaged and shipped out.

One of the prominent men of this paper company told us some time ago that they could handle their shipping department with half as many men and more efficiently, if the union would let them.

This useless hiring of twice as many men as necessary on some jobs—commonly called featherbedding, costs the public more and more in the goods they buy.

Progress Toward the Integration of Europe

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a speech given by me before the First Regional Model Assembly of the Council of Europe in Rochester, N. H., Saturday, May 19, 1956. The speech is entitled: "Progress Toward the Integration of Europe":

Mr. President and members of the Model Assembly of the Council of Europe: It is a great pleasure, a high privilege and a distinct honor to be here in the Spaulding High School Auditorium this afternoon to address the High School Model Assembly of the Council of Europe under the sponsorship of the New Hampshire Council on World Affairs and the International Relations Club of the University of New Hampshire. I am delighted to have the opportunity of delivering the closing address to the members of this assembly.

I take this opportunity to congratulate the New Hampshire Council on World Affairs, the International Relations Club of the University of New Hampshire, and the students of the participating high schools in New Hampshire for your efforts in making this Model Assembly an outstanding success.

I am greatly pleased that New Hampshire has a Council on World Affairs. We need to devote our attention to international problems since they affect our everyday life. Whatever happens in one part of the world sends repercussions around the globe because of the closeness of the continents in

this age of rapid scientific advancement. I notice that in the brochure put out by the New Hampshire council entitled "World Affairs Are Your Affairs," it is stated that the purpose of the organization is to "create an informed public opinion as the democratic basis for a sound foreign policy, to operate as a ccordination point and service center for interested organizations, advocating no specific policy or action, and to promote the widest possible understanding of world affairs as an essential step toward lasting peace." I hope this organization continues to grow and that it will have a wide membership in every section of the State, for we certainly need to have the broadest possible understanding of foreign affairs in this nuclear era.

I know of no more worthwhile endeavor than the organization and the holding of a Model Assembly of the Council of Europe. This interest in foreign affairs is most encouraging and it is most important, since the United States of America, this Republic, is the leader of the free world. We are in foreign affairs to stay and as the days come and go, we will find that it is necessary for us to have an ever-increasing understanding and to take an ever-increasingly active part in the solution of international problems. We need to know more and more about foreign affairs and the shaping of foreign policies because the future of the world will depend directly upon how wisely the United States exercises its destiny-given position of leadership in the new role in which the Republic finds itself.

REPORT OF STUDY MISSION

My specific object this afternoon is to discuss with you the progress toward the unification and integration of Europe. This is a subject in which I have long been interested. In the fall of 1953 I had the opportunity of being the chairman of a study mission to Europe. The mission made a thorough study of the specialized agencies of the United Nations, also a complete survey and appraisal on European unification and integration. In the section of our report dealing with European integration, we gave detailed information on the Benelux Economic Union, the Organization for European Economic Cooperation, the European Coal and Steel Community, the Western Union, the North Atlantic Treaty Organization, the proposed European Defense Community, and the Council of Europe, all having the purpose of bringing about a closer unity among the nations in Europe.

NEED FOR UNITY

In our report dated February 25, 1954, the study mission stated: "At the end of World War II, the concept of unity took on new meaning and significance. * * * Cooperation among the nations of Europe had become more than an ideal or a dream. It had become a matter of life and death for free peoples. The formidable obstacles to unity, so long recognized, were at last challenged by the overwhelming need for unity.

"Since the closing days of the war, efforts toward increased cooperation among the European nations have followed many different lines and assumed many different patterns. These have ranged from consultation among national governmental representatives on international committees to the surrender of portions of national sovereignty to supranational organization, with one objective in mind: To achieve peace, security, and economic prosperity through the joint action of two or more nations."

In an article entitled "United States Leadership in a Divided World," which I wrote for the 1953 September issue of the Annals of the American Academy of Political and Social Science, I stated: "As I think of the disunity in Europe and as I think how important the achievement of unification—political, economic, and military—has become, my mind turns to the history of the 1860's in which Abraham Lincoln gave leadership to his country. His farsighted statesmanship prevented the division of our country and made certain the continuation of the United States."

Had it not been for Lincoln's leadership the United States today might not be in existence and our continent would undoubtedly be an atomized continent, with many divisions, and instead of one nation we might find ourselves hopelessly factionalized. Happily, this is not the case. Although it would be impossible to make one nation out of the European countries, nevertheless, a much greater degree of unity is possible and a much greater degree of unity is essential if Europe is not to perish in a maelstrom of differences, rivalries, dissensions, and conflict.

INTEGRATION IMPERATIVE

By the end of World War II it had become perfectly apparent to thinking people that a greater integration of Western Europe was imperative if the nations on that continent were to survive the threat of communism and if they were to preserve the culture developed over so many years. The Soviet Union insisted upon maintaining large standing forces. The policy of Moscow was intransigent and aggressive. The Soviet Union presented a threat that was far beyond the ability or capacity of any of the European states to meet as individuals. Collective action was the only way that the countries could be preserved. It was also apparent that Europe by itself could not survive.

With United States help and by moving together, the countries had the possibility of achieving a power sufficient to form a balance. The economic problems created by a series of small States separated by tariff barriers and trade restrictions seemed to mean continued economic difficulties for all, while integration offered the efficiency and economy of a mass market and specialization. Integration, in short, seemed the one logical way of meeting a number of different problems. It is my purpose to trace the development and the contribution made by various European organizations toward a greater integration of the continent, economically, militarily, and politically.

BENELUX

In 1944 the first attempt at integration economically was the so-called Benelux group, consisting of Belgium, the Netherlands and Luxembourg. These countries established a customs union which merged, to some extent, the economies of the member States. The agreement provided for the elimination of tariffs existing between the member countries and the establishment of common tariffs on imports coming into the union. Complete union has not been achieved, since all trade barriers have not been eliminated.

ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION

Three years later, in 1947, steps toward a broader economic integration occurred when 16 countries in Europe cooperated to create the Organization for European Economic Cooperation. This organization, established to implement United States economic aid under the Marshall plan, had four aims: First, to reduce trade barriers; second, to facilitate the distribution of essential materials; third, to promote economic stability; and fourth, to utilize more effectively European manpower.

In our report on the unification and integration of Europe, our study mission stated that "the long-term aim of the Organization for European Economic Cooperation is the achievement of a sound European economy through the economic cooperation of its members. In pursuing this goal, its immediate purpose was to insure the success of the European recovery program through cooperation with the United States." The program was most successful and in the present mutual-security bill there is no economic aid programed for Europe.

EUROPEAN COAL AND STEEL COMMUNITY

Another of the organizatitons making an outstanding contribution to economic integration is the European Coal and Steel Community. It is particularly important because it created the first effective supranational agency. For the first time nations surrendered a sufficient amount of their national sovereignty to the new organization, the authority of which was considered superior to the individual authority of each member state.

The members of the European Coal and Steel Community include Belgium, Italy, France, Western Germany, Luxembourg, and the Netherlands. Its purposes are: First, to enlarge the European market; second, to encourage the increase per capita steel consumption; third, to pool their resources; and fourth, to assist member states to adjust their economies to an intensified competition in Europe and elsewhere. In establishing a dominion over the distribution of coal, iron ore, steel, and ferrous scrap within the political frontiers of the member countries, the European Coal and Steel Community is a real supranational authority and is making a valuable contribution to the economic integration of Europe.

THE EUROPEAN PAYMENTS UNION

Another organization contributing to economic integration was founded in July 1950. This was the European Payments Union. The Union provides a common currency pool for balancing international payments on a multilateral basis. In this way a freer flow of currencies and goods has been made possible.

WESTERN UNION

The establishment of the Western Union on March 17, 1948, by France, Belgium, Luxembourg, the Netherlands and the United Kingdom, was the first step toward the postwar military integration of Europe. Under this pact the countries pledged themselves to give immediate military assistance to any party against which aggression might occur.

NORTH ATLANTIC TREATY ORGANIZATION

On April 4, 1949, a treaty was signed in Washington, D. C., which brought NATO, the North Atlantic Treaty Organization, into being. By negotiating this treaty, the North Atlantic Community reaffirmed its faith in the purposes of the United Nations Charter, seeking to stabilize the North Atlantic area by organizing for collective defense to keep the peace and maintain the security of the community. The treaty aimed to strengthen the free institutions of European nations and to encourage economic collaboration within the framework of cooperative consultation.

The North Atlantic Treaty Organization has been an outstandnig success. At the moment the following nations—Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, Turkey, the United Kingdom, the United States, and Western Germany—are members of the Organization.

In the military sphere the North Atlantic Treaty Organization is accomplishing the principle task for which it was intended, that is deterring Communist military aggression in Europe, insuring the territorial integrity and political independence of the European nations and enabling those nations to stabilize their respective economies. However, events of recent months have clearly demonstrated that the North Atlantic Treaty Organization needs to become more than a military alliance. The threat of the new look Russian foreign policy demands that new life and broader vision be given to NATO.

RECENT NATO ACTION

In view of the new tactics of the Soviet Union, the North Atlantic Treaty Organization has taken some recent and significant action. At a meeting of NATO in Paris on May 5, it was decided to set up a committee of 3, including Foreign Ministers Gaetano Martino of Italy, Lester B. Pearson of Canada and Halvard M. Lange of Norway, to make a study of NATO problems and to develop ways and means of defeating communism. As suggested by Secretary of State John Foster Dulles to the NATO meeting in Paris, this high level council would sit permanently, dealing with political and economic problems confronting the Atlantic community. Thus, the North Atlantic Treaty Organization has reacted to the new situation created by the change in the tactics of the Soviet Union—a change which is, of course, calculated to help them in their fundamental objective of world domination, which does not change.

Today perhaps more than ever before, Europe is aware that its very survival rests on the strengthening of economic, military and political ties within the Atlantic community. European nations must realize that there are issues involved that require the sacrifice of certain nationalist goals and desires. For Europe to assume her rightful place in any international negotiations and decisions, she must work effectively and soon toward greater integration and unity.

Guy Mollet has said: "Russia's cold war has shown the need for a Europe united militarily; Russia's new look calls even more loudly for a Europe united politically." Progress has definitely been made toward European integration. Europe has moved toward the idea of a common market. A common coordinating authority will act as a spokesman for the common European interest, although a "United States of Europe" with executive, legislative and judicial powers is far from a forseeable realization. An agency coordinating on a supranational level to give Europe the strength she needs for survival and effective international cooperation is a reasonable expectation.

REJECTION OF EUROPEAN DEFENSE COMMUNITY

The foregoing is a brief summary of the principle successful European ventures since the termination of World War II. Concomitant with these successful ventures have been certain projects and proposals which have not fared so well. The aura of success which tends to surround these union efforts of postwar Europe must not blind us to setbacks which have occurred.

For one thing, I refer to the rejection by France of the European Defense Community. Although France had led the way in proposing the European Defense Community, the proposal for pooling the Armed Forces of the 6 member nations into a common army was turned down by the French assembly in 1954. Among the principle reasons for this rejection of the European Defense Community was the French fear that Germany would dominate it, being potentially more capable of developing military predominance in Europe. Of course, the concept of supranationalism associated with all these schemes for integration has always run headlong into the competing nationalisms of the respective countries. For this reason all the interested European nations have approached this concept with caution.

With the rejection of the supranational European Defense Community, the countries fell back upon a more orthodox military alliance. Some years earlier, Britain, France and the Benelux countries had signed a defensive alliance called the Brussels Treaty Organization. With this Organization as a basis, the Western European Union was established at the Nine Power Conference held in London in the fall of 1954, consisting of Britain, France, the Benelux countries, Germany and Italy. Since this alliance was a substitute for the European Defense Community, it naturally had the same purpose to add Western German strength to that of the allies and at the same time to control that strength. As stipulated in this Western European Union, Western Germany is pledged to abide by a continental arms control, not to manufacture atomic, biological or chemical weapons, to conduct its foreign policy in accordance with the United Nations Charter and never to resort to force to achieve German unification. Thus, although the Union does have certain aspects of supranationalism, it does not have such extensive ones as those the defunct European Defense Community would have had.

THE COUNCIL OF EUROPE

In the report of the study mission several paragraphs were devoted to the Council of Europe. As you all know, it was in March 1948 that the French Parliament adopted a resolution calling for a European Constituent Assembly to establish a European federation. Established on May 5, 1949 with the aim of promoting "greater unity among the European countries in order to facilitate their economic and social progress," the Council of Europe now, includes the United Kingdom, France, Belgium, Luxembourg, the Netherlands, Italy, Ireland, Saar, the Scandinavian countries, Greece, Turkey, Iceland, and the German Federal Republic.

The major organs of the Council are: the Committee of Ministers, composed of the Foreign Ministers of the member States or their deputies, which meets at least twice a year in closed sessions; the Consultative Assembly, consisting of 132 delegates with delegations varying in size according to the relative sizes of the member countries, which meets in open sessions annually for 1 month in Strasbourg, France; and the Secretariat. Before the Consultative Assembly can make recommendations to the Committee of Ministers, a two-thirds majority vote is required, and such recommendations, if unanimously approved by the Ministers, are then transmitted to the member governments. A system of "partial agreements," agreements among certain members which do not bind those who abstain, which slightly modifies the unanimity rule, has only recently been adopted by the Ministers.

Because of the existence of other international organizations with functions similar to those of the Council of Europe, which in essence is a clearinghouse of ideas for the means of advancing European unification, the Statute of the Council provides that the work of these other organizations be kept in mind when the Assembly is planning its agenda, thus avoiding a duplication of effort.

PROSPECTS FOR FURTHER PROGRESS TOWARD INTEGRATION

We may now ask ourselves what are the prospects for further progress toward integration in Europe. In the first place, the new habits and institutions established within the European Community have taken root and have been accepted by Europeans and the world. The European idea has captured the imagination of even the once skeptical European. A new consciousness of "Europeaness," so to speak, about the common background of the European civilization has been realized by Europeans themselves.

More and more one hears Europeans speaking in terms of common interests and a common market. From the beginning of the Marshall plan the matter of a common market has persistently appeared. When Robert Schuman's plan for pooling coal and steel resources was accepted by the 6 European nations in April 1951, it was establishing a common steel and coal market for regulating production and eliminating trade and other restrictions. It is felt that this 6-nation common market of 150 million in a united Europe should increase production and prosperity by creating a larger and greater demand for new goods. Coal and steel were selected as the first sector to be pooled because these two resources are the major ones upon which the heavy industries of both France and Germany exist. By September 1955 progress had been made toward stabilizing the common market, as well as toward integrating other fuel and power resources into the plan. For the future there is talk of integrating transport, other conventional fuel and power, and even nuclear energy.

TOWARD THE FUTURE

In the report of the special study mission on International Organizations and Movements and on the unification and integration of Europe issued in 1954, we stated in our last paragraph: "The United States has steadfastly encouraged and supported unification and integration movements in free Europe. In the final analysis, however, these movements must spring inwardly from the will of the Europeans themselves. United Sstates policy is premised on that will. But if the passage of a reasonable length of time indicates that such a will does not exist, the United States would be compelled—not by its own choosing—to readjust its policy."

I like to believe that there is springing from the hearts of the Europeans a desire for a closer integration and unification. The events of the past several months have posed new problems and in view of this, the United States is in the process of readjusting its policy, not because we have lost faith in the unification of Europe, but because we recognize that into the existing organization, particularly the North Atlantic Treaty Organization, there must be breathed a new life and a new vitality.

That Europe is endeavoring to come to grips with this problem is evidenced by the recent appointment of a committee of NATO members to study and report to the Council, which I mentioned previously. That we are coming to grips with this problem is evidenced by a suggestion which Secretary of State Dulles offered in his speech closing the mutual security hearings on May 10 of this year. The Secretary stated that consideration is being given to the establishment of a committee to conduct an independent study of various aspects of the mutual security program. In listing the topics under consideration, he included: "The relative role of the State and Defense Departments in administering the program; whether we should seek to put more of our program on a loan rather than a grant basis; whether the program needs to be enlarged and given greater continuity to meet the new Soviet tactics." Thus, the free nations of the world, because of the recent change in Soviet tactics, are endeavoring to shape policies to meet the new situation.

STATEMENT MADE BY THE UNITED NATIONS DELEGATION TO SECRETARY OF STATE DULLES

In connection with this shift in Soviet policies, the United States delegation to the 10th General Assembly of the United Nations, of which I was a member, submitted to the Secretary of State on December 9, 1955, a statement on foreign policy. In this communication we stated:

"The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. It appears to be clearly a shift in the cold war, in which economic and social problems have moved to the forefront.

"Members of the United States delegation during this General Assembly session have observed the effectiveness of Soviet tactics

under these new conditions. This can be seen both in the way the Soviet bloc delegates work in various United Nations meetings and also in the voting that occurs in many committees. As we observed maneuvers, we were conscious that the Soviet Union, elsewhere in the world, was using economic and social collaboration as a means for jumping military as well as political barriers. Examples of this can be found in India, Egypt, and Burma.

"We believe that the United States must counter these Soviet efforts. We can succeed, not by outbidding communism in sheer amounts of economic aid, but by making newly independent and newly articulate peoples feel that they can best satisfy their wants by becoming and remaining part of the community of free nations.

"We welcome more emphasis on economic and educational endeavors, for we have a proven experience in these fields.

"We are in a contest in the field of economic development of underdeveloped countries which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race.

"We could lose this economic contest unless the country as a whole wakes up to all its implications."

CONCLUSION

Europe must continue its drive with constantly increasing intensity to become more united economically, militarily, and politically, if the threat of communism is to be effectively met and destroyed. The Council of Europe, which is the political organization for the purpose of developing ways and means to bring about political unity, can well become the most important instrument for the realization of more cooperation among the countries of Europe. The unification of Europe has widespread support not only in Europe but throughout our own country. I know of no better way to become familiar with the problems inherent in the various moves calculated to bring about European unification than to make a study of this many faceted problem through a Model Assembly of the Council of Europe, such as you have held here today.

Europe is an integral part of the free civilization which it is our privilege to possess. Stretching back over the centuries, the nations of Europe have made a growing and an enduring contribution to the culture and the civilization of the West. From these countries we have received enrichment in art, music, literature, and many of the fields of human activity.

The revolution in scientific fields, particularly aviation and nuclear energy, is demanding that equal progress be made in the field of economics and politics. As the organizations we have been talking about become successful, we will find in the future a strong and invigorated continent continuing to make a contribution to the civilization of the West. This is our hope for Europe. We thoroughly believe in European unification and integration. We are endeavoring to shape our policies to bring about this desired end. I have confidence that we will be successful and I am certain that the nations of Europe, which are already hearing the clarion call of destiny "unite or perish," will rise to the occasion in this mid-20th century, and will, with our help and our encouragement, move ever closer to unification and integration until the peoples of those countries are completely secure from the sinister threat of communism, are able to live free from the fear of war and are able in a peaceful environment to help in the bringing about of a prosperous and peaceful world community.

Russian Persecution and Genocide of the Church in Ukraine

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. DODD. Mr. Speaker, in the course of this academic year, Marquette University has been celebrating its 75th anniversary. In its 75 years of existence this great Jesuit institution has developed an imposing record of scholarly achievement, educational service, and constructive effort in behalf of public enlightenment on every conceivable issue confronting American society.

As part of its 75th anniversary celebration, an impressive program was held on Sunday, May 20, on The Church Behind the Iron Curtain. Sponsored by the Slavic Institute at Marquette and under the honorary patronage of the Most Reverend Albert G. Meyer, archbishop of Milwaukee, Wis., this colorful and vitally important program was directly undertaken by three outstanding citizens of Milwaukee: the Honorable Francis X. Swietlik, Prof. Roman Smal-Stocki, and Prof. Alfred J. Sokolnicki.

Preceding the program was a celebration of holy high mass in the Byzantine Slavic rite at Gesu Church in which the Very Reverend Nestor Fecica, O. S. B. M., was the celebrant, assisted by Rev. Sebastian Kurylo, O. S. B. M., and Rev John Oleksiuk. A deeply moving sermon was delivered by the Most Reverend Roman Atkielski, auxiliary bishop of Milwaukee, and an explanation of the mass was given by Rev. George E. Ganss, S. J. Mr. James Ivankoe, directed the choir of the St. Nicholas Ukrainian Catholic Church in Chicago. The Voice of America recorded both the mass and the program in full.

The program devoted to The Church Behind the Iron Curtain covered most of the countries of Eastern Europe. One of the most instructive addresses delivered on this program was the Russian Persecution and Genocide of the Church in Ukraine, by Dr. Lev E. Dobriansky, professor of Soviet economics in the graduate school of Georgetown University and chairman of the Ukrainian Congress Committee of America. At this time of the visitation of two religious delegations from the Soviet Union, the contents of this address may well be used as an authoritative source for several pointed questions that might be raised on the alleged freedom of worship and conscience in the U. S. S. R. I commend this address to the studied attention of my colleagues:

RUSSIAN PERSECUTION AND GENOCIDE OF THE CHURCH IN UKRAINE

(Address by Dr. Lev. E. Dobriansky, professor of Soviet Economics, Graduate School, Georgetown University, chairman, Ukrainian Congress Committee of America)

It is with an eminent sense of honor that on this distinguished program devoted to the Church behind the Iron Curtain, I have this oportunity to portray the church in Ukraine. In taking this opportunity, I desire first to convey the further greetings and warmest wishes of Georgetown University on the complete success of the 75th anniversary celebration of its sister institution, and may the many God-given blessings of this Ignation Year, in which we pay great tribute to the rich Jesuit tradition, bring to Marquette still more illustrious achievements of progress and popular enlightenment. Never before in the history of western society have creative achievements in faith and knowledge been more desperately needed than now, with the fatal aim of atheistic Russian Communist imperialism pointing at the very heart of our civilization.

The timely character of this short address is further enhanced by the recent celebrations in this country of 1,000 years of Christianity in Ukraine. In every sense a national tradition, this colorful background of loyal faith was founded by the holy baptism of Saint Olga, princess of Ukraine, in the capital of Kiev in A. D. 955. While the enslaved Ukrainian people themselves could only observe this glorious event in the silence of their present catacombs, we Americans, in the free environment of our country and under the wise leadership of the Most Reverend Archbishop Constantine Bohachevsky and the Most Reverend Ambrose Senyshen, O. S. B. M., are privileged to perpetuate this tradition in the abiding hope that one day its full expression will capture again a free and independent Ukrainian nation. In this, we are most thankful for and greatly inspired by the prayers and hopeful messages sent on this commemorative occasion by numerous eminent dignitaries in the Catholic hierarchy of America. Their bountiful source of inspiration to the relentless freedom-aspiring efforts of the 40 million Ukrainians, who have rightly come to be known as the Irish of Eastern Europe, cannot be too strongly emphasized.

THE NECESSARY MATRIX OF HISTORICAL UNDERSTANDING

For one to understand, rather than just know, the state of the church in Ukraine today, it is imperative for him to view the salient contemporary facts in a necessary matrix of historical understanding embracing the relations between Russia and Ukraine. By analogy, no more than we can affirm a person's understanding of the philosophia perennis without a foundation in its metaphysics, could we expect an appreciative understanding of the present plight of the church in Ukraine without a historical knowledge of Russia's traditional imperialist appetite for resourceful Ukraine. It would, indeed, be an error of extreme abstractionism to view the church in Ukraine devoid of its context in the form of the persistent struggle of the often free Ukrainian nation against the colonial and imperialist domination by Moscow. The atheistic doctrines of Marxism help little in this understanding, for the policy of the Russian Communist today, in relation to the church in Ukraine, is substantially that of the Russian czars of yesterday.

The history of Eastern Europe abundantly shows the consistent attempt on the part of Muscovy and empire-building Russia to reduce and liquidate Ukraine as a nation. This is the meaning of Russification. With its third Rome obsession and ideologizing orthodoxy for the expansionist ambitions of the czars, the Russian Orthodox Church long served as the medium of Russification. In the imperious big-brother spirit of "be my brother or I'll slay you," it has always condemned the great union of the Ukrainian Greek Catholic Church with Rome in 1595.

"If an angel appeared from heaven before you," wrote the Muscovite Metropolitan Jonas, "and told you to recognize the authority of the Pope, then curse him." Religious persecution and genocide were integral parts of the Russification programs launched by Peter the Great, Catherine the Great, and Czar Nicholas I. The institutional continuity of this tradition was established by Stalin himself. On the forcible absorption of western Ukraine during World War II, his appointed head of the Russian Orthodox Church, the Patriarch Alexi, directed these words at the Ukrainian Catholics: "Where is the Vatican leading you at the present time. * * * To complicity with the abetter of fascism." Even on our shores bold expression is given to this combination of colonial empire and Russification, as witness the letter of the Russian Bishop Nikon to the New York Times on August 16, 1953.

A detailed study of this history, from Muscovy to the present federated Soviet Russia, amply demonstrates that for the greater part of this period the characteristic totalitarian Russian phenomena of imperialism, colonialism, empire, Russification, and religious persecution and genocide have developed hand-in-hand. In the current period it discloses, too, the singular fact that the church in Ukraine is the object not only of Russian Communist persecution but also of genocite perpetrated through the medium of Russian orthodoxy. This religious genocide constitutes a mortal attack on the soul of the Ukrainian nation as other forms of Soviet Russian genocide have on the head and body of this capitive non-Russian nation. Moreover, the indisputable record of this religious genocide furnishes additional evidence of the spuriousness of the Soviet constitution which in article 124 allegedly provides freedom of conscience, separation of church and state, and freedom of religious worship. This history convincingly shows also how the conquest and captivity of one large non-Russian nation leads to the enslavement of other formerly independent non-Russian nations, attended by similar forms of tyranny and persecution.

THE RUSSIAN COMMUNIST RECORD OF RELIGIOUS PERSECUTION AND GENOCIDE IN UKRAINE

The Russian Communist record of religious persecution and genocide in Ukraine commences only a few years after the destruction of the independent Ukrainian National Republic in 1920. In the twenties it was the forerunner of things to come on other Ukrainian territories incorporated in other states, not to say, in regard to persecution, on other non-Russian ethnic territories as well, with the imperialist expansion of Moscow. The genocidal attack on the Ukrainian Autocephalous Orthodox Church in the period of 1926–32 led to the complete liquidation of this body in Ukraine. Metropoliton Vasyl Lypkivsky was banished, Metropolitan Mikola Boretsky was imprisoned, and about 10,000 lay and monastic clergy met similar fates of deportation to concentration camps, imprisonment, and execution. Up to the outbreak of World War II, 34 bishops and over 3,000 priests were executed or died in the forced labor camps to which hundreds of thousands of the laity were deported. In his testimony in the work on Forced Labor in Soviet Russia (Dallin and Nicolaevsky), Prof. Ernst Tallgren, a former prisoner, points out that the most numerous of the political prisoners in these camps are Ukrainian farmers, Catholics, and members of the Ukrainian Orthodox Church. In the sweep of this genocidal onslaught about 80 percent of the Ukrainian Orthodox churches were demolished.

With the forcible annexation of other Ukrainian territories toward the end of World War II, Moscow now applied this pattern of religious genocide chiefly to the Ukrainian Catholic Church. As the patriotic Ukrainian Catholic leader, the Most Reverend John Buchko, well pointed out in his letter to the New York Times on August 5, 1949, before the cases of Cardinal Mindszenty, Archbishop Stepinac and Archbishop Beran emerged, the extreme case of Metropolitan Joseph Slipyi and the entire loyal Catholic hierarchy and clergy, who were deported or murdered in 1945, was a closed chapter. The death of the greatly beloved Metropolitan Sheptytsky on November 1, 1944 appeared to set the stage for Moscow's plans in the destruction of the Ukrainian Catholic Church which was fully launched on April 11, 1945.

The hierarchy, including 10 bishops, was arrested or killed, 3,600 priests serving 6 million believers were jailed, executed, or deported for forced labor, and 4,400 churches were desecrated. The roll of Christian martyrdom reads in part as follows: Archbishop Slipyi sentenced to the coal mines of Vorkuta and still believed to be in custody; Bishop Josephat Kotsylovsky of Peremyshl refused to join the Russian Orthodox Church and died in prison in Kiev on September 21, 1947; Bishop Hryhory Khomyshyn of Stanyslaviv died in a Siberian camp, January 17, 1947; Bishop Nicetas Budka of Lviv, tortured into insanity and died in prison; Auxiliary Bishops Hryhory Lakota of Peremyshl and Ivan Latyshevsky of Stanyslaviv in Siberian concentration camps; Most Rev. Mykola Charnetsky a slave laborer in the Urals; Bishop Theodore Romhza of Uzhorod in Carpatho-Ukraine killed by a Red Army tank in an alleged accident, October 27, 1947; Very Rev. Petro Verhun, Apostolic Visitator in Germany, kidnapped by the Russians in 1945, whereabouts unknown; Msgr. Augustyn Voloshyn arrested by the MVD on May 17, 1945 in Prague, whereabouts unknown; Most Rev. John Shimrak, Bishop of Krizevci, heading some 10,000 Greek Catholic Croatians and 40,000 Ukrainians in Yugoslavia, murdered in prison in 1947 on orders of the Tito regime; Rev. Dr. A. Boychuk, former rector of the Catholic seminary in Stanyslaviv, at forced labor in Siberia.

Each of these particular facts intimates the following more general facts. One, the movement of the Iron Curtain westward brought with it further genocide of the Ukrainian Catholic Church. In 1947 the attack centered upon the church in Carpatho-Ukraine and in 1950 in Czechoslovakia, resulting in the arrests of Bishops Paul Hoydych and Vasyl Hopko and numerous Basilian fathers, the Jesuits of the Eastern Rite. Two, Moscow's tactics of assault were the familiar ones of false accusation, divide and conquer, police sentences, and sacerdotal Russification. "Agents of the Vatican and American imperialists" led a long list of stock accusations; a "Committee of Initiative for the Transference of the Greek Catholic Church to Orthodoxy" was formed by the Patriarch of Moscow to entice the few apostate priests, and on his order and the assistance of the MVD it called a Synod in Lviv on March 8–10, 1946, to complete the break with Rome and enforce allegiance to the Russian Orthodox Church; and Ukrainian seminaries and churches were subjected to wholesale Russification.

However, these measure of religio-political imperialism have failed to break the religious resistance of the Ukrainian nation to Moscow. On the surface, both the Ukrainian Catholic Church and the Orthodox do not exist, but underground their memberships grow. The quisling paper, Radyanska Ukraina (Kiev, No. 191) complains: "Religious prejudices are still hampering the consciousness of some of our people and preventing them from taking an active part in the building of communism." Under the caption of "Christians from Catacombs in the Donetz Basin in Rome," the Swiss organ, Vaterland (Feb. 4, 1952) states: "This underground religious movement embraces large areas of the Ukrainian Soviet Republic." The attempted implication of the Catholic Church at the trial of the Polish Bishop Czeslaw Kaczmarek in 1953 in the activities of Ukrainian political underground resistance points to a not unnatural alliance between the Polish and Ukrainian peoples who, leaving aside relatively minor differences, today face arm-in-arm a common enemy.

PRAYERS FOR ACTION ON THE CHURCH IN UKRAINE

It is well known that His Holiness, Pope Pius XII, in the encyclical, Orientales Omnes, calls attention to the martyrdom of the Ukrainian Catholic Church and appeals to all Catholics to pray for his "Church of the Catacombs."

In the encyclical Orientales Ecclesias, significantly directed at the Ukrainian nation, His Holiness points to the religious genocide of "flourishing Christian communities." Truly, this solid vanguard of Catholicism in the Soviet Union merits our first and prayerful consideration. If anywhere they strongly converge, the three great ideas of religion, national independence and liberty, which Father Don Luigi Sturzo rightly holds to have shaped the history of mankind (Nationalism and Internationalism, p. 13), it is in captive Ukraine.

Prayers lead to action and today, in our own Congress, the resolutions submitted by Senator HUMPHREY of Minnesota and Congressman DODD of Connecticut on the genocidal persecution of Christianity in Ukraine are aimed to test the supposed reasonableness of the collective leadership which attributes the horrors of the past to Stalin. The rehabilitation of the Ukrainian Catholic Church and the Orthodox would not be posthumous, for they are not functionally dead. These measures offer a concrete test to the capacity of the oligarchical dictatorship to translate the words of article 124 in the Soviet Constitution into deeds. Furthermore, the forthcoming visit of the eight Russian Protestant and Orthodox churchmen, led by Metropolitan Nicolai, who heads the department of foreign affairs of the Russian Orthodox Church, presents a most appropriate occasion for their responses to questions on the genocide of the church in Ukraine and a list of names of those presently persecuted. It is surely not conducive to our national security to permit an uncontested dissemination of policed misrepresentations on freedom of religious worship and conscience in the Soviet Union.

Facing the emperors of his day, Tertullian wrote, "Every day we stand seige; every day we are betrayed; above all in our gatherings and our assemblies we are surprised." His words ring truer than ever today as the assemblies of God increase in Ukraine, Poland, Lithuania, Estonia, Bulgaria, Rumania, Hungary, Czecho-Slovakia, Byelo-Ruthenia, Croatia, and even in Russia. Their unshaken faith is the foundation for the realization of the three great ideas that shape the history of mankind.

Statement by Hon. John Lesinski, of Michigan, on Misleading Tactics of Soviet Union

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. LESINSKI. Mr. Speaker, the attached article explains the many tactics that the Communist Government of Russia is using to foster herself and to destroy the American form of government.

I have known for sometime about the action of the countries behind the Iron Curtain writing to minority groups and urging them to come back to their native country. Those who do return usually find themselves imprisoned or worse. This has been going on for some time and the article explains vividly and pointedly the actions of the Communists.

What bothers me, though, is that the present administration, including the President of the United States, in their desire for so-called peaceful coexistence consistently disregard these actions of the Communists and seem to see only the olive branch the Russians are holding out to us. For instance, during the Geneva Conference, Czechoslovakia was making her arrangements for sale of arms to Egypt. Also, while putting out the olive branch in the Middle East, the Communists are taking action to destroy the present forms of government there.

The recent action of the Soviets to cut down their armies by over a million, which, of course, is only a very small portion of their total armed forces, was undertaken with the object of having us do the same. If we did, we all know we would be left with only approximately one-half of our present men in the service.

All of these signs point definitely, as many of us have known for years, that regardless of what the proposal from Russia is, it can never be honored on its merits.

Present action in Korea by the United Nations inspection team, the disregard of the Korean armistice, and actions in Southern Vietnam, all point further that the administration is being fooled by the Soviet promise that you can do business with these people. The sooner we do away with such thinking and bring about constructive thought for the future, we will all be better off.

Following is the article Return to Us, They Beg, by Fred Woltman and Jack Steele, which appeared in the Thursday, June 7, 1956, issue of the Washington Daily News:

Josef Novak, a Czech escapee from the Red putsch, was mystified to receive a sentimental, anonymous chain letter from Munich, Germany, just before Christmas 1954.

It was simply worded and crudely handwritten. But the envelope had his name and home address in Pittsburgh clearly and right on the nose.

The letter began "Sisters and brothers of Bohemian and Slovak countries." It sang of the joys of Christmas in our native country, the bells resounding over the snowdrifts, and our dearest ones close at hand.

It also told of a great new movement gushing out with elementary force to bring Czech exiles back.

"In its name, copy this proclamation three times," the writer beseeched, "and send it to your friends."

Josef Novak soon learned that fellow Czechs all over the United States were getting identical letters—also precisely addressed, but mailed from different points in Austria and West Germany.

The gimmick in the Czech chain letter, of course, was to fool each recipient into thinking he got a spontaneous note from some fellow exile in Europe.

PART OF GRAND SCHEME BEHIND IRON CURTAIN

Instead, it was part of a grand scheme hatched behind the Iron Curtain.

In later months, waves of these personal letters hit the various emigre groups—Russians, Poles, Ukrainians, Rumanians, and so forth.

From within the Soviet Union, Russians and Ukrainians heard from beleaguered relatives for the first time in a decade. Before that, those left behind hadn't dared to correspond. Now, evidently, they were being forced to.

"My dear Uncle Dmytro," began a typical letter from Orysia Yurivna in Stanislaw, the Ukraine.

"In our community we do not have any longer any rich capitalists," wrote the enthusiastic Orysia. "When we sing together in the Kolhosp (collective farm) everyone is happy. In the home of every kolhospnyk is a radio. * * * Two times a week movies are sent free. * * * No one is unemployed. * * * Practically everyone has bought a bicycle."

"Return to us," Orysia pleaded with Uncle Dmytro, "and you will live in prosperity and happiness among your own people."

VIRGINIAN'S LETTER TOUTED NEW RUSSIA

A Ukrainian-American farmer in Virginia heard from a brother he hadn't seen since 1943. The letter touted the new Russia. He refused to reply. A few weeks later a follow-up letter arrived, dropped in the mail in New York City. By whom, it was impossible to tell.

Emigre groups say there have been thousand of such personal letters. Many times that number are sent to America by "Return to the Homeland" committees in eastern Europe, chiefly the central committee in East Berlin headed by Maj. Gen. Nikolai Mikhailov.

Last winter, over a span of a few days, 1,500 Estonian-Americans found packets from General Mikhailov in their mail boxes. They contained invitations to return and promises of amnesty.

The Tolstoy Foundation cites, as typical, this letter recently received by a Russian emigre and signed by General Mikhailov:

"DEAR COMPATRIOT: Your mother, ———— ————, informs us that in 1948–49 you were brought to America and she requests us to trace you.

"Please confirm immediately receipt of this letter and let us know what hinders you from coming back to your motherland. We shall try to help you to come back to the Soviet Union and join your people."

POLES RECEIVE MANY FLOSSY BULLETINS

Polonia International sends 30,000 letters as well as copies of its come-home paper to Polish organizations in this country and to old-time immigrants as well as recent escapees. And it sends out flossy bulletins urging Poles to revisit the homeland even if they don't want to return.

Free emigre committees are astounded at the size of the mailing lists in the hands of the Mikhailov committee and its satellite counterparts.

As a sample of its thoroughness, the Mikhailov group got hold of partial membership lists of two groups of emigree Russian doctors, the Russian Medical Society of New York and the Pirogov Society. Copies of the Mikhailov Homeland paper thereafter popped up on some of the doctors' waiting room tables.

Two facts are obvious:

Red mailing lists were built up by criminal means.

Red agents in the United States are collecting data on refugees.

After Mikhailov set up shop last year, anti-Communist offices which look after Russian refugees in West Germany were burglarized. Only membership and mailing lists were taken. The offices included the Central Union of Postwar Refugees, the American Friends of Russian Freedom and the Munich YMCA.

The free Estonian headquarters in Baden had its address lists taken on September 17, 1955. The Latvian offices in Augusdorf were rifled on August 19. Burglars broke into the files of the Lithuanian office at Reutlingen on October 22, but were frightened away.

RED AGENTS SCAN ROOM-TO-LET ADS

In New York, Red agents scan personal room-to-let and lost-and-found ads in Russian newspapers to collect names, according to Mark Weinbaum, editor of the free Russian newspaper Novoye Russkoye Slovo.

Other mailing list sources are Russian cultural and professional groups, he says. Refugee groups even fear they may be infiltrated by Red agents who steal their lists.

Behind the Iron Curtain, security agents take down names and addresses from mail and gift packages from the United States. Americans who send parcels behind the curtain have to fill out forms, one copy of which goes to the Red governments.

In the Ukraine, MVD agents systematically went from village to village collecting—sometimes by coercion—the names of exiles from their families and friends. And in the last few weeks Estonians received form letters from General Mikhailov suggesting that they send him addresses of other refugees.

The mailing lists serve a more sinister purpose than merely providing names for pen pal letters. The Reds also use them as sources for future fifth-column activities in the United States.

THEY DEMAND LEADERS DO "PATRIOTIC WORK"

In fact, the Mikhailov committee demands that emigree leaders do what is officially calls patriotic work as a condition of amnesty. To prove themselves, these leaders are directed to spread dissension and redefection propaganda among their fellow refugees.

Mikhailov has even tried to recruit one of the stanchest anti-Communists among the Russian escapees.

He is Gregory Klimov, a former Red army major who fled to the West and founded the Central Association of Post-War Emigrees of U. S. S. R. Mr. Klimov, who lives now in New York, also is the author of The Terror Machine—Inside Story of Soviet Rule in Germany.

Despite his record, Mr. Klimov recently received a letter signed by one Michael Kolo-

soc, a redefector now on Mikhailov's payroll.

"I write on request of a member of the Committee for Return to the Homeland," said Kolosoc. "They say you are a man for whom it is possible to return, too. They say there is no front door for you because amnesty does not apply. * * * But there is a back door. * * *

"If you wish to return, you should do several tasks for them. You should do some patriotic work."

Mr. Klimov declined the offer.

The United States Is Being Forced Into Isolation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Miss Dorothy Thompson writing in the Washington Evening Star a few nights ago said that the international situation is becoming increasingly dangerous to the United States for lack of foresight and analysis with the result that it is being increasingly isolated by other nations who are and have been friendly to us.

The article follows:

NO CAUSE FOR REJOINING HERE—RECENT WORLD EVENTS INTERPRETED AS INCREASING ISOLATION OF UNITED STATES

(By Dorothy Thompson)

There was much international news over the weekend, but none of it should cause rejoicing in Washington.

While the House Un-American Activities Committee heard 39 American "authorities on communism" testify that the new developments in Russia are a greater menace to the free world than Stalinism, and the American Ambassador to Russia, Charles Bohlen, assured Khrushchev (at a party) that NATO was not being liquidated, but strengthened, French Premier Guy Mollet signed a far-reaching agreement with the Soviet Union, on trade, cultural exchanges, and even principles to be realized, which will bring strong Soviet influences into a not at all unreceptive France.

In the upper house of the West German Parliament (the Bundesrat) Chancellor Adenauer, America's most reliable ally in Europe, suffered another defeat on two sections of the military service bill, charged with infringing free speech and making it impossible to protect conscientious objectors in their constitutional rights. The Bundesrat previously had voted down 18 months of military service in favor of 12, and the 18-month bill was passed over the veto of the upper house. The East German Government has said that conscription in West Germany will permanently preclude reunification, and meanwhile the British Government has announced that it will end conscription.

In the Middle East, Premier Nasser of Egypt announced his country would accept no external restrictions on her right to buy arms anywhere and in any quantity or category, and Egypt's official national news agency reported that an Egyptian military mission would go to Red China to shop for arms, the day Egypt's recognition of the Communist regime was proclaimed.

Although China is not normally considered a supplier of arms it could be a transshipment point for other Communist bloc states—with the advantage of not being subject to any restrictions that might be imposed by the United Nations, of which she is not a member.

Most sensational of all, perhaps, has been Israel's approach, via a young Egyptian journalist, Ibrahim Izzat, to Premier Nasser, of Egypt, and the message he conveyed from the Israel Government to the Egyptian. Nothing else in his report (which was released in Cairo in summary and will appear more fully under Egyptian censorship in the widely read magazine for which he works) is so important, Mr. Izzat said Foreign Minister Sharett and the Minister of Labor, Mrs. Golda Myerson (previously an American citizen), had told him "Egypt and Israel had the identical aim of opposing British influence in the Middle East. They were as opposed as the Egyptian leaders to the western-backed Baghdad pact."

The Baghdad pact, creating a northern defense against Soviet aggression was initiated by the United States, and although our Government has not joined it, we are closely cooperating with its members—Britain, Turkey, Iran, Pakistan, and Iraq.

Izzat's visit was in response to an Israel invitation, apparently issued as a means of securing direct contact with Egypt. His report on social conditions (excluding the treatment of Israel's Arab citizens) is remarkably favorable.

Ben Gurion announced via Izzat his willingness to meet Premier Nasser in any place, including Cairo, and in return for conclusion of peace between Israel and the Arab bloc. Israel, it appears, has offered the plum of cooperating against western influence in general and British in particular, on the theory if you can's lick 'em, join 'em. This is no negligible offer. Israel has immensely able diplomats and one of the world's best intelligence services.

For those who have thought Israel to be an outpost of western policy, this will come as a shock. But Israel always has been officially neutral between East and West and could be counted on to pursue her own self-interest. Should peace be established on such terms, the international repercussion among Israel's supporters and upon British-American relations would be enormous.

The ice is breaking up along all fronts. New streams are flowing, and the United States, for lack of foresight and analysis, is being increasingly isolated.

Eisenhower Is Criticized for Theory of Neutralism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. MULTER. Mr. Speaker, the following article appeared in the New York Herald Tribune of June 7, 1956. It is most interesting in pointing up the lack of knowledge of our national history in high places.

EISENHOWER IS CRITICIZED FOR THEORY OF NEUTRALISM

(By David Lawrence)

WASHINGTON, June 6.—President Eisenhower doesn't often make mistakes with his impromptu remarks at press conferences, but when he does, it usually has international repercussions. Mr. Eisenhower almost pulled the rug from under his whole foreign-aid program by letting it be implied that nations which stay neutral in the cold war against Communist imperialism can still get financial benefits from the United States.

The President fell victim to the oft-repeated alibis of the "uncommitted" nations which argue that, since the United States stayed neutral during the first century or more of her existence, such a policy now is justified for them. This inaccurate statement of American history has been repeated often by various spokesmen for and champions of the neutralist cause in Asia, but it is surprising to see the President accept it and give it to his press conference as a valid argument.

SAYS POLICY WAS NEUTRAL

Mr. Eisenhower's exact words were these: "If you are waging peace, you can't be too particular sometimes about the special attitudes that different countries take. We were a young country once, and our whole policy for the first hundred years—or more, 150—was we were neutral. We constantly asserted we were neutral in the wars of the world and wars in Europe and antagonisms."

But what are the facts? In 1801 the United States declared war on Tripoli, which had interfered with American shipping in the Mediterranean. "Millions for defense, not one cent for tribute," was the battle cry.

The American Republic was less than 25 years old when it entered a world war, known on this side of the Atlantic as the War of 1812. The United States entered that war on the side of the French, who were fighting Britain. The main causes were the impressment of American seamen on the high seas by the British, blockade of American ports by the British, and violation of United States neutral rights on the high seas.

In 1821, when the Russian Czar issued his famous order extending Russian claims in the Pacific and closing the Bering Strait to commercial shipping of other nations, the young American Republic, by diplomatic note, publicly challenged the action.

THE MONROE DOCTRINE

In 1823 the United States served notice in what became known as the Monroe Doctrine that the American continents were no longer to be considered as subjects for future colonization by European powers and that this country would consider dangerous to its peace and safety any attempt on the part of the European powers to extend their system to this hemisphere. This was a participation in world affairs which, coming from the young Republic, was bold and defiant.

During the American War Between the States, President Lincoln did not hesitate to send a stern warning to Great Britain, which had recognized the belligerency of the Confederacy as British ships sought to run the blockade of the Union Navy.

In 1895, President Cleveland served notice on Great Britain that, if it interfered in a boundary dispute in Venezuela, it "will be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of any governmental jurisdiction over any territory which after investigation we have determined of right belongs to Venezuela."

In 1898, the United States intervened in a war to save Cuba from Spanish oppression.

FOUGHT BOXERS

In 1900, the United States joined with five European powers and landed American Marines on the mainland of China to do battle against the Boxer rebels who had besieged the foreign legations in Peking.

In 1917, the United States intervened in World War I to protect neutral rights on the high seas, and, in 1941, the United States again intervened in a world war to protect her territories against attack.

The United States did not stand aloof at any time in its early or late history when there was aggression against its rights. The help of allies was sought not only in the Revolution but in the War of 1812.

What the United States has tried to do in southeast Asia by its pact there and in the treaties with Korea and Nationalist China and the Philippines is to arrange for common measures to resist aggression. The SEATO pact and the NATO treaty are really extensions of the Monroe Doctrine principle.

Mr. Eisenhower's words also will plague him with respect to West Germany. The Soviet regime wants Germany to be neutralized. Mr. Eisenhower speaks of the dangers that countries face which have military associations because they may have difficulties along their borders. Certainly the President didn't mean to give the impression that he favored neutrality for West Germany and a withdrawal from NATO, yet that's what his remarks can readily be construed to mean. His closing words—uttered with reference to Yugoslavia—were somewhat inconsistent with his other statements but they better express the American point of view. He said:

"The reason we help and assist others is in the belief that this will help us, also."

That's the only basis on which a foreign-aid program will be voted—and neutrals will have a hard time getting any American taxpayers' money out of Congress.

Liberal Education and the Crisis in Leadership

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, this country is facing a crisis in leadership. The shortage of scientists imperils our national defense and, though there are more literate people in the United States today than ever before there is, in proportion, less literature being read and much less being written. Even on the political scene there are few giant statesmen to inspire us through the long winter of the cold war. While America has produced her skyscrapers, her huge industries, her fertile farms, her communication system, her network of airlines, her conquest of disease, her vitamized foods, and her housing projects, she has failed to rear the cultural leaders adequate not merely to plant the seeds of new progress but even to preserve the fruits of the past.

These matters were ably discussed by Prof. Vincent Edward Smith, Ph. D., of the University of Notre Dame, at the commencement exercises of Trinity College on June 4, 1956, in Washington, D. C.

Dr. Smith went on to say that—

For leadership in the works of the mind, we depend on our schools whose primary function is the communication of knowledge and truth, and yet the typical American school in our century, turning away from the ideal that knowledge and truth have an intrinsic value of their own, is no longer directed toward the genuine culture of the mind. If America has been short-changed in theoretical scientists, for example, surely a large share of the blame is the pragmatic method which has discouraged abstract theorizing by assigning concrete consequences as the sole test of truth. In this respect, the present-day American university has surrendered its lofty ideal, unfolded in Athens and held aloft wherever learning has flourished—the love of knowledge for its own sake.

CHARTER OF TRINITY COLLEGE SIGNED BY THE OFFICIALS OF THE DISTRICT OF COLUMBIA ON AUGUST 20, 1897

The administrators of the Catholic University of America encouraged the Sisters of Notre Dame de Namur to erect a building that would serve as a college for women and the charter of Trinity College was signed by the officials of the District of Columbia on August 20, 1897. The 19 pioneer students, representing 11 States and the District of Columbia, assembled for their first class on November 7, 1900. From its origin Trinity has offered only a liberal arts course leading to a bachelor of arts degree, with the sole purpose of providing its students with a broad cultural education.

Dr. Smith was, therefore, speaking to a sympathetic audience when he said—

The liberal arts of language and mathematics—presented not merely as tool subjects or as skill courses but with the truly liberal aim of understanding—are highly relevant to the culture of the great thinkers that our Nation is challenged to produce in almost every field. Taught in the mode of understanding and not merely for practical utility, language and mathematics at all stages of education can be effective means of awakening the notion that the works of the mind are a great adventure and that there is a repose for human intelligence in the mere possession of truth, apart from its utilitarian consequences. It is false to suppose that democracy, by equalizing all men, discourages leadership. Everyone has a natural right to the education proportioned to his own ability. Our real problem in democratic education is not our commitment to offer educational opportunities to everybody. It is not a problem in the quantity of education but its quality. Our pragmatism has weakened, at all levels of schooling, the bridges to intellectual eminence that have always been the liberal arts.

Because of the contribution to the continuing discourse on the problem of education in our country which Dr. Smith has made, I include here the text of his address to the students of Trinity College.

LIBERAL EDUCATION AND THE CRISIS IN CULTURE

(Address of Vincent Edward Smith, Ph. D., professor of philosophy, University of Notre Dame, delivered at Trinity College, Washington, D. C., June 4, 1956)

The leaders in America have alerted us to a serious crisis in our culture. It is indeed a crisis in leadership itself. In the sciences, for instance, there are persistent reports from Government, industry, and the halls of education that our shortage of good theorists may even imperil our national defense. From the literary point of view, though there are more literate people in the United States than ever before, there is, in proportion, less literature being read and much less being written. Even on the political scene, there are few giant statesmen to inspire us through the long winter of the cold war. While America has produced her skyscrapers, her huge industries, her fertile farms, her communication system, her network of airlines, her conquest of disease, her vitaminized foods, and her housing projects, she has failed to rear the cultural leaders adequate not merely to plant the seeds of new progress but even to preserve the fruits of the past. After a careful study of human inventivity throughout recorded history, William Sorokin, a Harvard sociologist, has concluded that, despite the great mechanical advances of our own time, the number of great discoveries reached its peak about the beginning of the present century and started curving downhill. Some voices even proclaim that our brand of democracy here in America discourages leadership by flattening us all into mediocre and anonymous masses. Whatever be the truth in this proposition, it does appear that while we have been glorifying the common man the uncommon man has become more and more rare.

The crisis in our cultural leadership is an issue appropriate to bring before our present graduates. Some of them, in the Providence of God, may be called to such leadership, but all of them, as future mothers or, please God, as future religious will exert an influence on a new generation that must produce its share of leadership for Christian culture. But unfortunately, there is no formula for the making of leaders, and even in charting out the causes of our present shortage the analysis becomes darkly entangled in the whole complex of American culture. Our critics need hardly remind us that we are a practical-minded folk, impressed more by experimental results than by the intrinsic worth of abstract principle. A spirit of this kind was quite natural in a young nation spreading a civilization across the wilderness; and it is no surprise to find that up to the turn of the century our intellectual culture was chiefly imported, at first from England and France and later from Germany. When America reached a maturity able to express her genius in a conscious, philosophical way, the spokesman who came forward was William James.

Like most philosophers in the modern period, James was after a criterion of truth, and his search finally led him to the so-called pragmatic method. According to James, truth is defined by its practical consequences. "'The true,'" he wrote, "to put it briefly, is only the expedient in our way of thinking, just as 'the right' is only the expedient in our way of behaving." By his pragmatic method, James merely sanctioned the practical-minded direction of the American genius and blessed it with an academic respectability. If there is one way to discourage leadership, it is to take as a yardstick for the true or the good the immediate practical consequences to which an idea leads. A leader is a person with a vision of a great object that is worthy of being pursued regardless of the consequences; his mind is not isolated upon the immediate results of his projects, but expanded to the dimensions of life's ultimate meaning. A leader is a person whose will is anchored in a cause that is worthy of sacrifice and even the surrender of life itself; his primary concerns are not the things which are open to practical human control, but the great, unchanging principles that control human conduct itself. A leader is a person who can communicate with others, because he has lived his own cause so intimately that he expresses it in his very life itself. Of such fabric are leaders made; a leader loves the true because it is true and the good because it is good. What further reason is there to love either of them?

For leadership in the works of the mind we depend on our schools, whose primary function is the communication of knowledge and truth, and yet the typical American school in our century, turning away from the ideal that knowledge and truth have an intrinsic value of their own, is no longer directed toward the genuine culture of the mind. If America has been short-changed in theoretical scientists, for example, surely a large share of the blame is the pragmatic method which has discour-

aged abstract theorizing by assigning concrete consequences as the sole test of truth. In this respect the present-day American university has surrendered its lofty ideal, unfolded in Athens and held aloft wherever learning has flourished—the love of knowledge for its own sake.

If there is one thing more important than knowledge, it is the love of knowledge. St. Thomas Aquinas, recognizing as a Christian theologian that the supernatural destiny of man is a vision did not hesitate to exalt knowledge as a foretaste of beatitude itself. Let us not sell the intellect short. To love knowledge is to love our last end, namely, God. To convert knowledge into a merely pragmatic device is not only to defeat the purpose of a university or college, but it is also to turn against the very nature of scholarship, which received an infinite exaltation when the Word became flesh and dwelt amongst us. When ex-President Conant, of Harvard, defines the objectives of the liberal college as the cultivation of man, the citizen, he parts company with the whole tradition of western learning where the intellectual virtues of science and wisdom, rather than the social virtues of the citizen, have always been the great liberal ideal. Important as social virtue or any other moral virtue may be, it cannot be communicated by teaching, and it belongs to other agencies of education besides the strictly teaching work that is proper to the classroom.

The shortage of leaders in our arts and sciences is the immediate concern of a college and university where, instead of the liberal atmosphere, the spirit of pragmatism prevails; but leaders, to the extent that they are made at all, are made much earlier in life. Toward the basic formation of the intellect, high school contributes more than college, and the elementary grades contribute even more. Prior to college, the mind is taking possession of the two great arts which are presupposed for any further intellectual achievement, the logical or language arts on the one hand and the mathematical arts on the other. Historically, they are known as the liberal arts—arts because they involve a construction by human reason, and liberal because they enable the mind, like a free person, to operate for its own proper good. By means of these arts of language and of mathematics, the mind achieves command of its own instruments to analyze and abstract, to reason and reckon, to communicate and criticize; and thus awakened to its own dynamism, the mind can engage, from its own inner vitality and not merely for pragmatic reasons, in the pursuit of knowledge and truth. Without a prior possession of the liberal arts, the generalization, order, and communicability necessary to a first-rate achievement in intellectual culture cannot truly prosper.

The crisis in intellectual leadership has been favored by our pragmatic commitment which has led higher learning away from its great liberal vocation: to pursue knowledge for its own sake. But if the acquisition of the arts, necessary to all basic areas of the mind from letters to the sciences, is in large measure the work of precollege education, it may be of value to take at least one fix upon the current teaching of language and of mathematics in the lower stages of education.

For such purposes, it should be noted that pragmatism, as defined by James, was taken up with a slightly different emphasis by John Dewey, a philosopher who has had an immeasurable impact on American education. There are two aspects to Dewey's philosophy of education. In the first place, he regarded the school as primarily social in function, having for its aim the adjustment of the learner to his or her biological-cultural environment; the school has for its specific purpose not the intellectual development of the human being as a thinker but the social evolution of the human being as a citizen. In the second place, Dewey regarded all knowledge as an instrument, validated only by its consequences. As a result of this view, language and mathematics are described in the educational vocabulary as tool subjects. Taught strictly for use, the liberal arts from grade school through college tend to be regarded today as skill courses, and since use is primarily a social affair, language and mathematics are emphasized primarily for their relevance to citizenship.

Now in a very strong sense, the liberal arts are tools, simply because they are instruments which equip the mind for the pursuit primarily of abstract truth. But where language and mathematics are taught merely as tool subjects they will not even make good tools. Unlike mechanical arts which construct a product outside the mind, language and mathematics have an intellectual status and are governed by their own intellectual principles. There is a logic embodied in a good prose paragraph, a paragraph that is not merely a staccato of simple declarative sentences but a hierachy with the proper coordination and subordination of ideas, the right transitional devices, and the correct punctuation scheme to express the organization of thought. Logic has suffered as much as language because our students are no longer plunged into the classics and challenged with the hierarchies in, for example, Cicero's periodic sentences. A good course in writing introduces a learner even in grade school to the proper ordering of ideas that may some day expand into scientific achievement. In any event, the ultimate aim of a language program requires attention to the liberal character of language, rather than its merely pragmatic utility. Language is not a mechanical system to be learned simply by rote, and where it is taught merely as a skill subject without the deliberate attempt to understand it, much of its value for the liberal ideal will remain unrealized.

The understanding of language, begun early in education, requires attention in college where, at least, under our present arrangement, a full-dress course in logic aids the mind toward a critical and reflective possession of all its instruments. Unfortunately in many of our liberal colleges, there is hardly any emphasis on creative writing and even less respect for the composition of poetry. The argument is proposed that even the bachelor of arts today does little writing or reading except in expository discourse and that creative writing is an expendable part of an already crowded syllabus. Here again, apart from all the other issues involved, there is a serious dislocation between our educational practices and the need for cultural leadership. Surely our great thinkers in history have always been imaginative and truly creative minds, and what can give a finer challenge in this regard than creative writing? It can surely be conceded that there is a discipline for the mind in the exact description of the Washington Monument, or an accurate exposition of a fluoridation program; and yet there is an equally necessary discipline for the mind in the control of one's own original creations for expressing the darker and deeper things explored by fiction.

The liberal art of mathematics, presupposing that of language, is likewise an important training for leadership. Science in its most perfect form, mathematics brings the mind to grips with the most rigorous scientific order. It is sheer pragmatism to exalt mathematics only because it is exact; surely every genuine science can make a similar claim. Mathematics is valuable in the culture of the intellect because its principles are abstract and general and because it exercises the mind in perfect scientific discourse.

At this juncture, it may be helpful to recall the contrast of Gabriel Marcel between a problem and a mystery. A problem is something that can be finished, so that the mind may move on to other considerations; there is no more to be learned about 1 and 1 after knowing that it is equal to 2. But a mystery, to keep Marcel's figure, is inexhaustible. The propositions, God exists, or man is free, are capable of constant reconsideration without ever sounding their depths. Now the subject that deals par excellence in problems is mathematics, and it is urgent to study pure problems to be aware of what it is to have a complete and exhaustive understanding; where mathematics is approached in a properly mathematical way, the mind is also aware of the metaproblematic world of mystery which invites reason to a lifetime of reflection. Yet mathematics can never be studied in terms of pure problems unless it is pursued as pure mathematics, apart from the applications which engage it in the mystery of things.

If the foregoing premises are valid, then the liberal arts of language and mathematics—presented not merely as tool subjects or as skill courses but with the truly liberal aim of understanding—are highly relevant to the culture of the great thinkers that our Nation is challenged to produce in almost every field. Taught in the mode of understanding and not merely for practical utility, language and mathematics at all stages of education can be effective means of awakening the notion that the works of the mind are a great adventure and that there is a repose for human intelligence in the mere possession of truth, apart from its utilitarian consequences. It is false to suppose that democracy, by equalizing all men, discourages leadership. Everyone has a natural right to the education proportioned to his own ability. Our real problem in democratic education is not our commitment to offer educational opportunities to everybody. It is not a problem in the quantity of education but its quality. Our pragmatism has weakened, at all levels of schooling, the bridges to intellectual eminence that have always been the liberal arts.

This occasion has provided a passing review of some of the great blessings of these graduates who are formed by an institution that has held firm to the liberal arts as taught in a liberal atmosphere. It has reminded us that these young graduates can serve our Christian culture by working in whatever ways they can toward a revitalization of the liberal arts against the present horizons of pragmatism. Language and mathematics are learned early. They are learned at home and, with the constant encouragement and understanding of parents, in school. Unless they are learned early and learned well, all further education must take constant corrective measures to make up the deficit, and the leadership in American culture will continue to lag behind our needs. Properly taught in the home and in the school, such arts equip reason with more than the knowledge which they embody because they invite the mind to the exciting life of pursuing truth for understanding. And in the long run, there is something more important than the knowledge which can be crowded into schools and curriculums; it is the love of knowledge which can inspire and enrich a whole lifetime of liberal learning and lead at last to the face to face knowledge of God Himself.

Supreme Court Justice William O. Douglas

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, recently there appeared in one of my leading daily newspapers an article entitled "Let's Take a Look Just for the Record." It deals with Supreme Court Justice William O. Douglas, and we in this House should likewise keep the record straight on members of the high court. The article follows:

LET'S TAKE A LOOK JUST FOR THE RECORD
(By Andrew Avery)

Supreme Court Justice William O. Douglas is one of those angelic anti-anti-Communists who often accuse other people of being character assassins. Yet now we find Justice Douglas going into Great Britain's high court of justice and confessing that he committed a libel in his book "North From Malaya."

A libel suit had been filed by Sir Reginald Dorman-Smith, former British Governor of Burma. Characteristically, Douglas had accepted hearsay about Dorman-Smith's conduct of that office; he had not made the slightest attempt to check the facts. Now he and his British publisher have apologized to Dorman-Smith, paid the plaintiff's costs, and agreed to stop distributing the book until the defamatory passages are removed.

When a Justice of the United States Supreme Court makes a confession of libel, in a British court, isn't that a reflection on the United States? What kind of country are we to have a Justice of our highest Court who recklessly proclaims calumnies?

The truth is that Douglas has repeatedly committed much worse libels of Americans. In his spare time he has been averaging a book a year, racing into print with his annual mishmash of misinformation.

An example is his 1954 book, An Almanac of Liberty. This title is deceptive; for Douglas' program would help the Kremlin's quislings here to crush all liberty. No wonder the Communist Party repeatedly praised the book and promoted its wide distribution.

In that book Douglas defamed many unnamed New York State judges and the New York police. This was during his attack on the State's system of authorizing certain judges to sign an order allowing a district attorney or the police to tap a telephone wire that may yield evidence of crime.

"During 1952," he wrote, "there were in New York City alone at least 58,000 [court] orders issued which allowed wiretapping—over 150 every day in the year."

That is wholly untrue. It is a smear of the judges. Douglas' hair-raising figure, 58,000, is 113 times the true figure.

When a congressional committee invited Douglas to testify in support of his stupendous charge, he responded with a letter smoothly asserting that his "figures will prove to be conservative ones." But had he asked the New York judges how many wiretap orders they had signed? No. His 58,000 figure was simply hearsay.

Then Wellington Powell, vice president of the New York Telephone Co., testified that in 1952 the total number of court orders for wiretaps in all five counties of New York City was only 510.

Edward S. Silver, district attorney of Kings County (Brooklyn), testified that the 58,000 was impossible. "Every time you get an order you have to have at least six detectives manning that wire." (Two men at a time, in 3 shifts of 8 hours each.) "If you have over 1,000 a week," said Silver, "in 3 weeks you wouldn't have a policeman on the street. They would all be down in cellars."

Douglas was treated with cold scorn by District Attorney Frank S. Hogan, of New York County (Manhattan). Fifty-eight thousand court orders? "It is scandalous, ridiculous, impossible," Hogan testified. "You couldn't do it with a police force of 50,000. * * * We must be wary of * * * the hysterical alarmist with a flair for the dramatic. * * * A United States Supreme Court Justice makes such an unsupported and utterly ridiculous statement as that, and his figures are off by a mere 10,000 percent." (In fact, more than 11,300 percent.)

Yet Douglas' libels of the New York judges and police are still in the book, which hasn't withdrawn—unlike Douglas' other book in England. An Almanac of Liberality is in public libraries and school and college libraries all over the country. Students and others are reading it this minute, swallowing Douglas' calumnies as gospel. Shouldn't somebody warn them?

Now that Douglas has been forced in a British court to confess his libel of a Briton, shouldn't the American people ask this member of their Supreme Court to confess his libels of Americans?

Resolution by Michigan House of Representatives Urging That Arms Be Made Available to Israel

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. DINGELL. Mr. Speaker, the House of Representatives of the State of Michigan has joined with other right-thinking people by unanimously adopting a resolution urging that arms be made available to Israel. I hope that the administration will act with the same intelligence and vigor as did the State legislature in recognizing the great danger to world peace caused by the weakness of Israel and the growing strength of the Arab nations. I cannot urge too strongly that immediate steps be taken to make available to Israel the necessary aid.

Representatives Edgar Currie, Detroit second district; Frederick Yates, Detroit fourth district; and Ed Carey, Detroit third district; were the sponsors of the resolution. The original resolution was introduced by Senator John B. Swainson, Wayne County 18th district.

The text of the resolution follows:

Concurrent resolution memorializing the Congress of the United States to implement the Tripartite Declaration of the United States, Great Britain, and France to guarantee the borders of Israel

Whereas the State of Israel was created by resolution of the United Nations on November 29, 1947, and was recognized by the United States on May 14, 1948; and

Whereas the State of Israel has secured her borders by force of arms of invading aggressor nations; and

Whereas on May 25, 1950, the United States, Great Britain, and France guaranteed the borders by tripartite agreement; and

Whereas certain Communist nations have sold munitions to Egypt, thus threatening the peace of the Middle East and the entire world; and

Whereas the State of Israel has requested this Nation to sell certain arms for its own protection: Now, therefore be it

Resolved by the house of representatives, That the Congress of the United States be and is hereby petitioned and urged to take such action as may be necessary to make available to the State of Israel such arms as may be necessary and also to negotiate a mutual-security pact with the State of Israel; and be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, to the President of the Senate and the Speaker of the House of Representatives in Congress, and to the Michigan Members of the Senate and House of Representatives in Congress.

The Late Honorable William T. Granahan

SPEECH
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 28, 1956

Mr. KEOGH. Mr. Speaker, the Congress and the people of the Second District of Pennsylvania have sustained a great loss in the passing of our beloved colleague, my good friend, BILL GRANAHAN.

Back in the 79th Congress, after taking his oath for the first time as a Member of this House, he was assigned to the Committee on the Revision of the Laws. It was in that way that a warm friendship commenced and developed between us—a friendship that I valued because of the many attributes of fine character that BILL possessed. He was distinguished by his gentle friendliness and sincerity—marks of a true gentleman. These traits alone, however, did not make BILL GRANAHAN the outstanding legislator that he was. His industry, wisdom, and conscientious devotion to duty that became immediately apparent in his work on the committee were what also contributed so much to his success both in committee work and in the representation of his constituents.

BILL GRANAHAN is going to be missed by his family, his colleagues, and his constituents. To his widow who, I know, in BILL'S eyes was the person most responsible for his own success, I particularly want to extend sincere condolences.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, ———, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dill, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The Candle of the Lord

EXTENSION OF REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. ANDERSON. Mr. President, on May 29 it was my privilege to address the overseas breakfast of the general assembly of the Presbyterian Church at Philadelphia, Pa. I had been urged to discuss the world situation and what atomic energy might do to improve it.

I ask unanimous consent to include the text of that address, entitled "The Candle of the Lord," in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My pastor gently chides the members of his congregation who come to church only on Easter Sunday. Perhaps he makes a mental exception in my case, because Washington is a far journey from Albuquerque. Yet last Easter morning our family was at his service, well rewarded by his sermon.

The glory of the Gospels is that they grow as our lives grow, that their lessons take on new meaning as our tasks expand and our experiences broaded. A Bible story that we heard as youngsters in Sunday school may have a wholly different meaning when we hear it at the baptism of the children of our children.

How many times I have heard the story of the resurrection. Yet this past Easter, against the background of a contemplated trip to the far Pacific to watch the air burst of a hydrogen bomb, it changed color like a chameleon and was seen anew. The trip itself was later abandoned, but the setting for the sermon remained.

My pastor was sounding again the declaration of Christian faith: that Christ was risen, that "He ascended into Heaven, and sitteth on the right hand of God the Father Almighty * * *"

Then came these words: "Without the resurrection, Christ would be a good man but only a good man. Without the resurrection the Christian plan of salvation would be a beautiful theory, but only a theory."

Through my mind ran the conviction that he was right. Without the resurrection, without the power to roll away the stone and arise from the dead, there could be no Christian faith. But my thought went to the atolls around Eniwetok, to the atomic blasts I had seen, and to this question: If the world die, can it live again? Would it, too, need to experience disaster and rise phoenix-like from ashes in order that in the end it might find salvation?

Eleven years have passed since the first atomic explosion at Alamogordo, 11 years since a group of noted scientists went into an unpopulated section of New Mexico to wait in that cold dawn behind hastily constructed bunkers to find out if the monstrous thing which they had concocted would finally go off.

How had we come to that momentous point of modern day history? Scientists had speculated for generations that the atom could be split. Yet it remained for Albert Einstein on August 2, 1939 to send a letter to President Roosevelt suggesting that recent work by Fermi and Szilard which he had seen in manuscript had led him to expect that the element uranium might be turned, as he put it, "into a new and important source of energy in the immediate future." It might become possible, he thought, to set up a nuclear chain reaction in a large mass of uranium by which vast amounts of power and large quantities of new radium-like elements would be generated. Then came his hint which altered the course of history. This new phenomenon, he said, would also lead to the construction of bombs, and that it was conceivable though much less certain that extremely powerful bombs of a new type might thus be constructed.

We can pass over the preliminary experiments leading to the first atomic pile and the first chain reaction. The actual work toward a bomb got under way in April of 1943.

Dr. Robert Oppenheimer, who then headed the effort, has since described to me a week-long series of meetings during that month. They were held at what then was known as site Y—the mountain camp famous ever since as Los Alamos, birthplace of the atomic bomb.

Beginning each day at 9 o'clock, 30 men were cloistered in a brand new but windowless building, a strange structure to fit into that mountain setting of singular beauty. For 3 hours they would discuss their undertaking, break up for lunch, put in a whole afternoon again and then following their evening meal, continue informally until late at night. They literally breathed, ate and slept the nuclear possibilities of their task. They were driven by the white heat of war, constantly prodded by the idea that our enemies might achieve this new weapon ahead of us and that we would thereby emerge from worldwide conflagration as the vanquished instead of the victors. All through the bitterness of Dunkirk, the bombing of London, the slow, difficult fighting in the far Pacific, this fear that they would not be in time was to drive them to long hours of unprecedented endeavor.

Military men were later to label this new type of bomb as a "decision in a packet," and our scientists were determined to claim the decision.

Finally they had a chance to test their potential weapon. Slowly the seconds to zero could be counted off—5, 4, 3, 2, 1—then the brilliant flash, the light which could be seen for hundreds of miles, the roar that rumbled and thundered against the mountain peaks of my home State. Then there was silence, and a chance for men to reflect that the instrument which they devised in their effort to free men from the yoke of oppression in all parts of the earth might equally well constitute the instrument of man's eventual destruction.

Dr. Oppenheimer, in whose hands had been placed the responsibility for the creation of this newest of all weapons, was among the watchers. He, like the others, had been reasonably sure that the device would explode. And yet, on that cold grey morning when he saw and heard the evidence of the correctness of all their calculations, he could experience no sense of exultation, no rapturous ecstasy that success had crowned their efforts. He could think only of two lines from Bhagavad-Gita: "I am become death, the shatterer of worlds."

My hope this morning is that we may sketch briefly the world scene and attempt to discover how atomic energy may affect it, that we may consider what spiritual significance atomic energy may have over the world today, that we may ask, in other words, what atomic energy and atomic power mean as we try to build a Christian civilization.

First of all, then, what does a layman see on the horizon? Are there spots that give us concern? Is there a tenseness in the air? Do we live in a troubled and restless world?

Obviously time does not permit a careful review of world conditions even if I were competent to make it. But we might take a few quick glances to see if forces of integration, of community, of peace are drawing us more surely together than diverse forces are pushing us apart.

We have placed great faith in NATO—the North Atlantic Treaty Organization. Today it is in a state of disintegration, and the most recent meeting of NATO Ministers was, in effect, an added failure. I could hardly speak disparagingly of Three Wise Men before a church gathering, and yet, despite the creation of a commission of three wise men who are supposed to explore the totality of NATO to see in what field it can be broadened, the fact remains that NATO was never in a more dangerous state than at present, nor is it prepared to become stronger in the future.

In the book of Proverbs there are these words: "The spirit of man is the candle of the Lord." If the spirit of man can bring into being a candle which will shine its light into this problem of NATO, then we may hope that this international effort may not head toward eventual disintegration but instead may find increasing strength.

But let me mention the little things—the clouds no larger than a man's hand—which threaten to set aside our high hopes for the future of mankind. For example, the United States has been asked by the Icelandic Parliament to withdraw from our air bases there, even though we came in initially at the request of Iceland itself and have spent there over $200 million in projects.

In the middle of NATO, the French have withdrawn practically all their divisions assigned to NATO to handle the trouble in Algeria.

On the eastern anchor of NATO, we have the trouble in Cyprus which involves Great Britain, Greece and Turkey. Britain's only remaining major base in the Near East is Cyprus which she must maintain to protect the oil of the Middle East, on which England and Western Europe depend for 90 percent of their needs. In the Middle East there is 70 percent of the known world reserve in oil. Cyprus has a world importance all out of proportion to its size.

The Arab-Israeli question has been accentuated by the penetration, economically and politically, of the Soviet Union and its satellites into that area. The Soviet Union is, for the first time, in both the Middle East and Africa, and in to stay.

In south Asia, Nehru is facing tremendous difficulties internally. In Thailand there is

a shift away from its alliance with us and toward neutralism.

In southeast Asia, Cambodia has indicated, as Indonesia has so pointedly announced, that it will receive help from any quarter. Vietnam still has a long and difficult road to travel.

Singapore may well be on the verge of being lost to Great Britain, and it would not be surprising, unless there is a drastic turn of event, that this Crown Colony might go Communist.

The importance of the Bandung Conference of April 1955 cannot be overestimated because out of this conference came the Afro-Asian bloc, which is becoming more unified and stronger as time goes on—especially in its voting capacity in the United Nations.

Hong Kong is being held only on sufferance. Taiwan and Korea are being maintained largely through United States help, and Ceylon, as the result of recent elections, is shifting away from the West and toward closer relations with the Communist states.

I am one of those who is persuaded that the two most important areas of the world at the present time are Germany at one end of the Soviet Empire and Japan at the other. I share this morning's program with the moderator of the United Church of Christ in Japan and hope that his impressions of this assembly will be that America in official and unofficial life senses the great importance to the peace of the world of the 90 million people who live in his land.

I hope that the people of the United States will continue to appreciate that Japan's population is increasing at the rate of 2 million a year and that this poses an extremely difficult problem for her with not more than 16 percent of her land arable and with many resources missing that her economy sorely needs. Japan, I would think, faces three choices: (1) Increased trade with the world; (2) trade where she can find it and continued assistance from the United States; or (3) going Communist. If the first two fail or falter, the third result may well happen, not because of any sympathy for the Communist ideology, but because of economic necessity.

Germany, on the other hand, is interested primarily in unification. The Western World has placed great reliance on rehabilitation, reconstruction, and the possible rearming of the Western German army. The Soviet Union, to look at the other side of the coin, has the power to compel Eastern Germany to unify with Western Germany; she can offer the return of lands which she and the Poles have taken from the Germans; she can persuade Czechoslovakia to effect a Sudentenland settlement; she can offer trade and economic opportunities to the East; and she might well ask in return a treaty of neutrality and a German withdrawal from NATO. While Adenauer may refuse, we have a right to wonder what the German people would do.

Africa is in a state of turmoil, and nationalism is on the rise. In Latin America there are strong indications that the Soviet Union is seeking to extend its way economically.

Thus we can call a partial roll of trouble spots. The list, though not complete, may suffice for this discussion.

If you are willing to accept my belief that the world we live in is troubled and restless, then we may ask why that condition is particularly perilous now. The world has been at war before, has been divided between alliances of great powers, has seen the areas of conflict grow until nearly all the civilized world became involved, but has come at last to the day of armistice and peace when the wounds of war could be slowly bound up and the scars of a hundred battles could disappear. Is this experience unique?

Yes, it is unique, without parallel in history. If man could destroy his fellowmen in the past, such destruction was limited. But we have come a long way from the days when the walls of Jericho came tumbling down. We passed through the age of gunpowder, through the conflict between the trench and the tank, through the terrific pounding of aerial bombardment and the menace of the submarine that lurked in the sea. Now we are not content with airplanes that sweep through skies at several times the speed of sound, not made safe by automatic antiaircraft missiles that can track an attacking bomber and explode it and its cargo, not satisfied with submarines propelled by nuclear fuel that may lurk in deep waters month on end. Why, the crew of the *Nautilus* jokingly guarantees that their ship need surface only to let its crew members reenlist. But with it all, we do have enough.

Now we study and design and test for the ultimate weapon, if such there be. We want the tools for a push-button war. We will have guided missiles with atomic warheads that will be able to fly at thousands of miles an hour, far above the range of defense guns, and hit a target 5,000 miles away with deadly accuracy. We will have bombs that will plunge into the far depths of the ocean and wipe out a nest of submarines. We will have power to fill the stratosphere with atomic particles so dangerously charged that airplane crews cannot pilot their craft. So we will find what we may then call "safety" in these arsenals of annihilation—on land, in the sky, and deep in the bosom of the sea. Only—these will not bring safety, and we will not know peace.

We have had before the Joint Committee on Atomic Energy of this Congress a long parade of witnesses outlining the latest plans for the military application of atomic energy. These top military leaders were competent and convincing. They have not only paraded their weapons and explained their plans, they have estimated the capability of the enemy and then played the game of war with different sets of assumtptions as to which combatant has taken the initiative.

From all their testimony, there seems to me but one conclusion: That we and the enemy become, as one scientist said, like two scorpions in a bottle. Each scorpion has the power to inflict the sting of death. Naturally, he seeks to maneuver himself into a position where, if he sees the need, he may destroy the other without harm to himself. But, being scorpions, each recognizes that to close with his opponent means the risk of a deadly counterstroke. And so we sit in uneasy stalemate, realizing that war with atomic and thermonuclear weapons means not only the destruction of the active participants but could easily mean the end of civilization itself.

Of course, we could remove ourselves from the bottle, and so could our opponents, merely by dismantling totally and forever all manner of atomic arms. But that brings only partial relief. The intelligence that taught us to make the bomb may tell us how to fashion new devices not banned by rules of war but equally destructive.

For man has reached to the very source of the energies resident in the cosmos—atomic energy. In doing so he binds to his will a force that seems without limit by the finite standards of men—yet puny in contrast to the infinite power of God.

Latent in this almost unbounded source of energy are immense possibilities for both life and death—death because no man can hope for immunity from the worldwide contamination of earth and atmosphere that would result from all-out nuclear war. Yet every day brings stories of how the split atom may be used to bring new standards of health, wealth, and happiness to the peoples of the earth.

Near Chicago is an isotope farm where plants and animals can be raised in an atmosphere of radioactive carbon dioxide. From this work can come the tools for the investigation of biochemical mechanisms. We will soon begin to learn more about how our bodies work, what throws them out of gear, and what therapy may set them right again.

Near New York City is a laboratory where radioactive isotopes are being applied to the problems of agriculture. These tracers can be followed through a growing plant like a man carrying a lighted lantern down a dark street at night. We see how a plant uses its food, and what foods best suit the digestive systems of different plants. We have not yet learned why a red cow eats green grass and gives white milk, but we learn how to trace tiny particles from the roots of a plant to its branches and leaves, how to produce disease-resistant varieties of grains and fiber, and how to grow more and better food.

I am ready to concede that here in America where agricultural surpluses are a perpetual headache to Congress and the farmer, this science may be of no immediate value; but there are hungry mouths in many parts of the world where we might go, not to be ministered unto but to minister. After all, with world population increasing 50 million persons each year, the day of food surpluses may not last forever—even in America.

The atom, then, has possibilities for life or death. Of itself, atomic energy knows nothing of these ends to which it may be put. It is in the truest sense a neutral. The decision to use it for one purpose or another rests with man himself.

Indeed, if atomic energy presented only the issue of life or death it might be in no way different from all the material means at man's disposal. But there is a difference which is made evident by the orders of magnitude of what the new power does. A week ago a hydrogen-type bomb was exploded in the Pacific. It was not nearly as powerful as we know how to make bombs, but it had the TNT equivalent of all the firepower this Nation used in World War II—in rifles, in field artillery, in naval shells, and in the rain of bombs that poured from our airplanes. It was a one-shot atomic war . What if a hundred such bombs should fall?

Perhaps as we think of that grim possibility, our reflections will permit us to penetrate beyond the issues of life and death to those that are really decisive. For beyond them are to be found the larger issues of justice and injustice, of right and wrong. In the last analysis, this breakfast assembly might regard these as the true alternatives between which a choice must be made. Life or death remain but the consequences of that choice.

The making of a right choice in these matters will involve courses of action that are many and varied. The possibility of physical destruction must be a matter of personal concern for each and every one of us. It cannot be otherwise when all-out nuclear warfare could mean the annihilation of human life on this planet. Consciousness of this fact should serve to demonstrate anew the moral solidarity of mankind. It should likewise serve to demonstrate that every man is responsible to all men and for all men. The problem we face is to make all men feel this responsibility that is theirs.

How do I intend to exercise my responsibility? That question is asked to illustrate that each of us must find the work best suited to our hands.

First of all, I shall not rely on the powers of destruction . That does not mean that my voice or vote will be used to cripple the defense of my country or to stop the development of its weapons. On the contrary, I shall favor its programs of defense as a deterrent to the horror of an atomic war. But I shall know that there will be no victor in a nuclear conflict, and I shall want mankind to survive.

Second, I shall seek to encourage at home and abroad an understanding of the basic issues confronting mankind today.

Only a few days ago President Sukarno, of Indonesia, addressed a joint meeting of the two Houses of Congress. He told us that he had come to the United States to see our country with his own eyes, to confirm or to modify the impressions of this land which he had collected from afar over a period of many years. But most of all, he had come to learn something from America—not merely as a nation, but as a state of mind.

That, in my judgment, is the part of his address that appealed most to the Congress—this concept that the visitor from abroad must study not only the physical characteristics of our country, must count not only the dollars we may spend in our programs of military and economic aid to the free peoples of the earth, but must know the state of mind which exists in America itself. This understanding of us and our problems—and our appreciations of theirs—may in the long run persuade the uncommitted people of the earth to cast their lot with us and our allies in the worldwide cause of freedom and right. Without it, they may turn to some other land which may offer less in material goods but more in sympathetic understanding.

Third, I shall recognize in atomic energy an instrument that may be useful in the endeavor to find peace. To do that, it may be necessary to cast off the bonds of materialism and practice the ancient and noble Christian virtue of sacrifice, but the goal is worthy of it.

This morning, when I fly back to Washington, my first obligation is to return to hearings of the Joint Committee on Atomic Energy on the subject of the Nation's reactor program. We have been taking testimony for more than a week, considering every facet of the subject.

Through the testimony—like a red thread woven into a dull blanket—has been the showing that here in America the development of cheap atomic power is not urgent. As a nation, we have large supplies of power generated by falling water—and we are about to add the power of Niagara to our supply. We have inexhaustible supplies of coal from which electricity might be generated, and we have a reasonable supply of gas and oil. We may not need a new source of energy, but 20 years of population growth with a heavy drain on other resources may alter that story.

Then, too, the presently planned atomic power plants will not be competitive with conventional plants using fossil fuels. Therefore, their construction in America now would impose a double burden: (a) The current would be higher in cost and a subsidy for its use thereby required, and (b) the plants would be outmoded and hence need to be substantially modified when a later round of atomic powerplants with lower power costs could be constructed.

But there are areas of the earth where power costs are high and where atomic power is soon to be cheaper than conventional power. Hence England has already turned the electricity from its first plant into its national grid, and Russia will be building its first atomic plants in its European areas where power is high and not in Siberia where coal is abundant. Likewise, atomic power is already attractive to many sections of South America, to Turkey, and to parts of Africa.

Do we like the threat that godless Russia now poses in atomic science? Shall we permit a communistic country to occupy the areas that we leave open? Russia will build an atomic plan in East Germany, is pushing atomic development in Red China, has her eyes on Egypt, and will undoubtedly expand her atomic penetration whenever and wherever the chance may come.

So what can we do to help atomic energy build a Christian civilization? Presbyterians are at work in 34 countries, and in many of these lands, the very thing that they can use now is the power of the atom.

To these friendly lands and to the uncommitted peoples of the earth, I would send the evidences of our purpose to use the atom for peace, not just the nuclear fuel which the President has already promised, but the vessels in which it is to burn. Thereby we would test the most promising types of reactors, revise and rework them under actual operating conditions and thus have them ready for our use at home when the cost of their electricity became competitive with the energy we now have in abundance. Such a program could cost us as a nation a billion dollars in 5 years, a large sum to be sure, but only a small part of what is now contemplated in military aid. I think it would pay far greater dividends both in security and satisfaction. Actually the House of Representatives seems to feel that the cost of foreign aid might be cut a billion dollars this year—enough for a whole program of international atomic aid.

Then what we did would speak clearly to the world of what we are—a nation devoted to peace, working through Christian faith toward the goal of worldwide justice and welfare.

If "the spirit of man is the candle of the Lord" then the candle would shine in these far fields where humble people need this blessing of modern science poured out to them.

First, in many cases they need such a program in research and in building up adequate numbers of trained scientists, engineers, and technicians. We are training foreign scientists and engineers at State universities and at our great atomic installations at Oak Ridge and the Argonne National Laboratory. We must encourage these activities; and the moral influence of the church can help to enlist new trainees and potential scientists from the lands across the seas.

Second, they need it in medicine—and we have medical research reactors schedules for use in friendly countries. There the people understand medical purposes. Most of what they have heard of us in atomic matters is the bomb—the messenger of death. Now they see the beneficent side of the atom, the medical research reactor—the giver of life.

Third, they need it in food. Here again we are not dealing with the agriculture of the United States. The world has never had enough to eat, and in many of these 34 lands, the skills developed by atomic research would be very welcome.

Fourth, they need it for power. At the Geneva Conference on peaceful uses of atomic energy last August, I heard Dr. Homi Bhabha describe the energy problem of India where 75 percent of their power comes from cow dung. With population on the march, India needs new sources of power. Where will she turn? I hope: To this Christian land. Surely the sacrifices we will require in our own program will be nothing compared to the benefits we will bring to them.

"The candle of the Lord"—how will it shine around the earth? The decisions now being made in America on these problems of atomic power may determine how far it will throw its light. For these decisions with regard to the use of atomic energy are shaped by a very few men. The spiritual problems of the multitudes are pressing ones, indeed. But still more pressing are the problems of these leaders of the people in this day of atomic crisis. It is a spiritual and moral problem of the greatest moment.

From my post of observation in the Senate of the United States and as chairman of the Joint Committee on Atomic Energy of the Congress, I have no doubt whatever about the material strength of this Nation. Yours is the responsibility to see that the spiritual strength is not lacking to the end that our people and our leaders may continue to discharge their responsibilities to all mankind and prove this truly to be a "nation under God."

Life Expectancy of Minnesotans

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. HUMPHREY. Mr. President, as a Senator from Minnesota I have always been confident that Minnesotans were among the healthiest people alive. I am delighted to have my confidence bolstered by some official statistics which have just been released by the Minnesota Department of Health. These statistics indicate that people from Minnesota can expect to live longer on the average than residents of all but two States in the Union. Only the States of South Dakota and Nebraska exceed Minnesota in life expectancy at birth, and I am happy to add that I myself was born in South Dakota—so I have the best of all possible worlds.

This study shows, Mr. President, that the life expectancy of white males during the period of survey, 1949–51, was 68.2 years, while for white females it was 73.4 years.

An article appearing in the St. Paul Dispatch on May 21, 1956, lists life expectancy for various Minnesota individuals according to age level. I am happy to share this information with my colleagues and ask unanimous consent that the article I have just referred to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINNESOTANS HEALTHY: NORTH STAR STATE RANKS THIRD IN UNITED STATES

Minnesota residents can expect to live longer, on the average, than residents of all but two States in the Nation, the Minnesota Department of Health said today.

Basing its report on a national Office of Vital Statistics survey, the department said that when the survey was taken in 1949–51 the life expectancy of white males at birth in Minnesota was 68.2 years and for white females it was 73.4 years.

Similar figures for the United States were 66.3 years for white males and 72 for white females. Only South Dakota and Nebraska exceeded Minnesota in life expectancy at birth.

The information was compiled in the statistical bureau of the Metropolitan Life Insurance Co. The expectancy tables were based on the average number of deaths within each specific year of life occurring among residents of the State during the survey years.

In the last half century, the report shows 18.08 years has been added to the life expectancy of white males and 20.95 years for white females in the Nation. In 1900 the life expectancy for men was only 48.23 years and for women 51.08 years.

For Minnesota here is the life expectancy for individuals at varying age levels in 1949–51:

Age	White males	White females
Birth	68.22	73.35
10	60.67	65.42
20	51.26	55.69
30	41.97	46.04
40	32.73	36.54
50	24.16	27.52
60	16.61	19.17
70	10.44	12.01
80	5.96	6.71

POPULATION UP 10.8 PERCENT SINCE 1950

WASHINGTON.—The Census Bureau today estimated the United States population on April 1 at 167,440,000, including Armed Forces overseas.

The Bureau said this was a gain of 16,308,000, or 10.8 percent, over the 151,132,000 on April 1, 1950, when the latest census was taken.

It estimated that about 10 percent of the net population gain in the last 5 years was accounted for by a net civilian immigration of 1,700,000 during the period.

Disposal of Land Along the Inland Waterway in North Carolina

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. SCOTT. Mr. President, it has come to my attention that the Federal Government is planning to dispose of some 4,858 acres of land it now owns along the Inland Waterway in North Carolina.

According to the General Services Administration, the land lies along the Waterway between the North Carolina-Virginia line and Beaufort Harbor.

In response to inquiries by me, the GSA says it has just let a contract to appraise the property, and the appraisal report is due to be completed September 1, 1956. The GSA says further that immediately after the appraisal report is approved, the property will be advertised for sale to the general public.

The Federal Government bought the land, mostly from individuals, to cut portions of the Inland Waterway through North Carolina. It was purchased in much the same way as right-of-way is bought for highways. The first purchase was made in 1908, and the Government continued buying land adjoining the waterway through 1947.

It now says that it no longer needs the land and wants to sell it.

To me, there seems to be a serious question of what will happen to the land in respect to soil erosion. Recent hurricanes and floods have taught us that conservation practices are precious factors in all coastal areas.

I think the Government ought to consider seriously offering to the State any surplus it has for use as State parks and the like before taking competitive bids. I should dislike to see selfish interests come in, buy the land for a song, and then sell valuable timber from it at a handsome profit. There is a large amount of first-class timber on some of the property, and every precaution should be taken to avoid windfall profit schemes devised by persons who have no interest in the waterway or the land adjoining it.

If there is no public use for the land, the Federal Government ought to give the original owners the first opportunity to buy it back.

I understand that plans to sell the land have been underway since last October, but until now the GSA has failed to offer any information about what is going on in the matter.

To me, this seems to be a poor way to do business. At least, the GSA could have let the public know what it has in mind. Both Congress and North Carolina State officials should have been advised, if not consulted. It is, in short, another case of not letting the right hand know what the left hand is doing.

I ask unanimous consent to have printed in the Appendix of the RECORD letters concerning this matter which I have received from Edward J. Fanflik, Acting Assistant Chief of Engineers for Real Estate, and Frank J. O'Gara, regional director of the General Services Administration, Atlanta, Ga.

There being no objection, the letters were ordered to be printed in the RECORD, as follows.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C.

Hon. W. KERR SCOTT,
United States Senate,
Washington, D. C.

DEAR SENATOR SCOTT: Reference is made to your informal request to this office on May 29, 1956, for information as to the status of excess lands along the Intracoastal Waterway from the Virginia State line to Beaufort Inlet, N. C., and of the disposal proceedings in connection therewith.

On October 28, 1955, the district engineer, Corps of Engineers, at Wilmington, N. C., reported certain lands acquired by the Government for the Intracoastal Waterway to the regional director, General Services Administration, at Atlanta, Ga., for further utilization by other Government agencies or disposal, pursuant to the provisions of the Federal Property and Administrative Services Act of 1949 (Public Law 152, 81st Cong.) and implementing regulations of the General Services Administration. The lands so reported comprise the following sections and acreages of the waterway:

Section	Acreage	Holding agency No.	GSA control No.
North Carolina Cut, N. C.	592.51	WILM-2(56)	D-NC-432
Alligator River to Pungo River, N. C.	2,591.08	WILM-3(56)	D-NC-433
Goose Creek to Bay River, N. C.	443.50	WILM-4(56)	D-NC-434
Neuse River to Beaufort Harbor, N. C.	1,231.70	WILM-5(56)	D-NC-435

Brig. Gen. Henry J. Hoeffer, the Division Engineer, Corps of Engineers, at Atlanta, Ga., informs me that he has recently obtained informal information from the Regional Director, General Services Administration, that the contract for the required appraisal of the aforementioned property was awarded on or about May 15, 1956, and that the appraisal work is scheduled for completion around the middle of August. The property is scheduled to be advertised in September 1956, and it is anticipated that disposal action will be completed by December 1, 1956.

In connection with the operation and maintenance of the Intracoastal Waterway, it is considered necessary that certain easement rights in the aforementioned property be retained by the United States. A copy of the reservation recommended by the Department of the Army for inclusion in any conveyance of these lands by the General Services Administration is inclosed for your information.

Inasmuch as the General Services Administration is the disposal agency of the Government in this instance, it is suggested that further information regarding disposal of the property be obtained from the Regional Director, General Services Administration, 50 Seventh Street NE., Atlanta, Ga. In any communication to the Regional Director of General Services Administration concerning these lands, a citation to the holding agency numbers and/or the GSA control numbers indicated above will be of assistance to the Regional Director in expediting a reply.

I trust that the foregoing information is satisfactory for your purposes.

Sincerely yours,

EDWARD J. FANFLIK,
Acting Assistant Chief of Engineers for Real Estate.

AMENDED RESERVATION CLAUSE

Each instrument or deed of conveyance shall include the following:

"Whereas in the River and Harbor Act of Congress approved July 25, 1912, and subsequent amendments thereto, provision was made for the constructing, improving, and maintaining an intracoastal waterway from Norfolk, Va., to Beaufort Inlet, N. C., in accordance with a project set forth in House Document (or River and Harbors Committee Document) No. 391, 62d Congress, and pursuant thereto, an intracoastal waterway has been constructed over, across, or adjacent to the land herein conveyed, there is excepted from this conveyance the said Intracoastal Waterway as a part of the navigable waters of the United States, and there is reserved to the Government and its assigns the perpetual right and easement to maintain the said Intracoastal Waterway and to enter upon, dig or cut away, and remove any or all the hereinbefore described tract of land as may be required at any time in the prosecution of the aforesaid work of improvement, or any enlargement thereof, and maintain the portion so cut away and removed as a part of the navigable waters of the United States; and the further right to maintain the aids to navigation presently established by the United States on the land herein described with the rights of ingress and egress thereto; and the further perpetual right and easement to enter upon, occupy and use any portion of said tract of land, not so cut away and converted into public navigable waters as aforesaid, for the deposit of dredged material, and for the placement thereon of such aids to navigation deemed necessary by the Government, and for such other purposes as may be needful in the preservation and maintenance of said work of improvements: *Provided, however,* That the grantee,

his heirs and assigns shall enjoy all such rights and privileges in said tract of land as may be used and enjoyed without interfering with or abridging the exceptions and reservations herein contained."

GENERAL SERVICES ADMINISTRATION,
Atlanta, Ga., June 5, 1956.

The Honorable W. KERR SCOTT,
United States Senate,
Washington, D. C.

DEAR SENATOR SCOTT: At the request of Mr. Cochrane, of your office, furnished below is information regarding the property known as the Atlantic Intracoastal Waterway, N. C. The property was turned over to us for disposal by the Corps of Engineers and is divided into four reports, as follows:

Location	Case No.	Acreage
Currituck County	D-NC-432	592.51
Hyde and Tyrell Counties	D-NC-433	2,590.63
Pamlico County	D-NC-434	443.50
Carteret and Craven Counties.	D-NC-435	1,231.78

We have just let a contract to appraise this property and the appraisal report should be received in this office on or about September 1, 1956. Immediately after the appraisal report is approved, the property will be advertised on a tract basis to the general public, with sealed bids to be returned to this office on a specified date.

In reporting the property to us, the Corps of Engineers reserved the right to maintain and, if necessary, enlarge the waterway and in so doing, dig away or remove any portion of the land considered necessary for this operation. This restriction might indicate that sale of the property might have to be made at rather low prices; however, there is considerable interest in the property and we believe that its sale will reflect an adequate return to the Government.

We propose to offer the property in tracts, as acquired.

If additional information is desired, it will be a pleasure to furnish it upon request.

Sincerely yours,

FRANK J. O'GARA,
Regional Director.

Memorial Day in Normandy

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. HILL. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a poem entitled "Memorial Day in Normandy", written by Mr. J. Mitchell Pilcher, of Montgomery, Ala. The beautiful tribute to the courageous Americans who made the supreme sacrifice on the Normandy beaches and battlefields for the cause of freedom was published in the Alabama Journal on May 29, 1956.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

MEMORIAL DAY IN NORMANDY

The long march is over, the winter gone,
Our soldiers' graves are wreathed with late May flowers,
When emerald leaf and petaled flower acclaim
Memorial Day in French Normandy • • •
Here one may visit those soft silent towns
Wherein are sleeping—till the trump of time
The men who fell, pledging their light-foot years.
That fearless Freedom might be born anew!
Nine cemeteries filled with silent men!
Row after row of crosses, small and white,
Grave after grave as lonely as the heart.
Pause, visitor, for Young America's sake—
Honor to Youth's valor on distant shores,
Yankee lads that sleep beneath reconquered soil
Of Normandy—where wave-swept beaches lie,
Hallowed and enshrined by stripling martyrs.

—*J. Mitchell Pilcher.*

Senator Lehman's Sixth Radio Report to the People of New York State on the Work of Congress

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a monthly radio report which I made to the people of New York State on Sunday, June 10, 1956.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEW YORKER'S REPORT ON THE NATION

(Text of Senator HERBERT H. LEHMAN'S sixth radio report to the people of New York State during the 2d session, 84th Cong.)

Fellow New Yorkers, the past 4 weeks in the United States Senate have been busy and productive. I am pleased to report to you that since my last broadcast, the Senate has passed four major pieces of legislation on which I have been working for some time—the Niagara power bill, the flood disaster insurance program, a broad Federal housing program, and an extension of the GI home-loan program.

This has certainly been my most productive legislative month in the Senate. Each of these four major legislative achievements are matters of vital interest to the people of New York and I am sure you would like to hear something about them.

The bill providing for the public development of the Niagara Falls power resources by the New York State Power Authority passed the Senate on May 16 by a vote of 48 to 39. As the primary sponsor of this bill, I was most gratified by the size of the favorable vote in the Senate. The chief issue in the debate on the Senate floor was whether Niagara Power should be developed by the State of New York, for the benefit of all the people of the State, or whether the Niagara resource should be given away by the Congress, despite the laws of New York State to a private power monopoly headed by the Niagara Mohawk Power Co.

The people of New York State are the direct beneficiaries of this victory over the advocates of the giveaway of Niagara power. The Senate action in passing my bill was a great step forward in achieving early development of this single greatest undeveloped hydroelectric site in the United States.

My colleague, Senator IVES, attempted to have this bill sent back to the Public Works Committee for what he called further study even though we have been studying it for years. This move would have killed the bill. Fortunately, his proposal was defeated and now the day is closer at hand when all the people of New York State will reap the benefits of two great hydroelectric developments—the St. Lawrence, presently under construction, and the Niagara.

Practically speaking, what does this mean for the people of New York State? It means that low-cost hydroelectric power will attract more industry to New York and that employment opportunities will thus be increased in our State and it means cheaper rates of electricity for home and business consumers.

Under the terms of the Niagara bill, as it passed the Senate, this will all be accomplished without cost to the taxpayers of New York State or of the Nation.

Now we must all push ahead to achieve the same type of victory in the House of Representatives. This is your fight. Passage of the Niagara bill in the House is going to be difficult. I am confident, however, that with the same widespread citizen support for the public development of Niagara power which I received during the Senate debate, we can achieve affirmative action in the House, and the great Niagara power development can proceed to become a reality in the next several months.

The Senate also enacted a Federal flood-disaster insurance program on which I have been working since the disastrous floods in our Northeastern States last fall. As acting chairman of the Senate Banking and Currency Committee considering the flood-disaster insurance program, I held extensive hearings in New York State and in other on the east coast. Over the decades our Nation has been intermittently plagued with floods. Almost no State has escaped their devastation.

The Northeastern States, and the Atlantic Seaboard States have suffered terrible losses in recent years from floods following hurricanes. We all remember the destruction wrought by hurricanes Diane and Connie. The losses to homeowners and businessmen amounted to hundreds of millions of dollars.

Since private insurance companies will not write flood insurance, I conducted hearings on this subject for the Banking and Currency Committee, and the Senate, on May 10, passed my bill providing for the establishment of a Federal program of flood-disaster insurance. I am sure that those of you who have been hit by floods will understand the importance of this legislation. It, too, is now befor the House and I am extremely hopeful that favorable action will be taken on the disaster insurance program before the closing of Congress.

The last two major legislative achievements of the past month which I want to tell you about are in the field of housing. The great volume of mail which I have received from citizens of New York State has made me more keenly aware that the question of adequate housing for our citizens is at the top of the list of unresolved problems confronting our Nation today.

With this in mind, I introduced a bill proposing a major overhaul of our Federal housing program. As a member of the Housing Subcommittee I heard the testimony of experts on housing needs and of representatives of the housing industry. From these hearings, and subsequent studies by the committee, we drew up and sent to the Senate a good housing bill. This housing bill was passed by the Senate. It goes further than the scanty program proposed by the administration but I would have liked to see it go even further in several respects, especially in the area of providing middle-income housing for persons unable to qualify for low-cost public housing but who are unable to meet the high cost of sale and rental housing being built by the housing industry today.

The housing legislation passed by the Senate authorizes 135,000 public housing units for each of the next 3 years, as against the meager 35,000 units for each of 2 years requested by the administration. This legislation provides a greatly expanded program of urban renewal and slum clearance assistance to our cities struggling with the growing problem of our slums.

But that isn't all that this housing bill accomplishes. We have also made provision for 15,000 units annually of public housing for elderly people, and instituted a program of special financial assistance to housing enterprises designed to meet the needs of our elderly families which are unable to find adequate apartments or homes.

This elderly housing program was a great victory for those of us who have witnessed the real needs of our senior citizens. It is a good start and it is a firm basis on which to build and expand a program for housing for the elderly in the years to come.

While my proposal for a full-scale middle-income housing program was defeated in the Senate Banking and Currency Committee by a tie vote, the Senate agreed to direct the staff of the Housing Subcommittee to make a complete study of middle-income housing needs and to report back to the Banking and Currency Committee the full facts of the crisis in middle-income housing. I am proud of the progress we made this year in laying the groundwork for positive legislation in this field and I am also proud of the overall housing bill which the Senate passed and sent to the House for action.

Still on the housing bill, I was the sponsor of an amendment which the Senate adopted extending the GI housing loan program for another year. When the Veterans' Administration announced its plan to stop receiving applications for home loans as of next January, I felt it would be a tragedy to let this program expire before some 11 million veterans throughout the Nation—and many hundreds of thousands in New York—could avail themselves of their rights for these Veterans' Administration guaranteed home loans. I therefore proposed to the Senate, and the Senate unanimously passed a 1-year extension of the GI home-loan program. I am confident that the House of Representatives will take similar action before the end of the session.

So much for our recent victories in the Senate.

In my remaining time I want to tell you about another important subject now being debated on the floor of the Senate—a proposed liberalization and revision of the social-security program.

Among the changes being proposed to the social-security program, there are two particular amendments I want to discuss with you. These deal with the payments of benefits to totally and permanently disabled workers at the age of 50 if they were, before their disability, employed in jobs covered by social security—and the lowering of the retirement age for women from 65 to 62.

The bill which is now under discussion passed the House of Representatives last summer by an overwhelming vote. It contained the two provisions to which I have just now referred. However, the Senate Finance Committee accepted the arguments of the administration and various pressure groups and eliminated the disability provision completely and made the lower retirement age for women applicable only to widows.

A group of my colleagues and I are now carrying on a fight to have the two original provisions restored. There is nothing complicated about these proposals. The do not deal with involved legal questions or abstract theories. They deal with people—their human needs and wants.

The Senate Finance Committee also decided that the reduction in retirement age for women should be made effective only for widows. To me this is an outrageous example of discrimination. The problems of the older woman do not depend on her marital status.

Of course I am concerned about the woman who finds herself a widow at the age of 60 or 62—a woman without skills, training, or job experience. But, I am also concerned about the woman in her early sixties who loses her job and is unable to find another because of the reluctance of employers to hire women over 60. And I am concerned about the woman who has no children to support her, no insurance or other source of income to fall back on.

By lowering the retirement age for all women to 62, we can give them something to look forward to—we can make their advanced years, years of brightness and hope—we can make them secure in the knowledge that they will not be dependent on others—that they will be self-sufficient, instead of charity cases.

I have touched only on the high points of the social security debate. I am confident that you share my views—that you hope and pray, as I do, that the United States Senate will promptly approve these pending amendments that mean so much to the people of this Nation.

All of my time has expired. I will be back on this station in 4 weeks with another report to you on my work in the United States Senate.

A Future in the Merchant Marine

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. BUTLER. Mr. President, Ralph E. Casey, president of the American Merchant Marine Institute, has proved himself to be an authority of high standing in matters of governmental functioning, especially relating to the maritime industry. His capable service in the executive and legislative branches has shown that when he addresses himself to a public question his statements are logical and worthy of public attention. For these reasons I believe that his address at the 100th commencement of the Maritime College of the State of New York, Fort Schuyler, N. Y., is deserving of national attention and I ask that salient excerpts from President Casey's speech be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A FUTURE IN THE MERCHANT MARINE

The first order of business at any commencement is congratulation. Ordinarily, I would turn first to the graduating class, for this is certainly their day. But I shall reverse the order today and address myself first to the Maritime College herself.

Almost any graduate of my college or university has taken pride, at one time or another, in the age of his alma mater. "Old" may be an insult to a woman, and surely no compliment to a man, but to a college it is a term of positive endearment. This is true even if the school was founded only in recent years. But when it has reached the point of graduating its one hundredth class, as Fort Schuyler has today, it has certainly earned all the honor and veneration with which its alumni regard it. Those of us in shipping who are not Schuyler graduates share your pride today that our earliest maritime collegiate training institution has passed such a milestone.

To you, Admiral Durgin, and to your staff, congratulations on producing this and other fine classes, and on bringing the college safely to this major port of call. Congratulations to all of your remaining undergraduate body who, though not yet ready to go to sea for good, will have the chance to go temporarily aboard your fine new training ship, the third of the *Empire States*. Finally, I know I speak for the entire merchant marine when I say that we congratulate ourselves today that we have a Fort Schuyler and that we can count on a continuation of the training methods which have given us so much of our best navigational, engineering, and building talent.

It is not news to any of you here that Fort Schuyler has played a very large part in shaping the modern American merchant marine. Nevertheless, I should be shirking an obligation, if, on my first appearance before you as president of the American Merchant Marine Institute, I failed to acknowledge the great debt which our industry owes to this college. Over the years, whether on liner bridges, at freighter hatches, or in tanker enginerooms, not forgetting steamship company offices, maritime agencies of the Government, and countless manufacturing, engineering, and shipbuilding plants where a thorough grounding in maritime technology is indispensable, many hundreds of our ablest men have come out of just such classes as yours.

How much Fort Schuyler has meant to the merchant marine was symbolized on National Maritime Day when a member of your class presented the golden rivet to Commodore John Anderson of the United States Lines, one of your fellow-alumni who, by virtue of his command of the *United States*, could well be considered the Nation's top-ranking merchant seaman.

In my own organization, we have had ample occasion to know the willing and cooperative spirit with which Fort Schuyler men enter into all programs and activities of general benefit to the merchant marine. Both alumni and staff members of the college sit side by side on many of the committees of the American Merchant Marine Institute.

What are some of these things that will be expected of you as soon as you have taken your degrees and licenses, saluted the *Empire State's* quarterdeck for the last time, and gone ashore to look for other ships? I shall mention two—not because there will be no others, but because these will be lifelong responsibilities growing directly out of the fact that you are Fort Schuyler men.

First, there is the responsibility to practice your newly acquired profession. This may seem too obvious to mention. It is taken for granted that most of you will go as deck or engineroom officers at the first opportunity and keep going as long as you have sealegs to go on. But you don't need a deck under you to put your general knowledge and special technical training to work both for your own advantage and for the good of the merchant marine. As the electronic and nuclear age advances, there are going to be many dryland industries working directly for the merchant marine, and unable to do their work properly unless they have trained marine engineers to tell them whether the miracle gadgets they produce will be suited to seafaring.

Second, you will be called on to be lifelong public servants, largely of the unsalaried variety. Those few of you who may actually go into Government will find in due course that all your practical and theoretical knowledge will be valuable in the solution of America's deep-rooted and difficult maritime problems and in the formulation of future policies.

But the great majority of you will remain private citizens, whether at sea or on shore. As such you will be on shore much more than mere voters when issues arise out of these same problems. You will be men who have studied the subject, who know it firsthand and who not only must cast your own ballots in the light of that knowledge but must seek every opportunity to educate your fellow Americans. Sadly enough the great majority of the American public are traditionally—I might almost say zealously—ignorant of shipping matters, even where the conduct of the country's maritime affairs touches their own prosperity and safety more closely.

At sea and in foreign ports, you will have another public responsibility. It has been said that a ships' officer is an ambassador of our country. Not many of us think of ourselves quite so pretentiously, and certainly there is little of diplomatic pomp and protocol about conning a tramp into a minor foreign port, running the gauntlet of local officialdom and local traders, and getting out with a whole skin. Nevertheless, it is certainly true that every American officer can play his part in what is perhaps the most urgent campaign of our industry today—the camapign to fill our cargo holds and increase our carryings.

You may have been wondering what the industry has to offer you in exchange for discharging these obligations. It goes without saying that, if you get a berth on an American ship, you will be among the best paid, the best fed, and the most secure, both personally and socially, of all the world's merchant officers. But, you may still ask, will the berth be there?

I think I can give you an optimistic, if cautious, answer to that one. We have admittedly gone through a period of depressed shipping employment in recent years. The evidence of the past 12 months, however, is that we are coming out of it. If present plans and prognostications mature, there should be steadily increasing shipboard job opportunities for some years to come. I can cite, for one thing, the present comparative prosperity of the tramp shipping industry, which seemed threatened with extinction only 2 years ago. More promising still are the very extensive fleet-replacement and enlargement programs upon which many of the major companies have embarked in recent months—programs usually looking as far ahead as 15 to 20 years. Eleven large new passenger liners are now building or embodied in firm replacement plans.

I recently had an opportunity to talk with some people in Washington concerning the development and placing in coastwise service of roll-on, roll-off vessels. There are those who feel with absolute conviction that this type of vessel will at last bring about the gravely needed revival of our coastal shipping trades. I myself believe that if these ships overcome the greatest obstacle which has stood in the way, namely, slow cargo-handling coupled with devastating in-port costs, the trailership and the trainship will once again vindicate water transport as the most efficient and economical way of moving some types of goods between our domestic ports.

All-Out Fight on Disease

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely editorial published in the Washington Post and Times-Herald of June 8, 1956, entitled "All-Out Fight on Disease."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL-OUT FIGHT ON DISEASE

How strong a fight the United States will make on disease in the coming year is now being decided in the Senate-House conferences on the bill for medical research. The Senate on Tuesday voted approximately $183 million for the National Institutes of Health. The House had voted $135 million. The larger appropriation was made as a result of strong recommendations from many distinguished medical scientists, including the cardiologists, Dr. Paul Dudley White and Dr. Irving Wright, and the cancer specialists, Dr. Wendell Stanley, a Nobel prize winner, and Dr. Sidney Ferber, an outstanding authority on leukemia. These and other witnesses representing the major fields of medical research testified that manpower and research facilities were available to make effective use of the funds asked.

If the larger appropriation is not maintained, some promising and exciting forays in what the Senate Appropriations Committee called the "grand national strategy of medical research" will be weakened. One of these is the use of chemical compounds in the treatment of cancer. Another is a crash program agains arteriosclerosis, proposed by Dr. White. In view of the great loss of manpower and economic productivity and the widespread grief and unhappiness that the big disease enemies cause, we hope that the conferees will authorize a full scale research offensive against them.

Three Colleges—All Founded for Service

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. MARTIN of Pennsylvania. Mr. President, this is the college commencement season. It is a time to commend our institutions of higher learning which are teaching the basic things in our way of life. Decency, courage, loyalty, faith, tolerance, and love of God are the virtues which have made our Nation so great. They must be constantly taught and brought to our attention.

The Washington Observer has an editorial entitled "Three Colleges—All Founded for Service," relating to Washington and Jefferson College, holding its 157th commencement; Waynesburg College, its 105th commencement; and California (Pa.) State Teachers College.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THREE COLLEGES—ALL FOUNDED FOR SERVICE

It is graduation time for three colleges in Washington and Greene Counties.

Two of them are liberal arts colleges which have served young folk for many decades, and the other is a State teachers college, supported by State funds.

Of the two liberal arts schoools one—Washington and Jefferson—will hold its 157th commencement. It had its beginnings, however, in private schools more than 175 years ago, when this was the new west.

The other—Waynesburg—will graduate its 105th class.

Both were founded by men whose impact on their communities was great.

Both have had great leaders, great presidents, great faculties. And both have served greatly. Graduates of both stand high in many fields—ministry, law, medicine, business, and science.

The two schools have served well, and they have lived because they have served.

They are great examples of the kind of schools which have made America and created its moral and spiritual character. For colleges such as these have turned out the men who have led the Nation in its religion, who have set the ethical and moral standards which have put America high in world leadership.

These two colleges have been engaged in building foundations for life. They have not been specializing institutions, in that they have not tried to prepare men and women for specific trades or professions. But they have laid foundations on which life and its professions are built. And experience over the years has taught that men who secure strong foundations build better life structures.

Such schools, we believe, have a great future—as long as they serve well. And such service requires, above everything else, a desire on the part of school administrators and faculties to help young men and young women to ready themselves for big places of service in the world.

The other college—California State Teachers College—has established itself as a strong influence in southwestern Pennsylvania. Its graduates have stamped their influence and moral character on generations of school pupils. And because of the influence they have on young people, the alumni of this school have done much to build human character.

It also will prosper as it continues to serve.

And back of the service of all three—and of all other colleges in the land—there must be a passion to train young men and women in such a way that they will find God in their work and put God in their achievements.

If they do that our colleges will continue to make America greater, and to keep it strong among the nations of the world.

Soviet Imperialism

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. DOUGLAS. Mr. President, the Assembly of Captive European Nations which met in Strasbourg, France, April 12–15, brought together many able and thoughtful leaders of the peoples now suffering under the Communist yoke to plan and work for the return of freedom to their countries.

One of the notable addresses on that occasion was delivered by Dr. Peter Zenkl, courageous former mayor of Prague and vice premier of Czechoslovakia, on the subject of Soviet Imperialism. I ask unanimous consent that this timely and penetrating address, reminding us that the menacing colonialism of today is Soviet imperialism, be printed in the Appendix of the RECORD.

together with a brief descriptive sketch about Dr. Zenkl recently written by Edward R. Murrow as a preface to a booklet entitled "Peter Zenkl, Champion Anti-Communist."

There being no objection, the address and descriptive sketch were ordered to be printed in the RECORD, as follows:

SOVIET IMPERIALISM

(By Peter Zenkl)

All of us present, as members of the Assembly of Captive Nations, know at first hand what Soviet imperialism is. I shall not talk about the substance of that condition. I wish to explain why it is necessary to call the system by that name, not avoid the name but do everything in our power to make that technical term current, commonly used and obvious. It has its own specific meaning and individuality, different from other imperialism.

First, I would like to emphasize that even calling the oppression of central and eastern European peoples by Communist Moscow "colonialism" is no derogation of our good friends Great Britain, France or much less the United States. Colonialism by the Western powers has ended, or is rapidly ending, and I must say, honorably since most of the former colonies have attained freedom. Furthermore, western colonialism never and nowhere ever attained the horror and inhumanity of the Soviet variety. It was largely a trusteeship of the more advanced over the less advanced. The mistakes of the past century, and there were mistakes, have long since been counterbalanced by the tremendous progress made by their wards. The western powers, whose leading statesmen have willingly admitted mistakes, can be justly proud of the final balance. We can speak of colonialism without hurting their feelings because they have terminated or are terminating their period of domination with honor, while the Soviet Union is forcing its colonialism among the most cultured parts of Europe, transplanting the worst forms of oppression from medieval centuries into the middle of the 20th century.

Second, I wish to emphasize that no one who has not personally suffered the horrors of Soviet oppression can even imagine them. Many persons recall that oppression is unpleasant, not from its present forms, but from what they know of its past forms.

For instance, take the fact that two-thirds of all the 76 present members of the United Nations were colonies at one time. Think of the 22 American states, including the United States of North America. Think of all the British dominions like Canada, Australia, New Zealand, of all the Arab States, of all those in southern and eastern Asia, with India at their head, of Pakistan, Ceylon, Burma, the Philippines, Indonesia. Think of the African states, recent colonies like Tripoli, Tunis and others now coming to the age of independence, with many others to follow. Think of Sudan and of British Togo, which will have its plebiscite on May 7, and Somaliland, which will be free in 3 years. Nigeria and the British West Indies in the Carribean Sea, which will be independent dominions in the near future. None of these members or future members of the United Nations know anything of communism, but they know a lot about colonialism. Not even the people who are neutral in the cold war, or those who boast incorrectly of neutrality, can be indifferent to the dangers of colonialism. It is our duty by using the proper name to warn them that they are threatened by colonialism—not the old colonialism, but the much worse new colonialism of communism.

The best reason for using the correct name, however, is its deep truth. Soviet imperialism has all the characteristics of suppression from the worst and most primitive times in history, times long past and forgotten in the West. It has all the signs of colonialism in the political, economic, social and cultural fields. Let us look at the matter from those four angles:

Politically, ancient colonialism meant that the subject people had no control over its own public affairs. They were governed from some foreign capital, through a governor to whom the local puppets could only bow and obey. If they objected, the local princelings were bought or threatened. Exactly the same thing is happening today in the capitive nations. "Matushka Moskva" has a new significance today, as she alone governs in Praha, Warszawa or Budapest through chieftains bought with money or power, who can appoint and remove any official at will.

The people of these new colonies have no right of free elections any more than had the peoples of Africa or Asia. Moscow's subjects in the captive nations have no human rights, no independent courts, no rights of assembly. These colonies are governed by the police, with no political parties, no free press, or right of free expression. I tell you the oppression in Soviet colonies is worse, much worse than in Asian colonies within the past 50 years.

Economically ancient colonies were managed by mammoth companies, who ruled without responsibility to anyone but their shareholders. We see the same today in the captive countries, with their national enterprises, their joint Soviet-Rumanian, or Soviet-Hungarian corporations, and their 5-year plans, which subject their economies to that of the Soviet Union, and place economic goals and quotas above the life and death of mere people, above all human rights and liberties. These corporations exploit the labor of their colonial subjects more or less like slaves, pay miserably in comparison with the cost of necessities, seize private property without compensation, push particularly old people out of their homes, deny medical attention to those no longer able to work. They do not treat their subjects like people; forced labor and concentration camps have become the symbol of Soviet colonialism. The horror of this form of colonialism is worse than we could find back in the 16th century in the west.

Naturally the planned economy in captive countries is not planned for the benefit of the domestic population, but only of Russia. That in central European colonies is a purely complementary economy, to complement or supplement the economy of the U. S. S. R. Even the much advertised Soviet form of collective farming is a copy of the old plantation system with all its unpleasant symptoms. In ancient times colonial subjects paid head taxes; today the Soviets have replaced the fair income tax with consumers' taxes, similar in effect to a head tax. Such economic similaries with ancient colonialism could be listed without end.

In social matters the similarity is still more remarkable. We could say a lot about breaking up families in Soviet colonies, about exhausting work by women, about excessive working hours, about physicians who don't treat patients but drive people to labor they cannot stand, about the collapse of labor unions which now serve the state and not their members, about the lack of any protection for labor against unfair treatment by the one great employer—the state, about workers chained to one plant where the government orders them to work, about the lack of freedom to travel at home or abroad, the death penalty for trying to escape this workers' paradise.

Soviet colonizers have no interest in maintaining the culture of their occupied peoples; they want only skillful hands and willing servants behind the Iron Curtain. They falsify history in each of the European colonies, try to erase the greatness of past national leaders and artists, to substitute Soviet art, literature, science, invention, and political leadership. Their colonized peoples must forget they were ever free, ever played a part on the world stage; they must worship only Soviet heroes. It has become a crime to remember freedom in the past or to dream of future freedom.

Why do I say all this? Because colonialism no longer exists in the west and the last colonies are rapidly moving into complete independence. Because the paradox of our century is that it has ended colonial rule over backward peoples, while at the same time permitting something worse to be foisted on advanced peoples. Because this new colonialism is actually the worst threat to world peace. It is our duty to show the world that all attempts to negotiate permanent peace will be stillborn unless it puts an end to this ulcer on the face of world politics. All the work of the United Nations for peace will remain phrases on paper, shadows on the wall, until it faces up to this problem.

We must point out to the world what an absurd anomaly it is for the Trusteeship Council and the General Assembly to debate about elections in the wild sections of New Guinea and say nothing about free elections in Bucharest, Budapest and Riga. It is a shadow game to debate about corporal punishment for a few criminals in central Africa while a 100,000 people in Poland are tortured in concentration camps for no crime at all. It is really absurd for the United Nations to worry about a few students from some colony somewhere refused visas to attend an American university, while whole classes of young people are excluded from the 600-year-old university in Praha and denied all rights to higher education because they or their parents do not belong to the right political party. We ought to stand up and proclaim aloud that we are for free elections in the most remote corners of the earth, that we protest against physical humiliation of people anywhere, that every person has a right to education. But while demanding these rights for peoples just entering civilized society, let us demand the same for the 100 million people in central Europe, who had these rights but have lost them, and also for the other millions in the East who have never had a free election, still live under the threat of physical torture. Is it too much to demand that the Twentieth Century movement which has given self-government to hundreds of millions in Asia, also return self-government to the peoples in central Europe and insist on civilized government in Eastern Europe?

I therefore propose that this assembly establish a committee to study these questions and select a group of those who know the problem to draft memoranda and a program in this field.

I propose that we define Soviet colonialism as based on works by modern Communist authors, and prove that their charges against the West are long out of date whereas they still apply behind the Iron Curtain.

I propose that the facts and data we discover be presented to all non-Communist members of the United Nations—not only to their delegations in New York, but also directly to their governments around the world.

I propose that we form a special commission of legal and political experts to study means of including these problems in the agenda of the United Nations as a contribution to its efforts toward permanent peace. Yes, I know the wording of Article 3 paragraphd 7 of the United Nations Charter, which forbids interfering in internal affairs of member states. But I also know that both colonialism as such and threats to world peace are not internal affairs of member states. I also know that the question what is or is not an internal matter of member states is decided in the final analysis by a voting majority of those present. We also

know that the United Nations has often interfered in internal affairs of member states, rightly or wrongly—at the instigation or the consent of the Soviet Union. We see that Greece, for instance, has placed the question of Cyprus on the United Nations agenda. Well, it is time that the United Nations considered the question of the captive nations—and it will be our fault if this is not put on the agenda. Truth is on our side; our cause is right and sacred. Free men—free nations are rising throughout the world—be assured that they will rise to their feet also behind the Iron Curtain.

The Soviet Union calls for an end to colonialism—shouting like a thief, "Catch him. There he goes." It is up to us to unmask the real thief.

PREFACE TO PETER ZENKL, CHAMPION ANTI-COMMUNIST

(By Edward R. Murrow)

Brackett Lewis has written an unadorned account of the life of Peter Zenkl. A full account can come only from the pen, the mind, and the memories of Dr. Zenkl himself.

It was no accident that nearly all competent Western observers who visited Czechoslovakia in the years between the wars labeled it a model democracy. Czechoslovakia was at the same time an inspiration and a challenge to its neighbors. And one of the principal reasons that this was so was that small, smiling, and vigilant statesman known as Peter Zenkl. He was three times lord mayor of Prague; was Minister of Social Welfare and Public Health under President Benes—leader of the largest anti-Communist Party in Czechoslovakia. He witnessed the saddest sight a patriot can behold—the death of his nation without battle, when Czechoslovakia was betrayed by her Western Allies.

Dr. Zenkl is a fighting man, with as much faith in free men's ability to govern themselves as any man I have ever known. He spent 6 years in Nazi concentration camps, was condemned to death, but managed to survive those last few indescribable days of horror at Buchenwald. When this reporter had the honor of finding him there, he was not a broken man; he had not even bent. His faith in his country, in democratic processes, in the dignity of the individual and his right to be free, were undiminished.

Czechoslovakian Communists in Buchenwald, seeing me in the company of Zenkl, warned me against him. They said: "Beware of old Zenkl. He still believes in that old-fashioned nonsense, like Masaryk, Benes, and Woodrow Wilson." They hated and were fearful of him because, fortified with an idea, he would not break. They promised to destroy him if he returned to his native land. It never occurred to him to do anything else. He became Deputy Prime Minister under Dr. Benes. And then, for the second time, saw his country go down under the flood of a foreign tyranny. Finally he managed to escape, and now resides in this country.

Peter Zenkl knows as much about fighting communism as any man I know. He spent much of his mature life doing exactly that. He is an inspiration for all men who seek freedom. The hatred of his fellow-countrymen in Buchenwald, the fact that the Communists in Czechoslovakia still fear and malign him, are both tributes to the power of the man and of the idea he cherishes.

Technically, I presume Dr. Zenkl is now classified as a refugee. But he will be at home wherever freedom flourishes and men are prepared to fight for it.

There are refugees who believe that they know precisely the pattern and form of the government and society which should and must replace the present tyranny when they return to their native land. It is not so with Zenkl. This is a decision he reserves for his fellow-countrymen when, in freedom, they may determine such matters for themselves. The years in prison and in exile have served to intensify and strengthen his intolerance of injustice. He knows that in a world where there is no security for little nations, there is no security for big ones. He is a quiet man, with a truly ferocious faith in freedom. And there will come a time when schoolchildren in his own country—and I hope in mine—will read the story of Peter Zenkl, his life, and his works, and will draw from it the pride, inspiration, and respect for human rights which is the diet on which individuals and nations must survive.

Congressman Ben F. Jensen, of Iowa, Takes a Look at the Record on the Farm Issue

---

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. JENSEN. Mr. Speaker, during the past year or more hundreds of my constituents have written me expressing their great concern about the welfare of our farmers. Businessmen, as well as farmers, wrote and called on me, because all business is tied to agriculture. Many said give us about the right amount of rain and sunshine and all will be well without a farm program, while others talk about feed distribution, feed costs, feed supplies, credit, transportation, machine costs, and high taxes. Many complained about hog and cattle prices, and said they felt politics was entering into all proposed farm legislation. Let us take a look at the record.

The Democrat Party was in full power in both the White House and in Congress in 1951 when the President's hand-picked Director of the Office of Price Stabilization, Mr. Michael DiSalle, announced on February 19, 1951, that he would soon roll back the price of cattle 10 percent with President Truman's approval. At the same time he announced that was only the beginning—because said he, "I'm going to roll back cattle prices another 4½ percent on August 1, and another 4½ percent on December 1, because said he, cattle prices are too high." We Congressmen from cattle producing areas took up the fight and were able to stop all except the 10 percent roll-back, but the damage was done—cattle prices, as you well know, started on the toboggan the day after DiSalle made his dictatorial announcement, which also pulled other farm prices down and down. Now we hope the present increased prices of livestock will hold, and they will hold unless the packers decide otherwise. We are still waiting for the packers to explain the low hog prices in 1955 in face of the fact that the American people ate more pork in 1955 than the farmers marketed as shown by the Department of Agriculture records.

The House of Representatives passed a bill amending the Agricultural Act on May 5, 1955, to strengthen the farm economy, but the Democrat controlled Senate committee pigeonholed the bill, and then the Democrat bigwigs began trying to blame the farmers' troubles on the Republican administration. That was the worst kind of politics, and at the expense of our farmers. Their time would have been better spent cooperating with the congressmen from the farm States who asked nothing more than fair and equal treatment for the farmer with others segments of our people. Then in order to give quick help to many financially distressed farmers President Eisenhower and all the Republicans, and a few Democrats, in Congress, worked hard to get this present Democrat controlled Congress to put a provision in the soil-bank bill to pay 50 percent of the soil-bank benefits this year to farmers who would agree to comply next year with the soil-bank provision in the bill; but the Democrats screamed politics to the end that section was knocked out of the bill.

Now let us take a look back at the record. Total farm income was less during the Democrat 8-year period, 1933 to 1940, than it was during the preceding Republican 8-year period. Take a look at hog prices for instance—long after the New Dealers plowed under corn, wheat, and cotton, and destroyed little pigs, and spent over $19 billion trying to prime the pump—the highest price paid for hogs at the Omaha market in 1940 was $7.30 in August, the low was $5.25 in February. Please note below price chart compiled from the Omaha market, also please note hog prices for years 1947, 1948, 1953, and 1954, when the Republicans were in control of Congress:

Top prices for hogs by months

Year	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year
1956	15.25	15.00											
1955	18.75	18.00	18.75	18.50	19.00	22.25	20.50	17.85	17.25	16.35	13.75	12.00	22.25
1954	27.35	27.25	27.90	28.65	28.25	27.00	26.00	24.50	21.50	19.75	19.75	18.85	28.65
1953	19.25	21.75	22.25	24.65	25.25	26.00	27.50	27.25	26.00	24.75	24.00	27.00	27.50
1952	18.35	18.10	18.25	17.85	22.25	21.25	23.50	23.75	21.60	20.75	17.60	19.25	23.75
1951	22.00	23.75	22.75	22.25	22.25	23.00	23.25	23.50	21.65	22.50	19.60	18.75	23.75
1950	17.75	17.85	18.00	17.75	20.50	21.75	25.75	26.50	24.50	20.75	19.25	20.75	26.50
1949	21.50	21.75	22.50	21.75	22.25	22.25	23.00	23.60	22.75	19.50	17.00	16.00	23.60
1948	28.75	26.50	25.25	23.50	26.00	29.50	30.50	32.25	30.00	27.50	25.35	22.75	32.25
1947	25.25	29.50	29.25	28.00	25.25	25.25	28.75	28.75	32.00	30.00	25.85	28.75	32.00
1946	14.50	14.50	14.50	14.50	14.50	14.50	22.85	24.00	15.90	27.50	25.25	25.00	27.50
1945	14.45	14.45	14.45	14.45	14.45	14.45	14.45	14.45	14.45	14.50	14.50	14.50	14.50
1944	13.45	13.55	14.10	13.75	13.45	13.50	14.45	14.45	14.45	14.45	14.45	14.45	14.45
1943	15.00	15.35	15.40	15.50	14.50	14.15	13.90	14.60	15.10	14.65	14.15	13.50	15.50
1942	11.85	13.00	13.65	14.50	14.20	14.40	14.50	14.70	15.00	15.30	14.10	14.75	15.30
1941	8.85	7.75	8.10	9.10	9.35	10.90	11.60	12.15	12.30	11.35	10.50	11.15	12.30
1940	5.65	5.25	5.50	6.35	6.00	5.40	6.75	7.30	7.25	6.40	6.10	6.85	7.30
1939	7.70	8.20	8.00	7.00	6.90	7.00	7.15	6.65	9.25	7.15	6.50	5.75	9.25
1938	8.50	8.85	9.35	8.60	8.65	9.00	10.05	9.80	9.15	8.60	7.90	7.45	10.05
1937	10.50	10.00	10.45	10.15	11.60	11.50	12.60	13.10	12.25	11.40	9.25	8.35	13.10
1936	10.75	10.75	10.55	10.60	10.10	10.50	10.75	11.40	11.00	10.15	9.55	10.35	11.40

In the year 1940 after 8 years of new dealism when the Democrats were in full control, both in the White House and in Congress, over 10 million Americans were out of work, but World War II solved that problem for them by giving jobs to 14 million Americans in uniform—then, of course, all prices, including farm prices, went up and up. But thinking Americans want no more of that kind of business.

By honorable, peaceful means—without the stimulant of war and its heartaches—the Republican peace party will earnestly strive, and will succeed in leading the way to genuine prosperity. That is our sacred pledge to the American people. So, I am proud to continue to cast my lot with the Grand Old Party.

The Oppenheimer Case

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Manchester Union Leader, Manchester, N. H., on Wednesday, June 6, 1956, entitled "Bohlen Wrong, BRIDGES Right." This editorial refers to an exchange of correspondence between Kenneth D. Robertson, Jr., of Boston, Mass., and the Honorable Charles E. Bohlen, United States Ambassador to Russia, which should be of interest to the general public and which I request be printed immediately following the editorial referred to.

There being no objection, the editorial and correspondence were ordered to be printed in the RECORD, as follows:

BOHLEN WRONG, BRIDGES RIGHT

Our readers will remember the shock so many patriotic Americans experienced when President Eisenhower appointed Charles E. Bohlen as our Ambassador to Russia. They also will remember Senator BRIDGES' patriotic opposition to the appointment.

Just how right Senator BRIDGES was can be seen from reading the correspondence between Kenneth D. Robertson, Jr., of Boston, and Charles E. Bohlen, of Moscow, and a member of the board of overseers of Harvard University. That correspondence is printed on today's editorial page under "Important," with "Harvard and Oppenheimer" the main caption.

It will be noted from the correspondence that Bohlen favors Dr. Oppenheimer's appointment as William James lecturer at Harvard. "I do not mind telling you," he writes alumnus Robertson, "that had I been present at the meeting (of the board of overseers) I would have approved Dr. Oppenheimer's appointment."

Ambassador Bohlen, then, apparently sees nothing wrong in Harvard's honoring of Oppenheimer in spite of the fact that Oppenheimer contributed money to the Communist Party, associated with Communists, lied to a security agent of the United States Government during wartime, and was denied security clearance because of "basic defects in character."

With such a lack of moral sensitivity, as indicated by his judgment of Oppenheimer's connection with Harvard, Bohlen must feel very much at home in Moscow, associating as he does with the atheistic killers in the Kremlin.

BRIDGES was right.

WILLIAM LAUB, *Publisher.*

BOSTON, MASS., *February 24, 1956.*

Hon. CHARLES E. BOHLEN,
Department of State,
New State Building,
Washington, D. C.

MY DEAR AMBASSADOR BOHLEN: As an interested alumnus, I ask you as a member of the Board of Overseers ("which directly represents alumni interests in the policies of the university"—Pusey) whether or not you now approve of the Oppenheimer appointment as William James, lecturer.

I would like a yes or no answer to that question regardless how you voted at the board meeting which "approved" the appointment—or whether you even voted or not.

And I would like your answer to include your views as to Dr. Oppenheimer's moral qualifications to lecture on the subject of ethics and philosophy to the young students at Harvard. It seems to me that the moral issues involved go far beyond any purely scientific accomplishment, no matter how illustrious.

If this letter makes you angry by speaking too plainly, please don't take it out on me. After all, I didn't have a Communist as an intimate "girl friend," didn't contribute money to the Communist party, didn't associate with Communists and employ them in secret government work or fail to pass security tests. Nor have I lied about the foregoing when questioned thereon.

Finally, don't blame me for appointing him.

Sincerely yours,

KENNETH D. ROBERTSON, Jr.

(cc: Dr. Pusey member of the corporation, Same letter to all members of board of overseers).

THE FOREIGN SERVICE OF THE
UNITED STATES OF AMERICA,
AMERICAN EMBASSY,
Moscow, U. S. S. R., April 28, 1956.

DEAR MR. ROBERTSON: I have received your letter of February 24 in which you inquire whether I as a member of the board of overseers voted for Dr. Oppenheimer's appointment as William James, lecturer. In view of my absence from the country I did not attend the meeting of the board at which this question came up.

Although I do not know that you have any right to inquire how individual members of the board of overseers did or not vote on any given question before it, since in this case it is a hypothetical question I do not mind telling you that had I been present at the meeting I would have approved Dr. Oppenheimer's appointment.

Sincerely yours,

CHARLES E. BOHLEN.

BOSTON, MASS, *May 12, 1956.*

Hon. CHARLES E. BOHLEN,
American Embassy, Moscow, U. S. S. R.

MY DEAR AMBASSADOR BOHLEN: The tenor of your letter of April 28 is not altogether surprising in view of the very real doubts at the time of your appointment regarding your qualifications to represent America's best interests in Moscow. Defending Dr. Oppenheimer without any reservations—a man who so well served the enemies of his country—is, perhaps, to be expected of you.

It does seem strange, however, that an interested alumnus cannot get a forthright answer to a direct question from a member of the board of overseers, particularly in view of Dr. Pusey's statement that your board "directly represents alumni interests in the policies of the university"; and in a man of your intelligence I can hardly believe that you purposely misread that question.

If you will reread my letter, you will see that I did not ask you how you voted on the Oppenheimer appointment; I asked whether you "now approve" of it. You call that a "hypothetical question," challenge my right to ask it, and then answer it by indirection only. Moreover, you are very careful to avoid answering the question of Oppenheimer's moral qualifications to discourse on the difference between what is right and what is wrong. Are you, perhaps, ashamed to express your views on them?

I am so disgusted at your undeviating loyalty toward a tool of the conspiracy—a self-confessed liar and one who was officially denied security clearance because of basic defects in character—that I am sending copies of our correspondence to Senator EASTLAND and to others who, with him, will be in a position to evaluate its significance and take appropriate action.

Very truly yours.

KENNETH D. ROBERTSON, Jr.

Enclosure: Raymond Moley's The Pink Flag Flies, Newsweek, April 23, 1956.

(cc: Dr. Pusey—other overseers—members of the Harvard Corporation—Senator EASTLAND—and others.)

A Watch on Bigness

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Watch on Bigness," which appeared in the Omaha World-Herald on Sunday, May 20, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A WATCH ON BIGNESS

Last year General Motors Corporation earned $1,189,000,000. It was the first time any business ever earned a billion dollars in 1 year, and commentators had much to say about this vast sum and the power of the corporation that made it.

Congressional committees buzzed around General Motors as if it were a shady giant that needed its ears pinned back.

GM's dealer relations were sifted and a Senate committee made solemn recommendations as to changes. The Justice Department's antitrust chief talked darkly about GM divesting itself of some of its manufacturing enterprises. An attack on GM's defense contracts sputtered out when it was learned they were down 35 percent in 1955, but the slur had been made, and it stuck.

No phase of General Motors operations escaped close scrutiny. Its business methods were probed and prodded in the disapproving tones of prosecutor trying to send somebody up for embezzlement.

All this about a corporation whose sales, earnings, taxes, profit, plant investment were clear matters of public record and about which no hint of scandal could be found. The only excuse given was that bigness must be watched.

But it seems that only certain kinds of big business must be watched. Corporate big

business but not union labor's big business, which is the operation of welfare funds.

In total, the labor welfare funds make General Motors' billion-dollar income look like a piddling amount. In 1954 the union funds took in $6,500,000,000 and the cash total in the funds at that time was estimated by a congressional committee at upward of $25 billion. No American corporation, no American industry, has such enormous assets, either liquid or in property.

This is bigness almost beyond comprehension—and it is operating in virtual secrecy.

Victor Riesel, the blinded labor columnist, says he is convinced that the hoodlum who pitched acid in his face last month was working for the racketeers who have horned their way into labor. The loot they're after, he opines, is the pension and welfare funds. Not only are they after it but they are already regarding it as their own. Any interference with this huge grab of power and money, says Mr. Riesel, is the spur to violence.

The shakedowns by which these labor criminals amass fortunes are varied. They include outright theft, padding of expense accounts, operation of insurance companies. There is practically no accounting of any of the money. In the words of Senator DOUGLAS, Democrat of Illinois, "administrators * * * treat the money more as their own than that of the beneficiaries."

What an ironic state of affairs is this. A respectable American corporation is badgered and defamed for the crime of making a billion dollars honestly. And the hoodlums who have wormed their way into a much bigger enterprise, labor's pension and welfare funds, operate without any threats of Federal interference of any kind.

Surely some of the energy and indignation expended in watching General Motors could profitably be diverted to keeping an eye on the hoodlum-infested welfare funds. Congress should waste no time in getting around to it.

Nonmagnetic Taconite

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. HUMPHREY. Mr. President, my colleagues will be aware of the tremendous importance of the new taconite industry in northern Minnesota. It is a subject I have discussed many times on the Senate floor.

The St. Paul Pioneer Press of May 30, 1956, contained an editorial entitled "Nonmagnetic Taconite Is Next Ore Frontier." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NONMAGNETIC TACONITE IS NEXT ORE FRONTIER

Minnesota's tremendous resources in the way of low-grade iron ore may be stretched still further, through plans now underway. Taconite has been the big source of expansion in which so much enthusiasm centers as to long-range future prospects. But it is the magnetic kind that is being used, in which iron can be removed from the rock rather simply by the use of magnetism. There are nonmagnetic ores in tremendous abundance, particularly toward the western end of the iron ranges. The Great Northern Railway Co. now plans to encourage the development of such ores on the western Mesabi Range.

The Grand Rapids Herald-Review, hailing this new, bright prospect, says "these ores can be made magnetic by the application of heat up to about a thousand degrees. After that, the process of extracting the iron may be generally the same."

The western end of the iron range area watches, perhaps with a bit of envious interest, the taconite developments further eastward. "Every year," says the Grand Rapids paper, "points to the use of the western ores, and the day of their usefulness may not be too distant. While the nonmagnetic taconites must be heated to utilize present processes, they have some other advantages. Great tonnages have been mined and stockpiled. The vast red piles may be seen across the whole western range. * * * Much of the western range ore may have higher iron content than the magnetic taconites now being used. The western taconites are softer and will be crushed at less cost. They will not require as fine grinding. In future operations on the western Mesabi there will be no need for high investment in housing or transportation facilities. There are investment advantages which may be very important."

The developments being discussed may take some years, but they do hold great promise.

Adm. Arthur W. Radford, Chairman, Joint Chiefs of Staff

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. MARTIN of Iowa. Mr. President, the United States has produced many distinguished military and naval leaders—men tested in both peace and war. The qualifications for high positions in the Armed Forces are far greater today than ever in our history. Yet few people realize the years of arduous application necessary to attain such posts.

The present Chairman of the Joint Chiefs of Staff is Adm. Arthur W. Radford. His distinguished career was summarized in the June 1956 issue of Shipmate, the magazine of the United States Naval Academy Alumni Association.

In order that the indicated biographical sketch about Admiral Radford may have a wider distribution I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the subject summary was ordered to be printed in the RECORD, as follows:

ARTHUR WILLIAM RADFORD, CLASS OF 1916

Although Adm. Arthur William Radford is a Navy man by virtue of graduating from the Naval Academy in 1916 and subsequently giving 40 years of service to the United States Navy, he is far more than just a Navy man. In his present top post as chairman, Joint Chiefs of Staff—a post he has held nearly 3 years—he is a man dedicated not only to all armed services of the United States, but to the entire world. His friends and classmates know him as quiet and reserved but highly compatible, easy going with his fellow man—but firm on important issues or when the well-being of his country is at stake.

Arthur W. Radford was born in Chicago, Ill., on February 27, 1896, the son of John A. and Agnes E. Knight Radford. At the age of 14, an uncle took him to Chicago to see the first international air show in Grant Park. He made up his mind then and there that he wanted to be an airplane pilot. When he attended the Werntz Preparatory School in Annapolis, where the beginnings of naval aviation were underway at North Severn, he spent all his free time there.

As a midshipman, he was a one-striper member of the Masqueraders, farewell ball committee, and went out for track. He graduated in the upper half of his class. At that time the Navy Department was taking few officers into its flying program so Ensign Radford went to sea, in the U. S. S. *South Carolina*, where he served during World War I. He was in Central America when the opportunity arrived to be in the first Pensacola class, but he entered the second class and was awarded his wings as naval aviator 2896 in 1920.

Then followed 10 years of apprenticeship in which Radford served as a flying instructor at Pensacola, an aviator aboard a battleship, a fighter pilot abroad the first carrier which was a converted collier, and a tour of staff duty in Washington. He flew seaplanes and land planes; he was catapulted from the decks of many ships, including an improvised turret platform. He studied, investigated and tried out aerial gunnery, air-to-air refueling, balloons, parachutes, and aerobatics. He was officer in charge of the Alaskan Survey Detachment which investigated the forest and mineral resources of Alaska in 1929, along with representatives of the Departments of the Interior and Agriculture.

In June 1932 Radford returned to the Bureau of Aeronautics, serving in the Flight Division until August 1935. He joined the aircraft tender *Wright* as navigator, after which he served successively as tactical officer and operations officer on the staff of Commander Aircraft, Battle Force, U. S. S. *Saratoga*, the flagship.

He commanded the Naval Air Station at Seattle, Wash., from June 1937 until 1940, then served as executive officer of the aircraft carrier *Yorktown*. His next major post was commander, Naval Air Station, Trinidad, British West Indies, with additional duty as commandant of the Naval Operating Base at Trinidad, serving until the fall of 1941.

Upon the outbreak of World War II, the Navy had to expand immediately its aviation program, with thousands of aviators needed. Radford—now a rear admiral—started a program of rigorous preflight training in a few universities with ground studies and physical conditioning. He set up a number of inland centers for primary training, and in 2 years the program was turning out thousands of superbly trained pilots annually.

He was awarded the Legion of Merit and cited "for exceptionally meritorious conduct * * * as Director of Aviation Training, Bureau of Aeronautics, December 7, 1941, to April 19, 1943."

With the problem well in hand, Admiral Radford asked for sea duty, and fought his first major action as commander, Carrier Division II. Here he organized and trained at sea the first so-called airborne nightfighter teams for which he was awarded the Distinguished Service Medal.

In December 1943, Admiral Radford became chief of staff and aide to the Commander Aircraft Pacific, serving until the following spring when he returned to the States. He was appointed Assistant Deputy Chief of Naval Operations for Air and in that assignment was awarded a gold star in lieu of a second Legion of Merit.

Admiral Radford moved forward into other battles with the fleet, and in November 1944 assumed command of Carrier Division 6. He was awarded a gold star in lieu of a second Distinguished Service Medal "for exception-

ally meritorious conduct in the performance of outstanding service. * * * He expertly directed his task group in carrying out effective attacks against the enemy in the Tokyo area on February 16, 17, and 25; Iwo Jima, from February 19 to 22; Kyushu and the Inland Sea area on March 17, 18, and 19; and supporting operations at Okinawa from March 23 to May 29, in addition to a strategically important photographic mission over this heavily fortified Japanese-controlled island."

He reported to the Deputy Chief of Naval Operations for Air, on temporary duty in connection with planning the postwar Navy, then became Deputy Chief with the rank of vice admiral. In early 1947 he was commander, Second Task Fleet, then returned to the Navy Department as Vice Chief of Naval Operations.

On April 2, 1949, the White House announced his temporary appointment to the rank of admiral while serving under Presidential designation as Commander in Chief, Pacific; Commander in Chief, Pacific Fleet; and High Commissioner of the Trust Territory of the Pacific Islands.

When he was assigned to this command, Admiral Radford was given the opportunity to put some of his ideas concerning unification into effect. Unification was not a new subject to him, for its principles had been discussed among the services for many years. Although he did testify in opposition to the original draft for a merger, he fully supported the real unification that came about in the National Security Act of 1947. He felt then, as he does now, that unified effort could come only after a generation of interservice education. It develops as a natural process of evolution from mutual trust, understanding, and respect, and depends on good leadership by competent and sincere individuals.

In the fall of 1949, Admiral Radford received official orders to report to, and testify before, the Congressional Committee of the Armed Services investigating the slow B–36 and related matters. This was a role he did not seek, but he spoke out forcibly with his true objective views based on many years of varied experience. The congressional probers focused their attentions on questions of airpower, and on this subject Admiral Radford spoke with authority.

To him, national airpower meant the combination of land airpower, naval airpower, commercial airpower, and aircraft industrial airpower. The tremendous national power of the combined airpowers would provide ultimately the most imaginative instrument of national policy.

As Commander in Chief, Pacific, he made it a point to cover his entire area with frequent visits in order to learn firsthand what was going on. He often was at the control of the plane.

During this period, Radford's responsibilities increased tremendously not only due to the conflict in Korea, but because of the unsettled conditions throughout Southeast Asia. In April 1951 the Joint Chiefs of Staff turned over responsibility of the Marianas-Bonin area to the Pacific Command, and followed this a year later by adding the Philippines-Formosa area. He was later given increased responsibilities concerning military-assistance programs in Southeast Asia.

He was awarded a Gold Star in lieu of the third Distinguished Service Medal, with citation as follows: "For exceptionally meritorious services * * * during operations against enemy aggressor forces in Korea from June 26, 1950, to January 1, 1951 * * * as a result of his brilliant leadership, professional skill and able administration of naval operations in the Western Pacific, surface forces were strategically placed to control waters surrounding the target area and to provide coordinated support of land operations designed to aid the Republic of Korea in her fight against domination and oppression."

In June 1953, Admiral Radford was appointed Chairman of the Joint Chiefs of Staff, succeeding Gen. Omar Bradley. To this job he brings the greatest variety of experience and the greatest degree of patriotic devotion to duty. He believes that now, more than ever, there should be no partisan advocacy of any one service, or role, or mission, or weapon. The best possible use of the total moral, economic, and military strength of the country is his goal.

In addition to the medals mentioned, Admiral Radford has the World War I Victory Medal, Atlantic Fleet Clasp, American Defense Service Medal, Fleet Clasp, Asiatic-Pacific Campaign Medal, American Campaign Medal, World War II Victory Medal, and the National Defense Service Medal.

The Government of Great Britain awarded him the decoration of Companion of the Order of the Bath, and he also holds the Cross of Military Merit, awarded by Guatemala.

Admiral and Mrs. Radford—the former Marion McMichael, of Portland, Oreg., make their home at Nebraska Avenue in Washington D. C. He has little time to spare from his heavy duties, but gives generously to civic affairs. Recently, he made an address at the presentation of the annual awards by Freedoms Foundation at Valley Forge, Pa., when in conclusion he said: "We will find our freedom tasks demanding—demanding courage, humility, selflessness, service, and lots of hard work; and demanding an unshakeable belief in the manner of life which we defend.

"These tasks may even demand our lives. And in the final analysis, there is no greater sacrifice than for a man to lay down his life for God and country. In the end, truth, justice, and faith will win."

Proposed Unification of Armed Forces

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "All Too Plausible" by William H. Grimes. This article deals with the suggestion from some sources that the Armed Forces should be unified to the extent that they would be under 1 Chief of Staff and all 3 services would wear a common uniform. I feel this is of interest not only to Members of the United States Senate, but to the general public as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THINKING THINGS OVER

(By William H. Grimes)

ALL TOO PLAUSIBLE

It is certainly a plausible proposition that the Armed Forces should be further unified to the extent that they would be under a single chief of staff and all three branches, the Army, the Navy, and the Air Force, would wear a common uniform.

In case of war the three branches must coordinate their operations toward a common objective or objectives. That alone constitutes a powerful argument in behalf of further steps toward unification.

The very plausibility of the idea is the thing that should make one wary. The layman cannot pretend to an expert opinion on military matters. But it is permissible for the layman to draw on his own experience and suggest that what seems so plain and indisputable on the surface is a warning to look underneath.

From a military standpoint is it advisable to have a single authority which can say, "March here and do that. Sail there and do this. Fly to such and such a place and do so and so?"

Hitler had that power in Germany and the result was disaster. If he had not insisted on the operation at Stalingrad, if he had not ordered the Germans to make a stand, World War II might have been prolonged. Stalin had absolute military power and we now learn that he ordered an operation at Kharkov against the advice of his generals. The result was a defeat in which thousands of Russian soldiers perished needlessly.

In Great Britain and the United States there was no single individual with that authority. Strategy grew out of discussions to which many minds contributed. There were no mistakes comparable to Stalingrad.

It can be argued that both Hitler and Stalin were disordered minds. So they were. But can there be any assurance that in any country the man in charge of military operations will not make misjudgments, unless checked?

It is well to emphasize again that these are the observations of a layman. But it is within a layman's province to point out that where any individual had supreme military power—and some of the most brilliant military minds have possessed it—he sooner or later came to grief. Napoleon, Alexander the Great, and Gustavus Adolphus finally went down to defeat.

The immediate occasion for the suggestion looking to closer unification is the bickering among the various branches of the armed services which has just been revealed.

In the first place, would a unified command and a common uniform do away with those differences? Or would it merely conceal the differences; sweep them under the rug as it were?

The Army man, the Navy man and the Air Force man has each been raised in his service. Preponderantly these are men dedicated to their callings. Why should they not be expected to fight for those measures which they believe will strengthen their services? Would anyone seriously want them to do anything else? Does anyone seriously propose that there should be a form of organization which would silence these men and make them afraid to offer their ideas?

When these military differences break into the newspapers there is an impression of disorder. Well, the whole process of representative government is at times disorderly. The process depends on conflicting opinions being offered, argued and resolved. How do you bypass that process in military matters and at the same time maintain civilian control over the military?

That leads to another question. Is civilian control of the military possible or even feasible under modern conditions where military organization must be complex and spread over the globe, where the weapons and the methods of today are obsolete tomorrow?

If one conceives that the public and the Congress are capable of passing on the details of military problems, then the answer is negative. Neither the majority of Members of Congress nor the public can possibly have the information on which to base judgments. Much of the information cannot be revealed. If it could be revealed, most of it would be incomprehensible to all except a very few specialists.

The case is that the information that the public does get is often distorted. Much of it is brought out by Congressmen who have a political motive in slanting and coloring their revelations. Much of it comes from military men who do not want to see an appropriation for their activities decreased.

The man who runs as he reads sees the headlines that a general said that in a few years Russia would have the capabilities of destroying the retaliatory power of the United States. Careful reading of the general's testimony shows he came very far from saying anything of the sort. But few have time to go beyond the headlines.

Then is civilian control of the military anything more than a pretense? Would it not be better to eliminate the pretense and proceed on the basis of reality?

In a letter to this newspaper the other day, Mr. Eugene Wilson recalled the case of General William Mitchell and his serious charges that the Armed Forces were neglecting airpower. The public was unable to judge the merits of that famous controversy. But it had the good sense to know that there should be action. As Mr. Wilson recalls, the action was the appointment of a Presidential Advisory Committee under the chairmanship of Dwight Morrow and that committee paved the way for development of American airpower.

It would have been a tragedy if there had been a type of command which could have silenced General Mitchell. And while public opinion could not form its judgment on his charges, it could bring about the fullest investigation.

"Unification" is one of the good words. One who seems to question "unity" is at once suspect. And perhaps unification of the defense forces would be as beneficial as the promise held forth. There is the chance it might be something quite different.

Address by the Honorable Wilber M. Brucker, Secretary of the Army, Commencement Exercises, United States Military Academy, West Point, N. Y., June 5, 1956

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mrs. ST. GEORGE. Mr. Speaker, it is with great pleasure and pride that I place in the RECORD the fine address delivered at the graduation exercises at the United States Military Academy at West Point by the Secretary of the Army, the Honorable Wilber M. Brucker.

West Point is in the 28th Congressional District that I have the honor to represent, and it was my great pleasure to hear the Secretary deliver this address that will long be remembered by the graduating class of 1956 and by their friends and relatives from every one of the States and the Territories of our great Republic:

General Bryan, General Taylor, Congresswoman St. George, alumni of the Academy, members of the class of 1956, distinguished guests, ladies, and gentlemen, I come on this unforgettable day to express the esteem and good wishes of the entire Nation to you of the graduating class. Three-quarters of this graduating class are receiving commissions in the United States Army, and one-quarter are receiving commissions in the United States Air Force. For each of you this day is one of the most memorable occasions of your life. It is also important for your country because in the tremendous future each of you will bear a large responsibility for her security and well-being. One hundred and sixty-seven million Americans will be depending upon you.

Forty-one years ago this week 2d Lt. Dwight D. Eisenhower departed from West Point after receiving his diploma and commission. It was 1915, and already the turmoil of a warring world was beating upon America's shores and washing away the foundations of her traditional defenses. I remember it well myself. America had sore need for the strength and courage and devotion of every one of her sons. He was ready. The great traditions of the Academy, built upon the creed of honor and dedication to the highest good of the country, had fortified the strength of his youth, and had added new meaning to the standards by which he lived and the faith he held. He was prepared to go forth and serve America, and to keep his momentous appointment with destiny.

You, too, have an appointment with destiny, America has never had a greater need for rising young leaders of high competence who exemplify the spirit of unselfish service to the Nation which West Point has nurtured throughout its glorious history. As professional soldiers, you will have a principal part to play in providing the tough military shield our country must have for a long, long time to come, fortifying it against the grim threat of armed aggression.

You have not sought the smooth road, the easy life, or you would not have chosen the military profession, which is one of the most demanding and strenuous of them all. It appeals to robust men of courage and physical stamina who place the greatest value upon the soul-warming rewards of service which only the soldier knows. It appeals to the men who seek the strenuous life. It was Theodore Roosevelt who praised, "that highest form of success which comes * * * to the man who does not shrink from danger, from hardship, or from bitter toil, and who out of these wins the splendid ultimate triumph."

The task of military leadership which you have undertaken becomes more exacting every day. When I was a platoon leader with the Rainbow Division in World War I, it seemed to me that the Army was exceedingly complex. Now, after 40 years, looking back, I am impressed by how simple we had it in comparison with the modern Army in this age of swiftly advancing technology.

You have learned at West Point how atomic weapons, guided missiles and air transport have revolutionized strategic and tactical concepts. Their impact upon the art of war has not even yet been fully assessed. But this we do know—they have multiplied both in number and in magnitude all of the problems of command, from the highest to the lowest. Because of the tremendous compression of time and space—the telescoping of cause and effect—which science has brought about, the burden resting upon the individual officer at all levels has become increasingly greater. Decisions that a few years ago might have waited upon a staff conference must now be made in the twinkling of an eye. Today's modern Army, Navy, Air Force are the fastest moving, and the hardest hitting in all history. The highest professional competence and the soundest possible judgment on the part of leaders charged with responsibility for the lives of men in battle and the success of our mission are of even more vital important than they have been at any time in the whole past.

Gentlemen, today we are threatened by a vile international conspiracy, backed by the largest mobilized armed forces on earth. During the last 10 years the Communists have extended their control to embrace 600 million people. They have more than 8 million men under arms at this moment, including 2½ million Red Chinese. Most of their troops are ground troops. They have 405 armed and well-trained divisions ready for immediate action.

Menacing as this may be, it is only a part of the overall challenge that we face. Of equal importance is the menace of a diabolical ideology of hate, atheism, and intellectual perversion which saps men's moral stamina, impoverishes their minds, and gnaws at their souls. The Communists know that if they could destroy America by either method—I mean, of course, with military force or this insidious ideology—they could end all effective resistance to their plans to capture the whole world for communism.

The ability of our Nation to stand firm in the face of this challenge rests upon our spiritual strength, our unswerving purpose, and our sustained vigilance. The steel of America's spirit will always be her most formidable armament. It is important that the influence of your knowledge, your training, your vision, and above all, your character, be brought to bear to the fullest extent to help keep that American spirit strong and vigorous.

The concept that the soldier should be called in only after statesmanship has failed and war is actually upon us is outmoded because it is motheaten, shoddy, and threadbare, and a part of the past. Today the United States Army is one of the strongest pillars of statesmanship by which we are seeking to compel any warlike nation to keep the peace. With half of its strength deployed in 73 countries overseas, what a powerful deterrent to war it is—along with the Navy, of course, the Marines and the Air Force, which altogether make up the defense team.

Our troops abroad constitute visible evidence to the leaders of the Communist conspiracy that we mean exactly what we say—that we steadfastly intend to resist aggression in any form. In the future, there should never be an occasion for an aggressor to explain that he "misunderstood" America's position. The presence of our troops standing guard along the frontiers of freedom in Europe and Asia stimulates the morale over there, and stiffens the resistance of our friends. It is a constant reminder that we're in this together. It proves our determination to see it through together, and it constitutes a powerful deterrent to any aggression.

Then, my friends, if we are challenged by enemy acts of violence, the United States Army, with its supporting tactical air power, has uniquely the capability to counterattack with force commensurate to the threat. The Army is not bound to any single weapon strategy, but is, instead, equipped and trained to meet any military emergency from a small local war to an all-out aggression. The United States Army stands ready to apply the right kind of force at any time, any place, in any weather, and to any degree. The Army thus provides a flexible deterrent as well as a strong counterattack capability.

Gentlemen, in addition to leadership for war, leadership for peace is a major concept of the military profession, and you must be equally well prepared to assume the obligations which it entails. The only thing America covets is peace—the kind of peace that is durable because it is founded upon justice and backed up by moral and physical strength that will deter war from ever again invading the world. Within the last 20 years, the soldier has evolved into a soldier-statesman. Eisenhower, Marshall, MacArthur, Collins, Taylor—these are only a few of the many officers at the top levels of the Army who have contributed immeasurably to our security, and to the realization of our national objectives, by brilliant accomplishments not only in the military sphere, but also in the field of international diplomacy.

Yes, the role of the soldier-statesman in all ranks is steadily becoming of gretaer conse-

quence. The United States is now linked with 45 other nations in the greatest system of mutual defense that the world has ever seen. The United States Army is at this moment helping to train over 200 allied divisions and has become the backbone of the mutual defense system. The Army is not only a military instrument, but it also stands as the embodiment of American national policy.

During the course of your careers, many of you undoubtedly will be called upon to participate in high councils by means of which the nations of the world will continue to seek a practical resolution of the differences which stand in the way of enduring peace. You must be fully ready to play your part there with the same devotion, skill, and wisdom which have been characteristic of your predecessors at so many conference tables.

Although few in number, West Point men for a century and a half have had a profound effect upon the development of sturdy Americanism, and the growth of our Nation to greatness. As an officer, you will walk in the footsteps of great men. You must never think in small terms limited solely to military duties. Although you are a specialist in the military art, you've been taught here to be a generalist in the world field of human relations. As an officer you are in the forefront of man's struggle to control his technological achievements and to reap from his scientific labors not just destruction but a better way of life. As an American officer you must have a broad comprehension of the objectives toward which we as a Nation are moving, and of all the interrelated factors which are involved in their attainment.

Yes, the value of the service that you render through the years in these important areas of activity cannot be overestimated. Nevertheless, no matter how many worthy and essential noncombat tasks you may be called upon to perform, you must guard with jealous care your most priceless possession—your soldier's soul. You are a fighting man. If war should finally be thrust upon us, your job is to fight, to lead our troops to victory in battle. This is the immutable obligation of your profession. When the chips are down all else is secondary.

Despite all the momentous changes in the techniques and the weapons of war, the standards by which an officer is judged have never altered. What you know is important; what you can do is important; but in a larger sense what counts most is what you are. Knowledge and ability can never be substituted for character.

"Noblesse oblige" must be your motto. From those who have, much is expected. You are a member of the "Long Gray Line." You have had superior advantages, and superior achievement is expected of you. You cannot afford to leave West Point and rest upon your laurels.

The character of a great officer is made up of many essential elements. One of them is uncompromising rectitude. High morals and ethical principles still count mightily. What would be considered a minor lapse from integrity in the ordinary man, amounts in an officer to trifling with the lives of his comrades and the honor of his country. Of course, merely refraining from doing wrong is not what I mean. An officer must live a private life above reproach, but an officer must be diligent in doing right. His character must be on the positive side.

High courage, which is one of the greatest traditions of American arms, is also a basic ingredient of soldierly character. While you must have great physical courage, there are other types of courage which are equally important, which often test the mettle of a man far more severely than facing great personal danger. You must have moral courage to stand up and be counted for what you believe in your heart to be right, no matter what it costs. You must have the courage to be patient until the time comes for action. You must have the courage to shoulder responsibility and bear it without flinching, no matter how onerous a load it may be. And, above all, you must have the courage to make decisions upon which hang the lives of your men and the fortunes of your country. That is the kind of courage that is the hardest to come by and the most difficult to sustain. No man has ever been a great military leader who lacked that type of courage.

Can we doubt that dash and daring, combined with audacious imagination, are prime requisites of outstanding leadership? History has proved it to be true all down the line of mighty warriors from Hannibal, who crossed the Alps, to MacArthur, who threw away the book and landed at Inchon, where he was least to be expected, and broke the back of the first savage offensive in the Korean war. Later in Korea it was the dash and daring of leaders like General Taylor and those down the line and through the ranks which enabled 22 Allied divisions to whip 72 divisions of the combined Communist Chinese and North Korean armies.

Only if leaders take the imaginative approach to every problem, translate their creative thinking into dynamic action, can the Army be fully ready to meet the challenge of the future. New pathways must be cut through every jungle of precedent and custom that blocks the march of true progress. Nothing has ever been done which could not be done better. Creative thinking will put you ahead, and keep you ahead, through your whole career.

It was Elihu Root, a great Secretary of War, who said this: "I observe that there are two entirely different theories by which individual men seek to get on in the world. One theory leads a man to pull down everybody around him in order to climb up on them to a higher place. The other leads a man to help everybody around him in order that he may go up with them."

That regard for others which impels a man to help those around him is another of the virtues dominant in the character of the great officer, as it is in the character of every great leader in life.

You could adopt no better guideline also for the future than the creed of Gen. George S. Patton, who said: "In yourself demand the impossible." A well-rounded personality is the best guarantee of success in any field of endeavor, and if you keep your goal you will be able to scale any heights. Your diploma evidences no more than the foundation of learning. The pursuit of knowledge and understanding is an eternal quest. No plateau of accomplishment could ever be so lofty that there did not loom above it another mountain of challenge.

Gentlemen, the record of West Point's sons in every war since the Revolution has been a glorious one. It has been many years since they were numerically preponderant among the officers of the Army, either in war or peace, but they leaven the whole Army with the inspiration of West Point. They are trained and worthy leaders bearing the hallmark of a thoroughbred who, going out into the Army, multiply themselves a hundred-fold by their dedication to "duty, honor, country."

As Secretary of the Army I charge you to hold high the principles for which West Point has ever stood. Never compromise with lesser ideals. You will set an example of individual dignity as well as military competence. The Nation will never cease to depend for its strength and vigor upon men like you—men who think in terms of what they owe their country, not what their country owes them—men who proudly acknowledge that patriotism is still a strong driving force in their lives and in the lives of all of us. Gentlemen, the prayers of all the millions of Americans go with you today as the Class of 1956 now mounts the parapets of our national defense.

Caleb Mills Saville: Engineer for the Gatun Dam and Locks of the Panama Canal

---

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. DODD. Mr. Speaker, Connecticut can look with pride on the careers of many of its distinguished citizens. Outstanding among such persons in Caleb M. Saville, who from 1912 to 1948 was manager and chief engineer of the Metropolitan District Water Bureau of Hartford, and is now its consulting engineer.

Of greater historic significance than his numerous important achievements in Connecticut are his contributions for the construction of Gatun Dam and Locks of the Panama Canal.

It is indeed gratifying to read in the June 2, 1956, issue of the Hartford Times an interesting news story of this distinguished engineer's accomplishments and present life by Raiph Minard.

Under leave granted, I include the indicated news story as a part of my remarks:

CALEB SAVILLE, ENGINEER, BUSY AT 91

(By Ralph Minard)

Every weekday morning at 9:30 a short, portly brisk man with a moustache leaves the lobby at Heublein Hotel, steps into a car, and is driven out to Broad Street, where at No. 115 he steps out and enters the spacious quarters of the Metropolitan Water District.

The brisk little man is Caleb Mills Saville, and he is probably Hartford's oldest engineer. Mr. Saville was 91 Sunday.

Mr. Saville works in a small office reached through a plain wood door. There is no name or other designation. Once chief engineer and manager of the Metropolitan District, he serves now as consultant engineer and has 36 years of technical papers to work over. He is also concerned with such matters as the gradual obsolescence of the Panama Canal on which he once worked.

Mr. Saville's day, is a precise one. He enters the Heublein dining room a few minutes after 7 each morning and seats himself at his customary table. The waitress knows what he wants without asking. After nearly 2 hours at his office, he motors to the University Club on Lewis St., where he also has his customary table. He arrives at 11:30 and sits down for a light lunch at 11:55, usually with his old friend Frederick R. Merrels of West Hartford. His lunch is likely to be a sandwich.

Back to his office for more work, then at 3 he leaves for the Heublein and a hearty evening meal.

He was born in Melrose, Mass., grew up in Medford and was graduated from Harvard in 1889 cum laude in engineering. As a young engineer he helped with the construction of the Simpson dry dock in Boston, then designed and constructed water works systems in various parts of the country.

In 1895, after 4 years designing and building a sewerage system for Malden, Mass., he became division engineer of Boston's metropolitan water and sewerage board and directed such projects as building a tunnel under the Mystic River, a storage reservoir at Spot Pond and a reservoir at Forbes Hill.

In 1907 he went to work on the Panama Canal, first as assistant division engineer in charge of construction at the Gatum locks, and later as engineer in charge of the third division of the canal.

In 1912, local officials became concerned over the city's health and sanitation conditions. Water was supplied to the city by an old reservoir at the top of Asylum Hill.

Mr. Saville took up his work with the Hartford Water Department as chief engineer. He laid out long-range plans not only for improving the city's water and sewer systems, but also for obtaining pure water from better sources. Eventually this search for water led as far north as Barkhamsted, and out of the search also came the Metropolitan District Commission.

He designed the linked system of water supplies running north from Hartford, the Nepaug Reservoir, the Barkhamsted Reservoir, its industrial adjunct, the Compensating Reservoir and the huge dam in Barkhamsted which bears his name. For 36 years, until his retirement in 1948 as chief engineer, he was the guiding spirit behind the Metropolitan District Commission and its successful drive to insure Hartford a water supply for generations.

Saville Dam stands as a Connecticut example of his engineering skill. But in the engineering world there is one other work perhaps better known. These are the papers containing Mr. Saville's research for the foundations of the Gatun Dam in the Panama Canal. They have been called by engineers "a masterpiece of engineering investigation."

Emigre Problems

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, June 11, 1956

Mr. DOUGLAS. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD an address by Dr. Peter Zenkl delivered at the recent meeting of the Assembly of Captive European Nations on the subject of On Emigre Problems. This thoughtful discussion of a few of the refugee problems should be helpful to those who are working to keep alive the hopes and possibilities of freedom and the distinctive cultures of the captive peoples of eastern Europe.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ON ÉMIGRÉ PROBLEMS

(By Peter Zenkl)

The struggle between West and East is called a cold war. It is not a bloodless war, however, even if no lists of dead and wounded are published. It is cold with the coldness of bare steel—and the coldness of Communist hearts. The cold war has wounded soldiers on every battlefield, just as any other war. Among these wounded are the refugees, hundreds of thousands of them throughout the world. A commander who left his wounded to lie on the field without trying to save and heal them, would surely lose his war, and also be severely criticized by all the civilized world.

It is not my purpose to discuss the whole problem of care for refugees, nor do I wish to tell the free nations what they should do to save and assist exiles from the countries overrun by the Communists in order not to be compared to that heartless commander. I shall not repeat things which have been said so often and the urgency of which is generally recognized, but it is true that many things have been left undone which are urgently necessary in order to lighten the suspense and discomfort of the first days after refugees escape from the Communist yoke; make their stay in border countries as profitable as possible in preparing for life in the country where they will settle; make their stay in a border country as short as possible, and help them through the complicated process of immigration to some country in the free West. This applies not only to able-bodied trained workers, but also to those not so well qualified by health and training.

Here I wish to speak in detail only of certain problems which seem to merit extra attention. The first is our duty to increase the attention given to the needs of older and less healthy émigrés. People are not draft animals, to be discarded as soon as they cannot do heavy work.

A sick person, even with tuberculosis, still has an immortal soul, even though the Communists do not think so. You often find a sick person, or one with a physical handicap, who has a greater spirit than the healthy one next to him—and, if you allow me, I would like to add that he often has more intelligence. It is remarkable how many geniuses are people with some handicap or other. How many great people had tuberculosis, how many geniuses ended up in mental illness No; people are not rabbits, to be judged merely by their physical condition. Several States have immigration laws which would have excluded Chopin, Beethoven, or Smetana. How are we to know how many of the young folks, declared ineligible in the present refugee camps, could eventually become the pride of a state which drove them into exile or of a state which accepts them? Please remember in our discussion this category of the humble and declassified.

Another category to which we should devote more attention are the children. There is a trend in some States to urge that the children be assimilated as fast as possible into their new life and forget the past, forget their mother tongue. They are supposed to become good Americans, Australians, British, Brazilians or Mexicans. I take the liberty of disagreeing with this policy, first from the viewpoint of our enslaved nations. We Czechoslovaks, for instance, struggled for centuries to prevent our children being Germanized. Are we to be indifferent to their complete Americanization or Gallicization? If so, we shall lose them as fast as if we left them in Communist hands, where they would be systematically denationalized. We combat communism if we save them for our future homelands. I am not being chauvinistic; I, too, know that the motto "Nothing but our nation" is fascist, totalitarian and bad. I only wish our children to return home some time as world citizens, free of chauvinism. If they are to return home, however, they must have a home—and not roam the world as uprooted souls. One of the fundamental Communist policies is to uproot everybody, to make everyone a proletarian. Many famous people have defined a proletarian as a day laborer with no firm roots anywhere.

I would even say that denationalized children are a loss also for the states in which they have settled. The countries which receive us should wish us to be prophets in the struggle against communism, living examples of the harshness of communism. A person who wishes to be assimilated as rapidly as possible into his new surroundings, whose greatest objective is to buy a car, is not much of a warrior against communism. A child who forgets Czech, Polish or Rumanian, who ceases to dream of returning home and loses interest in his nation's problem—soon disappears in the mass who have no interest in politics. I say that each state which admitted us ought to wish us to return home eventually as the best representatives of America, Britain, France, Argentina in the countries from which we originally came. Returning emigres can mean a great deal in Hungary, Estonia, Poland when they reconstruct their commercial, political, and cultural life. If our children are denationalized, our present hosts will lose more than they gain.

For these reasons I suggest that we seek ways to influence public opinion in the lands where we now live to permit us to save our children for freedom, for the anti-communist cause. When freedom returns to central Europe, the free world will need them in Prague and Bucharest much more than in America or Australia. We should invent ways of teaching them their mother tongue, our history, of arousing their active concern for the future of their home peoples—not ways of becoming the lax and indifferent people the Communists want. Indifferent people are of little use in this struggle; they are no threat to communism.

I suggest that each nationality publish a Golden Book, reviewing its history and achievements briefly but truthfully and strikingly for children, their parents and teachers. Such a book should include the best literature and art, our national customs and songs, our immortal poetry. If it is to be golden, it should teach our children to love those of other nations, overwhelming past quarrels and uniting them in our common cause as centers of culture placed by fate between two great powers, Russia and Germany.

We should also publish textbooks of our languages, children's books in our mother tongues, and foster children's theaters, choruses, and puppet shows. There is no end of work to be done in that field, and its results can be vital. If we do not save our children for the day of reliberation, we only serve the enemy.

My third comment on this problem is the duty of emigres to preserve and advance the culture of our peoples. Fortunately we have in exile many artists, writers, composers, actors, scientists, professors of the highest rank. We should help them concentrate their efforts, improve conditions for their work, publish and publicize their work. No, please do not think I wish to influence the content to their work or to make them produce propaganda, even anti-Communist propaganda. We must not subject the arts and science to politics, as the Communists do. Art and science must be free, as they are not free behind the Iron Curtain. But let us realize that each well written book, each exhibition or concert, each successful scientific experiment is a victory against communism. It is up to us to see that the work of our writers, poets, and scientists sees the light of day and becomes the general property of all in the free world, and then of our peoples behind the Iron Curtain. There are many cultural organizations and some serious cultural journals among emigres, which were founded without our help and in harder times. We can find ways to help those doing that work without offending them or interfering, perhaps by making it possible financially for them to publish a larger volume or more frequently. We can certainly increase the number of subscribers and readers by publicity, and thus expand and improve our language newspapers.

I do not believe in tight organization in cultural fields. Culture is not a matter of power or instantaneous decision, like politics, and it is not necessary for everybody to go in the same direction or to submit to discipline. That is valuable in political life,

gentleman, but not in cultural work. As a matter of fact, culture has often risen highest where political conditions were confused and scattered, as in ancient Greece or renaissance Italy. In Germany culture was highest in Goethe's time, not in Hitler's. I am not concerned that there may be more centers of culture, about opposing cultural trends, experiments and research. Those are exactly what are lacking in the constrained conditions behind the Iron Curtain. What does concern me is that our life takes place in a tea cup, without public impact, without readers and critics. That is where we owe our cultural workers help, without dominating their work. This, too, is in the interest of our struggle against communism. The remarkable Czech historian, Palacky, wrote that whenever he won a victory it was not by force of arms, but through higher culture. I believe we also will defeat communism by higher culture.

It is for that reason, gentlemen, that I suggest we discuss these problems carefully and systematically. Cultural work requires constant attention to small details, often in efforts not seen by the public, which do not bear immediate fruit. The fruit is permanent, however, it lasts for generations, often outlasts many, many political decisions.

Sedition, Treason, and Subversion Statutes

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. BRIDGES. I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the Los Angeles Examiner, Los Angeles, Calif., Thursday, May 24, 1956, entitled "Back to the Law," and which I feel will be of interest to Members of this body.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACK TO THE LAW

"The Department of Justice favors enactment of the bill."

In the foregoing forthright language—contained in a letter from the Justice Department to Congress—the Eisenhower administration has placed itself squarely on record as upholding States rights and opposing the usurpation by the Supreme Court, or lesser tribunals, of legislative powers belonging exclusively to Congress.

On April 2 the Supreme Court handed down a split decision which had the effect of abrogating the laws of 42 States and two territories against sedition, treason, and subversion. The court held that Congress, in passing the Smith Act, had preempted the field and had intended to do so. But no such provision was found in the Federal statute.

The duty of the court was to interpret and apply the law as written by Congress. Instead, the court amended the law, which only Congress has a constitutional sanction to do.

Senator BRIDGES (Republican), New Hampshire, introduced at once a bill to nullify the Supreme Court decision.

The Justice Department has fully approved the Bridges bill in a letter to Senator EASTLAND (Democrat), Mississippi, chairman of the Senate Judiciary Committee. The letter said that, "in the fields of sedition and subversion, the Federal and State governments can work together easily and well, supplementing each other."

That is exactly what the Supreme Court should have said.

Tribute to Hon. Clarence Cannon

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I herewith include an article which appeared in the St. Louis Globe-Democrat concerning tribute paid to the Honorable CLARENCE CANNON on June 8 in Mexico, Mo.:

ALONG THE POLITICAL TRAILS—LITTLE DIXIE PAYS TRIBUTE TO CLARENCE CANNON TODAY

(By John R. Hahn)

CLARENCE CANNON, 77, of R. F. D. 1, Elsberry Mo., is assured of reelection to this 18th term in Congress from Missouri's Ninth District, simply because no Democrat and no Republican felt it would be worth while to challenge him.

It would seem to be a logical conclusion, since CANNON has never lost an election. (A minor historical note on his career is that he has also never lost a fist fight in Congress, of which there have been at least three.)

But if CANNON's election seems assured and he is moving up the ladder of age, he still has lost none of his fire and energy.

When you ask anyone who knows him about CLARENCE CANNON, the dean of Missouri's congressional delegation, the answer from friend or foe usually starts out like this:

"CLARENCE is quite a guy * * *."

That's about right. CLARENCE is quite a guy. In the first place, one of the tools of his successful political races which he wins in his heavily Democratic district is that he's a fire and brimestone campaigner. He stirs up his constitutents—and interests them in CANNON.

Today CANNON is being honored at Mexico, Mo., with an all-day celebration during which he'll be given a plaque and toasted by speakers headed by United States Senator STUART SYMINGTON.

CANNON was once described as "a political evangelist for the Democratic party." Still, theres' more to him than the way he campaigns. Cannon works hard and is something of a watchdog on the powerful House Appropriations Committee, of which he is chairman when the Democrats control the House.

He is regarded everywhere as one of the country's outstanding parliamentarians and has been parliamentarian for the House of Representatives under both Democratic and Republican administrations, which is a rare distinction in itself.

He wrote the rule book for the Democratic National Convention, and even now the National Committee is having more copies of Cannon's rules printed to guide this year's convention.

CANNON's will be one of the most televised faces at the convention this year. He'll be in plain view of the camera near almost every speaker, wearing his customary frozen frown.

CANNON explains his dour facial expression during these proceedings by saying that he wants to show no favorites among the candidates.

When SYMINGTON was told by the writer that CANNON was without opposition this year, the Senator said he was delighted to hear that.

This was SYMINGTON's tribute to CANNON:

"As chairman of the House Appropriations Committee, CLARENCE CANNON is one of the 5 to 10 most powerful and influential men in Washington. One would never know this, because at all times he is a kind and humble person, despite his great authority in the field of money and the fact he is the acknowledged parliamentarian of the Congress. If there is anyone more respected and beloved in Missouri's Ninth District, it is his wife, Miss Ida.' Together, they represent their district, the State and the Nation in a manner that can only bring pride to all Missourians."

SYMINGTON, who is CANNON's candidate for the Democratic nomination for President, will doubtless expand on this tribute today.

This is not the first time that a victory for CANNON has been automatic. As a matter of fact, he was nominated unanimously by the Democrats for his initial term in Congress.

In those years, his campaign literature discribed him as a protege of the late, great Speaker CHAMP CLARK of the House, also of Missouri.

As SYMINGTON noted, CANNON is one of most powerful men in Washington. All the Government spending bills originate with the House Appropriations Committee, and under his chairmanship, bills have originated in that committee appropriating literally hundreds of billions of dollars.

Most of the Nation, since the televising of the Democratic National Convention, may think CLARENCE CANNON is the man without a smile.

But they ought to see him out through Little Dixie, back in his Ninth District with the folks who are sending him back to represent them in Congress for the eighteenth time. They ought to see him today in Mexico, for example.

He's all smiles up there in the country.

For Better Teeth

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. DOUGLAS. Mr. President, some of the material circulated and statements made about fluoridation in recent months seem to me to be quite extreme and unsupported by scientific evidence. In order that the Members of Congress and readers of the RECORD may have available a temperate expression of opinion from an unbiased source on this issue, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Chicago Daily News for May 7, 1956, on the topic "For Better Teeth."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR BETTER TEETH

The scheduled start of fluoridating the water supply for 1,500,000 Southside Chicagoans brought a final parade of protest by a small band of die-hard opponents of this method of combating dental decay.

We have expressed our conviction many times that the extensive research upon and experience with fluoridation proves it to be effective and desirable. It has had far-

longer tests, for instance, than the Salk vaccine against polio.

But, just as there are always some who think that grape seeds cause appendicits, doubtless there will remain a small minority who believe that the addition of a tiny percentage of fluorides to the water can be harmful.

Proving that a little knowledge can be misleading, they cite the fact that fluorine is a poison. We can only point out that so is chlorine, but we all continue to shake its sodium salt on our food daily, and are the better for it.

We hope the objectors can bring themselves to believe that not they but the consensus of medical opinion on the subject might just conceivably be right about it.

Constitutionality of OTC

EXTENSION OF REMARKS
OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part of a statement prepared for the Ways and Means Committee on H. R. 5550. The part included relates to the constitutionality of the OTC proposal and deserves in my judgment the most serious consideration.

The statement was prepared by Mr. Lennox P. McLendon, Greensboro, N. C., in behalf of the Southern States Industrial Council and others. I believe that it throws a revealing light on the constitutional question involved in H. R. 5550. I commend it to the attention of all Members for its clarity and its authoritative analysis of the subject:

THE OTC PROPOSAL—CONSTITUTIONAL OBJECTIONS

A. H. R. 5550 INVOLVES AN UNCONSTITUTIONAL DELEGATION OR RESIGNATION OF LEGISLATIVE POWERS

Should Congress enact H. R. 5550, it would assist in a direct violation of the Constitution by delegating or resigning its legislative powers, to lay taxes and import duties, and to regulate commerce with foreign nations—powers exclusively vested in Congress (U. S. Constitution, art. I, sec. 8, clauses 1 and 3). The unconstitutional nature of this delegation is underscored by the fact that it will run not to an administrative agency of this Government but, by redelegation, to a supernational organization.

(1) *There is no precedent in American jurisprudence for H. R. 5550*

We may search our congressional history in vain for any act that even approaches in scope or in effect H. R. 5550. A realistic constitutional evaluation of the power delegated by H. R. 5550 must embrace more than the bill itself in view of the fact that it necessarily implies congressional approval of our participation in GATT—the branch of the quasi-government composed of GATT plus OTC which initiates the laws. In other words, one cannot consider the constitutionality of United States membership in OTC without considering the constitutionality of United States participation in GATT, which is immutably grafted on and intertwined with OTC. It has been previously established precisely in what respects the two are interlocking and independent, so that in legislating OTC Congress will have approved GATT.

As we have previously observed, GATT has the power to make rules, binding as law on its members, in matters concerned with world trade as well as domestic matters affecting world trade. Since all domestic economic events have an effect upon world trade, and the power rests with GATT or OTC, or both, to determine which of these economic events have a significant effect upon world trade, it necessarily follows that no clearly defined limitation exists on GATT's power over our domestic affairs. In the future, GATT, by promulgating rules and regulations or by self-amendment (art. XXX) will have the power to enact legislation conflicting with our laws. It may also be able to beat Congress to the punch by legislating on new matters before Congress can act or wishes to act. Clearly, rules and amendments to GATT should not be binding as domestic law in this country.

Our analysis of OTC and GATT indicates that the contemplated delegation of congressional powers is, for practical purposes, limitless inasmuch as it ranges far beyond the power of Congress to fix customs duties and regulate commerce with foreign nations, and includes authority for the State Department to accept, on behalf of this Nation, economic measures which affect our domestic affairs and jurisdiction, even to the point of overriding domestic policy established by Congress.

Our courts have never ruled upon a delegation of power of the magnitude involved here, nor have they ruled on a delegation of congressional power to a supernational organization comparable to GATT alone or GATT plus OTC. Nor has Congress ever authorized a delegation similar to that implicit in the pending bill. United States participation in GATT cannot be justified by using the United Nations as a precedent. Proposals that the United Nations infringe upon the internal problems of its members were condemned from its inception and article II, section 7, of its charter provides that the United Nations shall not intervene in matters essentially within the domestic jurisdiction of any state or requiremembers to submit such matters to settlement before it. Even the charter of the International Trade Organization, the discredited precursor of GATT-OTC, contained a similar provision (ITO art. 73 (c)). Moreover, in the United Nations the United States has a veto while in GATT and OTC it has none.

(2) *It is a basic principle of constitutional law that Congress cannot lawfully delegate its lawmaking powers*

In 1689, John Locke pointed out the reason for the rule that the Legislature cannot transfer its lawmaking powers in this language:

"The legislative cannot transfer the power of making laws to any other hands, for it being but a delegated power from the people, they who have it cannot pass it on to others." [1]

The Supreme Court has stated on numerous occasions that Congress is without constitutional authority to delegate its legislative power, the power to make laws, even to the executive branch of our Government.[2] No less an authority than Chief Justice Marshall stated the rule to be self-evident, as follows:

"It is not contended that Congress can delegate to the courts or to any other tribunals powers which are strictly and exclusively legislative." (*Wayman* v. *Southard*, (10 Wheat 1, 311, 325).)

In the leading case of *Field* v. *Clark* (143 U. S. 649, 36 L. Ed. 294) the Supreme Court, speaking through Justice Harlan, said (36 L. Ed. at p. 310):

"That Congress cannot delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution." [3]

It is one of the settled maxims in constitutional law that the power conferred upon the Legislature to make laws cannot be delegated by that department to any other authority. When the sovereign power of the State has located the legislative authority, there it must remain; and by that designated constitutional agency alone laws must be made until the Constitution itself is changed. (See Cooley, Constitutional Limitations, 7th Ed., p. 163.)

Since Congress cannot delegate its legislative powers it becomes necessary to inquire to what extent Congress may lawfully delegate authority, not legislative in character, and secondly, to examine the tests which have been applied to acts of Congress by the courts when such acts are challenged as constituting unconstitutional delegations or resignations.

(3) *The constitutional right of Congress to delegate authority is limited to the delegation of administrative functions, to be exercized within limits clearly and definitely set forth in a congressional enactment, and designed to make the will of Congress (the law) effective*

The distinction between valid and invalid delegations by Congress were set forth clearly in *Hampton* v. *U. S.* (276 U. S. 394, 407):

"The true distinction, therefore, is, between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be and conferring an authority or discretion as to its execution, to be exercised under and in pursuance of the law. The first cannot be done; to the latter no valid objection can be made."

The Congress is under compulsion to enjoin upon its delegate "a certain course of procedure and certain rules of decision" in carrying out the delegate's function. (See opinion of Chief Justice Taft in *Wichita R. R. and Light Co.* v. *Public Utilities Commission* (260 U. S. 48).)

In *U. S.* v. *Shreveport Grain & Elevator Co.* (287 U. S. 77), the rule was again stated:

"That the legislative power of Congress cannot be delegated, is, of course, clear. But Congress may declare its will, and after fixing a primary standard devolve upon administrative officers the 'power to fill up the details' by prescribing administrative rules and regulations."

It is therefore clear that Congress can delegate certain authority to the executive branch of the Government or to an administrative agency in order to carry out the will of Congress. Accordingly, Congress can authorize administrative officers or the President to carry out or fill in the details of legislation.[4] The constitutional right of Congress to delegate an interpretative, administrative, or functionary role, as distinguished from a delegation of its legislative power, is accompanied, however, by constitutional restrictions and limitations. If such delegation is not to be unconstitutional, Congress must, by its own enactment, set forth: (a) A clear statement of the congressional objective to be striven for by the delegate, and (b) definite methods or standards to guide the Executive in attempting to achieve the congressional objective. (*U. S.* v. *Shreveport Grain & Elevator Co.* (287 U. S. 77).)

(4) *The application of these principles to H. R. 5550 conclusively establishes the unconstitutionality of the proposal*

I maintain that passage of H. R. 5550 would be an unconstitutional delegation by the Congress for each of the following reasons:

First, H. R. 5550 involves a delegation of or resignation from essential legislative power, i. e., the power to make laws levying taxes and customs duties, regulating commerce with foreign nations and covering

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

other nondelegable matters, which powers are vested exclusively in Congress by the Constitution.

Second, even if we assume, for the purposes of argument, that H. R. 5550 does not constitute a delegation of legislative power, the act is still unconstitutional, because it allows the recipient of the delegated power to exercise an unfettered discretion without setting forth either a clear constitutional objective or definite standards for the guidance and control of the delegate.[5]

Addressing ourselves to the pending bill and the respective charters of GATT and OTC, we must ask whether congressionally authorized participation involves a delegation of what the courts have determined legislative power. The Constitution of the United States specifically defines the relevant congressional power in article I, section 8:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises."

Even assuming, for the sake of argument, that the Trade Agreements Act of 1934, delegating to the President, for a limited period of time, the right to enter into reciprocal trade agreements, is not an unconstitutional delegation of legislative power, it is manifest that United States participation in GATT–OTC does involve an unconstitutional exercise of legislative power by the executive department. GATT has the power to regulate our commrece with foreign nations, and the President has the power to determine what our customs duties and basic regulations of foreign commerce shall be within the broadest sort of limits, undefined except by such broad phrases as "raising standards of living," "insuring full employment," "developing the full uses of the resources of the world," "expanding the production and exchange of goods," and "promoting the development of the economies of all the contracting parties." These broadly stated objectives of GATT may be desirable, and even laudable, but to use them as the vehicle for giving to the President or the State Department the authority to regulate foreign commerce is nothing less than a grant of authority to legislate. Our Constitution does not provide for a sharing of legislative power with the President or even for a delegation of a portion of the legislative power to the President. Rather, it specifically provides in article I, section 1:

"All legislative powers herein granted shall be vested in a Congress of the United States."

The analysis of GATT–OTC which I have heretofore presented inevitably leads to the conclusion that H. R. 5550 is a delegation and resignation of legislative powers by Congress. Indeed, in this respect the proposed legislation closely approaches the act of Congress involved in the case of *Carter* v. *Carter Coal Company* (298 U. S. 238), in which the Supreme Court held the act in question to be "legislative delegation in its most obnoxious form," since it was "not even delegation to an official or official body, presumptively disinterested." There the delegation was to the producers of more than two-thirds of the annual tonnage production for the preceding year and more than one-half of the mine workers employed. Here the delegation is to the President to commit the United States to membership in OTC, and this involves the subdelegation to a group of nations, now 35 in number, of control over tariffs and imposts upon both United States imports and exports and of power to regulate numerous other vital economic factors such as standards of living, balance of payments, and a maze of factors affecting the economies of numerous nations. So far-reaching and comprehensive is this delegation and subdelegation that it becomes impossible to catalog the consequences. To ask the American people to accept this sort of legislation is tantamount to asking them to approve a delegation from Congress to the President and then to a supernational agency of the power to regulate a vast field of economic factors which are absolutely vital to the maintenance of our standard of living and our industrial system of regulated but essentially free enterprise.

The second reason why the proposed act is unconstitutional is that the Congress has not included in the act any standards for the guidance of the delegate. (See *Schechter Poultry Corp.* v. *U. S.* (295 U. S. 495).)

Every Member of Congress who seriously considers this proposal will surely ask the question: What standards for the guidance of the delegate are set up by Congress in H. R. 5550? Since the language of H. R. 5550 does nothing more than authorize the President to accept membership in OTC, it is apparent that we must look elsewhere for the limitations, if any, upon the authority of the delegate. We then look to GATT and we find its objective (art. I) stated as follows:

"1. The contracting parties recognize that their relations in the field of trade and economic endeavor should be conducted with a view to raising standards of living, insuring full employment and a large and steadily growing volume of real income and effective demand, developing the full use of the resources of the world and expanding the production and exchange of goods, and promoting the progressive development of the economies of all the contracting parties.

"2. The contracting parties desire to contribute to these objectives through this agreement by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce."

A consideration of the foregoing language leads to the conclusion that the attempt is now being made to tie up the economic destiny of the United States with that of a group of nations—in short, to commit the regulation of foreign commerce to a supernational agency.

With respect to the unlimited discretion and authority vested in OTC we again call attention to the language of article 14 of the OTC Charter. That language permits only one interpretation, i. e., that OTC, when considering a charge that a benefit to some nation-member is being nullified or impaired or a charge that any objective of GATT is being impeded, may "make appropriate recommendations * * * or give a ruling on the matter." The appropriateness of the action of OTC is left entirely in its broad discretion.

Notwithstanding that Congress has repeatedly disclaimed any intention of authorizing United States participation in GATT in several acts extending the Tariff Act of 1930, the proponents of H. R. 5550 have argued that section 350 of the Tariff Act of 1930 as amended by the Trade Agreements Act of 1934 is congressional authority for GATT. The purpose of the Trade Agreements Act of 1934 as most recently amended by Public Law 86 adopted at the first session of the present Congress is set forth as follows:

"For the purpose of expanding foreign markets for the products of the United States (as a means of assisting in establishing and maintaining a better relationship among various branches of American agriculture, industry, mining, and commerce) by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production so that foreign markets will be made available to those branches of American production which require and are capable of developing outlets by affording corresponding market opportunities for foreign products in the United States."

The act provides that when the President finds as a fact "the purpose above declared will be promoted by the means hereinafter specified" he is authorized, among other things, "to enter into foreign trade agreements with foreign governments." The only kinship between section 350 and GATT is highly tenuous. It is clear that the objective of section 350 is to expand foreign markets for United States products as a means of establishing and maintaining better relationship among the various branches of American agriculture, industry, mining, and commerce, and that the laying of tariffs on foreign products admitted to the United States is always subordinate to the promotion of foreign markets for American goods.

On the other hand GATT's objectives are raising the world standard of living by insuring full employment and a large and steadily growing volume of income and demand and expanding the world's production and exchange of goods and promoting the progressive development of the economies of all the contracting parties. The mere narration of these contrasting objectives points up the inconsistency between the two pieces of legislation and demonstrates how unprecedented is the scope of GATT-OTC, rendering it impossible to be fitted into this Nation's constitutional structure.

The authors of H. R. 5550 have provided for a broad and, in many respects, an unlimited delegation and, at the same time, have carefully omitted any clear constitutional objective or definite standard for the guidance and control of the delegate. That these two characteristics of H. R. 5550 are fatal to any claim for its constitutionality may be illustrated by comparison with the Emergency Price Act of 1942. The constitutionality of the act was challenged before the Supreme Court in *Yakus* v. *United States* (321 U. S. 414), on the ground that it (a) was an unconstitutional delegation of legislative power, or (b) failed to set up proper standards to guide the Administrator. The Court held that the purpose of the act was clear—"to stabilize prices and prevent speculative, unwarranted and abnormal increases in prices and rents, to eliminate and prevent profiteering * * * speculation * * * abnormal market conditions or scarcities caused by or contributing to the national emergency." Thus, the objective was a limited one and the act was to be effective for a limited period of time—the war emergency. The Court said: "By the act * * * the President is directed to stabilize prices, wages and salaries, 'so far as practicable' on the basis of the levels which existed on September 15, 1942." Thus, known prices existing on a specific date were fixed by Congress as the standard for price stabilization. The Court concluded:

"The act is thus an exercise by Congress of its legislative power. In it Congress has stated the legislative objective, has prescribed the method of achieving that objective—maximum price fixing—and has laid down standards to guide the administrative determination of both the occasions for the exercise of the price-fixing power, and the particular prices to be established. * * *

"The act is unlike the National Industrial Recovery Act of June 16, 1933 (48 Stat. 195, ch. 90), considered in ALA. *Schechter Poultry Corp.* v. *United States* (295 U. S. 495, 79 L. Ed. 1570, 55 S. Ct. 837, 99 ALR 947) which proclaimed in the broadest terms its purpose 'to rehabilitate industry and to conserve natural resources.' It prescribed no method of attaining that end save by the establishment of codes of fair competition, the nature of whose permissible provisions was left undefined. It provided no standards to which those codes were to conform. * * *

"The essentials of the legislative function are the determination of the legislative policy and its formulation and promulgation as a defined and binding rule of conduct."

It is believed that one of the prime underlying factors which led the Court to sus-

Footnotes at end of speech.

tain the act was the fact that this Nation was then in the throes of all-our war.[6]

The broad objective of Congress "to rehabilitate industry and to conserve natural resources" condemned by the Supreme Court in the above quotation and in the Schecter Poultry case strikingly similar to the above-quoted language setting forth the purpose of OTC-GATT, the latter being even more objectionable because it must operate on a worldwide level, whereas the National Recovery Act operated on a national level. Unlike the Emergency Price Control Act, H. R. 5550 contains absolutely no standards for the guidance of the delegate except the purpose to promote the economic prosperity of all the nations participating in GATT.

(5) *Decisions of the Supreme Court fix the line of demarcation between valid and invalid delegations by Congress*

The decisions of the United States Supreme Court, having either a precedential or persuasive value in considering the constitutionality of H. R. 5550 divide themselves into two groups, first, those in which acts of Congress have been held valid against the challenge that such acts constitute an unconstitutional delegation of legislative powers; and secondly, those in which acts of Congress have been held invalid because they did constitute an unconstitutional delegation of legislative powers.

Illustrative of the first group of decisions (without attempting to include all of them) in which the challenged acts of Congress have been held valid are the following:

The *Aurora* (7 Cranch 382, 3 L. Ed. 378), an act authorizing the President to revive and put into effect an embargo act of Congress upon the refusal of either France or England for a period of 3 months to revoke her edicts violative of the neutral commerce of the United States; *Buttfield* v. *Stranahan* (192 U. S. 470), an act authorizing the Secretary of the Treasury, upon recommendation of a board of experts, "to establish uniform standards of purity, and fitness for consumption of teas imported into the United States"; *Union Bridge Co.* v. *U. S.* (204 U. S. 364), an act authorizing the Secretary of War to determine whether bridges and other structures constitute unreasonable hazards to navigation, etc., and to remove such obstructions; *U. S.* v. *Curtiss-Wright Export Corp.* (299 U. S. 304), a joint resolution of Congress authorizing the President to prohibit, by proclamation, under penalty of fine or imprisonment, the sale of arms and munitions of war to countries engaged in the armed conflict in the Chaco, if he finds that such prohibition "may contribute to the reestablishment of peace between those countries"; the power given the President concerned a single clearly defined function relating to a very limited existing crisis, which power once exercised was exhausted and did not have continuing future operation as H. R. 5550 will; the court relied on the fact that this matter fell completely in the area of foreign relations, which matters are inherent in sovereignty and do not find their basis in any enumerated powers of the Constitution (whereas the powers enumerated in H. R. 5550 are circumscribed by art. I, sec. 8, clauses 1 and 3, delegating to Congress the power to lay duties and regulate foreign commerce). The case of *Yakus* v. *United States* discussed above belongs in this group.

In the acts of Congress involved in these and in many other cases (many of them cited in the Schechter case and Curtiss-Wright case) no difficulty is experienced in ascertaining the specific objective of Congress or the clear-cut standards by which the delegate was to be guided.

The Supreme Court has decided two cases involving earlier Tariff Acts and it is very important to examine briefly the conclusion of the Court and the principles enunciated in these cases—*Field* v. *Clark* (143 U. S. 649) and *Hampton* v. *U. S.* (276 U. S. 394). *Field* v. *Clark* passed upon the constitutionality of the Tariff Act of 1890, which authorized the President to put into effect a specific list of tariffs fixed in the Act for a period of time determined by the President, upon his ascertaining that the duties imposed by other countries on the products of the United States "were unequal and unreasonable." The renowned Mr. Justice Harlan laid down these principles:

"That Congress cannot delegate legislative power to the President is a principle universally recognized as vital to the integrity and maintenance of the system of government ordained by the Constitution. The act of October 1, 1890, in the particular under consideration, is not inconsistent with that principle. * * * Congress itself prescribed, in advance, the duties to be levied, collected, and paid, on sugar, molasses, coffee, tea, or hides, produced by or exported from such designated country, while the suspension lasted. Nothing involving the expediency or the just operation of such legislation was left to the determination of the President. The words, 'he may deem,' in the third section, of course, implied that the President would examine the commercial regulations of other countries producing and exporting sugar, molasses, coffee, tea and hides, and form a judgment as to whether they were reciprocally equal and reasonable, or the contrary, in their effect upon American products. But when he ascertained the fact that duties and exactions, reciprocally unequal and unreasonable, were imposed upon the agricultural or other products of the United States by a country producing and exporting sugar, molasses, coffee, tea, or hides, it became his duty to issue a proclamation declaring the suspension, as to that country, which Congress had determined should occur. He had no discretion in the premises except in respect to the duration of the suspension so ordered. But that related only to the enforcement of the policy established by Congress. * * * Legislative power was exercised when Congress declared that the suspension should take effect upon a named contingency. What the President was required to do was simply in execution of the Act of Congress. It was not the making of law. He was the mere agent of the law-making department to ascertain and declare the event upon which its expressed will was to take effect." * * *"

Hampton v. *U. S.* dealt with the constitutionality of the Tariff Act of 1922, which broadened the scope of power delegated to the President. This act conferred on the executive department the administrative task of revising tariffs upward and downward (not to exceed 50 percent change) in strict accordance with a definite formula fixed by Congress, precisely geared to the difference in cost of production at home and abroad, as such differences were ascertained and computed by the President.[7] It is immediately apparent that there is a basic distinction between this type of an act, which was sustained by the Court, and the proposed regulation of tariffs by OTC and GATT, which distinction highlights the invalidity of the latter. The congressional formula was inflexible and could not be altered in any way by the President; the application to each particular product was functionary, primarily involving compilation of data and administrative calculation.

Nothing the President could have done would have altered cost of production of a traded item in the United States or the cost of production of that item in Germany, the two factors which absolutely control the adjustment of the tariff. Conceding the complexity of administratively ascertaining the comparative costs of production, what happened was simply that if it cost 20 cents to produce a pound of barium dioxide (involved in the Hampton case) in this country and 14 cents in Germany, the tariff on barium dioxide imported from Germany would be raised from 2 cents, the rate fixed in title I of the act, to 6 cents in order to equalize the cost. The delegation to the executive department squarely fits the time-honored test (the brig *Aurora; Field* v. *Clark*): the power granted was to ascertain the applicable tariff and not to select it. Just as Congress had in Tariff Act of 1897 fixed the specific tariffs to go into effect upon the President's ascertain tariff and not to select it. Just as Congress had in the Tariff Act of 1897 substance fixed the specific tariffs to go into effect upon the President's ascertaining that certain facts existed, leaving the actual computation, on the basis of the detailed congressional formula, to the executive branch.

Chief Justice Taft said:

"To avoid such difficulties, Congress adopted in section 315 the method of describing with clearness what its policy and plan was and then authorizing a member of the executive branch to carry out its policy and plan and to find the changing difference from time to time and to make the adjustments necessary to conform the duties to the standard underlying that policy and plan. As it was a matter of great importance, it concluded to give by statute to the President, the Chief of the executive branch, the function of determining the difference as it might vary. * * *

"The true distinction, therefore, is, between the delegation of power to make the law, which necessarily involves a discretion as to what it shall be, and conferring an authority or discretion as to its execution, to be exercised under and in pursuance of the law. The first cannot be done; to the latter no valid objection can be made. * * *

"If it is thought wise to vary the customs duties according to changing conditions of production at home and abroad, it may authorize the Chief Executive to carry out this purpose, with the advisory assistance of a Tariff Commisison appointed under congressional authority."

Illustrative of the second class of cases in which the Supreme Court has held acts of Congress invalid as an unconstitutional delegation of legislative power are the following:

Panama Refining Co. v. *Ryan* (293 U. S. 388), striking down a part of the National Recovery Act authorizing the President to prohibit the transportation in interstate and foreign commerce of oil produced or withdrawn from storage in violation of State law, for the reason that "Congress did not declare in what circumstances that transportation should be forbidden, or require the President to make any determination as to any facts or circumstances. Among the numerous and diverse objectives broadly stated, the President was not required to choose. The President was not required to ascertain and proclaim the conditions prevailing in the industry which made the prohibition necessary. The Congress left the matter to the President without standard or rule, to be dealt with as he pleased." (These statements of Chief Justice Hughes are strikingly applicable to GATT-OTC.) One of the aspects emphasized by this case was the absence of a requirement of findings of fact by the administering agency or of any procedural safeguards or adequate means of review—all of which are absent in GATT-OTC. *Schechter* v. *United States* (295 U. S. 495), a part of the National Recovery Act authorizing the President to promulgate codes of fair competition, the only statutory guide being the requirement that the code "will tend to effectuate the policy of the act"; *Carter* v. *Carter Coal Co.* (298 U. S. 238), the Bituminous Coal Conservation Act delegating power to fix maximum hours of work to a group of producers and mineworkers composed of the

Footnotes at end of speech.

Footnotes at end of speech.

producers of more than two-thirds of the annual tonnage produced for the preceding year and more than one-half of the mineworkers employed.

In each of this last group of cases, the objective of Congress was declared to be in the public interest but in each instance the Congress failed to set up clearly defined and permissible standards for the guidance of the delegate.

We search in vain for any language in OTC or in GATT setting up any specific standards for the guidance of the delegate in the exercise of the duties imposed upon him.

It therefore appears as an inescapable conclusion that H. R. 5550 not only delegates authority to make tariff laws and is unconstitutional for that reason but, even if it is not an unconstitutional delegation of legislative power, it fails to set up any standards for the guidance of the delegate and fails to pass the tests of constitutionality on one or both grounds.

(6) H. R. 550 is also unconstitutional because it is a subdelegation, not to an officer or agent of the United States but to a supernational organization

One of the distinguishing attributes of H. R. 5550 rendering it unlike any previous legislation of Congress involving the delegation of power is the fact that it provides for a subdelegation from the President to a supernational body over which the President will have no effective control since the United States would have but 1 vote in 35. The Supreme Court has been positively clear in announcing the rule that the Congress cannot delegate either legislative or administrative functions to a private body or to a trade group. As previously noted, the Supreme Court in the Carter Coal Co. case condemned the delegation by Congress of power to fix maximum hours in the coal industry to a nonofficial group as legislative delegation in its most obnoxious form. In the Schechter case, the Court had this to say on this subject:

"But would it be seriously contended that Congress could delegate its legislative authority to trade or industrial associations or groups so as to empower them to enact the laws they deem to be wise and beneficent for the rehabilitation and expension of their industries? Could trade or industrial associations or groups be constituted legislative bodies for that purpose, because such associations or groups are familiar with the problems of their enterprises? And, could an effort of that sort be made valid by such a preface of generalities as to permissible aims as we find in section 1 of title I? The answer is obvious. Such a delegation of legislative power is unknown to our law and is utterly inconsistent with the constitutional prerogatives and duties of Congress."

In the absence of constitutional amendment, Congress cannot delegate power to a supernational organization.[8] Congress can, within the limitations previously discussed, delegate to the President because the President is responsible to the people; it can delegate to an administrative agency subject to congressional or presidential control because both Congress and the President are responsible to the people; and it can delegate to 1 of the 48 States matters affecting the citizens of that State since State officials are likewise responsible to the citizens to be affected. On the other hand, Congress cannot delegate to a private group or to a supernational organiaztion which is not responsible, either directly or indirectly, to the people of the United States.

In considering H. R. 5550, one cannot overstress the fact that Congress will have no right to amend or modify the provisions of GATT, and that future amendments to GATT will not be brought before Congress for its approval even if they cut across our domestic legislation.

In dismissing a contention that the Webb-Kenyon Act of 1913, which subjected interstate commerce in intoxicants to Federal control, constituted an unconstitutional delegation by Congress of its legislative powers, Chief Justice White stated that Congress could at any time recover the power it had delegated. (*Clark Distilling Co.* v. *Western Maryland Railroad* (232 U. S. 311, 326).) H. R. 5550 effectively eliminates congressional control over tariffs, customs rules and regulations and our foreign trade.

Proponents of GATT–OTC maintain that the United States could terminate its membership at any time. This is not an effective argument because, disregarding for the moment the international implications, it begs the question of who is doing the legislating and to whom legislative power has been delegated. Congress has always had the power to overrule decisions of an administrative agency, statutes enacted by prior Congresses and even treaties. (See *George E. Warren Corp.* v. *U. S.* (94 F. 2d 597, cert. denied, 304 U. S. 5723; *United Shoe Machine Co.* v. *Duplessis Shoe Manufacturing Co.* (155 Fed. 842).) But prior to the time Congress so acts, an unconstitutional act is in effect and action taken under that unconstiutional act would have to be considered ineffective.

And even assuming that Congress wishes to act, it is likely that it would be dissuaded from taking such action because of the international implications thereof. World opinion would in all probability prevent the United States from resigning. Our system of government is supposed to be responsive to the demands of our own people and it has never been suggested before that it should be responsive to the demands of other nations.

(7) Our present participation in GATT is unconstitutionl

From what has already been said, it is clear that our present participation in GATT represents an unconstitutional usurpation by the Executive of legislative power to fix duties, to regulate our commerce with foreign nations, and to legislate in other areas.

The State Department argues that the Trade Agreements Act of 1934, as amended, authorizes participation by the United States in GATT,[9] but this is belied by the difference we have already seen between the objectives of GATT and the objectives of the Trade Agreements Act of 1934, as amended,[10] and further by the specific congressional disclaimers with respect to GATT in 1951, 1953, 1954, and 1955 extensions of the Trade Agreements Act. The legislative history of the Trade Agreements Act of 1934 refutes the State Department's argument since it shows, in my opinion, that Congress meant to authorize the President to enter into bilateral trade agreements on a country by country basis and not a 35-nation multilateral agreement, equivalent to quasi-government, empowered to make laws binding upon its participants.

Our membership in GATT even without OTC involves an unconstitutional usurpation of legislative power, since GATT is exercising lawmaking functions affecting our foreign and domestic trade. If Congress should pass H. R. 5550, the question of whether GATT is authorized under the Trade Agreements Act of 1934, as amended, will become moot, since by such action Congress will have authorized sub silentio participation by the United States in GATT. This usurpation of its legislative power has not gone unnoticed in the Congress. Senator O'MAHONEY, in a recent debate of H. R. 1 (approved June 21, 1955, as Public Law 86[11]), has said:

"Mr. President, this country is being transformed into an executive government, and Congress blandly and calmly cuts its own throat, although every Member thereof has taken his oath to support a Constitution which provides in the simplest of simple words that 'all legislative powers herein granted shall be vested in a Congress of the United States.' But, Mr. President, the legislative power of fixing duties and imports is * * * delegated away from the constitutional authority and is vested in the Executive. * * *" (101 CONGRESSIONAL RECORD 4760, May 4, 1955).

In connection with the same legislation Senator MILLIKIN, in colloquy with Secretary of State Dulles, has said:

"I want to add a word of friendly advice. In committee, while differing in some matters, we all seemed to be unanimous on the point that there were a number of things in GATT * * * which I am quite sure the majority, if not all the members of the committee, felt that too much authority was delegated to GATT, more than could be constitutionally delegated" (hearings, Committee on Finance, United States Senate, 84th Cong., 1st sess., on H. R. 1, pt. 2, p. 1243, March 8, 1955).

The Randall Commission recognized the constitutional question involved in GATT, saying (report, p. 49):

"Indeed, questions concerning the constitutionality of some aspects of the United States participation in the General Agreement have been raised by the Congress."

I have not discussed, at any great length, the constitutionality of the Trade Agreements Act of 1934, as amended, because the unconstitutionality of H. R. 5550 is clear and does not depend upon the constitutional status of the 1934 act. The constitutionality of the 1934 act, however, has not yet been determined by the courts. At the time of its enactment, the 1934 act was considered by many Members of Congress to be unconstitutional, but justified by the emergency then existing. (H. Rept. 1000, 73d Cong., 2d sess.) Since its enactment the Supreme Court has ruled that equally far-reaching delegations of legislative power in other emergency legislation of the same period are unconstitutional. (See *Panama Refining Co.* v. *Ryan* (293 U. S. 388); *Schechter Poultry Corp.* v. *U. S.* (295 U. S. 495).)

Two cases are now pending which involve the constitutional issues discussed above. One case is pending in the District of Columbia and it challenges the constitutionality of both the 1934 act and United States participation in GATT. (*Morgantown Glassware Guild, Inc.* v. *George M. Humphrey, Secretary of the Treasury* (Civil Action No. 876–55).) The other case is pending in the United States Customs Court and it challenges the constitutionality of the 1934 act. (*Star-Kist Foods, Inc.* v. *United States.*) In view of the pendency of these actions, it would seem impolitic for Congress to pass H. R. 5550 before the Supreme Court has had an opportunity to pass upon the constitutional issues raised in those cases.

The American Bar Association agrees with my position on the unconstitutionality of H. R. 5550. In August 1955 they adopted the following resolution:

"*Resolved*, That the bill, H. R. 5550, authorizing the President to accept membership in the Organization for Trade Cooperation is hereby disapproved on the grounds (a) that the Reciprocal Trade Agreements Act of 1934 (Tariff Act of 1930, sec. 35) confers no such power on the President and (b) that neither the President, nor Congress has the legal authority under the Constitution, to delegate the regulation of our commerce with foreign nations to a foreign-controlled group."

If, then, the forces backing H. R. 5550 were to triumph, we would all have to join Chief Justice Charles Evans Hughes in saying:

"It would be idle to pretend that anything would be left of limitations upon the power

Footnotes at end of speech.

Footnotes at end of speech.

of the Congress to delegate its law-making function. The reasoning of the many decisions we have reviewed would be made vacuous and their distinctions nugatory. Instead of performing its law-making function the Congress could at will and as to such subjects as it chooses transfer that function to the President or other officer or to an administrative body. The question is not of the intrinsic importance of the particular statute before us, but of the constitutional processes of legislation which are an essential part of our system of government." [12]

B. CONGRESS AND THE PRESIDENT CANNOT LAWFULLY COMMIT THE UNITED STATES TO GATT-OTC BY MEANS OF AN EXECUTIVE AGREEMENT

Despite what has already been said, let us assume solely for the purposes of discussion that the passage of H. R. 5550 would somehow not be an unlawful delegation of legislative power by Congress. The scheme proposed in this bill would still be banned by the Constitution.

The Department of State recently described GATT in the following terms:

"GATT is the most comprehensive international agreement ever negotiated for the reduction of barriers to and hence for the expansion of world trade, having regard to the number of participating countries, to the scope of its provisions, and to the volume of trade affected." [13]

The one lawful manner in which to effect an agreement with foreign states of this character and importance ascribed to GATT by the State Department is expressly prescribed in the Constitution which states unambiguously:

"The President * * * shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur" (art. II, sec. 2).

The Constitution makes no mention of any power or procedure whereby the President or the Federal Government may commit the United States to any foreign agreement in any other manner. Nor does it suggest that Congress by majority vote of both Houses is to authorize or ratify international agreements. The only constitutional method by which the Federal Government may conclude a treaty with a foreign state is for the President to negotiate it and then submit it to the Senate for the approval of two-thirds of that body present.

The Constitution in article VI, clause 2, proclaims treaties as the "supreme law of the land" on an equal basis with other law-making procedures:

"This Constitution * * * the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States * * *; and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to contrary notwithstanding."

While the President can only enter into important agreements with other nations by following the treaty route, he can carry out certain functions delegated to him by the Constitution which relate to foreign affairs without the advice and consent of the Senate. In connection with such functions the President enters into executive agreements with foreign states when they are administratively necessary and incidental to specific powers vested in him by the Constitution. These powers can be found in article II, section 2:

"The President shall be Commander in Chief of the Army and Navy of the United States. * * *

"He shall nominate, and by and with the advice and consent of the Senate, shall appoint Ambassadors, other public Ministers and consuls."

Footnotes at end of speech.

If the Congress purports to authorize the Executive to join GATT-OTC by means of an executive agreement, such action would be without legal sanction because in derogation of the treatymaking clause. GATT-OTC is not an agreement which is incidental to the performance of the Executive's functions vested in him by the Constitution. Nor is it one that the Congress can properly delegate to the President to make. Rather, it is a far-reaching, 35-nation treaty between states which will have a broad and continuing effect upon most of our foreign and domestic trade. Committing this nation to such a grave step by the mere use of the executive agreement would be an inexcusable evasion of the clear command of article II, section 2, of the Constitution.

The framers, in drafting article II, section 2, of the Constitution, use the term "treaties" advisedly for they were aware of the distinction between treaties which deal with important and executory matters, and agreements such as records, conventions and compacts which deal with routine matters. This is shown by another provision:

"No State shall enter into any treaty, alliance, or confederation. * * * No State shall, without the consent of Congress * * * enter into any agreement or compact with another State, or with a foreign power" (Constitution, art. I, sec. 10).

The late Senator Robert A. Taft has analyzed the intention of the framers as follows:

"The founding fathers felt that the matter of assuming obligations or making promises to do something in the future for foreign nations was of sufficient importance to require that the proposal have the support of two-thirds of the Senators." [14]

Support for Senator Taft's analysis may be found in the following comment of Alexander Hamilton as to what transpired at the Constitutional Convention:

"As to the sense of the convention the secrecy with which their deliberations were conducted, does not permit any formal proof of the opinions and views which prevailed in digesting the power of treaty. But from the best opportunity of knowing the fact, I aver, that it was understood by all, to be the intent of the provision to give to that power the most ample latitude—to render it competent to all the stipulations, which the exigencies of national affairs might require; competent to the making of treaties and alliances, treaties of commerce, treaties of peace, and every other species of convention usual among nations; and competent in the course of its exercise for these purposes, to control and bind the legislative power of Congress. And it was emphatically for this reason, that it was so carefully guarded; the cooperation of two-thirds of the Senate, with the President, being required to make any treaty whatever." [15]

The distinction in the substance which a treaty or executive agreement may lawfully deal with has been acknowledged by the executive branch of the Government itself. In an opinion on the bases-for-destroyers transaction the then Attorney General, Robert Jackson, wrote:

"Some negotiations involve commitments as to the future which would carry an obligation to exercise powers vested in Congress. Such Presidential arrangements are customarily submitted for ratification by a two-thirds vote of the Senate before the future legislative power of the country is committed. However, the acquisitions which your are proposing to accept are without express or implied promises on the part of the United States to be performed in the future. The consideration which we later discuss is completed upon transfer of the specified items. * * * It is not necessary for the Senate to ratify an opportunity that entails no obligation."

Footnotes at end of speech.

Executive agreements deal with the day-to-day activities of the Government and should be confined to limited transactions. Borchard, Shall the Executive Agreements Replace the Treaty? (53 Yale Law Journal 670, 674.) The Federal Government can do by treaty what it cannot do by statute. This is dramatically illustrated in the leading case of *Missouri* v. *Holland* (252 U. S. 416). The Migratory Bird Act of 1913 had previously been held unconstitutional under the 10th amendment as a Federal encroachment on power belonging to the States. The United States thereupon concluded a treaty with Canada dealing with the same subject matter as the unconstitutional act. The Supreme Court concluded, erroneously in the view of many, that the treaty was valid and effective. Accordingly the purposes of the act were achieved. Our courts have not given a clear answer as to whether this result could have been accomplished by an executive agreement. (Cf. *U. S.* v. *Pink, supra.*)

Secretary of State John Foster Dulles, speaking for the executive branch of our Government, has spoken of GATT as a treaty:

"He signed it ad referendum, subject to the approval by Congress. * * * The same way treaties are signed. As you know, they really do not become operative until the Senate has consented to their ratification, and that is the way he has acted in relation to this document." [16]

Senators O'MAHONEY and MALONE have also stated that GATT-OTC is in reality a treaty in substance, procedure, and consequences.[17]

Since the Constitution unambiguously requires that the President and the Senate mutually share the treatymaking power, there are some who advocate a conscious policy of evading and nullifying that provision. (See McDougal and Lans, Treaties and congressional-executive or Presidential Agreements: Interchangeable Instruments of National Policy, 54 Yale Law Journal, 181, 534.) It is inconceivable that the Congress would knowingly participate in such an unlawful course of conduct. McDougal and Lans invidiously characterize the traditional position on constitutional construction as "the mechanical, filiopietistic theory [purporting] to regard the words of the Constitution as timeless absolutes." It need not be elaborated that the Constitution through the course of time has proved to be a flexible instrument able to adjust to a dynamic, expanding Nation.

It is not contended here that the three branches of the Government should not expand their activities in conformity with their growing responsibilities. This, however, should be done within the area allotted to each of them by the Constitution and is to be sharply distinguished from the policy of evading the treaty provision of the Constitution. Evading the treaty procedure, it is submitted, makes a fundamental, qualitative change in the balance of power between Congress and the Executive, one of such importance that it should be decided by consitutional amendment.[18] (See *Youngstown Sheet and Tube Co.* v. *Sawyer* (343 U. S. 579 (Steel Seizure case).)

It is difficult to escape the conclusion that the State Department has deliberately planned the proposed legislation to give it the appearance of necessity in promoting our national welfare in world affairs. They support the proposed legislation with the argument that our policy of dealing with foreign commerce cannot be separated from our foreign political relations. It follows, therefore, according to these State Department spokesmen that we should now abandon our time-honored observance of the

Footnotes at end of speech.

Footnotes at end of speech.

constitutional requirement for separation of legislative and executive functions and vest the proposed authority in a quasi-Government composed of representatives of 35 nations.[19]

One wonders why the advocates of "amendment by evasion" do not apply their energies and determination toward an appropriate constitutional amendment in the lawful manner. Perhaps the answer can be found in the wise statement of John Bassett Moore:

"I deem it to be inconceivable that there should exist in the United States any general sentiment in favor of committing to the Executive Department of the Government the entire and absolute control of treaty-making. [Such a sentiment] would justify a feeling of profound apprehension and alarm." [20]

The treaty provision of the Constitution was weighed very carefully by the Framers in convention.[21] The making of treaties was deemed of such importance to the Nation, that the advice and consent of the Senate were made an integral part of that process. Although, since that time, the Senate has grown to such proportions that the function of advising the President has, of necessity, been diminished, still, the Senate's consent remains a vital check on the President in committing the Nation to foreign agreements. In fact, the crucial role envisioned for the Senate in the treatymaking process is evidenced by the fact that it was only 10 days before the final adjournment of the constitutional convention that the President was given a share in the making of treaties with the Senate.[22]

In summary: Both Houses of Congress plus the President cannot lawfully commit the United States to GATT-OTC. Assuming that they can do so, H. R. 5550 still should not be enacted, since the heart of this bill is GATT, which has never been presented to the Congress or the people for approval. Congress should not acquiesce in the amendment of the Constitution by evasion.

[3] See also Justice Story's statement with respect to the separation of powers required by the Constitution:

"That the whole power of one of these departments [legislative, executive, judicial] should not be exercised by the same hands which possess the whole power of one of the other departments." (Story, Commentaries, sec. 525).

[4] *Hampton* v. *U. S.* (276 U. S. 394).

[5] "Congress cannot delegate legislative power to the President to exercise an unfettered discretion." (*Schechter Poultry Corp.* v. *U. S.* (295 U. S. 495); *U. S.* v. *Chemical Foundation* (272 U. S. 1).)

[6] "In considering these asserted hardships, it is appropriate to take into account the purposes of the act and the circumstances attending its enactment and application as a wartime emergency measure. The act was adopted January 30, 1942, shortly after our declaration of war against Germany and Japan, when it was common knowledge, as is emphasized by the legislative history of the Act, that there was grave danger of wartime inflation and the disorganization of our economy from excessive price rises. Congress was under pressing necessity of meeting this danger by a practicable and expeditious means which would operate with such promptness, regularity and consistency as would minimize the sudden development of commodity price disparities, accentuated by commodity shortages occasioned by the war." (Majority opinion of Chief Justice Stone (321 U. S. at pp. 431–432); see also pp. 422, 441, 443.)

[7] The act provides:

"Whenever the President, upon investigation of the differences in costs of production of articles wholly or in part the growth or product of the United States and of like or similar articles wholly or in part the growth or product of competing foreign countries, shall find it thereby shown that the duties fixed in this act do not equalize the said differences in costs of production in the United States and the principal competing country he shall, by such investigation, ascertain said differences and determine and proclaim the changes in classifications or increases or decreases in any rate of duty provided in this act shown by said ascertained differences in such costs of production necessary to equalize the same * * * *Provided*, That the total increase or decrease of such rates of duty shall not exceed 50 percent of the rates specified in title I of this act.

"(c) That in ascertaining the differences in costs of production, under the provisions of subdivisions (a) and (b) of this section, the President, insofar as he finds it practicable, shall take into consideration (1) the differences in conditions in production, including wages, costs of material, and other items in costs of production of such or similar articles in the United States and in competing foreign countries; (2) the differences in the wholesale selling prices of domestic and foreign articles in the principal markets of the United States; (3) advantages granted to a foreign producer by a foreign government, or by a person, partnership, corporation, or association in a foreign country; and (4) any other advantages or disadvantages in competition."

[8] It has already been noted that in the United Nations this country has the veto power and the action of that body is therefore subject to our control at least negatively.

[9] President Truman in his proclamation of December 16, 1947, announcing our participation in GATT, stated that our Government acted under the authority of the 1934 act.

[10] Tariff Act of 1930, sec. 350.

[17] 101 CONGRESSIONAL RECORD 4759, 1865, 3607; S. Rept. 232, 84th Cong. 1st sess., p. 15.

[18] The New York Times has stated that calling "treaties" "agreements," "is merely to argue that we could get around the Constitution by conspiring with each other in calling a spade by another name," and that if this can be done "we can do away with the need for any approval of treaties"; in fact, we can "interpret" the Constitution away. "There is one honest, straightforward method of change" and that is by constitutional amendment. (April 17, 1944, p. 22, col. 1.) In another editorial the Times declared: "This ignoring of a plain constitutional requirement would be a dangerous precedent. It would put in doubt the validity of treaties and international agreements not ratified in the constitutionally prescribed manner." (May 22, 1944, p. 18, col. 2.)

[19] "In other words, foreign economic policy is two things at the same time:

"It is foreign policy, governing our relations with other countries and having exactly the same objectives as any other aspect of foreign policy—namely the security and well-being of the United States as a whole.

"It is also the policy governing that part of our domestic economy which projects beyond our borders.

"Now, sound foreign relations and prosperous domestic economy are not in conflict. They go along together. Nevertheless, at the point of merging traffic, a high degree of dexterity is called for, and even then there are sometimes collisions and uncertainties over the right of way * * *

"Entirely aside from our internal difficulties in arriving at decisions, there is a further fact which is always with us; other countries are involved in these matters and we cannot accomplish all our objectives through decisions of our own." (Statement by Thorsten V. Kalijarvi, Deputy Assistant Secretary of State for Economic Affairs, before the Subcommittee on Foreign Economic Policy, Joint Committee on the Economic Report, November 9, 1955.)

[22] Corwin, The Constitution and World Organization, 31 et seq. (1944). It is also of interest, that the convention rejected by a vote of 10 States to 1 a proposal that treaties should be made by the President with the advice and consent of both the Senate and House of Representatives.

Surrogate William T. Collins

EXTENSION OF REMARKS
OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 8, 1956

Mr. DAVIDSON. Mr. Speaker, on the 30th of June a distinguished citizen and jurist, the Honorable William T. Collins, surrogate of New York County, will reach his 70th birthday. At the end of this year, by statutory requirement, he will retire from the bench and thus bring to a close a brilliant and dedicated public life of service to the community. The long and distinguished career which lies behind those 7 decades is of such an inspirational quality that I should like to bring some of its highlights to the attention of my colleagues.

Judge Collins was educated in the Catholic parochial grammar and high schools of New York City, then went on to St. Francis Xavier College, and in 1909 he received his law degree from Fordham University.

His career of public service dates from 1907, when he served in the office of the corporation counsel. In 1915 he was elected to the old board of aldermen, and he served as a member of that board for 5 consecutive terms. From 1920 until he became its president in 1924, he was the leader of that body. Then in 1925 Judge Collins became county clerk of New York County.

The late Alfred E. Smith, while Governor of the State of New York, took cognizance of the capabilities of this distinguished citizen and attorney and appointed him a justice of the Supreme Court of the State of New York. In 1929 the confidence shown in Judge Collins was upheld when the people of the State elected him to a full 14-year term. In

1943 Judge Collins was reelected to that court, after receiving the endorsement of all political parties.

Judge Collins was designated by the appellate division of the supreme court to serve as surrogate when Judge James A. Foley became ill, and in March 1946 he was appointed a surrogate by the Governor. Later in that year, with the endorsement again of all political parties, he was nominated and elected surrogate of New York County, the position which he holds today.

This then is the life of government service that Judge Collins has given to the people of New York. What are his other interests which rounded and gave meaning to his life as a member of a community?

Judge Collins served with distinction in World War I, and he was honorably discharged a second lieutenant, after enlisting as a private. His interest in the activities of the Air Force, the branch in which he served, and his later interest in matters affecting veterans was recognized by the Veterans of Foreign Wars, which presented him, in 1954, with its Achievement Award.

His concern for community betterment has caused him to be active in organizations such as the Grand Street Boys, the Knights of Columbus, and the Friendly Sons of St. Patrick. Judge Collins, in addition, is a past President of the National Democratic Club of New York and of the Manhattan Club of New York City.

In the fields of religious and philanthropic work, Judge Collins has been for many years a trustee of St. Patrick's Cathedral in New York City and a supporter and trustee of the Mission of the Immaculate Virgin at Mount Loretto, Staten Island, one of the largest orphanages in our State. The list is indeed endless.

Mention must however be made of the fact that in 1949, Judge Collins was honored by his church by being made a Knight of Malta; that, in 1951, the Federation of Jewish Philanthropies honored him for his efforts on its behalf; that in 1953, he was awarded an honorary degree of doctor of laws by his alma mater, Fordham University; and finally, that in 1943, he was the recipient of the award of honorary chairman of the Interfaith Movement. The judge's remarks on the occasion of that award are so moving, so eloquent, and so timely even today, that I take the liberty of incorporating them at this point. His remarks A Challenge to Bigotry, follow:

A CHALLENGE TO BIGOTRY

(Remarks of William T. Collins, justice of the Supreme Court of the State of New York)

Judge Goldstein, and friends of the radio audience:

I have heard with deep humility the kind things that have been said of me. I do not feel that I deserve them, but if I must be flattered at all, and if I have any say in the matter, my preference would be a compliment for one thing above all others—and that one thing would be whatever I have tried to contribute to the sublime cause of the interfaith movement.

I am happy and honored to accept this award. This cause is based on human dignity. Its guiding principle, from its president, Judge Vincent S. Lippe, to the last of its members is no more or less than the concept of the true fellowship of all men.

The most devastating war in all history was caused by a ruthless disregard of that principle. Brave and loyal adherence to the principle of interfaith would have averted this war. Wider and wider recognition of that principle today will not only hasten the end of the war, but—as the principle spreads throughout the United Nations—prevent war in the future. That is a victory truly worth living for.

"For all our dreams of nobler things
Will meet the same old fate
Unless we turn to fellowship, and do
Away with hate."

Our first duty is to win the war. There is no valid reason why the war and the peace cannot be won at the same time. The peace cannot be won and stay won unless and until we erase the causes of war. The most sinister of those causes are intolerance, the disregard of the rights of others, the proscription of religion, the discrimination against races, the tyranny of the majority over the minority—all these wicked flowers shooting off the crooked stem of the dishonest declaration that might makes right.

Nations consist wholly and solely of individuals. Justice among nations can proceed no faster than the acceptance of justice among individuals, and between groups of individuals. There is our clue to the peaceful world of a long tomorrow—there is our interfaith principle again; achieve individual justice and you abolish international injustice. This organization is a small body of individuals, but its influence upon international justice can reach to the ends of the tortured earth, and can help the wounds of the world to heal.

Now we must not be so naive as to believe that this massive victory will be won by broadcasting speeches, or holding meetings, or passing resolutions—or even by enacting laws. All those steps help, but they are not the goal; they are simply the pathways leading to it. That goal is "live and let live." That goal is "do unto others as you would have others do unto you." The path seems so straight, so natural, so easy to traverse. And yet it is not easy. Across that path lie menaces and traps, mines and barricades, the more dangerous for their invisibility and their subtlety.

What are those traps the enemy has sown across the path of brotherhood. Here are a few: Arrogance, personal greed or vanity, prejudice, bias, bigotry and intolerance, stupidity and sheer ignorance, contempt for the rights and beliefs of others, inflated superiority concerning one's own ideas.

Those are only a few of the obstacles concealed along the road to the true fellowship of man that is our goal. They must be sought out, rooted out, and neutralized. Recognizing them takes a keen eye. Rooting them out takes a sure hand. And destroying them takes a strong heart and a cool head.

Those threats are everywhere, every day, as you know. There are so many of them that the real size of the interfaith task begins to take shape before you and me. You can't eliminate these menaces with a sledge hammer. You've got to go slowly, steadily forward on the long road of unceasing education.

The right education will expose bigotry—will make the bigot his own victim, drive him into the open to stand ashamed and wretched before the public eye. It must be brought home to the bigot and the persecutor and the intolerant that his own intolerance stamps him unmistakably as a small and mean person. To scoff at the race or the color of another individual is to turn the merciless spotlight upon one's own shortcomings. To attack the character of another is to attack one's own character. At the base of the statue of Booker T. Washington at Tuskegee there is an inscription. Here is what it says:

"I will let no man drag me down so low as to make me hate him."

There is a French writer who recently spoke cleverly of those who love their prejudices more than justice. Well, in the interfaith movement we aim to transpose those key words. We want a world peopled by those who love justice more than they love their prejudices. A woman once clodded Dr. Samuel Johnson, who wrote the famous dictionary: "Your book" she said "contains many offensive words." Dr. Johnson replied, "Madam, I see that you have gone through my dictionary looking for them." She stamped her own character as she attacked his. It always works that way.

Yes—the cause of interfaith is a long task. Too many of the menaces to true human fellowship we take too much for granted. We call them "self-evident"—but they are not self-evident at all. They must be brought out into the open and measured for their danger afresh. Anybody would agree that bigotry is as un-American as a Messerschmitt. It is. But interfaith declares that bigotry is downright and absolutely lawlessness. Freedom of worship is a cornerstone upon which our Nation was built. Bigotry is an attack upon that cornerstone. It is outright sabotage to the form of government we cherish, and it is treason to the Constitution, and a cancellation of the Bill of Rights. You can't be a patriot and a bigot at the same time. It was Dryden who said:

"Of all the tyrants of human kind
The worst is that which persecutes the mind."

The creed we espouse is a simple American creed. The United States has a record unbeaten on earth for championing the persecuted, for defending and protecting the rights of the minority, and for protecting you and me on our way to and from the church of our own selection. On that magnificent record there are, alas, some stains. One of our aims is to erase those stains. The greater task is to keep the record rolling forward, clean, unsullied.

It is self-evident—but it can't be repeated too often—that this country was founded and built mostly by people who fled from religious persecution, and that it has grown great by the united support of peoples of all faiths. We have no right to insist that other nations give their people equal protection, rights, and opportunities—if we don't accord them to all of our own people.

Let me emphasize what Judge Goldstein has said so well; that the interfaith cause does not propose an amalgamation of faiths. It recognizes the strength and autonomy of each, and the power in respect for one for another, and cooperation between them. Real tolerance is not merely knowing one's own beliefs, but knowing the other fellow's as well, and respecting them, and respecting him for being true to those beliefs. Interfaith doesn't proselyte for members. It crusades for respect between the faiths.

Out there on the fighting fronts you see among all faiths respect and cooperation in action. The chaplains on the firing line are ministers and priests and rabbis. The first man after the commanding officer to cross that Guadacanal bridge under fire was a Catholic priest. But under the Stars and Stripes it could have been a rabbi or a minister. Those men have set up new ideals for us all. They hold each other's beliefs in meticulous respect—and they go forward into battle arm in arm. We should aim to deserve the freedom they are winning for us together.

Have we any right to wait for the end of war to live as hard as they live in the cause

of true freedom? I do not think so. Our task is here—and interfaith recognizes it. The enemy of tolerance is here in midst, and the time for attack is today and everyday. The battle is long, and we shall not win our victories lightly or easily. But today's setback does not mean that we shall not win tomorrow. With the principle of active human fellowship in our hearts victory is within our grasp.

"And though you stand defeated
When evening sunset dies
Defeat is never final
As long as suns shall rise."

This then is the partial story of a distinguished and devoted public servant and citizen. As is true in the case of all great men, there is always a source of inspiration and support which is such an important factor in their lives that it must be acknowledged. In this case, tribute must be paid to the former Mae Godfrey, who since 1909 has been the dear wife of William T. Collins. She is responsible for the happy home and happy life which is inevitably the birthplace of the activities and accomplishments of men who leave their imprint on the community. Her loyal and devoted companionship, in great measure, is the key to the life which Judge Collins has lived and which has caused the unanimous affection in which he is held by all who know him.

At the end of this year the judicial career of Judge Collins will come to a close. He has occupied his position of trust with great dignity. His record will chart the path for those who follow him. We cannot help but learn how best to serve our fellowmen when we review the activities and interests on a man like William T. Collins.

Economy in 1961

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 11, 1956

Mr. HUMPHREY. Mr. President, Dean Richard L. Kozelka, of the School of Business Administration at the University of Minnesota, recently addressed an assembly of the directors and officers of the Federal Reserve bank in Minneapolis on the significant topic, One Man's Opinion—Economy in 1961. Dean Kozelka's talk aroused such keen interest that excerpts from it were reprinted in the issue of Commerce West for May 1956.

I ask unanimous consent that these excerpts be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION—ECONOMY IN 1961
(By Richard L. Kozelka)

A forecasting speech is regarded with suspicion, and the forecasters misses are thrown back at him with high glee. But forecasting is an inescapable part of most human decisions and nowhere more far-reaching than in the business decisions which affect our livelihood and our standard of living.

The art of forecasting rests on varying combinations of intuition, analysis of trends and patterns, interpretations of fundamental factors, and just plain luck.

A forecast for 1961 may consist of nine parts temerity and one part analysis, but an examination of trends and fundamentals may be of value.

Two basic figures are offered for 1961, followed by some comments on the contributing factors.

The first of these is a forecast of a population for the United States of 175 million people, about 10 million more than at present.

The second is a forecast of $470 billion for gross national product, compared with about $400 billion expected this year. Gross national product is the increasingly recognized concept of the grand total of value of goods and services produced by our working population in a year. There's a general relationship between gross national product and population which is represented in our standard of living, but obviously gross national product is not all consumers' goods. It must include our rather substantial provision for national defense and local protection, as well as replacement and increase in our intricate but efficient machinery for production.

The increase in the gross national product will be accomplished by a relatively smaller proportion of our population working less than our present labor force.

There will be a larger population in 1961, but a smaller proportion in normal working ages, 20 to 70 years. At present the percentage is estimated at 55.2 percent, which is expected to fall to 54 percent by 1961. This will reflect the continuing trend in longevity for our "senior citizens," and the trend toward early marriages and larger families.

The labor force, which consists of the people working or able and willing to work, also will show a shrinkage in relation to the total population. This will occur primarily at the high and low ages. The retiring age has been drifting downward and there is no reason to expect a reversal, particularly as social security approaches complete coverage.

At the other end of the age scale, the labor force is reduced by the extension of the school years. At present about 23.5 percent of the college age young people are attending some institution of higher learning. By 1961, this ratio is expected to rise to 28 percent, with all the problems of expansion which are worrying the school administrators today.

This postponement of entrance into the labor force is not only consistent with the American tradition of maximum educational opportunity, but with the rising standards of preparation required for business and the professions.

The increase in gross national product at a faster rate than the population growth naturally results in more goods and services per capita. The income per worker is estimated presently at $3,100 per year and will increase to $3,400 by 1961. The income per worker family averages at present about $4,500, and should reach $4,900 annually by 1961.

The reason for the higher income is familiar to all in the phrase "higher productivity." The increase in productivity due to technical progress is well publicized and generally welcomed, except by those temporarily displaced by the advances of technology.

New products, new materials, new processes seem to be announced with increasing rapidity, and there is no reason to expect a decline in the next five years.

Research is not new in university thought and practice. Reasearch is not new in private industry, but the scale on which it has been adopted and supported since World War II is relevant to a forecast for 1961.

The results of research are frequently like an iceberg, the visible evidence of a much larger body beneath the surface, the failures, the patient tests and experiment which may not bear fruit for months or years to come.

Postwar research has brought us many improvements and new products, but this may be only a foretaste of the benefits which are about to emerge from the experimental to the production stage.

Improved methods must be adopted more quickly if companies are to remain in business. "Automation" simply dramatizes a process which has been going on for centuries, and which is simply accelerated in this decade.

The special attention to technical progress may overlook the higher productivity resulting from the improvements in the art of management. The people who are responsible for the coordination of men and materials in an effective productive organization are under increasing pressure to improve their operations.

Close attention is being paid to executive development instead of leaving managerial succession to chance or personal favor.

Market research is becoming a necessary aid to executive decision.

Long range planning is accepted as a systematic necessity.

The demands of organized labor have forced management to intensive review and ingenuity to prevent labor costs from rising as fast as wage rates.

More recently the stockholders have taken a new interest in the quality of management.

There is no reason to expect these pressures to abate over the next five years. It is more likely that the effects of improved management will continue to appear in higher productivity.

Higher productivity is not limited to manufacturing, although results have more dramatic visibility in these areas. Equally significant changes have taken place and are in the offing in finance and wholesale and retail distribution.

Few consumers are aware of the spread between factory cost and retail price and the intensive efforts being made to reduce the cost of the service which the consumer has been accustomed to expect.

There should be a noticeable improvement in the stability of our economic climate by 1961. We can hardly complain about the violence of our economic fluctuations over the last decade, but the probability of such upheavals seems to be decreasing as we look into the future. There is both public and private concern in minimizing the business cycle.

We have national legislation on the books, in the full employment law, which commits the Federal Government to fiscal and other policies if unemployment becomes serious. We are acquiring experience and wisdom in the use of "built-in stabilizers," such as unemployment compensation and credit controls.

Our banking system is stronger, and the Federal Reserve System has the tools for control and the courage to use them.

Private business has an increasing stake in stability, and the chances are very good that increasing initiative will come from this direction.

A powerful incentive for reducing fluctuations is found in the increasing investment per worker. A fair estimate of average investment by 1961 would be $12,500. Rising cost of overhead on idle investment added to the costs of unemployment compensation for idle workmen combine into a persuasive argument which any alert manager is bound to heed.

The increasing prevalence of long-range planning prepares the manager for action which extends beyond short-run fluctuations.

The increasing diversity of industry creates countervailing forces against a general collapse.

There is little likelihood that the total tax burden will be reduced by 1961. Even if Federal expenditures are reduced, State and

local taxes will hardly decline. In the dismal 1930's, public works were promoted as a stopgap to relieve unemployment until private business regained its momentum.

Today public works are demanded by our growing population as part of their higher standard of living.

Schools, roads, water systems, and other "amenities of civilization" cannot wait for a depression, and the drawing boards are full of plans which will extend at least to 1961. This a strong backlog for sustained activity.

The dollar figures used in this forecast thus far have assumed no change in purchasing power. Such an assumption, unfortunately, is not likely to be realistic. The history of the American economy and the American philosophy show greater concern over falling prices than rising prices.

It is difficult to envisage any basic change in this attitude in the next 5 years. We are learning the value and the mechanism of price level controls, but on balance the chances favor at least mild inflation.

Another basic assumption in this forecast is at least no deterioration in the international situation. If a hot war breaks out in the next 5 years, "all bets are off" because substantial portions of our economic machine may be destroyed by enemy action, and our productive capacity temporarily, but seriously impaired.

If the present cold war is continued, we shall see 40, 50, or 60 billions of dollars of labor, time, and natural resources used to protect our peace of mind. That may be a bargain in peace, but one cannot help but wonder what that sum would mean in the American standard of living, if we want to be selfish, or in helping underdeveloped countries if we choose to share with others.

We alone cannot eliminate the threat of war, but as a major, responsible world power we are not without influence in encouraging the substitution of deeds for words.

An enduring peace rests on several foundations, one of which is economic. An economist is not an expert on disarmament, and would hardly dare forecast peace by 1961. He can only hope for a little progress in a troubled world.

America and the World's Debt to Poland

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. DONOHUE. Mr. Speaker, I have been asked to include the address I delivered on April 29, 1956, at the annual convention of the Worcester County Association of Polish American Citizens' Clubs.

The committee in charge of convention arrangements was headed by Mrs. Stella A. Ciborowski, association president, assisted by Mrs. Stella A. Recko, Mrs. Anna Kowiako, Mrs. Adeline Petriewicz, Mrs. Stephania M. Paterak, and Miss Amelia Gutowski.

The address follows:

SPEECH BY HON. HAROLD D. DONOHUE, OF MASSACHUSETTS, AT CONVENTION OF WORCESTER COUNTY ASSOCIATION OF POLISH-AMERICAN CITIZENS' CLUBS, WORCESTER, MASS., APRIL 29, 1956

I am very grateful for the cordial invitation to visit with you this afternoon and very happy I was able to accept your hospitality because I know I am among good friends.

Another good reason is that I feel right at home here. As perhaps most of you know, I was born and lived for many years within a few blocks of this building. As a schoolbay, I went to school in this area and played in the streets of this neighborhood. It was in those early years I first learned by observation about the high and noble qualities of the Polish-American people because I lived among you. All of those early Polish associates are still among the closest friends I have.

No one can live among the Poles without seeing that they are honest, hard-working, God-fearing people. They are devoted to their families, quietly courageous, and possessed of intense loyal patriotism. They have never hesitated and will never cease to be ready to fight and even die for the Christian principles and democratic freedoms. Without having to refer to the pages of the noble history of your native land, we have the impressive truth and proof of your willing heroism in the war records of America. Such names as Pulaski and Kosciusko are immortally associated with the origin of our own liberty. During the Civil War, the documents demonstrate that several thousands of Poles fought to preserve the Union. In the First World War, tens of thousands of Polish Americans served with our Army, Navy, and Marine Corps. In the Second World War, several hundred thousand fought and died to maintain American freedom, and the battle awards and distinctions they achieve are legion.

The contribution to the beginning and development of this Nation by your people is universally recognized with the deepest gratitude by your fellow Americans all over the country. Is it any wonder, then, here in our own vicinity, that every citizen of our area knows about the surbstantial part your Worcester County Association of Polish American Citizens' Clubs has played and is playing in advancing all the civic and patriotic objectives of this community and this country. They respect and admire you for it. They realize that your combined activities in explaining the standards of good American citizenship to your members and your persistent urging of the acceptance and fulfillment of the individual responsibilities of good citizenship is vitally needed for the preservation of this blessed Nation in these hectic times. It is, then, not only a pleasure, but, indeed, a public duty for me as Congressman to compliment you for your wholesome and inspiring example of the highest patriotism.

There is another reason why I personally have the highest regard and admiration for the Polish American. It is because no people have a greater concern or any greater loyalty to the old folks than you do. In the best Christian spirit, you are devoted to your own families, you are courteous and respectful to the aged and truly charitable in providing for their needs. A good Christian heart is your heritage and you, and your fathers and mothers before you, brought that good heart to America to add to the culture and progress of every city and State in which Polish Americans live.

It is, indeed, because of your Christian heritage that you recognize better than most Americans the grave danger threatening us and the free world in this fierce struggle against the barbaric atheism of Communist tyranny. Because of the experience of your beloved native country and because in some cases of unfortunate family experience, you have a clear understanding of the terrible fierceness, the relentless cruelty, and the devilish determination of the Soviet leaders in their plans to conquer and subjugate the free world into slavery. Because you are intensely aware of the godless nature of communism, you are intensely concerned with the universal promotion and practice of good citizenship without which America cannot expect to escape Communist subjection and consequent suppression of all the fundamental liberties we enjoy.

Because of your Christian heritage, you appreciate better than most what these liberties are and what they mean to you and your families and to all Americans. You realize very well that here in America we have the privilege of casting votes as our conscience dictates without any dictatorial interference. Here our Government leaders do not seek to impose their will upon us, our homes cannot be searched without a warrant, our property is not subject to unlawful confiscation, our families are not put in danger of bodily harm or imprisonment because of our convictions, our choice of schools to which we send our children is unlimited, and our privilege of worshipping God is unrestricted. These are blessed freedoms of a blessed land. You Polish Americans know very well just how blessed they are, and you also realize very well how easily they might be lost.

Other unfortunate peoples all over the world almost overnight have lost the rights and the privileges and the freedoms that had taken hundreds of years to gain. Under Communist inspiration, events are constantly occurring around this current world which are a grim reminder to all Ameircans that we must not and cannot take our freedoms for granted. All Americans today must earnestly realize, as you people do, that the struggle for freedom never ends and that the greatest danger to our present freedom is to take our democratic liberty for granted.

It is not enough ever, but more especially in these dangerous days, to merely enjoy the privileges and the liberties of a democracy; we must accept the responsibilities of citizenship to maintain our freedoms. The Communist leaders stand ever ready to take quick advantage of any wide neglect in or retreat from acceptance of the responsibilities of American citizenship. We, then, must remain ever ready to make the sacrifices necessary to prevent such a terrible castastrophe.

Your native land gave us the best modern example of such sacrifice in that serious engagement with the Communists in 1920. The Polish people proved then to the world that they were among the very, very few who early recognized the planned Communist objective of reducing the free world to tyrannical slavery. Would that we had wisely learned from their example, and the recent years of too much appeasement and too often retreats, of developing world confusion, and of increasing turmoil might well have been avoided.

The debt that the free world owes to heroic Poland for her courageous struggle against the Communist horde 36 years ago still remains unpaid and it still remains as a blot upon the moral integrity of this country and the United Nations.

It is not, however, thank God, too late to save America and to vindicate our honor by continuing to demand liberation and freedom from Communist tyranny of Poland and the other enslaved nations. America is today the outstanding single force preventing the final success of Communist propaganda, intrigue, and even forceful aggression. It would appear that they fear our military strength and so are content to wait and watch, hoping that we will become weak from within. They hesitate to openly attack us because they know we have great military resources; they are not so sure and they doubt that we possess the greater and more enduring strength of moral character as a nation and a people.

We must, then, give a resounding and convincing answer to that particular challenge. We must demonstrate to them that the great majority of Americans do possess the moral capacity to make personal sacrifices

for the common welfare. We must show them that the great majority of Americans are willing to govern their private ambitions for the general good. We must thoroughly convince them that they could wait until doomsday before the great majority of Americans will ever betray their neighbors, become disloyal to their country or accept the false and unholy appeal of Communist propaganda.

The only way we can do that is by individually and wholly accepting and carrying out our responsibilities as good American citizens. The foundation of good citizenship is to live our daily lives among our fellows with Christian self-restraint and in accord with the laws of God and duly constituted authority. In my opinion, the continuing demonstration of the great moral strength of the Christian unity among the American people will provide the greatest discouragement to the Kremlin leaders and will eventually force them to abandon their pagan plans to enslave the world.

You members of the Worcester County Association of Polish American Citizens Clubs have provided us with an inspiring example of how that Christian unity and moral strength is achieved. If the rest of the American people will imitate and persevere in your patriotic example, I hope and believe that, with the help of God, all of us will live to soon see the dawn of a new era of peace for America and freedom for Poland and the rest of the Christian world.

Another Presidential Error

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. MULTER. Mr. Speaker, the following article, which appeared in the New York Herald Tribune on June 8, 1956, is most interesting:

TODAY IN WORLD AFFAIRS—EISENHOWER TACTICAL ERROR BLAMED IN FOREIGN-AID UPSET

(By David Lawrence)

WASHINGTON, June 7.—President Eisenhower's foreign-aid program—mostly military and much needed—is in trouble in Congress, and this is due largely to his own mistakes in tactics.

Thus, the damage done by the President's offhand remarks at Wednesday's press conference is incalculable. Even the clarifying statement issued Thursday afternoon does not erase the injury done when the President, in effect, encouraged neutralism and caused the many allies and trusted friends of the United States in southeast Asia who have joined America in military alliances to wonder if they were being let down by Mr. Eisenhower.

TELEPHONES BUZZED

The telephones buzzed with expressions of shock and surprise and at times righteous indignation as the news of what Mr. Eisenhower said on Wednesday reached diplomats who represent America's allies in Asia. On Capitol Hill there was consternation. At the State Department there was an obvious discomfort but a discreet silence.

To understand what happened, it is necessary to present here the text of the President's remarks at the press conference as authorized for publication:

"Now, today there are certain nations that say they are neutral. This doesn't necessarily mean what it is so often interpreted to mean, neutral as between right and wrong or decency or indecency.

"They, are using the term 'neutral' with respect to attachment to military alliances. And may I point out that I cannot see that that is always to the disadvantage of such a country as ours.

WORLD OPINION

"If a nation is truly a neutral, if it is attacked by anybody—and we are not going to attack them—public opinion of the world is outraged. If it has announced its military association with another great power, things could happen to it, difficulties, along its borders; and people would say: 'Good enough for it. They asked for it.' So let us not translate this meaning of the word 'neutral' as between contending military forces, even though the conflict is latent, and neutral as between right and wrong."

But, asked some of the diplomats who represent countries that have already joined America in military alliances: "Shall we tell our people now that they were wrong and that, if attacked, they 'asked for it'?"

PRESIDENT'S STATEMENT

The President heard from his colleagues inside the government who advised a public statement. Here it is in its essential part:

"It is obvious that in some countries of the world there are certain ideological, geographical or other reasons making military alliances impractical. Such nations may declare themselves to be neutral, hoping thus to secure the support of world opinion against attack from any quarter. Neutrality does not mean either disarmament or immunity from attack. We have had historical examples of this kind of neutrality for many decades. * * *

"The President does believe that there are special conditions which justify political neutrality but that no nation has the right to be indifferent to the fate of another, or, as he put it, to be 'neutral as between right and wrong or decency or indecency.'

ASSOCIATION WITH UNITED STATES

"The President does not believe that association for mutual security with the United States will involve any country in added danger but, on the contrary, will provide added security on the basis of mutuality and scrupulous respect for the independence of each. As the President pointed out, the United States is not going to attack anybody; but some great powers have shown an aggressive disposition, and military association with such a power could lead to difficulties."

Why did the President plunge into such a delicate field of discussion, anyway, without going over carefully in advance with the Secretary of State the text of what he had to say? The answer is that, with the press conferences conducted as they are today, when a President's impromptu remarks are quoted directly without regard for the sensibilities of governments abroad, tragic mistakes like this will happen. They have occurred before under previous administrations, too.

ASIAN SITUATION

Unfortunately, Mr. Eisenhower isn't "briefed" in advance as he should be. Many of his friends in New York and elsewhere who have access to him have been dinning into his ear statements about the Asian situation which seek to justify neutralism and the expenditure of billions by the United States to nations that tomorrow may become Communist.

Mr. Eisenhower allows such friends to influence him, and the State Department is often in the dark as to what is going on.

This intervention of a separate kind of "State Department" at the White House is a difficult thing to deal with, and it is amazing that a man with the President's fidelity to well-defined lines or responsibility in military life should tolerate an influence on foreign policy separate from the officials charged with responsibility in making it. For the same phraseology and argument used in his press-conference statements of Wednesday can be found in the writings and speeches of the clique which has access to Mr. Eisenhower and is known in many parts of the world as "the real State Department."

The National Conference on Problems of the Aging

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Federal Council on Aging and the Council of State Governments are to be commended for arranging the National Conference on Problems of the Aging which was held in Washington, D. C., last week to discuss the obligations which we owe to our older citizens.

Some interesting facts were presented in the report of the Council of State Governments: First, the ranks of the aged are growing, both relatively and absolutely; second, the rate of increase of older people is twice that of the total population.

The report pointed out that the problems of older people include: Unequal opportunity for employment; inferior housing; separation, even more psychological than physical, from family and friends; widowhood for more than one-half of the older women; loneliness; lack of social participation; and the great shortage of trained personnel to help our older citizens with their problems.

Gov. Robert B. Meyner, of New Jersey, addressed the conference and urged a reevaluation by modern society of the entire concept of old age. I include his important speech together with an editorial which appeared in the Trenton Evening Times regarding it:

REMARKS OF GOV. ROBERT B. MEYNER, NATIONAL CONFERENCE ON PROBLEMS OF THE AGING, MAYFLOWER HOTEL, WASHINGTON, D. C., JUNE 5, 1956

Mr. Chairman and delegates to the National Conference on Problems of the Aging, we meet here today to discuss one of the most poignant problems of the latter half of the 20th century.

The Federal Council on Aging and the Council of State Governments are to be commended for arranging this meeting to discuss and explore the difficulties our States and our Nation face in trying to solve the problems of our older citizens.

I am reminded of a story found in a poem about a Mr. Arrents, who was the father of seven children. Mr. Arrents worked hard all of his life to feed, clothe, and educate his children. Once in a while throughout these hard working years, Mr. Arrents would sit back and muse about that one fine day when he would be able to relax and enjoy life—to retire and, so to speak, live off his children. Time passed. The children grew up and left home. "Ah," Mr. Arrents now said to himself. "The time has come to retire. "The children," he said "are all making a good living. Now let them support me in my autumn days as I cared for them for so many years."

And so, he called on each of his seven children. But from each one came the same answer: "Honestly, pop, I just can't do it."

Then, Mr. Arrents turned and went back to the task of finding support for himself. As he did, Mr. Arrents was struck by the ironic thought that it seemed to be much easier for 1 parent to support 7 children, than it was for 7 children to support 1 parent.

In a symbolic way, each of us today is 1 of those 7 children. For like them, we have been unable, for one reason or another, to care properly for a vast army of older parents and grandparents, many of whom played a great role in caring for us. We have neglected, instead, this vast population of older people, many of whom, because of our neglect, are living lives that are isolated, lonely, and useless.

Of course, there are the more fortunate parents, those with children who care. One young guitar-strumming singer is now enjoying fantastic popularity and an income equal to twice that of the President of the United States. The singer was asked on a television interview one day, how he intended to care for his "aged" father now that he had this great wealth.

"My daddy?" the singer replied. "Well, I'm gonna retire my daddy." It turned out later that "daddy" was 39 years old.

But what of the obligations we owe to our older citizens today?

The splendid report of the Council of State Governments has highlighted the significant facts concerning its magnitude. These facts are, first of all, that the ranks of the aged are growing, both relatively and absolutely; the rate of increase of older people is twice that of the total population. The report further points out that the problems of older people cannot be reduced to one simple factor. The many facets of the problem include: unequal opportunity for employment; inferior housing; separation, even more psychological than physical, from family and friends; widowhood for more than one-half of the older women; loneliness; lack of social participation; and the great shortage of trained personnel to help our older citizens with their problems.

"These problems, in their totality" emphasizes the report, "represents the failure of our economy, our Government, and our society to design a program which permits our older citizens to contribute to our economy and to live healthful, useful, and happy lives in accordance with accepted American standards."

Is it enough to say, "Through medical science, we have given you 10 possibly 20 more years of life," and then tell them to go off somewhere and sort of "do something" until their time is up? If this is what we want to continue to say to them; if we continue to disregard, or to force into early retirement or to place in mental hospitals, the army of aged in the United Statess today, these people shall be heard from. Politically, we cannot afford to deal lightly with the problems of more than 13 million people over the age of 65. No government, no political organization, can afford not to treat, with great pains, the problems of that number of people—a number comprising 8½ percent of the total population of the United States today.

In addition to this political consideration there is another practical consideration which might serve as a spur to action. We must prepare now for the potentially disruptive effect that this group (of which, let us face it, we shall all sooner or later be members) could have on the economy of our Nation. Today in the United States our payments to persons over 65 total $6 billion a year. Estimates are that by the year 2000 the cost of the Federal old-age and survivors' insurance to the United States Government will be $20 billion annually, a figure which could play havoc with our future national economy if we are not prepared to deal with it.

As a further practical aspect of this problem, we must consider the possibility that the older group may be agitated into political action by our neglect, might vote into office men who made rash promises of financial help which could prove disastrous to our national economy.

All of these factors point to the need for sound, constructive action in dealing now with the very human problems of people over 65.

For the most part these human problems are new and greater than they have ever been. In years gone by old age brought with it peace and contentment and security. Or at least that's our recollection of it.

But today the picture has changed.

In the United States the change began in the last century, when America began to grow from an agricultural to a mainly industrial society. In the last 65 years, while the population of our big cities increased by something over 350 percent, the number of people in the smaller, farm communities rose by only 51 percent. This change brought with it many magnificent benefits, but quite naturally, too, there were difficulties and hardships. There were people who were hurt by the change in our way of life.

Foremost among these were people who had found contentment in their later years in a rural existence.

For an older person to live in a small farm community years ago often meant that he had a farm of his own, and sons to help him care for it. The farm gave him economic independence and brought respect and recognition in the community. His pleasures were many. There were the grown-up children with families who lived nearby. For recreation, there was fishing and hunting.

What is life today for many of our older people who spend their later years in an urban community?

Many of them are workers who, reaching the age of 65, are forced into retirement. Many of them live in the heart of our large cities and have the television screen or an occasional trip to a baseball game as their major forms of enjoyment. The grown children are seldom seen, for urban life has given them greater mobility.

The social status of the older man in an urban society may be low, for often he does not seem to have a role in life. He may sit in a rocking chair and watch the rest of the world go by. He is alone. The degenerative process is speeded by inactivity. Idleness breeds illness, both physical and mental.

Now, most of these people do not want to quit. The survey by the Council of State Governments found that they wanted to continue as long as they were well enough. This survey also destroyed the old idea that people retired in order to enjoy leisure. Only 1 out of 25 workers thought that he would actually enjoy sitting and doing nothing. Retirement, it was found, was something that was forced on them because of failing health, or compulsory retirement, or because they lost their jobs and simply could not find new ones.

Retirement is often a crushing blow. For, in his own eyes, and in the eyes of the people around him, a person may become suddenly "an old man."

For many of our older citizens, mental problems which might have been dormant through the active years of life, begin to appear with inactivity and the decline in self-estimation. And so, we find that one-third of the patients in our mental hospitals throughout the country, today, are people over the age of 60. In New Jersey, the proportion of older people in mental hospitals increased from about 17½ percent of the total State mental hospital population in 1933, to almost 36 percent in more recent years.

As a matter of fact, we have allowed the admission of many older people into these hospitals who have no business being there and who could be treated much better somewhere else. Many of them need no more assistance than that offered by a local geriatric center which they might visit periodically for advice or treatment by well-trained personnel. Other alternatives to the mental hospital include day care centers, boarding homes, and nursing homes, all of which might be associated with a hospital and be able to draw on its personnel for guidance and treatment.

Our problem in dealing with the older people in their communities is not always financial. Indeed, we face a task of re-evaluation by our society of the entire concept of old age.

There is no doubt about it—such a re-evaluation is tremendously difficult, for it means that we must develop a completely new way of looking at the man or woman who is 65 and older.

The idea is prevalent that when a person becomes old, he is a different person, to be pitied and coddled, to be rejected when it comes to doing a man-sized job.

The idea persists that after 65 a man should practice the art of doing almost nothing. Such a program can be disastrous.

These firmly entrenched ideas have done much to magnify the problems of our older people today. We need new and fresh outlooks.

Certainly we can depend on our religious leaders to help fill this need. In addition, the Council of State Governments has set down a "Bill of Objectives for Older People" which is in reality a modern application of some of our most revered moral and religious principles. These objectives, which constitute a bill of rights for our senior citizens, are worth repeating.

1. Equal opportunity to work: Our society recognizes the value of work to the person and to the community. The older person should have equal opportunity, if physically and mentally able, to be gainfully employed.

2. Adequate minimum income: Older persons should have a retirement income sufficient for health and for participation in community life as self-respecting citizens.

3. Home living: Older persons are entitled to the satisfactions of living in their own homes and, when this is not feasible, in suitable substitute private homes.

4. Homelike institutional care: For older persons who need care that cannot be given them in their own or other private homes, they have a right to expect the institutions that serve them to be as homelike as possible and have high standards of care.

5. Physical and mental health: Older adults should have adequate nutrition, preventive medicine and medical care adapted to the conditions of their years.

6. Physical and mental rehabilitation: Older persons who are chronically ill, physically disabled, mentally disturbed, or unemployable for other reasons, have a right, to the fullest extent possible, to be restored to independent, useful lives in their homes and communities.

7. Participation in community activities: Older citizens can expect encouragement and assistance to form social groups and to participate with those of other ages in recreational, educational, religious and civic activities in their communities.

8. Social services: In planning for retirement and in meeting the crises of their later years, older persons should have the benefits of such social services as counseling, information, vocational retraining, and social casework.

9. Research, professional training: Older citizens should be able to expect an increase of research on the human aspect of aging, and development of special courses in school and departments of medicine, nursing, clinical psychology, and social work to train professional workers in the field of aging.

10. Freedom, independence, initiative: In securing the foregoing objectives there should be increased emphasis on the right and obligation of older citizens to free choice, self-help, and planning of their own futures.

This conference is faced with the monumental project of helping to achieve these objectives. The job can be done by utilizing the Jeffersonian philosophy: "Give the people the facts * * * and they'll know how to act." Our work here will be fruitful if we can return to our individual States with a plan for letting the people know what must be done on every level, day by day, to help our older citizens achieve the rights to which they are entitled.

We must begin to teach that life must be lived dynamically at every age, and that to reach the age of 60, or 70, or 80, does not mean to become suddenly different from what a person was at 40. It does not mean that he suddenly must become a burden to himself or to society. It means simply that he has become older, that he has more free time. This time can be used productively. It can bring new satisfactions for himself and new contributions for society.

Recently, I met a New Jersey woman who had spent her early years as a missionary in China, where she adopted a young son. When she returned to the United States, much of her time was devoted to the upbringing of this boy. When the woman was 64 years old, the boy was 26, and left home to pursue his career. To occupy her time, and with a genuine interest, the woman began translating books into braille for use by the blind. Today, this woman is 84 years young. She is not plagued by the problems which confront so many of our aging today.

Preparation for such activity should begin with the education of children and must be nurtured throughout life. This will mean the coordination of efforts, public and private, at all levels.

All too often in discussing a social problem, people are looking for a startling new idea, something that holds out hope for a quick or an easy solution. This conference will harbor no such illusion.

The answer lies in utilizing to best advantage the multitude of organizations and agencies—both public and private, both lay and professional, on local, State and national levels—that are now attempting to deal with various aspects of the problem.

The time has come to evaluate and coordinate their activities; to let the right hand know what the left hand is doing; to have these agencies working together.

Only in this way can the facts be brought home most effectively to the people. Only in this way can the coming legions of older citizens use their autumn years in increasingly fruitful service to our country, to their communities, and to themselves.

[From the Trenton Evening Times of June 8, 1956]

HUMANE AND ENLIGHTENED

Governor Meyner discussed with enlightenment and sympathy in his talk to the National Conference on the Problems of the Aging the need of a revaluation by modern society of the entire concept of old age.

The older citizen, as the Governor reasonably and humanely insists, has rights which cannot justly be denied him. Transcendent among these rights are an equal opportunity to work, which recognizes the value of work to the person and to the community; an adequate income sufficient for health and participation in community life; home living or a suitable subsitute; physical and mental rehabilitation when necessary, to restore older persons to independent, useful lives.

Such a program, as Governor Meyner insists, is a humane obligation. It is also one whose fulfillment holds the possibilities of economic value to the individual and to society.

Until Lithuania Is Free, the United States and the United Nations Have Not Discharged Their Moral Obligation

---

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. DONOHUE. Mr. Speaker, I have been asked to include the address I delivered at a meeting on June 10, 1956, sponsored by the Lithuanian Community Committee of Worcester, Mass., protesting the illegal and unjust Russian occupation of Lithuania. One of the resolutions unanimously adopted at the meeting called upon the United States Government to use its influence "to the end that the armed forces of the Soviet Union be withdrawn from Lithuania and the other occupied countries."

The chairman of the community group was Mr. Pranas Pauliukonis with the following members of the general committee: Mikolas Zemaitaitis, Jonas Dvareckas, Jonas Palubeckas, Albina Grazulis, Stasys Raudonis, Mrs. Maria Vaisnoriene and Julius Svikla; Anthony J. Miller was master of ceremonies.

The address follows:

It is a high tribute to the Christian tradition of your forefathers that you are holding these exercises in commemoration of the countless number of heroic Lithuanians who have died in defiance of Russian tyranny. I am privileged to take part in this ceremony.

It is particularly fitting that we specially pray for and publicly honor the more than 40,000 innocent Lithuanian men, women and children who were deported by Soviet order to the Siberian labor camps 16 years ago. Only God knows how many of these tragic souls have died under conditions of barbaric brutality in these slave camps or continue to live under constant torture and terror. The terrible mass murders and inhuman deportations of these thousands of unfortunate Lithuanians by the Soviets in June of 1940 stands out among the blackest pages of world history.

It is a fearful reminder and warning to us of the evil depths to which the Communist leaders will descend in their devilish determination to wipe out the Christian liberties of free peoples everywhere and eventually enslave the whole world. Although the Communist leaders have most recently been making faint gestures of apparent desire to cooperate for peace, we must wisely beware of their treachery. In the light of their inhuman persecution of Lithuania, and so many other unholy aggressions against small defenseless nations, we would be foolish indeed to place any confidence in their mere words.

We must remind ourselves and remind them also that actions speak louder than words, and there are actions within their power to take that would prove their sincerity. One of the most convincing and happiest actions they could take tomorrow would be to liberate Lithuania and the other small nations that they unjustly hold in subjugation under the iron heel. Until the Communist leaders give back the God-given freedom they stole from Lithuania and the other subjugated nations, we can have no faith in the new Russian propaganda policy of apparent repentance and reform into a peaceful world neighbor. In remembrance of the heroic Lithuanians who were annihilated and deported in 1940, we shall never relax our efforts until Russia has restored liberty to their homeland.

The slavish tyranny still being forced upon Lithuania and the other oppressed nations by Russian domination is a constant challenge to the moral conscience of this Nation and the United Nations to reestablish the great basic principles of Christian freedom and liberty for all peoples. In assuming leadership for justice in the world, our Government must perseveringly request and insist that the Lithuanian people be granted back the inalienable right to govern themselves as they see fit without Communist interference.

The major allies and the United States engaged in two great world wars and the Korean War for the Christian objective of liberty throughout a free world. Although the wars were won, the objective has not yet been accomplished.

The other world powers and this country still remain unhappy partners in the disgraceful betrayal of the smaller nations like Lithuania, while they continue to allow them to be cruelly suppressed by the Soviet imperialism which defies every concept of Christian democracy. The deaths of our World War and Korean war heroes will not be vindicated until Lithuania is free.

Although we have good cause to be sorrowful today about present Lithuanian subjugation, we have no cause to despair; quite the contrary. We can be certain that the Lithuanian people themselves will never cease their efforts to throw off the Communist yoke of slavery. Repeatedly through her history, Lithuania has proven that her people can eventually overcome any temporary defeat of oppressors. The Christian faith which in 1399 emerged triumphantly over the Tartar invasion and saved all Europe from barbarism is still with her today. It still gives her the spiritual vigor to outlive any ungodly dictatorship.

From my own friendship with and knowledge of my fellow Americans of Lithuanian descent, I know that deep in the hear of every Lithuanian is that passion for liberty and freedom which never dies. There is no power that can forever enslave a people who remain ever determined to be free.

Let us, then, pray for the souls of the Lithuanian patriots who have heroically died in defiance of Russian persecution and oppression. In memory of their sacrifices, let us dedicate ourselves to perseveringly work together until Lithuanian independence is restored.

May God grant that we can meet again soon in joyous celebration of the return of freedom to Lithuania and the other persecuted nations throughout the world.

Honorable John A. Blatnik Fights For Conservation

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, it was with interest that I read an article in the June 1956 issue of Sports Afield on the work of my good friend and colleague, the Honorable JOHN A. BLATNIK, of the Eighth District of Minnesota. As a conservationist, I was interested in the article because it cites some of Congressman BLATNIK's record

on behalf of conservation. The full text of the article, "He Fights for Conservation" follows:

Representative JOHN A. BLATNIK (Democrat, Minnesota), former paratrooper captain with combat decorations, Intelligence and OSS services in hotspots overseas, started his career in Congress in 1946 with a major conservation victory.

Sports Afield readers well remember the hard crusade to consolidate the roadless area of the Superior National Forest to preserve this incomparable canoe country wilderness. Representative BLATNIK, representing this district, achieved a unique result for a freshman Member of Congress in getting his roadless area bill through the House and, cooperating with Senator EDWARD THYE, enacted into law.

Representative BLATNIK has a special appreciation of the wilderness values so dear to sportsmen, and your reporter can testify to the prodigious job he did in fighting for this legislation.

Representative BLATNIK's solid conservation interest and excellent grasp and growth as a Member of Congress make him one of the leaders in the conservation bloc of the House of Representatives.

Through seniority, Representative BLATNIK has moved up to a key position on the House Public Works Committee which deals with the various water and works programs. He is chairman of the subcommittee which heard the pollution abatement bill and is working hard to get an improved bill onto the floor of the House so the pollution abatement efforts on a national basis will not expire this June.

Representative BLATNIK is not a headline maker but his know-how, persistence and capabilities as a Congressman who serves his constituency, make him one of the most invaluable Members to add strength to the conservation of the Nation's natural resources.

Rochester Bar Association Pays Tribute to the Honorable Kenneth B. Keating

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. HILLINGS. Mr. Speaker, on March 20, 1956, the Rochester Bar Association gave a testimonial dinner in honor of our distinguished colleague, the gentleman from New York [Mr. KEATING]. Over 700 persons attended the dinner which was held in the Rochester Chamber of Commerce Building. The principal address was delivered by the gentleman from Massachusetts [Mr. MARTIN] and the toastmaster was Mr. Paul Miller, executive vice president of the Gannett Newspapers.

Mr. Frank Traynor, president of the Rochester Bar Association, presented Mr. KEATING a silver plaque on behalf of the association. It is inscribed:

The Rochester Bar Association, on the occasion of its testimonial dinner to him on March 20, 1956, salutes its distinguished member, lawyer, soldier, and legislator, KENNETH B. KEATING, of whom it is proud to say that everything he does, he does well.

Mr. Speaker, I wish to join in the tribute paid the gentleman from New York by his friends and colleagues and in doing so I wish to bring to the attention of the House the address delivered by the gentleman from Massachusetts [Mr. MARTIN] and the response of the gentleman from New York [Mr. KEATING]. The speeches follow:

ADDRESS OF MR. MARTIN

It is a great privilege for me to come here this evening and join with the bar association and friends of Rochester in honoring a great public servant.

This trip has brought to me many pleasures. It is a privilege to come here in company with these grand Congressmen from New York who are at the head table, every one doing a wonderful service in this great task to keep America free, to keep America on the American track. It is a great privilege to come to this city where back in what I might almost term the horse and buggy days, Frank Gannett and I were trying at the national committee to keep the party alive after the Wendell Willkie collapse of 1940. I am glad to come to this city that I may pay tribute to this great Republican, who in the hours of party need, gave freely of his time and money that this party should live to serve the cause of America.

I am happy, too, to come here that I might see two of my former ex-Congressmen, Congressman Duffy and Congressman Whitley, who labored through the years in Congress, helping to carry America through those perilous days.

But primarily, we come here to honor a great American. A nugget of wisdom from the past says that "a man is not without honor save in his own country." Fortunately, that is not true here, because this great meeting, the men and women who have gathered here to honor KEN KEATING, give tribute to the fact that you do honor him, here in this city of Rochester, where he lives and where he works to make you a better community, and to make New York State and our country a better land.

We need men of the type of KEN KEATING in Washington. Never before was there so great a need for experienced men, men of character, men of ability, men of courage and of conviction, men trustworthy and honest. And that's the type of man you here in Rochester send to the Halls of Congress.

A little while ago I was one of the very few who said that President Eisenhower would be a candidate for reelection and that he would not only be renominated but that he would be reelected. That was because I knew in this tense period, this period when the world and the country needed the man so much, he could not fail to respond to that call of country.

The last testimonial dinner I went to I dropped a torch that caught flame and resulted in the man becoming chairman of the Republican National Committee. And with that thought in mind I'm going to be very careful tonight, that I don't set fires that may like the prairie fires sweep across the country.

I don't know whether KEN KEATING wants to go to the United States Senate or not. He hasn't told me and I'm not going to express an opinion upon that. If you decide to send him, I'll say this, you'll send a very efficient and competent man, a man who'd be a credit to this great Empire State of New York.

But I am a bit selfish. Perhaps it's because I come from New England—we are supposed to be a closed corporation up there in New England—and I am selfish and hope that he'll decline all these blandishments that have come from all over the State, that he'll go back with me, so that he might become chairman of the great Judiciary Committee.

Ah, my friends, that is a high honor, an honor that's not to be underestimated in any degree. To be chairman of the committee that handles more than one-third of all the legislation that flows through the Halls of Congress is a great honor. It requires a great legislator. It requires a man with the knowledge of law and procedure. And so, KEN, I'm not going to bring any pressure on you, but I would not feel badly if you decided—as I decided many years ago—that there was a greater opportunity to serve the people of this country in the House instead of the Senate.

I remember back—and, like an old man now, you know, we reminisce—back in 1936 a substantial group of Republicans and a good segment of the Democratic Party—including the leading newspaper of New England of the Democratic affiliation came to me and wanted me to run for the United States Senate. That was a great temptation, of course, but I resisted because I believed that there in the House a man could find his greatest mission and contribution to his country. I say that not to discourage you in the least bit, KENNETH, but we do need strong men in Washington, and whether he goes to the House or Senate you can be proud of him and you'll be proud of the record that he will achieve.

I cannot help but bring to you just one little message. These are tense days in the history of America. Yes; they are tense days in the history of the world. What we do in the next 2 or 3 years may well determine what kind of a world we are going to have—whether we are going to have freedom or whether we're going to have an ideology that crushes men and women beneath their iron heel. And we here in America will be given the opportunity, in the large sense, to determine that decision, because we are the one Nation in the world today strong enough, either in an economic or military way, to lead this world to freedom.

My dear friends, that's a challenge we dare not shirk. That's a challenge we must accept. I'm not one of those who's a pessimist on the future of the United States. I'm an optimist. I believe in America. I believe in its institutions, its ideals, and its hopes for the future. They are going to be brought into fruition because of the men and women who go into the public service. It cannot be written in the stars that this great Republic shall fail in the crucial period of our history.

O my friends, it may call for sacrifices. It may call for all of us to do a little more than we would desire to do. Those sacrifices must be made, because the world needs men and women, brave men and women, men and women who realize that the moral and other issues involved far transcend materialism.

Only recently, in the last few days, we hear the leaders of a great nation admit that their guiding genius for over 25 years is a murderer and a public cutthroat and everything else besides. We're not going to let that kind of people dominate this free world. That is not the spirit of America. It's not the spirit of America that made this Nation what it is today.

America has become great, not because of the resources and the great advantages that have come here in America, although they do contribute in large measure to that end—America has become great because of men and women who are willing to meet the test and meet it strongly and firmly. And so I am happy to come here, full of confidence in the future, believing that America is going to lead this whole wide world along the pathway of peace to better days in which all people, whether they live in Asia or Africa, may find life a little better. That is the goal for which America is pointing. It's an opportunity for all of us to aid.

Your good friend and my friend, because he is one of my loyal friends, and one who can take my place when the time comes that occassionally, you know, even the leader has to go out of the hall for a little while or lay down temporarily his duties. It's a great privilege for me always to know that I have KEN KEATING substituting for me. I've

called him to do that job on many occasions and he always fills the duties with credit and distinction.

Oh, my friends, I'm happy to come here tonight, happy to come that I may offer my personal felicitations to your Congressman, happy also that I might be able to give you this ray of confidence: America need fear no foe. America needs only to make sure which way it goes and to go that way on the side of freedom, peace, and justice.

Ah, my friends, let us realize the great obligation we owe to America. If we do, we will not fail. We will go forward to heights never dreamed of by our countrymen. And it will be a better day for all of us, whether he live in these great United States or in darkest Africa or Asia.

You do well tonight to come and pay this tribute to your Congressman. Too often, men in public life fail to secure the praise and approval of the better citizens of the community until it is too late to do them good. I'm glad to know that that's not the custom here in Rochester. And so, KEN, I salute you. Salute you as a great American, a great legislator, a great public servant. And I know wherever you go in Washington or to some other place in New York, you'll be serving the people and making a contribution to this citizenship which is so desirable in these days ahead. Thank you so much.

ADDRESS OF MR. KEATING

I am deeply grateful and touched by this tribute from the bar association. It is extremely hard, of course, for me to put into words all of my thoughts on this memorable occasion. I hardly know where to begin to thank all those who have contributed so much to this wonderful evening.

I am most grateful to the colleagues who have taken the long trip from Washington to be with me on this occasion. It so happens that all the colleagues here this evening are of my political faith, but you know, one of the finest things about service in the House of Representatives is the wonderful opportunity it affords to form warm and fast friendships, regardless of party affiliation.

Those Members who have come here tonight—HUGH SCOTT, HAROLD OSTERTAG, BILL WILLIAMS, and WALTER RIEHLMAN—have all been very close friends of mine. I don't know how to thank them enough for being here with me.

I am likewise overwhelmed that as busy a man as our minority leader should take time out of his busy life to come up here. This is indeed a fine tribute. I am most grateful to JOE MARTIN and to Judge Wheeler and HUGH SCOTT for the very nice things they have had to say about me and my work.

Since this dinner is primarily given by the bar association, I want to say just a word or two about lawyers. We in the bar association have no politics and it is, of course, among the lawyers of both political parties that I have had my most intimate association over a period of years. It is always a special pleasure when I am able to assist any members of the bar when they contact me in Washington.

You are all aware, I am sure, that it is very fashionable these days to tell stories about lawyers. It seems we hear them all the time. I am reminded of the one about the minister and the lawyer and the doctor who were marooned on an island. They had to get to shore for help, but the waters all around were infested with sharks. So they decided to draw lots as to who would swim ashore, and the lawyer got the short paper. He jumped in and they were about to kiss him goodbye, but when he started to swim all the sharks went in the other direction. The minister said, "That's the most amazing thing I ever saw." And the doctor said, "Oh, that's nothing, it's just professional courtesy."

Yes; we hear a lot of that sort of thing about lawyers. But I'm proud to be a lawyer and I am proud to say a word or two in rebuttal to that kind of talk. It's high time we did a little talking about the generosity of the legal profession.

I knew in my practice and I know now from my correspondence since assuming the role of a legislator, about hundreds and hundreds of cases in Rochester and this vicinity, in which lawyers—who are so often charged with acting only for a fee—have taken cases solely out of the depths of their feelings for someone who could not pay anything. And I know how industriously and diligently they pursue these matters even when they know they cannot possibly collect a fee.

Lawyers should have—and I feel in our community do have—an honored place.

Often we hear that lawyers are interested only in contention and about fights in court. As so many of us who have practiced law know, however, the truth is that much of the most constructive and finest work done by lawyers is performed outside of the courtroom. It is the wisdom and foresight which lawyers so often show in drawing up a will or a trust or forming a corporation that eliminates the risk of litigation. This is a real and positive aspect of the lawyer's role that should not be neglected.

I think lawyers sometimes overlook the vitally important role which they should fill as counsel for themselves. Many lawyers feel that because of the unique standards of their profession, they should not take the credit to which they are not entitled. But perhaps because I am somewhat removed from the active practice of the law, I can say that members of the legal profession in community service, in public life, in their contributions to the welfare of their clients and in living up to the standards of ethics to which they subscribe, are serving in the finest traditions of our county.

Let us as lawyers, therefore, be more articulate in expressing what we as lawyers do. We must remain faithful to the oaths we have taken as lawyers, but when stories are told such as I've told tonight, let us come back at them.

There has been a lot of talk here tonight about what the future may hold. Of course, I cannot predict what that may be, but I can say that no one could ever have been as fortunate as I have been to have had the honor of representing the 38th Congressional District. No one could ever have held a position of greater importance, or more enjoyment, or greater opportunity for constructive service than my post in Congress. I am proud to carry out that role, just as I am proud to be a lawyer.

I am grateful to so many of you who have helped me to serve in the House of Representatives and to all of you who have honored me so signally tonight. I thank you all from the bottom of my heart.

"Second State Department" Hit

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of June 8, 1956:

"SECOND STATE DEPARTMENT" HIT—CLIQUE ADVISING PRESIDENT BLAMED AS CAUSE OF NEUTRALITY MISSTEP

(By David Lawrence)

President Eisenhower's foreign-aid program, mostly military and much needed, is in trouble in Congress, and this is due largely to his own mistakes in tactics.

Thus, the damage done by the President's offhand remarks at Wednesday's press conference is incalculable. Even the clarifying statement issued Thursday afternoon does not erase the injury done when the President, in effect, encouraged neutralism and caused the many allies and trusted friends of the United States in Southeast Asia who have joined America in military alliances to wonder if they were being let down by Eisenhower.

The telephones buzzed with expressions of shock and surprise and at times righteous indignation as the news of what Eisenhower said on Wednesday reached diplomats who represent America's allies in Asia. On Capitol Hill there was consternation. At the State Department there was an obvious discomfort but a discreet silence.

To understand what happened, it is necessary to present here the text of the President's remarks at the press conference as authorized for publication:

"Now, today there are certain nations that say they are neutral. This doesn't necessarily mean what it is so often interpreted to mean, neutral as between right and wrong or decency or indecency.

"They are using the term 'neutral' with respect to attachment to military alliances. And may I point out that I cannot see that that is always to the disadvantage of such a country as ours.

"If a nation is truly a neutral, if it is attacked by anybody—and we are not going to attack them—public opinion of the world is outraged. If it has announced its military association with another great power, things could happen to it, difficulties along its borders and people would say: 'Good enough for it. They asked for it.' So let us not translate this meaning of the word 'neutral' as between contending military forces, even though the conflict is latent and neutral as between right and wrong."

But, asked some of the diplomats who represent countries that have already joined America in military alliances: "Shall we tell our people now that they were wrong and that, if attacked, they 'asked for it'?"

The President heard from his colleagues inside the Government who advised a public statement. Here it is in its essential part:

"It is obvious that in some countries of the world there are certain ideological, geographical, or other reasons making military alliances impractical. Such nations may declare themselves to be neutral, hoping thus to secure the support of world opinion against attack from any quarter. Neutrality does not mean either disarmament or immunity from attack. We have had historical examples of this kind of neutrality for many decades. * * *

"The President does believe that there are special conditions which justify political neutrality, but that no nation has the right to be indifferent to the fate of another, or, as he put it, to be "neutral as between right and wrong or decency or indecency.'

"The President does not believe that association for mutual security with the United States will involve any country in added danger, but, on the contrary, will provide added security on the basis of mutuality and scrupulous respect for the independence of each. As the President pointed out, the United States is not going to attack anybody; but some great powers have shown an aggressive dispostion, and military association with such a power could lead to difficulties."

Why did the President plunge into such a delicate field of discussion, anyway, without going over carefully in advance with the Secretary of State the text of what he had to say? The answer is that, with the press conferences conducted as they are today, when a President's impromptu remarks are quoted directly without regard for the sensibilities of governments abroad, tragic mistakes like this will happen. They have occurred before under previous administrations, too.

Unfortunately, Eisenhower isn't "briefed" in advance as he should be. Many of his friends in New York and elsewhere who have access to him have been dinning into his ear statements about the Asian situation which seek to justify neutralism and the expenditure of billions by the United States to nations that tomorrow may become Communist.

Eisenhower allows such friends to influence him, and the State Department is often in the dark as to what is going on.

This intervention of a separate kind of "State Department" at the White House is a difficult thing to deal with, and it is amazing that a man with the President's fidelity to well-defined lines of responsibility in military life should tolerate an influence on foreign policy separate from the officials charged with responsibility in making it.

For the same phraseology and argument used in his press-conference statements of Wednesday can be found in the writings and speeches of the clique which has access to Eisenhower and is known in many parts of the world as the "real State Department."

Memorial Day Address of Hon. Philip J. Philbin of Massachusetts

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD I include therein excerpts of speeches I made at Memorial Day exercises at Clinton and Gardner in my district:

CONGRESSMAN PHILBIN'S REMARKS IN PART AT THE DEDICATORY EXERCISES AT CLINTON, MASS.

The beautiful placque which we dedicate today on Memorial Day to those who died in World War II and the Korean conflict will fittingly commemorate the valiant service and supreme sacrifice of these great heroes. We thank the veterans of Clinton for establishing this lasting memorial to their names.

We could never adequately express our gratitude, but their noble deeds will live in the hearts of our fellow citizens forever.

To their families and loved ones, we again tender deepest sympathy. From the immortal sacrifices of these boys, and boys like them, our people will ever take inspiration and courage. Their memory will ever be sacred to us.

ADDRESS OF CONGRESSMAN PHILIP J. PHILBIN AT CLINTON AND GARDNER, MASS., MEMORIAL DAY, MAY 30, 1956

Speaking at Memorial Day services at Clinton and Gardner yesterday, Congressman PHILIP J. PHILBIN, of Clinton, declared that "the honored dead of all American wars set a stirring example of courage and devotion to the principles of freedom which the people of this generation must emulate, if we are to guard our way of life against the evil designs of potential enemies."

"These gallant heroes never hesitated when the call came to defend the Nation," he said. "Many of them paid the supreme sacrifice. Others were completely disabled and lie in hospital beds keeping the lonely vigil of liberty. All those who served us so nobly—those who died, and those who were willing to die, symbolize the spirit of America. They best exemplify the spirit of American freedom. They have won the undying gratitude of the Nation. Their memory is imperishable. They will ever inspire our youth and our people in loyal devotion and willing sacrifice for our cause."

"Today as we recall their illustrious deeds and reverently send up our prayers of gratitude for their unselfish devotion, it is fitting that we should repledge our own loyalty to the great cause of human liberty for which they gave their all."

"In this troubled world, never so upset before, we are threatened with military aggression, poisonous propaganda and stealthy infiltration openly designed to accomplish the undermining and collapse of our great democracy. These evil movements are not confined to this Nation alone. They extend to virtually every part of the world. Their declared aim is to destroy democracy and conquer the world for communism. They are moving toward that aim with unbending purpose and great cunning."

"Through treason and espionage they have stolen our most previous military and scientific secrets. They now pose a threat of deadly hydrogen warfare over the heads of all nations.

"Behind the Iron Curtain, they hold millions in cruel bondage. Outside of the Iron Curtain, they skillfully move to impose slavery on the peoples of the earth.

"But this Nation must not flinch. This Nation is strong in its arms, strong in its terrible weapons of war, strong in its trained men and women and in its invincible spirit to protect our shores and our Government, come what may, against possible aggressors and those who scheme, conspire, and work to destroy us.

"The world situation is profoundly serious. But we have faced serious situations before. Our Nation was born in a struggle against oppression. It has been guarded against oppression by generations of Americans who were determined to protect their liberties. Inspired by the sacrifices of the past and by the great faith of religion, democracy, and freedom which guides our destinies, the American people of this generation are also determined to defend their liberties. They will not let the threats of Marxist communism and its evil works, or the hydrogen bomb, or any other devilish weapons swerve or dissuade them one iota from guarding and protecting this great democracy and this great Nation. The American people will not be intimated or terrorized by the machinations of any earthly power.

"Peace we must have, and peace we must work for. Let it be clear that this great Nation, devoted to the welfare of free men and women, would never in any sense take responsibility for starting a great war that might spell the doom of civilization. Only complete fanatics could take such a step. Soviet leaders know as well as we do what the dire consequence would be, not only to other nations but to themselves, because, whatever destruction were wrought elsewhere, they well realize that the greatest devastation of all would be visited upon the territory behind the Iron Curtain. God forbid this should ever happen.

"In the memory of these heroes, liberation of oppressed peoples should be a foremost aim of the free world. We should insist in the United Nations and in all our foreign relations, upon freedom for all peoples, the present pitiful captives of stupid diplomatic concessions, as well as the age-long victims of colonial tyranny. And we should try our best to end the myth once and for all, that any race of people living in this world is superior before the law merely because of its color, its origin or its status. Equality of justice, equality of opportunity and the precious civil rights of the individual should be zealously safeguarded and protected. The dignity of every human soul must be acknowledged and recognized."

"If we could lift the shadows of doubt, fear and suspicion, end aggressive threats and poisonous infiltration, this Nation and the world could move forward to a veritable golden age. In the name of our hollowed dead whose blood consecrates our sacred cause, let us resolve today to strive to our utmost for peace. Let us keep our Nation possessed of that strength, vigor and spirit which are vitally needed to guard and develop our way of life. But so long as danger lurks, let us be claim, steadfast, and courageous—prepared to meet every test, every sacrifice, that may be called for to keep inviolate our country, our Constitution, our Bill of Rights, our free institutions and the safety and security of our homes and our people.

"If we achieve these things in our day, we will be contributing best to the future of our great Nation as well as to a peaceful world. We will thus justify the glorious patriotism, the unselfish service and indomitable loyalty of those whom we honor today from our grateful hearts."

PHILBIN said that Memorial Day has become a great national holiday "dedicated to our honored dead, and to the remembrance of loved ones who have gone to join their Maker in that great land from whose 'bourne no traveler ever returns'. With the beautiful flowers of spring and fervent prayers, we recall their love, their useful lives and their contributions to our country. If we measure up to their God-fearing devotion, this Nation need have no fears for the future."

Address by the Honorable Arthur Levitt, Comptroller of the State of New York, Keynote Dinner, Michigan Democratic State Convention, Grand Rapids, Mich., June 1, 1956

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mrs. KELLY of New York. Mr. Speaker, the Honorable Arthur Levitt, comptroller of the State of New York, was the keynote speaker at the Michigan Democratic State convention held in Grand Rapids on June 1, 1956. Mr. Levitt spoke for the Honorable Averell Harriman, Governor of the State of New York.

Mr. Levitt is one of my constituents, and is a former president of the Board of Education of the City of New York. We are proud of his record as a public servant and I am happy to have the privilege of inserting in the RECORD his speech at the Michigan convention:

I am honored to be with you this evening and proud to take part in the convention

proceedings of this great body of Democrats. I bring with me Governor Harriman's sincere regrets. He wanted very much to share this occasion with you, and to express for all of us in New York our deep and sincere admiration for your Democratic achievements here in Michigan.

Under our great Democratic Governors—Al Smith, Franklin D. Roosevelt, and Herbert Lehman—New York led the States in progressive government. Then New York entered a dark age. For 12 long years progressive ideas wandered in the wilderness, and we watched with envy as the State of Michigan assumed the leadership of which New York had boasted for so long.

In the past 7 years, we have watched you revitalize the entire economic, social, and political structure of your State, and at the same time achieve financial stability and undertake the largest construction program in the State's history. All achieved, I am proud to say, by Democratic leadership.

And so we have a special admiration for your illustrious Governor, who made all this possible. We are as proud as you that it is our party that claims the talents of this great leader, your popular Democratic Governor, Mennen Williams.

And let me add that we in New York consider Governor Williams eminently qualified for any position to which the people of this Nation may call him.

I also bring our compliments to your other leaders who have done such a splendid job in creating a winning party in this State—to Neil Staebler, to Ernest Lacey, to Margaret Price, to Adelaide Hart, to Senator McNamara, to your distinguished congressional delegation, and to many others. We would particularly like to compliment your party for the recognition which women have attained in Michigan politics. We in New York are now striving to follow your example in this regard.

In the last 18 months we in New York have begun to match your record of legislative progress. Under Gov. Averell Harriman, our State is regaining its old position of leadership in responsive and responsible government. We have added over $120 million a year to State aid to education, the greatest advance since the time of Al Smith. We are bringing our State's social insurance programs up to date over bitter opposition of the Republicans. We have pioneered the most advanced housing legislation in the country. We have extended and strengthened our fight against discrimination in all its forms. We have rallied our State in a concerted attack on the problems of older people and of youth. And while doing all this we have balanced the budget and cut individual income taxes by $40 million.

So New York and Michigan have something in common—a renaissance of social progress under dynamic Democratic governors.

I am sure our two States have something else in common, too—and that is our conception of what the Democratic Party is and has to be.

What is it that sets us apart from Republicans? Why are we the oldest political party in America?

The genius of the Democratic Party is, I believe, simply that we are the people. As a consequence the hopes and needs of all of us are automatically the goals of our party.

When there is suffering among us—when there is an opportunity to be realized—we are not afraid to use the instrumentalities of government because we know that the government is not "they" but "us." We know, because over 20 years we proved through experience that the people acting together can accomplish great good for all of us. These are above all the lessons we have learned from the inspired and dedicated leadership of Presidents Franklin D. Roosevelt and Harry S. Truman.

The Republican Party, whether under McKinley, Taft, Hoover, or Eisenhower, has represented predominantly only one segment of our people—the powerful and the privileged among us. Theirs has been, and is, a Government designed to serve not all of us but a few. We have defended and advanced the interest of the many—especially the less powerful and the less privileged who most need assistance to redress the balance between the weak and the strong in our society.

Thus it is that our party—and only our party—has fought to give the farmer elementary protection. Thus it is that our party has consistently championed the rights of labor.

Thus it is that we have fought monopoly of every kind—fought to preserve and develop public resources for the benefit of the people—and striven to protect and give greater opportunity to small business.

And thus it is that we have been the constant advocate of the rights and progress of minorities among us—minorities which, when taken together, add up to our great America.

I know I speak for the Democrats of New York when I say that we cannot conceive of any other kind of Democratic Party. We have no desire in our State to make our party over—in the image of our opposition—in any way. Franklin D. Roosevelt and Harry Truman expressed our fighting spirit and our liberal principles. What we must do this year is to apply to the problems of our own day and the days ahead the spirit which guided these two Democratic Presidents.

It has been said that this year is not the time for bold ideas. It has been said that this is the year when we should go slow, when we should soft-pedal words like "liberal," when we should modify our principles. Only then, some say, can we win the next election.

We of New York reply that this is a counsel of opportunism and a counsel of despair. We are not out just to win elections. We are a political party because we are a body of like-thinking men and women, organized to advance a philosophy of government that we believe is right for this Nation.

If we were to change our principles as readily as we change our clothes—to fit whatever is the climate of the times—then we would stand for nothing. We would be as devoid of principles as the Republicans are of ideas. And we would neither deserve nor receive the confidence of the people.

This is not alone a matter of principle—although that alone would be enough. It is a matter of practical politics as well. We did not become the majority party in this Nation by trimming our sails to every political breeze that passed our way. We became the majority party because we advanced a philosophy of vigorous and liberal action to meet the needs of the times. That is how we won five successive elections from 1932 to 1952. This is the only way we can win again—and it is the way we shall win again—in 1956.

Those who speak of trimming our sails talk first, of course, of civil rights. We are told that the best way to attain party unity is to try to compromise this issue. To this solution, we Democrats reply that unity attained by compromise would be a unity without substance, a unity without vitality, and a unity without effect. It would deny our very reason for being as a political party. Unity obtained at the expense of our beliefs and principles is meaningless.

What would they have us do about these decisions? Would they have us declare that the Supreme Court is not the final arbiter of what is the law of the land? Would they have us say that desegregation with all "deliberate speed" as the Supreme Court has directed is too fast? Would they have us contend that there are only States rights and no State duties to guard individual rights? And would they have us advocate to the world the principles of equality embodied in the Declaration of Independence while denying those principles at home?

To ask these questions is to answer them. It is obvious that our party cannot equivocate on this issue.

No one has expressed our party's stand better than did your Gov. Mennen Williams, at Northwestern University some weeks ago. As he said so clearly at that time: "Ours is the party—not only for the rich, not even for the poor alone, but for the rich and the poor and all in between, for men of all groups, of all classes, of all colors, of all creeds, without regard to any of the accidents of their birth."

I know that your convention will adopt a straight-forward and courageous statement on this important issue. And I am confident that when we meet in Chicago in August, our national convention will do no less.

The fight to protect the rights of labor is never finished either. We are right now witnessing a systematic and concerted attack on the political rights of working men and women. You have seen it here in Michigan. Under the protection of one of the most vicious sections of the Taft-Hartley Act, the Republican leaders and their antiunion allies are passing union-busting "right to work" laws wherever they can.

The Democratic Party can never compromise with those who would stifle the growth of labor organization. This is a time for vigor and vigilance by the Democratic Party to defend the advances which labor has made and is making.

With the advent of automation and atomic energy, we are entering a period of economic change that will surely be as rapid and as decisive as any in our history. It is an era filled with promise—but filled with danger, too. Right now over 200,000 automobile and other Michigan workers are unemployed. There is danger ahead of even more extensive unemployment, of increasing casualty lists of small businesses, and of more and more economic power concentrated in the hands of a few mammoth corporations. To realize the promise, yet avoid the dangers, it is up to industry, with the help of Government, to see to it that rapid changes in our industrial system are guided and controlled so that they result in human well-being and not in human tragedy.

Democrats will never accept the Republican thesis that one of the inalienable rights of an American is the right to suffer. Indeed, one of the factors that distinguishes us from Republicans is our faith that suffering can be eliminated by human ingenuity and our deep belief that our free economy must be the servant, not the master, of the people.

This philosophy applies right now to agriculture, too. The hardships that have been experienced by our farmers since 1952 have not been and are not necessary. If there had been a Democrat in the White House, they never would have happened. The farmers' plight today is the consequence of callous and calculated neglect. Next year, under a Democratic President, the farmers' right to suffer will be revoked.

As comptroller of the State of New York I am very conscious of our current financial condition. Today we are witnessing a situation in which the State, the municipalities, the school districts, the small-business man, the farmers, and the consumers of our Nation are finding it increasingly difficult to obtain the credit and capital essential to their effective operations. This lack of availability is unfairly and dangerously restrictive of our economic enterprise. Conservatism in money affairs is, of course, a basic factor for our economic health. I submit, however, that the Washington policy of tight money springs

more from fear than from a reasoned estimate of our economic prospects. Fear itself it more to be feared than inflation. In their concern over inflation the financial authorities should recognize the expansion of our population of the past 20 years and the estimated 65 million increase by 1975. They must realize that our people in keeping with the American tradition have constantly rising hopes and needs. If we are to progress the plan for tomorrow cannot be cut with yesterday's pattern. The present money and credit policies are not necessarily suitable for today's conditions. It has been suggested that we should have a broad inquiry into the money and banking systems of the Nation. In the light of what is happening, such a study appears overdue. This should enable us to plan more intelligently for a broader and more imaginative approach to the monetary needs of our American families and businesses.

What are some of the other things which American families need?

They need homes. In this field, our Nation is not gaining. We are not even holding our own. We are slipping backward in our housing standards. Yet, President Eisenhower has seen fit to scuttle the public housing program, and tight money is cutting back private home construction.

The families of America need security. Despite our economic growth, we are putting a smaller share of our resources into social security than we did in 1935 when the system was created. The whole purpose of social security is defeated when retired people do not receive benefits enough to live a decent life. Yet, only this year, President Eisenhower's spokesman was fighting against improvements in social security for women and for disabled workmen.

They need schools. Yet for 3 years, all we got from President Eisenhower was a White House conference, and he has still proposed nothing at all to help young men and women from poorer families to gain the benefits of a college education.

We need to launch a concerted attack upon all the causes of poverty. Under the leadership of Averell Harriman we have done this in New York State. But it should be done not only State by State but on a national scale.

America needs a solution to the problem of the growing cost of medical care.

We need national leadership to deal with the growing problems of the greater number of older people among us.

Yet, in all these fields—housing, schools, social security, health, the aging—President Eisenhower has given us limited and timid programs. In many cases, he has proposed nothing at all.

Now Republicans tell us that they want to take this lack of leadership and put it on a part-time basis. Was a bill of goods like this one ever offered for sale to the American people before?

This is not a year for the Democratic Party to equivocate and compromise. This is a time to state the issues clearly and sharply. It is a time for higher sights, for new vision, for bold action. Today, the American people seek the counsel of men of imaginatin, of courage, and of strength. Michigan has such a man in Mennen Williams. New York has such a man in Averell Harriman.

Those of us within the party who believe most strongly that our future lies in a clear-cut, dynamic, liberal philosophy, must be vigorous and united. The sleeping sickness which has paralyzed the national administration for 3 weary years must be dissipated.

The timid years must come to an end. Progressive leadership must be restored to the White House with a Democratic President of the United States.

Your convention here in Grand Rapids is one beginning. It is an auspicious beginning. You are laying the groundwork in this State of a great Democratic victory.

Once again, thank you for the privilege of attending this keynote dinner. I have witnessed here tonight a wonderful demonstration of party loyalty and political solidarity.

Good luck to you and my best wishes for a successful and triumphant convention.

Influence of the College of William and Mary on 18th Century America

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. TUCK. Mr. Speaker, on Sunday, June 10, 1956, the Honorable A. WILLIS ROBERTSON, JR., Virginia's distinguished junior United States Senator, delivered a most interesting and inspiring address at the annual graduation exercises of the College of William and Mary at Williamsburg, Va.

Since obtaining its charter in 1693, thus becoming the second college to be established in America, the College of William and Mary has maintained a continuous period of proud and honorable operation. It has exerted great influence for good in the life of our Nation. I am pleased to count myself among its alumni.

Under leave to extend my remarks, I include the following text of Senator ROBERTSON'S address:

INFLUENCE OF THE COLLEGE OF WILLIAM AND MARY ON 18TH CENTURY AMERICA

(Remarks of Senator A. WILLIS ROBERTSON at the annual graduation exercises of the College of William and Mary, Williamsburg, Va., June 10, 1956)

In selecting for discussion today the influence of William and Mary on 18th century America, I planned to emphasize the importance in human affairs of intangible values but my preparation has reminded me of the fact that intangibles are not as readily perceived or as easily defined as tangibles. Take my own experience with William and Mary for example. I had tangible contacts with William and Mary athletes on the football field in the falls of 1905, 1906, and 1917 but long prior to that I had unrecognized intangible contacts through attending public schools of Lynchburg, headed by E. C. Glass, an LL.D. of William and Mary and a member of its board of visitors, a high school in Rocky Mount of which the principal was J. Taylor Thompson, a William and Mary graduate, and classes in English at Richmond College, under another William and Mary man, Dr. J. A. C. Chandler, father of your present president.

In attempting to recall something of the tangible influence of William and Mary on the early life of our Nation, I shall mention as illustrations only a few of the many personalities involved.

Two years ago, when I delivered the commencement address at another Virginia institution, often referred to as "Mr. Jefferson's university," I started out by saying: "The longer I live, the more convincing proof I see of the fact that Thomas Jefferson was our greatest political philosopher." Naturally, therefore, I want to say something about Jefferson today, since he was one of the men trained at William and Mary who influenced the thinking and course of events not only in our country but in the entire world. But I also want to emphasize the cumulative importance of other graduates, less widely known, whose accomplishments some of you may duplicate.
